The tramway gross earnings show the average increase for the year, and it is anticipated that the same ratio of increase

will be maintained during 1918. Operating expenses have increased in a greater ratio than the earnings; but under the prevailing conditions, the directors consider that the results attained should be

deemed satisfactory.

The street railway passenger receipts were \$413,341.92, against \$388,494.05. Passengers carried, 9,534,162; car mileage, 1,371,334.

## New Brunswick Power Co's Annual Report.

Following are extracts from the first annual report, presented at the annual meeting in St. John, N.B., recently:—

The statement presented covers 10 months from Mar. 1, 1917, when the company commenced operations. The total operating revenue was \$569,200.40, and the total operating expenses \$424,893.65, leaving a gross income of \$144,306.75. Adding to this the net revenue from non operating departments, such as the Eastern Electric Co., amounting to \$21,553.76, makes for the year a gross income of \$165,860.51 available for the payment of bond interest and preferred dividends. Of this \$74,344.49 was paid in bond and other interest. The dividends on preferred stock paid for the nine months amounted to \$70,875, and accrued dividends for October \$7,875, leaving a surplus of \$12,766.02.

During the year the company made extensive additions to its plant. In the power house it spent \$72,112.24, very materially increasing its boiler capacity, thus enabling it to generate a larger amount of current. In the railway department it spent \$14,543.18 on new equipment, and \$11,803.09 for replacement of special work, etc. In addition to these figures, a considerable sum was spent in improving the tracks by using arc welding machines and rail grinder, building up the cupped ends of rails and welding the joints, which secured a smooth road-bed and easier riding for street car patrons. This work will be continued during 1918. Additions and extensions were also made in the electric and gas departments, amounting to \$24,476.95.

Shareholders will undoubtedly have noticed with some apprehension the company's application for relief in regard to its gas, railway and electric rates made recently before the Public Utilities Commission. In common with other operating companies of this character in America, this company is facing a situation which requires the undivided attention of the directors and the hearty co-operation of all shareholders in order to preserve the property intact against increasing costs. Those who are familiar with the taking over of the St. John Ry. Co. by the N.B. P. Co. will remember that in doing so the new company was obliged by law to put into effect a schedule of lighting rates considerably lower than old rates then prevailing. It was impossible at that time to tell accurately what decrease in the company's net revenue these new rates would result in, but after operating eight months under the new rates, the directors find that the decrease in revenue, resulting from these rates, will total \$58,000 a year.

The second and still more serious problem we are facing is that of coal. Up to Dec. 31st, 1917, we were able to buy our coal delivered in our power house at \$3.50 a ton and delivered at gas works \$4.20. On Jan. 1, 1918, however, the coal companies increased the price \$3.65 a ton, so that now it costs \$7.20 in the power house and \$7.95 at the gas works. With a gross consumption last year of 22,522 tons, it will be seen that we are facing a net increase in the cost of coal for the coming year of \$82,000. We regret that we are

unable to make a contract for our coal supply for a longer period than one month, and the estimate given is based on last year's consumption and the supposition that we will not have to meet any further advance.

In addition to this we were, last summer, obliged in all fairness to inaugurate a general increase in the rate of wages to all employees, which on a yearly basis will total \$40,000. In view of the continued increased cost of living and the necessity of retaining with the company the high standard of labor which we have with us, the question of still further increasing the rate of pay to all employees must be given serious consideration. It will be seen from these three items alone that a substantial increase of revenue will be necessary to take the place of these additional expenditures which we will be facing in full force during the coming twelve months. There are many other items of increased cost which enter into the operating of a property of this character, notably the cost of materials necessary for the maintenance of our plant.

The directors had under contemplation at the time of the purchase of the St. John Railway property, the construction and development of water powers on lands owned by your company in the vicinity of St. John. Owing, however, to the extraordinary demand for money due to war loans, and the fact that the American market, from which we had anticipated obtaining our funds, was practically closed a month after our taking over the property, by the U.S. going into the war, your directors had to forego temporarily this part of the development of your property. We have, however, at present under consideration a plan which may enable us to carry on the construction of our water powers, but at the present time no definite statement can be made. A great deal of the company's future depends upon the fairness and breadth of vision possessed by those who will have the determining of whether or not the company, under extraordinary war conditions, shall receive fair treatment in regard to increase in rates. Unless some measure of relief is accorded through this channel, and through the development of your water powers, we will undoubtedly be faced with the serious possibility of inability to pay our preferred dividends. If this condition comes about it will hamper the company for many years in the securing of additional capital for its necessary development work, necessary not only in the interests of the company, but in the best interests of the city as well.

Railway receipts .....	\$260,054.53
Light and power earnings .....	242,659.23
Gas earnings .....	66,486.64
Merchandise and non-operating income .....	21,553.76

Operating expenses .....	\$590,754.16
Interest on bonds .....	\$424,893.65
Other interest .....	72,916.68
Net earnings to surplus account .....	1,427.81
	91,516.02

	\$590,754.16
Dividends paid to Dec. 1 .....	\$70,875.00
Dividends accrued for December .....	7,875.00
Transferred to profit and loss .....	12,766.02

Profit for year after providing for interest on bonds and all charges .....	\$ 91,516.02

The directors were re-elected, as fol-

lows:—L. R. Ross, President; F. R. Taylor, H. P. Robinson, W. E. McGregor, P. W. Thomson, R. B. Emerson, L. C. Gerry.

## Nipissing Central Railway Annual Report.

Following are extracts from the annual report of this railway for the year ended Oct. 31, 1917, issued by the Timiskaming & Northern Ontario Ry. Commission, which operates it for the Ontario Government:—

Assets.	
Cost of road .....	\$308,095.21
Cost of equipment .....	65,585.07
Townsite property, North Colalt .....	240,361.45
Working assets .....	29,875.22
Deferred debit items .....	8,750.50
Value of franchise .....	141,393.32
	\$794,053.77
Liabilities.	
Capital stock .....	\$530,000.00
Advance from T. & N. O. Ry. ....	247,639.50
Working liabilities .....	16,246.88
Deferred credit items .....	6.10
Profit and loss balance .....	1,161.29
	\$794,053.77

Receipts and Expenditures.	
Transportation revenue .....	\$93,331.73
Non-transportation revenue .....	2,115.75

Total operating revenue .....	\$95,447.48
Maintenance of way and structures .....	\$15,717.69
Maintenance of equipment .....	12,484.13
Power .....	17,481.46
Conducting transportation .....	26,568.09
Traffic .....	293.60
Transportation for investment .....	
Cr. ....	7,717.86

Total operating expenses .....	80,259.73
Net operating revenue .....	\$15,189.75
Other income .....	268.59

Total income .....	\$16,458.34
Deductions from income .....	10,825.77
Net .....	\$4,632.57

Compared with the year ended Oct. 31, 1916, transportation revenue decreased \$15,605.61, and the other than transportation revenue increased \$655.14, while the expenditures increased \$5,523.10, giving a decrease in net income of \$20,473.57. The other income decreased \$231.36, and there was a decrease of \$3,140.05 in the deductions from income, the net result showing a decrease of \$17,564.88 against the year ended Oct. 31, 1916. The T. & N.O. Ry. Commission was paid \$2,000 out of profit and loss.

Traffic Statistics.	
Passenger car hours .....	23,439
Passenger car miles .....	240,350
Total passengers carried .....	1,207,390
Average daily receipts .....	\$256.70
Average receipts per car hour—passenger, cents .....	\$3.40
Average receipts per car mile—passenger, cents .....	\$0.33.2
Earnings per passenger, cents .....	\$0.06.6

The Toronto Transportation Commission for the current year consists of the Mayor, T. L. Church, Chairman; R. C. Harris, Commissioner of Works, Vice Chairman; T. Bradshaw, Commissioner of Finance; W. Johnston, City Solicitor; Controller Robbins, Ald. Gibbons, E. L. Cousins, Manager, Toronto Harbor Commission, and H. H. Couzens, Manager, Toronto Hydro Electric System. As mentioned in our last issue, plans and specifications for the building of cars and car shops have been mentioned, but nothing will be done in the matter until a report on the subject is made by R. C. Harris and T. Bradshaw.

Montreal Tramways Co. Wages.—A press dispatch from Montreal, Apr. 24, stated that the company's employees are asking for increases in wages of from 5 to 11c an hour, according to length of service. It is stated that the matter will probably be taken up by the recently appointed tramways commission.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—The Brantford, Ont., City Council has petitioned April 10, to extend the B.M. Ry. to the Terrace Hill district, as had been promised from time to time. (Mar., pg. 117.)

**Calgary Municipal Ry.**—The Calgary, Alta., Municipal Ry. is reported to have let a contract to the Birnie Lumber Co. for the supply of 10,000 ties for replacement purposes, at 85c each. (Mar., pg. 117.)

**Grand River Ry.**—Owing to exceptionally high water on the Grand River this spring, the company's tracks along the river in Hespeler, Ont., could not be used for some little time. A press report states that the tracks are to be moved away from the river. Surveys are said to have been completed which will do away with a number of curves, and give a practically straight route. The line referred to is part of the line long known as the Galt, Preston & Hespeler St. Ry.

**Guelph Radial Ry.**—We are officially advised that it is proposed to relay about 2,000 ft. of track on Dundas Road, Guelph, Ont., with 80 lb. T rails, with gas weld bonds, on concrete foundations. A. H. Foster is Manager.

**Lake Erie & Northern Ry.**—M. W. Kirkwood, General Manager, and other officials were in Simcoe, Ont., April 4, in consultation with the town council respecting the approach to the station and other matters which have been unsettled since the line was opened from Brantford to Port Dover. (Sept., 1917, pg. 368).

**London & Port Stanley Ry.**—The Ontario Legislature has authorized the City of London to pass a bylaw to raise \$131,000 upon 30 year debentures to pay for the construction and equipment of buildings and works completed, and the construction of other works by the London Railway Commission, which operates the London & Port Stanley Ry. The act also authorizes the passage of a bylaw by the city council to raise \$7,000 by bylaw to pay for the construction of a switch and bridge in connection, for the L. & P.S. Ry. Neither of these bylaws requires the ratepayers' assent. (Mar., pg. 117.)

**The Montreal & Southern Counties Ry.**'s application for permission to lay an extra set of car tracks on McGill St., Montreal, so as to improve terminal facilities, and permit of the more expeditious handling of the cars serving the south shore, was refused by the city commissioners, April 17. (April, pg. 164.)

**The Nipissing Central Ry. Co.**, which is owned by the Province of Ontario and operated by the Timiskaming & Northern Ontario Ry. Commission, is asking the Dominion Parliament to extend for five years the time within which it may build a line from Latchford, Ont., to the Grand Trunk Pacific Ry. near the Matagami River, Que.; from Latchford along the Montreal River, to the G.T. Pacific Ry. in Ontario; from Latchford southerly to Timagami station; an extension of the present line from Liskeard westerly to meet the last mentioned line; a line from Liskeard to Charlton; a line from the first mentioned line, starting at Wendego Lake, westerly to the T. & N.O. Ry., and a branch line from the first mentioned line, starting in Casey Tp., to North Timiskaming, on the Des Quinze River. (April, pg. 164.)

**Ottawa Electric Ry.**—It does not appear that the Dominion Government has reached any decision as to when it will

proceed with the erection of the new bridge at Chaudiere Falls, Ottawa, but it is expected that the work will be gone on with during the summer. When this is settled, the O.E. Ry. can proceed with its plans for providing a service across the bridge. (Feb., pg. 77.)

**The Western Power Co.** of Canada owns about five miles of railway along the Stave River, near Vancouver, B.C., which was built by its predecessor, the Western Canada Power Co., and controls the Burrard, Westminster & Boundary Ry. and Navigation Co., which has a Dominion charter to build a system of electric railways with New Westminster as the centre point. The Dominion Parliament is being asked to authorize the Western Power Co. to operate the railway built by the Western Canada Power Co. as fully and as effectually as that company was authorized to do by the provisions of its act of incorporation of 1910. (Oct., 1916, pg. 424.)

**Winnipeg Electric Ry.**—We are officially advised that the company proposes to instal automatic electric track switching devices. Orders have been placed for a sufficient number for installation at the most congested points on the company's line. If the devices prove satisfactory in operation, they will be adopted as a permanent improvement. Other improvements have been considered, but definite steps for their adoption have not been announced. (Sept., 1917, pg. 368.)

## London Street Railway Passenger Fares.

The London St. Ry.'s application for permission to increase its passenger fares, as published in Canadian Railway and Marine World for March, was considered by the city's finance committee on April 11, when President C. Currie and Manager C. B. King represented the company. The mayor decidedly opposed the application and recommended the company to cut down operating expenses. One alderman suggested that the company should default in its obligation to the bondholders, to redeem \$35,000 of its bonds during each of the last ten years of its franchise, and said to the company's officials present: "Your funeral is our holiday." It was decided finally to ask the company to furnish detailed statements for several years past, and the committee's feeling seemed to be to submit the matter to a vote of the people. In the meantime the company will probably act on the mayor's suggestion, to reduce operating expenses and will curtail the present service. At a city council meeting held subsequent to the committee meeting referred to above, a committee was appointed to look into the company's assessment, with a view to increasing it.

In connection with its application, the company has been carrying on an advertising campaign in the local papers, discussing the whole matter in a fair and moderate spirit. Starting out with the statement that, while under the agreement the company is bound by the fare schedule fixed in 1895, which was then considered reasonable and gave profit; the fare is the same today, while the company has to meet expenses on the 1918 basis; it is shown that the company can give and the city get the best service only by co-operation between the two interests. The next point taken is that better track, better cars and better service are required, but that in order to get them the company must have a larger income than is produced by the present average fare

of 4c. It is then shown that an increased fare is necessary, because the cost of all material required for railway construction, maintenance and operation has largely increased since 1895, many things having advanced from 50 to 380% since 1914; while wages, which ran from 12<sup>1</sup>/<sub>2</sub>c to 15c an hour, have increased to from 23c to 28c, and may have to be further increased. The final argument is that money invested in the line is entitled to a return. The cost of the line is said to have been \$1,466,348.44 cash, raised about one half by bonds, and the remainder by stock. It is pointed out that the London & Port Stanley Ry. has to pay 5<sup>1</sup>/<sub>2</sub>% for its bonds, although it has the credit of the city behind it, in addition to its own. The London St. Ry. pays 5% on its bonds, while the shareholders have received an average of 5<sup>1</sup>/<sub>2</sub>% since 1895, including a stock dividend. All surplus earnings, which might have been divided among the stock holders, have gone into the line, and it is necessary to maintain the line in an "even moderate state of efficiency" to pay interest on a considerable floating indebtedness.

## Winnipeg Electric Railway's Annual Report.

The references to this company's annual report in Canadian Railway and Marine World for April were made from a press report, which was not altogether correct. The printed report, which had not been received, has since come to hand, and shows that the decrease in net income for 1917 was \$151,621.80, instead of \$91,621.80, as stated in the press report. Following are extracts from the official report:—

The net income, on the same method of accounting, shows a decrease of \$151,621.80 compared with 1916, notwithstanding the fact that the gross revenues for 1917 show an increase of \$27,840.20 over 1916. This is a disappointing statement, but so long as the materials required by the company in its operations continue to increase in price, and demands for increased rates of wages to employees predicated on higher cost of living have to be met, and the jitney question remains unsettled, no substantial improvement in net income can be expected. The directors believe, however, that the sentiment of the citizens of Winnipeg is favorable to a permanent settlement of the vexed question, and it will be the duty of the board to endeavor during the present year to so adjust any outstanding differences between the city and the company that the jitney and other matters may be speedily and satisfactorily arranged to all interests concerned. General business conditions in Winnipeg are improving, and if a satisfactory adjustment of the jitney question is reached at an early date, arrangements will be made to carry out certain improvements in the physical properties which have engaged the directors' attention for some time.

**Hull Electric Co. Wages.**—Employees of the Hull Electric Co., which operates an electric railway between Ottawa, Ont., and Hull and Aylmer, Que., have applied for a board of conciliation in connection with wages. G. D. Kelly, barrister, Ottawa, will represent the company.

An Ottawa Electric Ry. official is reported to have said that the company is prepared to deal with the question of having women conductors, if the state of the labor market should render such a step advisable.

## The Montreal Tramways Commission.

The Quebec Government has appointed the three members of the administrative commission which is to exercise control over the Montreal Tramways Co., under its new franchise, as detailed in Canadian Railway and Marine World for March, pg. 110. The appointees are: Jos. F. Saint-Cyr, Judge of the Court of Sessions, President; L. A. Herdt, D.Sc., E.E., Professor of Electrical Engineering, McGill University; and J. S. Archibald, architect, all of Montreal. The salaries are, for the President, \$7,500 a year, and for the two other commissioners, \$6,000 a year each. These salaries are to be paid by the company, which will also pay the salaries of the staff engaged by the commission and all other expenses that are reasonable. The commission is authorized to engage experts at the company's expense, provided the charges are not exorbitant. If they are so considered, the company can appeal to the Quebec Public Utilities Commission to have the expenses revised.

## The Toronto Railway Penalized for Car Shortage.

On the application of the City of Toronto, for the Ontario Railway and Municipal Board to enforce its order on the Toronto Ry. for the supply of additional cars, which was referred to in our last issue, the board ordered on April 19 that the company pay to the city \$24,000, being \$1,000 a day, from Mar. 26, when the act referred to below was passed, until the date of the board's order, in default of providing 100 additional cars, as ordered by the board. A stay of seven days was granted to allow the company to appeal.

The date by which the 100 cars had to be in operation, according to the board's original order, was Jan. 1, 1918, but the board pointed out some little time ago that it had not the power to inflict penalties. At the city's instance, a bill was introduced in the early part of the Ontario Legislature's recent session, providing that in default of the company complying with the board's order, the company should pay the city \$500 a day from Jan. 1, 1918, for each car supplied by the company less than the number agreed in the order, such penalty to continue in force from day to day until the full number of cars called for by the order had been put in operation. This bill was withdrawn at the government's request and a bill to amend the Ontario Railway Act was introduced by the Attorney General, containing, among others, the following clauses:—

"4. The Ontario Railway Act is amended by adding the following as section 262a:

"262a. (1) The Board, for the purpose of enforcing compliance with any order heretofore or hereafter made by it, requiring any railway company operating a railway or street railway in whole or in part upon or along a highway under agreement with a municipal corporation, to furnish additional cars or equipment for its service, in addition to any other powers possessed by it, may order such company to pay to the corporation of the municipality in which the company so operates, a penalty not exceeding \$1,000 a day, for non compliance with any such order;

"(2) An appeal from any such order or from the refusal by the board to make an order, shall lie to the Appellate Division

of the Supreme Court of Ontario at the instance of either the said corporation or the said company as fully in all respects as from the judgment of a judge at the trial of an action in the Supreme Court; and the judgment of the said Appellate Division shall be final and binding, and no further appeal shall be allowed;

"(3) Notice of such appeal may be given within ten days after the date of the order of the board, or of the refusal of the board to make an order, and the appeal shall be set down for hearing as provided by Rules of Court."

## Mainly About Electric Railway People.

F. L. Butler has been appointed Transportation Engineer, Winnipeg Electric Ry.

S. S. Oliver has been appointed Chief of Stores, Quebec Ry., Light & Power Co., Quebec, Que., vice H. G. Bosse, promoted.

S. S. Anderson,  
General Manager, Sandwich, Windsor & Amherstburg Railway.

J. J. Newell has been appointed Electrical Superintendent, British Columbia Electric Ry., Vancouver, vice W. H. Fraser, resigned.

H. G. Bosse, heretofore Chief of Stores, has been appointed Comptroller, Quebec Ry., Light & Power Co., Quebec, Que., vice H. K. Tennant, resigned.

W. G. Ross, Vice President, Dominion Park Co., Montreal, has been elected President, succeeding H. A. Dorsey, deceased. Mr. Ross is a director of the Montreal Tramways Co., and President of the Montreal Harbor Commission.

Thos. H. Smallman, Vice President, London St. Ry., died at London, Ont., Apr. 16, after a short illness, of pneumonia. He was born at Parsonstown, Tipperary, Ireland, in 1840, and came to Canada about 60 years ago, and was for a time a conductor on the old London & Port Stanley Ry. He was connected with several industrial, insurance and financial

companies, and was a member of the executive committee of the Canadian Manufacturers' Association.

R. Home Smith, of Toronto, has been elected President of the Buffalo, Lockport & Rochester Ry., the head office of which is at Rochester, N.Y. R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., and E. F. Seixas, Manager, Niagara, St. Catharines & Toronto Ry., are also directors.

H. N. Kittson, of Hamilton, Ont., who was appointed a member of the Ontario Railway and Municipal Board, when it was organized, in June, 1906, resigned last year, his resignation having been accepted by the Ontario Government June 5, 1917, although this fact was only made public recently. An unconfirmed press dispatch says that G. C. Wilson, M.P. for Wentworth, has been offered the position vacated by Mr. Kittson, and that he will accept it at the end of the Dominion Parliament's present session.

Sidney Smith Anderson, whose appointment as General Manager, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., was announced in our last issue, was born at Windsor, Ont., Apr. 14, 1881. From Oct., 1897, to Jan., 1898, he acted as wireman's helper, Clark Electric Co., Detroit, Mich.; Nov., 1898, to May, 1900, in test department, Royal Electric Co., Montreal; May, 1900, to Aug., 1901, student's course, Westinghouse Electric & Manufacturing Co., Pittsburg, Pa.; May, 1902, to 1908, foreman, Light Department, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont.; 1908 to 1915, Superintendent, Light and Power, same company; 1915 to Mar. 27, 1918, Assistant to General Manager, same company.

Charles Johnson, Engineer, Toronto & York Radial Ry., who has been elected a member of the Canadian Society of Civil Engineers, was born at Mildmay, Ont., June 13, 1881, and entered railway service in 1904, and for 6 months of that year, was chairman, rodman and instrument man, Canadian Northern Ry.; 1905 to 1910, Resident Engineer, same road, Parry Sound, Sudbury and Toronto; 1910 to 1911, Assistant Division Engineer, same road, East Toronto; 1911 to 1912, Division Engineer, Ottawa, Ont., to Portage du Fort, Que.; 1912 to 1914, Division Engineer of Construction, same road, North Bay, Ont.; 1914 to 1917, Assistant Engineer, Toronto-Hamilton Highway, and since 1917, Engineer, Toronto & York Radial Ry.

Allan H. Royce, Vice President, Toronto Suburban Ry., who died at Southern Pines, North Carolina, Apr. 15, aged 50, of Bright's disease, was a member of the firm of Royce, Henderson & Boyd, barristers, etc., Toronto, and was solicitor for the Toronto Suburban Ry. for many years. He also did a good deal of other legal work at different times for Canadian Northern Ry., and allied interests and for the C.P.R. He was also solicitor for the Rolls Royce Co. of England, builders of automobiles, airplane engines, etc., being closely related to some members of that company, and he represented it in negotiations with the U.S. Government. He was the first Secretary-Treasurer of the Canadian St. Ry. Association, having been elected at the inaugural meeting in Montreal, Dec. 20, 1904, retaining the position until July 31, 1907, when he resigned. He had been in poor health for several years and went south for a portion of each winter. He was a brother of Lt.-Col. Geo. C. Royce, General Manager, Toronto Suburban Ry., who was with him when he died, and brought his body to Toronto for burial.

## Electric Railway Notes Throughout Canada.

The Nipissing Central Ry. is contemplating buying two interurban car bodies.

Winnipeg Electric Ry. employees put in a demand on April 16 for a 10% all round increase of pay.

The Montreal Tramways Co.'s employees sent a deputation to the management April 17, to ask for an increase of wages. Consideration was promised.

The Hull Electric Co. has ordered one double truck steel sweeper, 46 ft. long over all, equipped with brooms and ploughs for double end operation, from Ottawa Car Manufacturing Co.

It is suggested, from Whitby, Ont., that the portion of the Toronto Eastern Ry., partially built between Whitby, Bowmanville and Oshawa, be completed and operated by automobiles with flanged wheels.

A coal oil stove in an electric locomotive on the Grand River Ry. in the C.P.R. yards at Galt, Ont., exploded April 7, setting fire to the locomotive and practically destroying it. The locomotive will be rebuilt.

A number of electric railway companies throughout Canada are aiding the Dominion and provincial governments' food saving campaign by carrying special advertising inside and outside their cars free.

Several of the municipalities interested have decided that they will not oppose the British Columbia Electric Ry.'s application to the Board of Railway Commissioners for authority to increase the rates charged for freight on its lines.

The "skip stop" policy is being advocated as a means of effecting a saving in the cost of operating the Regina Municipal Ry. It is stated that there are 15 or 16 blocks to the mile in Regina, and the cars stop at every one of them, even during rush hours.

The New Brunswick Legislature has changed the rule of the road, diverting traffic to the right, instead of to the left, which latter is still the custom in Great Britain. This will necessitate some changes in the construction of street cars operated in the province.

Regina Municipal Ry. Sunday traveling is increasing, according to a report made to the street railway committee, April 15. For the three months ended Mar. 31, the surplus earnings over revenue for Sunday traffic were \$402.29, against \$28.98 for the same period in 1917.

The Toronto Civic Ry., by Apr. 5, had five of the 13 double truck cars which were ordered last year, in service on its lines. It is expected that the last car of the order will be in service during July. The car bodies are being built outside and the equipment is being assembled at the railway's car barns in Toronto.

The Regina, Sask., City Council, on April 3, directed the increasing by 10% of the wages of all men in the employ of its street railway department who were in receipt of less than \$1,500 a year. Commissioner Thornton explained that in addition the men in the different classes had been advanced six months, which gave a further increase.

The Edmonton Radial Ry. has arranged to run a special car in connection with the arrival and departure of all the Edmonton, Dunvegan & British Columbia Ry. regular trains, and a special car and trailer to deal with the passenger and milk traffic brought in three times a week

by the gas car service on the E.D. & B.C. R. to and from Westlock.

City Commissioner Thornton is reported to have informed the Regina, Sask., street railway committee on April 10, that the only solution of the street railway financial problem is the operation of one-man cars, and he asked that the council give serious consideration to the question of applying to the Saskatchewan Legislature for power to operate them.

The Montreal Tramways Co. has entered into an additional contract with the Montreal Light, Heat & Power Co., to supply 6,000 k.w. for its peak load, for 18 months from Apr. 1. This power will be delivered at Hochelaga, William St. and St. Denis stations, and the company expects to be able to economize in coal consumption to the extent of 25,000 tons.

The Toronto Ry. Co.'s adjourned special meeting of shareholders was held Apr. 4, to pass a bylaw to increase the number of directors by two. The meeting was originally called for Feb. 26, but was adjourned, owing to the required number of shares not being represented. At the Apr. 4 meeting the bylaw was passed authorizing the number of directors to be increased from 7 to 9.

The Moose Jaw Electric Ry. is asking the Moose Jaw, Sask., City Council for some financial concessions. The company has not been able to earn a dividend for the past four years, and in addition to taxes, amounting to about \$2,000 a year, under the terms of the franchise, the mileage payment of \$1,000 a mile for single track, with \$500 a mile for second track, comes into effect.

The Calgary, Alta., City Council and employees of the Calgary Municipal Ry. are discussing a new wage schedule. A joint committee of aldermen and the commissioners has offered a 48c maximum scale, to be retroactive to Jan. 1, with a seven hour day for all spare men. There are a number of details about which there is considerable difference of opinion, but an agreement was expected to be reached by April 30.

As a result of the increased fare schedule recently put in force on the Regina, Sask., Municipal Ry., the city commissioners estimate that the deficit for this year on the operation of the line will be \$46,824.82. The estimated deficit for 1917 was \$55,874.76 and the actual deficit was \$63,898.99. The estimates for this year provide for an increase of \$10,000 in the cost of operation and of \$27,000 in the revenues. The income up to the present shows an increase of 21 1/2%.

The British Columbia Electric Ry. completed the 21st year of its existence April 3. Since April 3, 1897, the company has expended approximately \$46,000,000 upon its various power, lighting and electric railway undertakings in and around Vancouver, New Westminster and Victoria.

British Columbia Electric Ry. conductors and motormen sent a deputation to the British Columbia Government to urge their objections to any proposal to introduce one-man cars into the province.

The Quebec Ry., Light & Power Co. is stated by W. J. Lynch, General Manager, to have suffered considerable loss recently on account of the rioting in that city. Apart from the damage to several passenger cars, there was material loss of revenue, owing to the cessation of the car service on certain routes, by order of the authorities, and also through a falling off

of patronage during the trouble. The company is said to be making a claim against the Militia Department for compensation for losses sustained by the stoppage of traffic in different parts of the city, and for rental of certain of its buildings which were occupied by troops.

The Regina, Sask., City Council had under consideration on April 3, a special report from the street railway committee upon the railway situation. The committee recommends that the office of Superintendent be abolished, and a traffic manager be appointed to look after the operation of cars, and that a head clerk be appointed to look after the office work. The Superintendent's salary is \$2,250 a year, and the two officers to be appointed would each be paid less than that amount. The report dealt with a number of other matters, and as Commissioner Thornton had some further information, the report was referred back to the committee for further consideration.

On an application for a betterment of the service on the Toronto & York Radial Ry., Scarboro Division, the Vice Chairman of the Ontario Railway and Municipal Board stated that the board could not make any order unless there was some agreement between the company and the city regarding the portion of the line within the city limits. The Toronto Works Commissioner said that the company was operating that portion of the line pending the completion of an arrangement. C. L. Wilson, Assistant Manager, T. & Y.R.R., stated that six cars were being operated, and another four would be put on shortly. The company lost some cars in the recent fire at its Scarboro barns.

The Quebec Public Utilities Commission is reported to have decided that it would not be advisable at present to compel the Montreal Tramways Co., and other companies having wire and cable lines carried on poles on Montreal streets, to transfer them to the conduit system provided by the city. The reason for this decision is said to have been the high cost of the materials required and of labor, while it is also suggested that even if the transfer were made, the service could not be improved, the only advantage being the clearing of the streets from poles and wires. The area which the city desired to have cleared is enclosed by Notre Dame, St. Lawrence, Craig and McGill streets and Victoria Square. The city's conduit system was completed in 1915.

Winnipeg City Council has, under the terms of recent provincial legislation, passed by a vote of 12 to 5, a resolution authorizing the preparation of a bylaw to prohibit the operation of jitneys in the city, the prohibition to begin May 1, and for an agreement with the Winnipeg Electric Ry. in connection with improvements to be made in the service as a result of the prohibition of jitney traffic. The agreement has been prepared and was discussed at meetings of the council on April 11 and 15, when further discussion was adjourned. The principal point of division is a section reading: "The company agrees with the city that it will not at any time apply for an increase in the fares for carrying passengers on its system." The matter came up at a meeting of the city council, April 19, at which it was reported that neither side would recede from the position taken up upon the agreement as a whole is to stand or the fare question. It is stated that fall by the fate of this section.

Sir Henry Drayton, Power Controller, has issued an order for the London Electric Co., which closed down its plant Apr. 1, to restart power production to supply 1,000 h.p. for the London St. Ry. The London Electric Co. some time ago decided to go out of business, leaving the field to the local hydro electric commission. Owing to the extraordinary demands for power at present, it has been considered advisable to utilize all available power plants. The hydro electric commission being relieved of supplying power for the London St. Ry., is required to take over the customers formerly supplied with light by the company, and if it has any surplus power available, it is to supply it to the London St. Ry., the London Electric Co. merely making good any deficiency.

The British Columbia Electric Ry. Employees Magazine, made its appearance at Vancouver April 1. At present the magazine, which is to be issued monthly, is being circulated among the employees of the British Columbia Electric Ry. and Vancouver Gas Co., engaged in the offices, the power plant, substation operators and agents in Vancouver and the mainland territory. Later on it will be circulated among the conductors, motormen and linemen, and the Victoria employees of all classes. The idea of having an office paper originated with the executive committee of the office association, and was taken up with the management, with the result that the company placed the magazine at the disposal of the employees "in which to print news and exchange views on current affairs about the company." The April issue is introductory, one-fourth of the space being taken up with a sketch of the company's history, three pages are given over to news and the rest is miscellaneous matter.

## Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	7 mths. to Jan. 31, 1918	7 mths. to Jan. 31, 1917
Gross	\$559,569	\$493,315
Expenses	388,407	362,836
Net	171,162	130,479

Cape Breton Electric Co.—

	2 months to Feb. 28, 1918	2 months to Feb. 28, 1917
Gross	\$36,294.55	\$32,010.16
Exp	28,999.16	19,445.02
Net	7,295.39	12,565.14

London & Lake Erie Ry. & Transportation Co.—It is reported from London, Ont., that the question of the city purchasing the whole or part of this electric railway will be reopened shortly.

London Street Railway.—

	3 mths. to Mar. 31, 1918	3 mths. to Mar. 31, 1917
Gross	\$38,320.41	\$35,705.10
Net	16,583.20	9,955.47
Exp.	27,737.21	25,749.63

Regina Municipal Ry.—

	1918	1917
Receipts for March	\$22,490.93	\$21,175.27
Passengers carried	453,592	477,553

Toronto Ry., Toronto & York Radial Ry., and allied companies:—

	Jan., 1918	Jan., 1917
Gross	\$1,068,319	\$1,002,469
Expenses	590,657	531,668
Net	477,662	470,801

Winnipeg Electric Ry. and allied companies:—

	Jan., 1918	Jan., 1917
Gross	\$334,642	\$319,945
Expenses	255,850	231,423
Net	78,792	88,522

The net for January, after deducting fixed charges, was \$21,208.81. The gross earnings for February were \$298,208.81. The gross earnings for February were \$298,898.63; net after operation, \$71,402.95; surplus after fixed charges, \$15,557.97.

## Hamilton Street Railway Wages.

Some weeks ago, the Hamilton Street Railway's conductors and motormen applied for an increase in wages, and for certain other concessions. All the points at issue were settled, by negotiation between the company and the men, except the rate of wages, which the company offered to submit to arbitration. This offer was accepted by the men and application was made to the Minister of Labor for a conciliation and investigation board, the company selecting as its representative S. F. Washington, K.C., of Hamilton, and the men W. D. Robbins, Secretary, Toronto St. Ry. Employees Union, and one of the Toronto city controllers. County Judge Livingston, of Welland, was selected as the third arbitrator.

The wages heretofore in effect are: 1st year, 22c an hour; 2nd year, 24c; 3rd year and after, 28c, with a war bonus of 2c in addition.

The rates asked by the men are: 1st six months, 36c; 2nd six months, 38c; 2nd year and after, 42c.

We are advised that the arbitrators, on Apr. 25, unanimously agreed to recommend a settlement at following rates:—1st year, 30c.; 2nd year, 34c.; 3rd year and after, 37c. The men accepted the award at a mass meeting that evening.

## Misrepresentations about Cleveland Electric Railway Fares Corrected.

The electric railways of New York State special committee on ways and means to obtain additional revenue has issued the following circular:—"A number of newspapers, in commenting upon the New York Court of Appeals' decision in the 6c fare case, have referred to fares in Cleveland, Ohio, as demonstrating that service can be given for 3c, with an additional charge of 1c for a transfer. The committee believes that this statement should be denied wherever it appears. The fare in Cleveland today is 4c, with a 1c charge for a transfer, no rebate, and there is every prospect that this rate will be further increased. It should also be remembered that this low fare does not apply to the entire system, and that in some instances fares as high as 8c are charged.

"The increased cost of operation has hit Cleveland as it has every other electric railway system, and fares have been increased three times since Nov., 1917. Fares in Cleveland are regulated by what is known as the 'interest' fund, into which goes all receipts remaining after operating expenses, maintenance, depreciation and taxes are paid. When this fund exceeds \$700,000, the fares are automatically lowered; when it drops below \$300,000, they are automatically increased. In Nov., 1917, they fell below \$300,000 in the fund and in spite of two increases in fare, in March of this year, it had fallen to \$120,000, necessitating still another increase. It is the opinion of those informed as to the situation that this latest increase will still prove insufficient and that a further advance will be necessary."

## Legislation Respecting Passing of Electric Railway Cars.

The Motor Vehicles Act, Revised Statutes of Ontario, 1914, chap. 207, as amended by the Motor Vehicles Amendment Act, 1916, chap. 47, provides as follows:

"15. When a motor vehicle meets or overtakes a street car, or a car of an electric railway, which is operated in or near the centre of the travelled portion of the highway, which is stationary for the purpose of taking on or discharging passengers, the motor vehicle shall not pass the car, or approach nearer than 6 ft. measured back or forward from the rear or front end, as the case may be, of the car, on the side on which passengers are getting on or off, until such passengers have got on or got safely to the side of the street as the case may be."

The Ontario Legislature, at its recent session added the following to the Motor Vehicles Act:—

"15a. No person in charge of a motor car, or the car of an electric railway operated in or near the centre of the travelled portion of the highway, which is stationary or in motion, shall pass on the left hand side of such car, having reference to the direction in which such car is travelling."

Sandwich, Windsor & Amherstburg Ry. Wages.—As stated in Canadian Railway and Marine World for April, a board of conciliation was appointed to consider disputes between the Sandwich, Windsor & Amherstburg Ry. and its employees. The board, which consisted of M. G. Campbell, chairman; E. G. Henderson, representing the company; and F. C. Kirby, representing the men, has reported recommending an advance in wages of 7c an hour, making them as follows: First six months 35c, second 6 months 37c, 2nd year 38c, 3rd year and afterwards 40c. An additional allowance of 1c an hour, exclusive of overtime, is to be paid all classes of conductors and motormen, in lieu of uniforms. Caps and badges are to be supplied free by the company, and all men to be in suitable uniform, clean and tidy when on duty. A Windsor press dispatch says the board refused the men's demands for recognition of their union.

London St. Ry. Wages.—The London St. Ry. employees applied to the company at the end of March for an increase in wages. A London press dispatch says that the increase asked is about 10c an hour, that the present wages of conductors and motormen range from 23c to 28c an hour, and that the increases asked would make them range from 32c to 38c. Other concessions were also asked. The management pointed out to a deputation of the men, that if it had paid for 1917 a dividend of \$19,124.40, which would have been a just charge against earnings, there would have been a deficit of \$24,827.60 on the year's operations, and that it was not in a position to pay higher wages. The matter is still unsettled.

Electric Railway Fares in Quebec. Canadian Railway and Marine World for April contained particulars of the Quebec Ry., Light & Power Co.'s application to the Quebec City Council, for permission to increase its street railway fares and gas rates. The application was read at a city council meeting on Mar. 15 and was referred to the finance committee. Owing to the committee's time being considerably taken up with changes in taxation and preparation of the estimates for the ensuing year, it will probably be taken up by the committee early in May.

# Marine Department

## The Minister of Marine's Explanation of the Dominion Government's Shipbuilding Programme.

In the House of Commons, on April 4, when the Naval Service estimates were being considered, Mr. Lemieux, M.P. for Maisonneuve, asked the Minister of Marine, Mr. Ballantyne, to give particulars as to the programme for naval construction in Canada. In replying, the Minister said:

The Government's programme is not for naval ships, but for mercantile marine ships. During the past year, there has been a certain type of naval ship built at various yards in Montreal and throughout Canada for the Imperial Government and also for the Canadian Government. I do not think it would be right for me to enter into details as regards the type of naval ships that have been so built, or as regards those that are under construction. Suffice it to say that I am very glad to make known that all the war vessels which have been built in the various yards of Canada, including that of Canadian Vickers, Ltd. at Montreal, have been constructed equally as well as they could have been in the old country, or in any other land.

At present there are 14 shipyards for building steel ships in Canada. If all of these yards were unoccupied at present and were all engaged building for the Canadian Government, the standard type of steel ships, the annual tonnage output would be 250,000 tons. When I had the honor of being called to the portfolio of Marine and Fisheries and Naval Service, I found that the Dominion Government was advancing money through the Imperial Munitions Board, under the direct management of Sir Joseph Flavelle, to keep all of the steel shipyards in Canada fully occupied in building ships for the mother country. It seemed to me, and also to the government when I brought the matter to its attention, that the time was opportune for Canada to embark upon the building of steel ships, as a national, permanent policy, and, after giving the matter very careful consideration for some months, and working out a comprehensive programme on good, sound, business lines, I brought the proposal before my colleagues in the government, and it was unanimously decided, that after the Imperial Munitions Board contracts were completed, all the berths in all the shipyards of Canada which are building steel ships would be utilized to the full in building steel vessels for the Canadian Government.

Our programme is that, as these berths become vacant and the Imperial Government ships are completed, they are taken up by the Canadian Government. At present we are having two ships built by Canadian Vickers, Ltd., of Montreal, one of 8,100 tons d.w. capacity, an 11-knot ship; and another of 4,350 tons. I have every hope that this autumn both of these vessels will be put in commission for the Canadian Government. It will be the first time in the history of Canada that sea going vessels as large as the two I have referred to have been built in Canada, by Canadian money, and owned by the Canadian Government; and I am very glad to know that members on both sides of the House join in favoring the policy that the Canadian Government is undertaking in the building, permanently, of steel vessels to keep the present yards

going. I hope a little later on, as the finances of the country become less strained, that the appropriation which is allotted to my department for building steel ships will be very much greater than it is at present. In addition to the two ships that are being built by the Canadian Vickers for the Canadian Government, another ship of about 5,000 tons is being built by the Wallace Shipyards at North Vancouver. Another vessel of 3,550 tons is being built by the Collingwood Shipbuilding Co. at Collingwood, Ont. Vessels that are being built in the yards on the great lakes are necessarily limited, as to size and tonnage, so as to conform to the depth of water in the canals. Ships that are being built in any of the yards on the great lakes cannot draw more than 14 ft.

Hon. C. C. Ballantyne, M.P.  
Minister of Marine and Fisheries.

of water, which necessarily needs a limitation as to size in the case of these vessels.

The ships are ordered at so much a ton. I do not believe, and neither does the government, in having ships built on a percentage basis. I would not like the House to think that I accept the first price that is given to me by any of these shipbuilders, at so much per ton for a completed ship, according to the design, blue prints and specifications of the government, for I certainly do not. In the department we have some very able men. Mr. Duguid, the Naval Architect, is a man who has had a splendid training, extending over many years in some of the largest shipyards in England. We also have expert men possessing a thorough knowledge of marine boilers and marine engines, as well as many expert draftsmen.

There are three different types of Can-

adian ships under construction: The 8,000 tonner, the 5,000 tonner, and the smaller sized ship of 3,550 tons. The technical officers of my department estimate what the cost of a ship will be. We also ascertain what a similar ship—a vessel of the same design, class and tonnage—is being built for in the United States and in Great Britain. With this information from both the countries referred to, and our own estimated cost, we have a very excellent check on Canadian shipbuilders, which prevents them charging us an unfair or unreasonable price for the vessel to be constructed. These vessels are built at so much per completed ton according to the specifications and plans of the Marine Department.

As the berths to which I have alluded become vacant from time to time they will be immediately taken up by the Canadian Government, and the existing steel shipbuilding plants throughout Canada will be occupied to their full capacity. I cannot state how many ships are being built by the Imperial Munitions Board at present, but the Prime Minister gave that information to the House on the opening day of Parliament. (This was published in Canadian Railway and Marine World in March and our information was confirmed by Sir Robert Borden in the House of Commons on Mar. 19.) The Canadian Government and the Department of Marine have absolutely nothing at all to do with the Imperial Munitions Board, so far as relates to our shipbuilding programme, and any ships that the latter has ordered are for Imperial account. The duty of the Imperial Munitions Board is to see that they are finished and paid for; and the Canadian Government assumes no responsibility for any of the ships that are under construction at present for the Imperial Munitions Board.

One of the first difficulties that confronted me when considering the adoption of a permanent shipbuilding policy, was that of steel ship's plates. There is no duty on ship's plates coming into Canada. There has not been, and there is not at present, a rolling mill in Canada for the manufacture of these plates. If Canada is to become a shipbuilding nation, as I see no reason why she should not, it is necessary for her to be self contained in so far as concerns all the material that is required for building these mercantile ships; and one of the first things that I set about to try and obtain for Canada was a large plate mill, so that all the plates required for the ships that we are now building, and I hope also for a very much larger programme later on, would be made in our own country. I took the matter up with the large steel manufacturers. I did not confine myself to the manufacturers in this country, but also went to the U.S. steel companies, and asked them what kind of proposition they could place before the Canadian Government in order that we would secure what steel plates we required here. After several months of negotiations with the several steel companies in Canada and in the U.S., the best and most favorable proposition I could get, and the one that was accepted by my colleagues, was that of the Dominion Iron & Steel Company, of Sydney, N.S. There being no duty on

ship's plates, we could not expect any large industry, either in Canada or in the U.S., to come to this country and undertake the erection of a plant for rolling ship's plates, that would involve at least \$5,000,000 capital expenditure, without any protection whatever. These are not days when the policy of protection need be discussed, and as we are more concerned with the prosecution of the war than with tariff matters, I did not raise the tariff question with my colleagues at all, nor do I intend to do so in this house. We went about the task in another manner, which I hope will receive the unanimous approval of the house. In brief, the contract that I have concluded with the Dominion Iron & Steel Co. was made on the following basis: The Dominion Government has guaranteed to the company that they will have a minimum tonnage of 50,000 tons of ship plates a year, extending over five years, making in all a total of 250,000 tons. The price per 100 lb. for the moment is \$4.15. The safeguarding of the public interest, so far as the price is concerned, from time to time, has been arranged on the following basis: Ship plates are made from steel ingots, which in turn are made from pig iron, the pig iron being produced from iron ore. The Dominion Iron & Steel Co. own and operate within British territory facilities to produce all the raw materials that I have just mentioned as being required for the rolling of ship's plates. We have taken, as a basis to adjust this price every six months, the price per ton of steel ingots. The price at the time the contract was entered into for steel ingots was \$25.50 a ton. The price of plates to start with is \$4.15 per 100 lb., based on an ingot price of \$25.50 a ton. These prices were agreed upon after long weeks of negotiation, and I was accused, in a friendly way perhaps, by President Workman, of the Dominion Iron & Steel Co. of driving too hard a bargain with it on behalf of the people of Canada. I do not think that is exactly so, because I consider the contract we have entered into is eminently fair to the company as it is also fair Canada. The mill will take about 15 months to be erected, and Mr. Workman estimates that it will cost about \$5,000,000. The government does not put up one cent of money for the erection of this mill. The government was pressed to advance this money, but I declined to make such a recommendation to my colleagues, because I considered that the Dominion Iron & Steel Co. is strong enough to put up the \$5,000,000 required for the plant, and I, therefore, recommended to my colleagues that we do not advance the money. Accordingly, the company is going to erect this plant at its own cost.

The company claims that within 12 to 15 months it will be turning out all the ship plates that Canada may require. The company estimates that the capacity of the mill will be 150,000 tons of plate a year. In addition to ship plate, it is estimated that there are about 50,000 tons of other plate, such as boiler plate, used in Canada yearly. There is no duty on boiler plate, nor on ship plate. This mill will be a new national industry for Canada, and not only will it turn out the ship plates which we shall require here, and and which, I think, even with the existing yards we have, will run something like 75,000 tons a year, but there is no reason why the Dominion Iron & Steel Co. should not be able to get orders for, if not the whole, at least a part of the 50,000 tons of plate used for other purposes than for ships.

To follow along the policy of safeguard-

ing the public interest so that we shall not be paying too much for ship plate, after the mill has run for six months, turning out the plate, the price of the plate will be determined on the fluctuating price for steel ingots, based on a price of \$25.50 a ton. We were also able to arrange with the company, also with a great deal of reluctance on its part, that no matter how high the price of steel ingots goes, in no event will the price of steel plate cost the government any higher price than \$4.25 per 100 lb. If the price of steel ingot drops over a period of six months, the price of plate will be lowered accordingly. We are not going to take the company's say-so as at what its cost the company's say-so as to what its cost tract that the government shall send expert accountants, whom we shall name, to go over the company's books and costs, and if the price of steel ingots has fallen during the period of six months they will see to it that the government gets a proportionate reduction in the price of steel plates. Those are the essential points in the contract into which we are about to enter. The further particulars will be known when the order in council is laid upon the table.

There is another clause in the contract into which we are about to enter, viz., that on all the plant and machinery that the Dominion Iron & Steel Co. will require to import into Canada for the ship plate mill they will pay duty, and that duty will afterwards be refunded. The government is making only two concessions: first, we are guaranteeing 250,000 tonnage for five years, and secondly, we are remitting the duty on the machinery and material the company will require to bring in for its mill. In order that the ships which the government is ordering shall not cost too much money, I am happy to be able to say that through the splendid support of the British and Canadian War Missions at Washington, and through the generosity of the U.S. Government, we have been able to buy 80,000 tons of steel plate in the U.S. on very favorable terms, at a price as low as the U.S. shipbuilders are paying. This amount will keep our plants operating during the balance of 1918 and during the whole of 1919, so that our supply of steel plate is assured until such a time as Canada is able to roll her own plate.

I was glad to hear Mr. Lemieux commend the government for embarking on this policy. I will not weary the house by emphasizing the necessity for ships, for we all know to our sorrow the great loss of tonnage that occurs daily, not only to the British Empire, but to all the allies and to neutral countries as well, through the operations of German submarines. It follows that the countries that are well supplied with ships after the war will progress more rapidly than the countries which are short of ships. The ships which are being built by the Imperial Munitions Board, and are being financed by Canada, will not be under the Dominion Government's control, but are being built for the Imperial authorities, to be owned and operated by them as they see fit. But the ships that Canada is building now, and the ships she will build in the future, will be absolutely owned and controlled by Canada and will be used in the most effective way for the prosecution of the war. We hope also to use these ships for carrying the products of our fields, mines and forests across the seas to the various countries with which I hope Canada will later be doing a large export trade. Without the ships, Canada would be in a very unfortunate position. Almost daily I am

receiving requests from various interests in this country for ships; the people are almost begging for them. We require ships for our coal trade, we require ships to carry farm products, and we shall require ships to work in conjunction with the government-owned transcontinental railways. No definite railway policy has been worked out, and I merely mention the railways in connection with the steamship services. Canada already owns the Canadian Government Railways and the Canadian Northern Ry., and there may come a time when she will want ships on the Great Lakes and on the Atlantic and Pacific oceans, to act as feeders for the national transcontinental railway system. I have no hesitation in saying that in my opinion this policy that Canada has embarked on with regard to the building of ships is a wise and safe one. Not only will the ships be under the government's control, to be operated by it as it sees fit, but if necessary they can be rented or sold, and there are many other things that we could do with them, so I consider our policy is a very safe one in the national interest.

Mr. Lemieux said something about neutral ships. The Canadian Government, of course, is confining its efforts entirely to ships of Canadian registry. We intend to keep our yards busy with Canadian registered ships only—ships for the Canadian Government. A large number of wooden ships have been built by the Imperial Munitions Board for the Imperial authorities, but it is not the intention of the Canadian Government to have any wooden ships built. I am not prepared to express any opinion for or against wooden ships, except that with the money available for shipbuilding in Canada at present it seemed to the government the wisest policy to invest that money in steel ships only. The wooden shipbuilding yards in different parts of Canada have many opportunities at present for building wooden ships. While they cannot build wooden ships for the Dominion Government, they have every opportunity of building wooden ships for private interests for Canadian registry, and some of the yards are now working on very large orders for wooden ships for allied and neutral countries.

Mr. Lemieux spoke, also, of the necessity of retaining the skilled and technical workers required for building ships in Canada. Everybody is agreed—this House, the people of Canada and of the British Empire, and all our allies—as to the necessity for ships, ships, and more ships, and although the operation of the Military Service Act does not come under my jurisdiction, I can say that the representations that have been made, and which will be made in the future, to the proper tribunals for the exemption of these men, will be given every consideration, and care will be taken to safeguard the interests of this country and of the Empire by seeing that the necessary number of men are retained in the shipyards to carry out the Dominion Government's programme.

E. G. Power, M.P. for Quebec South, said that as the representative of a constituency which at one time was the centre of the wooden shipbuilding industry in Canada, and before giving his cordial approval to the government's plan of steel shipbuilding, he would like to be informed whether the Minister has made a full investigation into the possibilities of reviving the wooden shipbuilding industry, and whether or not experts had given it as their considered opinion that wooden ships could not be used to increase the world's

tonnage with the same good effect as steel ships.

The Minister said in reply:—The government and I, as the Minister charged with the responsibility of seeing that the government's shipbuilding programme is carried out, looked very carefully into that question, but the government's policy being only to keep the steel shipbuilding yards in Canada busy, our financial ability will not permit us to go beyond that. Mr. Power will agree that, as a business proposition, and as a national proposition, bearing in mind that these ships are being built not for today only, but for the future, it is a wiser policy for Canada to put her money into steel shipbuilding than to put it into wooden ships. I am not saying anything derogatory to wooden ships, but the speed of a wooden ship is very much less than that of a steel ship, her carrying capacity is less, and the wooden ship is debarred from the submarine zone, because her speed, being so slow, she presents a very much better target for submarine torpedoes. But the latter argument is not the one that caused the government to go in for steel shipbuilding. The other arguments which I have presented carried more weight.

The member for Queens and Shelburne, N.S., Mr. W. S. Fielding, said:—I think the Government should be congratulated upon giving its attention just now to steel shipbuilding, which of course does not necessarily imply that the government lacks appreciation of the importance of wooden shipbuilding. My own judgment is that we do not need any particular stimulus for wooden shipbuilding in our country. It is an art with which many of our people are quite familiar. I do not know whether there is a revival in the ancient city of Quebec of the great art of wooden shipbuilding, but in the Maritime Provinces there is a very large measure of activity all along our coast. In my own constituency several wooden ships are being built. I am afraid the conflict between iron and wood and steel was settled some years ago, when, in the age of progress through which we were passing, the fact had to be recognized that the wooden ship must give way to the iron ship, and the iron ship in turn must give way to the steel ship, and by and by we will return to those conditions, when the large wooden ships will hardly have much chance in competition with the large steel ships. There has been in the past, and I believe there will be in the future, quite a demand for wooden ships, and I believe the conditions that will exist at the close of the war, and for some years afterwards will be such that there will be large opportunity for the wooden shipbuilders of the country to engage in their enterprise. So that I feel that, in giving the preference to steel shipbuilding, as the Minister is doing, there is no danger of any injustice being done to the wooden shipbuilding industry. I believe that industry will flourish for some years to come without any particular aid from the government. Steel shipbuilding is, in a measure, a new industry here. It has been carried on in a small way, but owing to the very fact that the Minister has stated: that we had no plate mill in the country, we could not expect to engage in the enterprise in a very large way.

The Minister added: While at present I regret that there are no steel shipbuilding yards in the Maritime Provinces, and while our programme is limited to the amount of the expenditure we can afford to allocate for shipbuilding, I have been giving a lot of attention during the last few weeks, and so have my colleagues, to

the question of having a large steel shipbuilding industry located somewhere in the Maritime Provinces, so that steel ships may be made there, as well as in other parts of the Dominion.

In answer to a question by Mr. Lemieux as to whether there would not also be rolling mills at Montreal, the Minister said: There is no reason why rolling mills should be confined to any one particular province, but it is not an attractive business proposition at present. There are not many financiers, or industrial men, in this country who want to put \$5,000,000, or even \$3,000,000, into a plant that has absolutely no protection whatever. If any other group of financiers wishes to enter into the rolling of ships' plates, either in Montreal or in any other part of Canada, I will not say that the government will give them the same assistance that we have found it necessary to give the Dominion Iron & Steel Co.—I think members will agree that it was necessary to do that to get the first mill started—but if any other group of financiers wish to start into the rolling of ships' plates without any duty, the government will be very pleased indeed to see them do it.

Jos. Read, M.P. for Prince Edward Island, said: I had the pleasure of visiting British Columbia recently, and while there went through one of the shipyards that the Minister stated he has given a contract to, the Wallace Shipyards at North Vancouver. I saw there the most marvellous development of shipbuilding that can possibly be found in the world. I stood in that shipyard and saw the workmen moulding the plates for the building of ships. One of the most intricate pieces of work in connection with shipbuilding is the making of the bilge plates of a steel ship. Four men were handling that plate. Not a blow was being struck, not a bit of human muscle was being exercised, no brawn was being used except in simply moving the plate along to receive the pressure that was coming from the mountain that stood within view of the very men that were handling the plate. There they were, drawing energy from "white coal" which was generated from a mountain lake, and they were moulding that plate into that intricate shape, ready to put on the ship's bottom, without using a mallet, a chisel, or a maul. It was a marvellous thing, and it showed that the people of British Columbia, at any rate, have all the necessary elements to compete with anything in the world in the building of ships. I found that not only were they moulding plates by means of electrical energy, but they were cutting off their great beams with an instrument just like a pencil, following a line, cutting off great beams, 6 in. square, with a jet of electric flame, and the acetylene gas that is used in connection with it. All the riveting and that sort of thing is being done by the same power. There is no doubt in the world that we can build ships in Canada. We built them before. There was a time in my history, in the early sixties, I think, when Canada—little undeveloped Canada—stood second, or, at any rate, third, among the whole of the nations of the earth in point of tonnage. And, during those years the men who went down to the sea in ships from the Maritime Provinces and the Province of Quebec were second to no men in the world. They were first. Very few sailors amongst them, because they were not very long at the business, but they developed to such a marvellous extent into officers that one would think they were all precocious boys. I have seen young men, taken out of the green woods in

Prince Edward Island, in two years' time become masters of square rigged ships in the foreign service; they were the greatest successes that any country ever produced. Anything that the Minister can do to build up a mercantile navy I am sure will be to the interest of Canada as a whole, as well as to the interest of those centres which have the good fortune to have the industry established amongst them.

Mr. Johnstone, M.P., asked the Minister if he was experiencing any difficulty in getting shipbuilders in Canada to accept contracts. A gentleman of prominence in marine circles had stated that shipbuilders were not accepting contracts from the Government as readily as they might on account of the exacting terms of the contracts.

The Minister replied:—It has not come to my notice that we have had any difficulty at all in placing orders for steel ships in Canada. Whenever the berths become vacant, we find the shipbuilders eager and anxious for business. It has not been brought to my notice that there is any condition such as Mr. Johnstone has mentioned.

The Algoma Central Steamship Line, Sault Ste. Marie, Ont., has purchased the s.s. William S. Mack, recently owned by the Lake Erie Transportation Co., Cleveland, Ohio, and has had her name changed to Home Smith. She was built at Lorain, Ohio, in 1901, on the channel system, with steel tank top where no ceilings are fitted, 3 watertight bulkheads, 2 non-watertight bulkheads, steel boiler house, and steam pump well, and is equipped with electric light. The propelling machinery consists of triple expansion engine with cylinders 20, 33½ and 55 in. diam. by 40 in. stroke, 1,000 i.h.p. at 80 r.p.m., supplied with steam by 2 Scotch boilers 12 ft. 10 in. by 13 ft. at 175 lb. Her dimensions are: length 346 ft., breadth 48 ft., depth 28 ft.; tonnage, 3,720 gross, 2,785 register.

Regulations re Outturns of Grain Cargoes.—Up to the time of writing, Apr. 22, no announcement has been made as to the Grain Commission's regulations governing allowances for the regulation of overages and shortages in grain cargoes, for the current season. The regulations in force last year provided for a fixed contribution of one-sixth of a bushel per thousand by the loading elevator, and a quarter of a bushel per thousand by the vessel, and on this basis, the unloading elevator assumed the risk of shortage and took any surplus that might occur. Some protest was made by the elevators this year, but after a general consideration of the matter, it was decided to leave it with the Grain Commission, and regulations are being devised to meet the situation.

U.S. Vessel Building on Great Lakes. A Cleveland, Ohio, press dispatch states that the U.S. Emergency Fleet Corporation has ordered from the American Shipbuilding Co., 66 steamships for salt water service, for delivery in 1919, at an estimated cost of \$50,000,000; the vessels to be of full Welland Canal size, but 60 of them to have a somewhat greater depth of hold. The dimensions are given as follows: length 261 ft., breadth 45¼ ft., depth of six, 22.5 ft., and of the balance, 28 ft. 2 in.; tonnage, deadweight, six of 3,500 tons, sixty of 4,200 tons.

Pilotage Tender for Halifax.—The Marine Department is on the look out for a pilotage tender for Halifax Harbor, N.S., the purchase of which was recommended recently by the commission which investigated pilotage conditions there.

# Steam and Sailing Ships Under Construction Throughout Canada.

Following are particulars of shipbuilding reported in progress at Jan. 31. The figures given in each case represent the gross tonnage.

## Steamships, Atlantic Coast.

Canadian Vickers, Ltd., Montreal, 2 cargo steamers, 8,200, steel; 1 dredge, 2,360, steel; 7 trawlers, 1,750, steel; 15 drifters, 1,875, wood.

Davie Shipbuilding & Repairing Co., Levis, Que.—1 car ferry, 5,000, steel.

Dowling & Stoddart, Port Clyde, N.S.—1 gas boat, 27, wood.

Grant & Horne, St. John, N.B.—1 cargo steamer, 2,800, wood.

Joseph Matte, St. Methot, Que.—1 tug, 18, wood.

Marine Construction Co. of Canada, Ltd., St. John, N.B.—1 auxiliary schooner, 750, wood.

John McLean & Co., Halifax, N.S.—1 tug, 320, wood.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.—1 cargo steamer, 3,000, steel.

Quebec Shipbuilding & Repairing Co., St. Laurent, Que.—2 cargo steamers, 2,600, wood.

Quinlan & Robertson, Quebec, Que.—4 cargo steamers, 6,400, wood.

Total, Atlantic coast—12 steel, 20,310 tons; 26 wood, 14,790 tons. Grand total, 38 steamships, 35,100 tons.

## Steamships, Great Lakes.

British-American Shipbuilding Co., Welland, Ont.—2 cargo steamers, 4,700, steel.

Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—4 cargo steamers, 9,600, steel.

Collingwood Shipbuilding Co., Collingwood, Ont.—3 cargo steamers, 7,200, steel.

Great Lakes Dredging Co., Fort William, Ont.—1 cargo steamer, 1,700, wood.

Midland Shipbuilding Co., Midland, Ont.—3 cargo steamers, 6,000, wood.

Polson Iron Works, Ltd., Toronto—7 cargo steamers, 16,450, steel; 10 trawlers, 2,640, steel.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—6 cargo steamers, 12,091, steel; 6 trawlers, 1,530, steel.

Thor Iron Works, Ltd., Toronto, Ont.—1 cargo steamer, 2,347, steel; 2 trawlers, 540, steel.

Toronto Shipbuilding Co., Toronto—2 cargo steamers, 6,000, wood.

Total, Great Lakes—41 steel, 57,188 tons; 6 wood, 13,700 tons. Grand total, 47 steamships, 70,888 tons.

## Steamships, Pacific Coast.

Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.—4 cargo steamers, 6,800, wood.

J. Coughlan & Sons, Vancouver, B.C.—2 cargo steamers, 11,500, steel.

Foundation Co., Victoria, B.C.—3 cargo steamers, 6,300, wood.

William Lyall Shipbuilding Co., Vancouver, B.C.—4 cargo steamers, 6,800, wood.

New Westminster Construction Co., New Westminster, B.C.—4 cargo steamers, 6,800, wood.

Pacific Construction Co., Port Coquitlam, B.C.—2 cargo steamers, 5,000, wood.

Wallace Shipyards, Ltd., North Vancouver, B.C.—4 cargo steamers, 17,500, steel; 1 freight and passenger steamer, 5,500, steel.

Western Canada Shipyards, Ltd., Vancouver, B.C.—3 cargo steamers, 3,900, wood.

Total, Pacific coast—7 steel, 34,500 tons; 20 wood, 35,600 tons. Grand total, 27 steamships, 70,100 tons.

## Wooden Sailing Schooners, Atlantic Coast

Acadia Shipbuilding Co., Saulnierville, N.S.—One, 400 tons.

Allan & Fraser, Fraserville, N.S.—One, 350 tons.

Annapolis Shipping Co., Annapolis Royal, N.S.—Two, 900 tons.

Beazley Bros., Weymouth, N.S.—One, 400 tons.

Moise Belliveau, Church Point, N.S.—One, 450 tons.

T. K. Bentley, Advocate Harbor, N.S.—One, 511 tons.

Fidele Boudreau, Church Point, N.S.—One, 350 tons.

Hilaire Boudreau, Church Point, N.S.—One, 300 tons.

Bridgewater Shipbuilding Co., Bridgewater, N.S.—One, 400 tons.

Smith Canning, Port Greville, N.S.—One, 350 tons.

Chester Basin Shipbuilders, Ltd., Chester Basin, N.S.—One, 650 tons.

Clare Shipbuilding Co., Meteghan, N.S.—One, 400 tons.

G. M. Cochrane, Fox River, N.S.—One, 450 tons.

A. H. Comeau, Meteghan River, N.S.—One, 400 tons.

Comeauville Shipping Co., Comeauville, N.S.—One, 450 tons.

G. A. Cox, Shelburne, N.S.—One, 322 tons.

Dowling & Stoddart, Port Clyde, N.S.—One, 300 tons.

Eastern Shipbuilding Co., Ship Harbor, N.S.—One, 300 tons.

H. Elderkin & Co., Port Greville, N.S.—One, 750 tons.

Ernst Shipbuilding Co., Mahone Bay, N.S.—One, 350 tons.

Falmouth Shipbuilding & Transportation Co., Windsor, N.S.—One, 405 tons.

Fauquier & Porter, Hantsport, N.S.—Two, 850 tons.

Foley Bros., Hantsport, N.S.—Two, 350 tons.

Thos. German, Meteghan, N.S.—One, 350 tons.

Hanpinson Shipping Co., Belliveau Cove, N.S.—Two, 750 tons.

D. Huntley, Scott's Bay, N.S.—One, 500 tons.

W. R. Huntley, Parrsboro, N.S.—Two, 650 tons.

J. W. Kirkpatrick, West Advocate, N.S.—One, 350 tons.

Lewis Shipbuilding Co., Sheet Harbor, N.S.—One, 675 tons.

B. N. Melanson, Gilbert's Cove, N.S.—One, 200 tons.

H. McAloney, Canning, N.S.—One, 350 tons.

Jos. McGill Shipping & Transportation Co., Shelburne, N.S.—Two, 395 tons.

W. C. McKay & Son, Shelburne, N.S.—One, 140 tons.

McKean & Rodding, Ltd., Dartmouth, N.S.—One, 375 tons.

McLean & McKay, Economy, N.S.—One, 350 tons.

Archibald McKenzie, River John, N.S.—One, 600 tons.

Chas. McLellan, River John, N.S.—One, 100 tons.

Chas. McNeil, New Glasgow, N.S.—Two, 800 tons.

W. A. Naugler, La Have, N.S.—One, 350 tons.

Noel Shipbuilding Co., Noel, N.S.—One, 425 tons.

Nova Scotia Shipbuilding Co., Liverpool, N.S.—Two, 875 tons.

O. O'Brien, Noel, N.S.—One, 325 tons.

Mortimer Parsons, Cheverie, N.S.—One, 425 tons.

J. N. Pugsley, Diligent River, N.S.—One, 500 tons.

J. N. Rafuse & Co., Conquerall Bank, N.S.—One, 350 tons; Salmon River, N.S., one, 325 tons.

S. Robichaud, Meteghan, N.S.—One, 400 tons.

St. Martin's Shipbuilding Co., St. Martin's, N.B.—One, 450 tons.

S. Salter, Parrsboro, N.S.—One, 200 tons.

Greene Scott, Minasville, N.S.—One, 73 tons.

Shelburne Shipbuilders, Ltd., Shelburne, N.S.—Two, 749 tons.

J. W. Smith, Hillsburn, N.S.—One, 479 tons.

W. K. Smith, Plympton, N.S.—One, 200 tons.

Smith & Rhuland, Lunenburg, N.S.—Two, 256 tons.

S. J. Foley, Fox River, N.S.—One, 425 tons.

Southern Salvage Co., Liverpool, N.S.—One, 185 tons.

B. L. Tucker, Bass River, N.S.—One, 350 tons.

F. K. Warren, Grosses Coques, N.S.—One, 350 tons.

Warren, Rice & Co., Weymouth, N.S.—One, 300 tons.

C. T. White & Son, Sussex, N.B.—Three, 1,360 tons.

Total, Atlantic coast, 72 schooners of 28,850 gross tons.

## Summary.

	No.	Tons.
Steel steamships.		
Atlantic Coast . . . . .	12	20,310
Great Lakes . . . . .	41	57,188
Pacific Coast . . . . .	7	34,000
	60	111,998
Wooden steamships.		
Atlantic Coast . . . . .	20	14,790
Great Lakes . . . . .	6	13,750
Pacific Coast . . . . .	20	35,600
	52	64,140
Steel steamships . . . . .	60	111,998
Wooden steamships . . . . .	52	64,140
Wooden schooners . . . . .	72	28,850
	184	204,988

## Halifax Disaster Manslaughter Charges.

As mentioned in previous issues, in connection with the Halifax disaster in December last, A. Lemedec and F. Mackey, master and pilot respectively of the s.s. Mont Blanc, together with Commander F. Wyatt, R.N.R., Chief Examining Officer of the port, were arrested, charged with having caused the death of a number of persons. Capt. Lemedec and pilot Mackey were released subsequently on writs of habeas corpus, the former leaving the country, and further indictment of the latter was refused. The case against Commander Wyatt, who was suspended from his duties soon after the disaster, came before the criminal court, Apr. 17, on the specific charge of having caused the death of Wm. Hayes, pilot of the s.s. Imo, the jury returning a verdict of not guilty, his acquittal following. In charging the jury, Mr. Justice Russell stated that there was absolutely nothing, so far as the law was concerned, on which a verdict of guilty could be brought in.

Prince Edward Island Car Ferry.—A Charlottetown correspondent writes: The car ferry steamship Prince Edward Island has been in operation this winter on the Borden-Tormentine route and has given continuous service. She has not missed a trip in the severest winter known for a quarter of a century. She has been rigidly put to the test and has never failed.

## General Shipbuilding Notes Throughout Canada.

**The Anglo-Newfoundland Development Co.,** Botwood, Nfld., is reported to be building two 3 masted auxiliary powered schooners of 450 tons each, equipped with engines of 150 h.p. This company is one of the Harmsworth interests, and is mainly concerned with the manufacture of paper for the Harmsworth controlled newspapers in England, though a considerable portion of its make is being sent to the United States.

**British-American Shipbuilding & Engineering Co.,** Vancouver, B.C.—A press report stated early in April, that within a month, work would be commenced on eight shipways, provided the Dominion Government would undertake certain dredging along the Kitsilano Reserve foreshore. It is reported that the company has reached an agreement with the harbor commission regarding the land to be leased on the western end of the reserve, and that plans have been approved by the local authorities. These plans show 8 building slips, machine shops, blacksmith shop, mould lofts, etc. It is announced, as mentioned in our last issue, that the company is arranging to build 20 steamships of a composite type, but no indication is given as to whom they are intended for. S. Matheson is President. We are officially advised that the company has been granted an export permit to build 20 wooden cargo steamships for Norwegian registry.

**Canadian Car & Foundry Co.,** J. M. Smith, at one time connected with the Collingwood Shipbuilding Co., and latterly with Tidewater Shipbuilders, Ltd., Three Rivers, Que., has been appointed Superintendent of the Canadian Car & Foundry Co.'s shipbuilding department at Fort William. As previously stated in Canadian Railway and Marine World, the company has a contract for 12 mine sweepers, for the French Government, of which the following are the chief dimensions:—length over all 143 ft., length between perpendiculars 135 ft., breadth moulded 22½ ft., depth moulded to main deck 13¼ ft., depth moulded to quarter deck 14¾ ft., displacement loaded 630 tons, freeboard (Lloyd's) 15 ins.

The Canadian Car & Foundry Co.'s annual report, dated April 15, says:—"Some months ago we were asked to co-operate with the Manitowoc Shipbuilding Co., of Manitowoc, Wisconsin, in the manufacture of 12 mine sweepers for the French Government. After careful investigation by shipbuilding experts, your directors became convinced that at our Fort William works we possessed the necessary machinery and facilities for the fabrication of ship parts, as well as an excellent water frontage, and it was estimated that an assembling plant and launching facilities for the class of boat proposed could be built and installed for approximately \$200,000. Your directors entered into negotiations with the official representatives of the French Government, and were finally offered a contract for the 12 mine sweepers, completely equipped, at a satisfactory price; liberal terms of payment were agreed upon, and advance payments arranged to provide the necessary capital and inventory requirements, and the contract was accepted. It is believed that this initial order will yield a profit, after charging against earnings the entire cost of the additional installation. An agreement has been made with the Manitowoc Shipbuilding Co., whereby we secure its co-operation and supervision, and work

on the project has commenced. Shipbuilding in Canada has attractive possibilities, and the successful initiation of the shipbuilding industry at our plant at Fort William will be of considerable advantage, especially in the event of a later depression in car building work."

**Collingwood Shipbuilding Co.,** Collingwood, Ont.—The disagreements between the company and its employees have been adjusted. The board of conciliation appointed, viz., H. P. Hill, Ottawa, Chairman; Capt. J. B. Foote, Toronto, for the company, and F. Bancroft, Toronto, for the men, heard the complaints, and during the hearing, it was agreed that the parties concerned would settle the matters in dispute between themselves.

A press report from St. John, N.B., states that the Collingwood Shipbuilding Co. is interested in the establishment of a steel shipbuilding plant at Courtenay Bay, St. John. One of the company's officials states that nothing is known about this at Collingwood.

**J. Coughlan & Sons, Vancouver.**—A Vancouver press dispatch of April 21 said that the Dominion Government's refusal of permission to Vancouver steel shipbuilding yards to proceed with new contracts for vessels of a standard type of 8,800 tons each for allied nations, and the issuance of orders by the Imperial Munitions Board at Ottawa for making structural alterations in the vessels already nearing completion, might result in a halt in operations at the Coughlan ship yards. As previously stated in Canadian Railway and Marine World, J. Coughlan & Sons have orders from the Imperial Munitions Board for building 9 steel steamships of 8,800 tons each for the British Government, one of which has been launched, and they are not likely to have any vacant berths during this year, but expect to have some vacant early next year, when the Marine Department will be prepared to give them contracts for building steel steamships of 8,800 tons capacity, if satisfactory terms can be arranged. In regard to changes in the structural alterations of the vessels under order by the Imperial Munitions Board, we are officially informed that no material changes have been made from the original plans and specifications.

**Halifax, N.S.**—An unconfirmed report says that J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., Montreal, is interested in a project to establish a steel shipbuilding plant at Halifax and to take the floating dry dock from Montreal there.

**Wm. Lyall Shipbuilding Co.,** Vancouver, B.C.—It is stated that the company, in addition to the wooden steamships which it is building for the British Government, has commenced the first of six vessels which it intends building for its own account, and expects to have completed by September.

**T. H. Macdonald, Meteghan, N.S.,** launched the schooner Rebecca L. Macdonald recently, and she subsequently loaded cargo at St. John, N.B., for South Africa, after which she will sail to New York. She is 186 between perpendiculars, 36 ft. wide, with 16 ft. hold, and is said to be the largest vessel launched from a Bay of Fundy yard for several years. The masts are 91 ft. long by 22 in. diam., of Oregon pine, and the topmasts are 50 ft. long, of native spruce. She is equipped with electric light, and has a 12 h.p. upright gasoline engine, for handling the sails, pumps, etc.

**Jos. McGill Shipbuilding & Transportation Co., Ltd.,** Shelburne, N.S., launched a schooner of 150 tons at the end of March, which was named James and Stanley. She is owned by Samuel Harris, Ltd., of Newfoundland.

The keel is reported to have been laid for a three masted schooner of about 200 tons.

**Nova Scotia Shipbuilding & Transportation Co.,** Liverpool, N.S.—The second of the two schooners under construction by this company recently, was launched at the end of March. She was built for Peter Yee Wing & Co., Sydney, Australia. Her dimensions are: keel 118 ft., beam 33 ft., hold 12 ft.

**The Port Hope, Ont.,** Town Council and Board of Trade, have been discussing the possibility of getting a steel shipbuilding plant established there.

**Prince Rupert, B.C.**—A Vancouver syndicate is said to be negotiating for a lease of the Grand Trunk Pacific Railway floating drydock.

**J. N. Rafuse & Sons, Conquerall Bank, N.S.**—Work is reported to have been commenced on the building of a second schooner in W. J. Foley's yard at Salmon River, N.S., similar to the schooner Industrial, the launching of which was mentioned in our March issue. The dimensions of that vessel are: length 113 ft., breadth 30 ft., depth 11½ ft.

**Standard Shipbuilding Co., Ltd.,** Vancouver, B.C.—Reports from Vancouver, as mentioned in our last issue, credit this company with having concluded contracts with the British Ministry of Shipping for 10 composite steamships, and that a representative of the company was in London, Eng., with the plans for the final approval of the authorities there. No confirmation of this can be obtained. Up to the present all shipbuilding orders placed in the Dominion on behalf of the British Government have been handled by the Imperial Munitions Board, and the board has not placed such an order, nor had any negotiations with that end in view.

**St. John, N.B.**—A proposition is said to have been made to the New Brunswick Government, by J. B. Craven, New York, and T. A. Duff, Toronto, for the establishment of a steel shipbuilding plant at Courtenay Bay, St. John. It is stated that a company is prepared to go ahead with the work on a large scale, immediately, if adequate support is given by the provincial government.

**Taylor Engineering Co.,** Vancouver, B. C., is reported to have been awarded a contract for the design and construction of a 4,500 ton floating dry dock. It is not stated where the dock will be located on completion. W. T. Donnelly, New York, who designed the dock and harbor works at Prince Rupert, B.C., is stated to have been engaged for the designing of the dock, the dimensions of which are mentioned as follows: length over all 352 ft., length of wings 300 ft., width over all 100 ft., width between wings 80 ft. It is said it will be designed to take a draft of 20 ft., 4 ft. keel blocks, and will be arranged so that its lifting power can be increased to 7,500 tons, when the length of the dock will be increased to 445 ft.

We have been advised that the company is building a wooden cargo steamship for coast service, with 300 tons deadweight capacity. She will be equipped with engine of 160 h.p., and will be built to class

At Lloyd's. The cost will be about \$90,000. The vessel is intended for operation between Seattle, Wash., and northern B.C. ports. Several small boats are under construction at the company's plant, and the building of two reinforced concrete seagoing barges, with capacity of about 1,200 tons each, is under construction.

P. A. Therriault, Belliveau Cove, N.S., launched the schooner Charles Therriault, of 339 tons, early in April. Arrangements have been completed for laying the keel of a similar vessel, and the work is proceeding.

### Steamships Under Construction for British Government.

The s.s. *Alaska*, built by J. Coughlan & Sons, Vancouver, B.C., was originally intended for Norwegian registry, but while on the ways, was taken over for the British Government. The launch took place Jan. 19, and she is expected to be ready for sea by the end of May. The officers have arrived in Vancouver to take over the vessel. She is to be operated by Furness, Withy & Co., on behalf of the British Government.

Edgard Fitzgerald, C.B.E., Assistant to Chairman, Imperial Munitions Board, left Ottawa for Vancouver and Victoria, B.C., early in April and is expected to return early in May.

Foundation Co., Victoria, B.C., launched its second wooden hull for the Imperial Munitions Board, Apr. 11, the name adopted being *War Massett*. This hull was ready for launching in March, but some delay was necessary owing to the non-arrival of fittings.

Wm. Lyall Shipbuilding Co., Vancouver, B.C.—The second of the wooden steamship hulls built by this company for the British Government was launched Apr. 10, and named *War Caribou*. She was at once taken to the Ogden Point assembly plant to have her machinery installed. The remaining four hulls, of this order, are reported to be well advanced. At least one of the four was expected to be ready for launching before the end of April, and another one early in May. Of the last two of the order, one is planked and caulking is proceeding, and the other is more than 25% planked.

New Westminster Construction & Engineering Co., New Westminster, B.C.—It is announced that the four vessels under construction for the Imperial Munitions Board at the company's Poplar Island yard, will be completed early in September. Local representations are being made to the board, in the hope of having the machinery installed at New Westminster, instead of having the hulls towed to Ogden Point, Victoria, where the board has equipped a large assembly plant. The first of these hulls was launched Apr. 11, and named *War Comox*.

Pacific Construction Co., Port Coquitlam, B.C., launched a wooden hull for the Imperial Munitions Board, Apr. 13, when she was named *War Tyee*. This made the fourth launch along the B.C. coast in one week.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The s.s. *War Isis* was launched at these yards, Apr. 3, for the British Government. This is one of 6 steel steamships of 3,400 tons d.w. capacity, ordered by the Imperial Munitions Board from the company. Keel plates were immediately laid in the vacant berth

for another similar vessel of full Welland Canal size.

Western Canada Shipyards, Ltd., Vancouver, B.C.—The wooden hull of the s.s. *War Selkirk*, the launching of which was mentioned in our last issue, was taken to the Ogden Point assembly plant early in April, for the installation of her machinery.

Launchings of Steamships.—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to April 15, giving in each case the date of the launching, the name of the steamship, the name of the builder and the deadweight tonnage:—

Steel Steamships.			Tonnage.
May 18, 1917	War Dog—Wallace Shipyards Ltd., North Vancouver, B.C.	4,500	
July 9, 1917	War Wasp—Nova Scotia Steel & Coal Co., New Glasgow, N.S.	1,800	
Aug. 19, 1917	War Fish—Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300	
Nov. 3, 1917	War Dance—Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400	
Mar. 16, 1918	War Camp—J. Coughlan & Sons, Vancouver, B.C.	8,800	
Mar. 23, 1918	War Power—Wallace Shipyards, Ltd., North Vancouver, B.C.	4,600	
Apr. 3, 1918	War Isis—Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400	
			30,890
Wooden Steamships.			
Dec. 19, 1917	War Songhee—Foundation Co., Victoria, B.C.	3,800	
Jan. 4, 1918	War Nootka—Western Canada Shipyards, Vancouver, B.C.	3,080	
Jan. 24, 1918	War Yukon—Cameron-Genoa Mills, Ltd., Victoria, B.C.	3,080	
Feb. 16, 1918	War Pucet—Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080	
Mar. 6, 1918	War Selkirk—Western Canada Shipyards, Vancouver, B.C.	3,080	
Apr. 10, 1918	War Caribou—Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080	
Apr. 11, 1918	War Comox—New Westminster Construction & Engineering Co., New Westminster, B.C.	3,080	
Apr. 11, 1918	War Massett—Foundation Co., Victoria, B.C.	3,080	
Apr. 13, 1918	War Tyee—Pacific Construction Co., Coquitlam, B.C.	3,080	
			27,720
Total tonnage of 16 steel and wooden steamships launched, 58,520.			

"News" That is Not News.—A periodical published in Montreal, which modestly asserts that it has "definitely established itself as the representative of the shipbuilding industry in this country," had the following in its April issue:—

"Vancouver, B.C.—The Standard Shipbuilding Co. has just secured contracts from the Imperial Munitions Board for 10 composite steamers. A site is now being prepared for the plant at Ruskin, where the Stave River joins the Fraser, and at least half a dozen keels are expected to be laid this month. The company has a location at Ruskin, with more than 2,000 ft. of frontage on the river, and has a saw-mill already in operation. The ships to be built under the present contract will be 281 ft. long over all, with a dead weight capacity of 3,500 tons and a speed of 10 knots. They will have reinforced steel keelsons and knees, instead of the natural wood knees of Douglas fir. The company controls 150,000,000 ft. of this timber close to the plant."

Canadian Railway and Marine World had no advice of any such contracts having been let by the Imperial Munitions Board and felt convinced they had not been; but so that there might be no doubt about the matter, we communicated with the board and were advised on April 16 that no contracts had been given by the board to the Standard Shipbuilding Co. Canadian Railway and Marine World's information from month to month as to orders placed for shipbuilding is complete, official and reliable, and is not made up of unverified press dispatches or reports.

### Ice Conditions on the Great Lakes.

The following final bulletin regarding ice conditions on the Great Lakes, was issued by the U.S. Weather Bureau, Apr. 23:—

In Lake Superior the ice fields at the extreme west end moved out Apr. 22, and the Duluth entry is free of ice. A few fields are reported over the central portion, but they offer no serious obstacle to navigation. At Whitefish Point fields in the lake are moving in and out with the winds, and on Apr. 22 were moving in and withdrawing on the short west of the point. The bay is partly opened, and it is not anticipated there will be much difficulty for the two steamers off Whitefish Point in making the passage.

St. Marys River is open, and a tug made the round trip to Detour.

In Green Bay the ice has moved out. No ice is reported to Lake Michigan, except near Northport and around Beaver Island. The straits are now open and no ice is reported.

In Lake Huron the fields are confined to the southern portion. From Harbor Beach to Port Huron the fields are extensive, but are moving with the wind. The ice is heavy but honeycombing rapidly.

St. Clair River is blockaded from just below Port Huron to Lake St. Clair, and ice is reported packed so that it reaches the bottom of the river in places.

In Lake Erie ice fields are confined to the south shore from Ashtabula to near Dunkirk but the ice is broken and soft. No ice is reported near Buffalo.

In Lake Ontario fields are reported from off Rochester to east of Oswego, but they are breaking up and will offer no great resistance to navigation.

### Shipbuilding Wages on the Pacific Coast.

According to a press dispatch from Vancouver, B.C., the commission appointed to go into the question of wages in the shipbuilding trade at the Pacific coast, has reported that the men are entitled to an increase of 10% dating from Feb. 1. The commission consisted of Mr. Justice Murphy, Chairman; J. H. Tonkin, representing employers, and G. J. Kelly, the men. It is stated that minority reports have also been sent in by the two last mentioned.

The report, it is said, recommends that 10% increases be granted, provided the men are willing to work 48 hours a week on straight time, excepting during June, July and August, and that they accept certain regulations governing the classes of labor. In regard to wages paid men working on steel steamships for the Imperial Munitions Board, the statement is made that the men can appeal to the board, which would be morally obliged to revise the wage schedule in accordance with that which the commission decides must be put in force in the wooden shipyards in the province, and to see that the firms concerned did not suffer financially.

It is also said that it is recommended that laborers shall be paid \$3.85 for an 8 hour day, excepting during June, July and August; that the demand for 10% on night shifts cannot be allowed, and that the men must do a full day's work for a full day's pay.

Several vessels arrived at Sault Ste. Marie, Apr. 23, upbound light, but were compelled to remain there on account of heavy gales and snow.

# Timber Derrick Gantry Crane for Ship Erection.

Present time high speed ship construction calls for erection cranes of special design. One form of these, which has been doing successful work, is the timber derrick gantry used at one of the prominent wooden ship plants. This crane is particularly worth note, in spite of its simplicity, because it was so worked out as to permit of rapid construction from standard materials that could be procured readily.

The high speed shipyards all have a number of shipways side by side, on which the ships are erected. Commonly, ways are built by driving wood or concrete piling into the ground, and capping and planking the top of the piling, to make a platform sloping toward the bay

frame may weigh as much as 10 tons. The crane shown has a safe margin over this maximum.

While the derrick gantry is not a new type, its adaptation to shipbuilding is a novelty. Under the old method of ship construction, with housed-in ways, there was provided a row of high columns between the ways, on which bridge cranes traveled back and forth over the ship, handling material to its place. The derrick gantry as used here is an excellent type of machine where the climatic conditions permit much work in the open. No high buildings are required, and the space between ways is kept clear at all times for handling bulky material. A railway track may be built between the ways, the

Wheels, gears, shafting	7,200 lb.
Bolts, tie-rods, nuts	1,600 lb.
Woodwork (except derrick and water tank)	57,050 lb.
Water tank, half filled	5,392 lb.
Total	113,742 lb.

The bracing of the gantry was designed with regard to all the various conditions of working of the crane. The heavy plank floor, not only provides a foundation for the machinery, but acts as horizontal bracing to take up the twisting strains which exist when the load is swung from side to side, and distributes them to the entire supporting structure of the gantry. The diagonal cross-bracing must be heavy enough so that when the crane load is applied at one end of the structure the

Ten-Ton Derrick Gantry, Built of Stock Material, and Equipment for Ship Erection.

on which the shell of the ship is built, stern toward the water, and from which it is launched. The ways may have a slope of  $\frac{3}{8}$  in. to 1 in. per foot; some shipbuilders prefer more slope than others. The spacing of adjacent ways set in the centre is fixed to suit the size of ships to be constructed. At the shipyard referred to the spacing ranges from 77 to 95 ft. This leaves a narrow space between the ships that are being erected, that is not adequate for storing and handling the material that is to go into the ship. It is the duty of the gantry crane to pick up this material from a point back of the ways, and carry it down between the ways to a proper location, then swing the material around to one side and over the ship.

In the new type of wooden ships brought into prominence by the war the chief assembling item is the crossframe, which is built up of a number of pieces of wood, each sawed to shape, pinned together by treenails. One assembled cross-

crane saddling it. Finally, the crane is one that can be built quickly and is of minimum cost.

The selection of wood as material for the main part of the cranes was dictated primarily by the desire for quick construction. In addition there was a gain in stability against overturning, as compared with steel. Wood is looked upon as being a light material, but when cost is taken into consideration the argument is in favor of wood. The wood in this crane costs  $1\frac{1}{2}$  c. a lb., framed in place.

The greatest load which the gantry crane will lift, when the boom is swung at right angles to the track, and the crane hook is 40 ft. from the centre of the mast, is a little over 14 tons. Its working capacity, fixed at 10 tons, leaves a margin of about 4 tons. The approximate total weight of the entire gantry crane is as follows:—

Operator's house	8,500 lb.
Stiffleg derrick, complete	16,600 lb.
Hoisting engine	14,000 lb.
Propelling engine	3,400 lb.

overturning effect will be transmitted to the whole length of the gantry and utilize the weight of the hoisting engine to prevent the gantry from tipping over.

The strains which develop in the stifflegs of the derrick are much greater when the stifflegs are set at an acute angle than when set at 90°. As designed they are adequate for the service required. They are supplemented, however, by two stay cables fitted with turnbuckles, which pass from the masthead to the side of the platform at about mid-length.

The water tank, placed under the deck and to one side, is of such size and distance from the centre that it just counterbalances the propelling engine. The effect is that the gantry has exactly the same resistance to overturning to right or left, and therefore has equal lifting capacity and equal safety.

Steam power was decided on for several reasons. Steam is reliable, is independent of live wires between shipways, and is elastic in starting and stopping

heavy loads, with minimum shock to the transmission machinery; and, what is more important than anything else, the necessary equipment could be purchased in the shortest possible time.

The main hoisting engine is a 7½ x 10 in. reversing type, with three shafts. One drum handles the load line, another the boom falls, and a pair of drums on the forward shaft swing the boom. The propelling engine, which drives the crane up and down between the ways, is 7 x 10 in. 2-cylinder reversing, the crankshaft being geared direct to the upper transmission shafting. The arrangement of the engines is such that the operator can reach any lever from one position, and all machinery is in view and readily accessible.

The propelling transmission system consists of a top horizontal shaft, 2 vertical shafts and 2 lower longitudinal shafts, with the necessary bevel gears, journal

boxes, etc., to make a complete working unit. Four of the 8 wheels are driven. At 200 r.p.m. engine speed the gantry travels 100 ft. a min. The accompanying detail sketches show some of the most important items in the transmission. The transmission shafting is fastened to the frame timbers in a particularly simple manner. Rigid boxes are used throughout. Great care was taken in construction to align the shafting perfectly.

This type of gantry crane is not limited to the construction of wooden ships. It can be used equally well for steel ship work. Other arrangements of crane are possible. Similar machines have been built with two derricks, one serving one ship, and the other serving the opposite. The one shown herewith probably represents the maximum combination of simplicity, universal adaptability, low cost and quick construction.—M. J. Welch, San Francisco, in Engineering News-Record.

## Coast, Lake and River Officers for 1918.

The following appointments made by navigation companies engaged in the navigation of Canadian waters, for their various steamships and tugs, have been reported to Canadian Railway and Marine World, in addition to those given in the April issue. The first column shows the names of the vessels, the second, those of the captains, and the third, those of the chief engineers.

**Water Supply on Great Lakes Vessels.** With regard to the U.S. order for the equipment of vessels operating on the Great Lakes, with the means of purifying water for drinking purposes, which went into effect Jan. 1, 1917, and which applied to vessels of Dominion register calling at U.S. ports, no special regulations have been devised for Canadian vessels at present. On Canadian representations, the order, so far as Canadian vessels were concerned, was deferred until Jan. 1, 1918, on the understanding that from that date, such vessels would conform to the U.S. requirements, to carry the necessary equipment, or to prove that water was taken from an approved source. The requirements are being complied with, the Marine Department having arranged for the certification of water supplies at Canadian lake ports, and forms for this purpose are obtainable at all customs houses. The local medical health officer then certifies as to the character of water taken on board. In most of the ports, direct connection can be made with local hydrants and the water taken aboard direct.

**Nova Scotia Shipbuilding.**—Under an act passed by the Nova Scotia Legislature in 1917, a commission consisting of D. Macgillivray, Halifax, Chairman; C. F. McIsaac, K.C., Antigonish; D. E. North, Hantsport; A. Mackenzie, River John; F. L. Kelly, North Sydney, and Murray Macneil, Halifax, Secretary, was appointed to investigate the province's facilities for vessel building, and to make suggestions for the carrying out of a general shipbuilding policy. The commission has presented its report, which was submitted to the legislature recently. After dealing with the situation in the province, the commission arrived at the conclusion that the encouragement of the steel shipbuilding industry, and the measures to be taken for its development and growth, is a matter primarily and essentially for the Dominion Government and not for provincial action. The Dominion Government's general policy on shipbuilding, as outlined by the Minister of Marine in the House of Commons recently, will be found on another page in this issue.

**Traffic Regulation at Sault Ste. Marie Canals.**—The Dominion Marine Association is considering a suggestion made by the Lake Carriers' Association, that a patrol boat be provided in the St. Marys River to govern downbound vessels and to direct them to certain locks. It is suggested that the boat be maintained jointly by the two associations and that all owners agree to submit their vessels to the patrol's control.

**The Imo-Mont Blanc Collision.**—Judgment was delivered in the Admiralty Court at Halifax, N.S., recently, in the actions between the owners of the steamships Imo and Mont Blanc, in connection with the Halifax explosion in Dec., 1917, each party suing the other for \$2,000,000. It was decided that the Mont Blanc was solely to blame for the collision, and that the damage would be assessed in the usual manner.

## Canal Estimates for 1918-1919.

The Railways and Canals Department's estimates for the year ending Mar. 31, 1919, submitted to the House of Commons recently, contain, among others, the following items, chargeable to capital:—

Welland Ship Canal, construction .....	\$ 1,860,000.00
Rideau Canal, towards construction of bridge at Pretoria Ave., Ottawa.....	8,000.00
Trent Canal, construction .....	500,000.00

The following items are chargeable to income:—

Chambly Canal, renewing, in concrete, top of wharf, St. Johns .....	\$9,200.00
Carillon and Grenville Canal, protection walls, Lake St. Francis .....	2,000.00
Rebuilding lower entrance pier .....	9,740.00
Lachine Canal, dredging .....	15,000.00
Ontario St. Lawrence Canal, improvements .....	43,000.00
St. Peter's Canal, improvements .....	4,000.00
Trent Canal, improvements .....	57,000.00
Welland Canal, heavy repairs .....	35,000.00

The following item is chargeable to collection of revenue:—

Compassionate allowance to widow of R. Wiggins, who was accidentally electrocuted while in discharge of his duties as bridgmaster, on the Bascule bridge, over Lachine Canal, July 16, 1917 .....	2,000.00
---	----------

## Atlantic and Pacific Ocean Marine.

The s.s. City of Wilmington, bound from a southern port for France, was reported to have been destroyed by fire off Sable Island, N.S., Apr. 15. All the crew were reported to have been taken off by a Norwegian steamship, in response to wireless signals from the burning vessel.

The British s.s. Curaca, which sank near Dartmouth, N.S., after being severely damaged in the Halifax explosion last December, has been refloated. The work was carried out by Capt. Reid of Sarnia, Ont., and J. P. Porter, of Halifax. The vessel was at pier 8 prior to the explosion, of which it felt the full effect, 44 of her crew being killed.

The C.P.R. steamships Empress of Asia and Empress of Russia, operating on the Pacific Ocean, have been requisitioned by the Dominion Government, and have been placed at the British Government's disposal, and all advertised sailings have been cancelled. These vessels were requisitioned by the British Government on the outbreak of war in 1914, and after considerable service in transporting troops, etc., they were released in 1916. At that time they were on the register of the United Kingdom, but within the last few months they have been transferred to the Canadian register, with Vancouver, B.C., as their home port.

## Maritime Provinces and Newfoundland.

It is reported that the Dominion Government s.s. Aranmore is to run between Yarmouth and Boston, owing to the Eastern Steamship Corporation's s.s. Governor Cobb having been requisitioned by the U.S. Government.

The Island Tug. Co., Charlottetown, P. E.I., is negotiating for the sale of its business and vessels, and does not anticipate operating this year. It owns the s.s. Harland, built at Shelburne, N.S., in 1908, screw driven by engine of 33 n.h.p., and of the following dimensions: length 113 ft., breadth 27 ft., depth 6.7 ft.; tonnage, 352 gross, 217 register; and the steam tugs Fred M. Batt, and Islander.

The s.s. Acadien, formerly Senlac, which was lost during a gale, about Feb. 20, and which was reported to have been

towed to a Newfoundland port, which however was not correct, was located early in April, about five miles east of Flat Island, Placentia Bay, Nfld. Both anchors were out and her stem was under water, while the stern was well out of the water. Apparently she is not broken up, and divers are to be sent to inspect her with a view to salvage. She was sold recently by C. Brister & Son, to French owners, and was on her way to St. Pierre, Miquelon, when overwhelmed by heavy seas. It is stated that some of the crew, including the engineers, left the vessel in one of the boats and were picked up by a Newfoundland vessel, the captain and the remainder of the crew staying with the vessel, and losing their lives. It is also stated that the vessel must have drifted a considerable distance after the portion of the crew left her, and that if there had been anyone on board capable of running and repairing the engines, she might have been saved.

## Province of Quebec Marine.

The Lachine Canal was unwatered Apr. 23, and navigation was resumed through to Montreal, Apr. 29.

The first vessel to enter Quebec harbor this season was the schooner Florida, which sailed in from Ile aux Coudres, Apr. 4.

The Quebec & Levis Ferry Co. will, it is reported, probably remove its s.s. North from the service between Quebec and points along the north side of the Isle of Orleans, this year, as it is stated that the Dominion Government will not continue the subsidy for carrying mails there.

The Gaspé & Baie des Chaleurs Steamship Co., which has operated the steamships Gaspesien and Percesien on the lower St. Lawrence for some years, will not run any steamships this year, its vessels having gone into other service overseas. The s.s. Percesien was sunk near England in February.

The Marine Department received tenders, Apr. 29, for the purchase and removal of the s.s. Montmagny, now lying sunk near Crane Island in the St. Lawrence River. The tenderer must agree to commence the work of removal immediately on the acceptance of his tender, and must continue same until the removal is completed to the Department's satisfaction.

The Minister of Marine stated in the House of Commons, Apr. 18, that since Nov. 1, 1916, the Quebec Harbor Commissioners had sold grain boat no. 1 to the St. Lawrence Navigation Corporation for \$100,000, and dredge no. 1 to Compagnie Generale d'Enterprises Publiques, for \$185,000. He also stated that they had not purchased any steamboats or dredges since that date.

It was reported recently that no appointment of a harbor master at Quebec would be made for the present, to fill the vacancy caused by the death of Capt. J. A. Murray, who lost his life in the Halifax explosion in December, 1917, as owing to the fact that the vessels entering and leaving the harbor are under the jurisdiction of the Naval Authorities, such appointment would not be necessary. It was announced later, that Capt. McGough has been appointed acting harbor master there.

Charters for coal traffic for about 600,000 tons for the head of Lake Superior, were reported closed at Cleveland, Ohio, Apr. 12, at 48c, the established rate.

## Ontario and the Great Lakes.

Water was let into the Cornwall Canal, Apr. 22, and navigation was permitted through it the following day.

The C.P.R. steamship service on the Great Lakes, will commence May 2, between Owen Sound and Fort William, and June 1 between Port McNicoll and Fort William.

The Minister of Railways and Canals has intimated that the lower end of the Trent Canal will be open for general use, May 1, and that the canal, as far up as Washago, will be open by June 1.

The Public Works Department received tenders, Apr. 22, for the use of the tug Hercules during the summer, she not being required by the department. She has been berthed at Midland, Ont., during the winter.

Representatives of Great Lakes steamship lines met in Winnipeg recently and discussed the more economical transfer of freight and passenger traffic between lake and rail at Fort William and Port Arthur, and at eastern points.

The Department of Public Works will receive tenders to May 2, for the purchase of the dredge P.W.D. no. 114, the steam tug St. Paul, and three dump scows, lying at Burlington Bay, Hamilton. The sale of each is subject to an upset price.

Action has been entered at Toronto, against A. B. Mackay, Hamilton, Ont., by F. R. Johnson, Port Colborne, Ont., and P. Bonham, Montreal, for an accounting of all earnings in connection with the operations of the s.s. Sarnor.

The first steamship to enter Fort William harbor this year was the Algoma Central Steamship Line's s.s. W. C. Franz, which arrived there, Apr. 25, from Midland. The master, Capt. Jordan, was presented with a silk hat, by the Board of Trade.

The United States s.s. Harvester arrived at Port McNicoll, Apr. 21, with 609,000 bush. of oats, from Chicago, Ill., thus opening the water borne grain season, about two weeks earlier than last year. The master reported that no ice was in sight in the Straits, Lake Huron or Georgian Bay.

The lighthouse formerly located on the southeast side of Snake Island bank, Lake Ontario, has been removed to Fourmile Point, Simcoe Island, and the hand fog horn heretofore operated at that point from a shed, is being operated from the lighthouse, and is being used to answer signals from vessels in the vicinity during thick weather.

A. McFee & Co.'s claim against the Montreal Transportation Co., for \$31,000 for the loss of 40,000 bush. of wheat through the wreck of a barge in the Cornwall canal, Oct. 30, 1913, was dismissed at Montreal, Apr. 7, on the ground that the wreck was due to the dangers of navigation, for which the transportation company was not liable.

The Minister of Public Works, in reply to a deputation, Apr. 9, relative to the development of Port Dover, Ont., harbor, is reported to have stated that everything that was necessary will be done for the adequate development of the harbor. An amount had, he said, been included in the supplementary estimates, to repair the damage caused by storms.

The Foundation Co., New York, is reported to have acquired the Reid Wrecking Co.'s business and plant at Port Huron, Mich., and to be making extensive alterations there. It is said that the dry

dock is being lengthened to 625 ft., and that keels for 10 steel trawlers are being laid, it being the intention to have the vessels completed before the close of navigation next winter.

An order in council has been passed cancelling the regulations governing the Prescott and Ogdenburg ferry service, owing to the largely increased cost of operation and scarcity of fuel, and substituting new regulations permitting increased rates for passengers, vehicles and animals. The service is given by the Prescott & Ogdenburg Ferry Co.'s s.s. Miss Vandenburg.

Imperial Oil, Ltd., has acquired the s.s. Kaministiquia from the Western Navigation Co., Fort William, and has changed its name to Westoil. She was built at Wallsend-on-Tyne, Eng., in 1909, of steel, with 4 watertight bulkheads, and steel boiler house. The propelling machinery consists of triple expansion engines, with cylinders 20½, 33 and 54 in. diam. by 36 in. stroke, 1,156 i.h.p. at 76 r.p.m., and supplied with steam by 2 Scotch boilers 13½ ft. by 10½ ft. at 180 lb. Her dimensions are: length 250 ft., breadth 43 ft., depth 25 ft.; tonnage, 2,172 gross, 1,401 register.

The Public Works Department did considerable dredging at Port Burwell, Port Stanley and Rondeau, on Lake Erie, during 1917. At Port Burwell it was done to 15.6 ft., at the south end of the breakwater, 18 ft. to the south end of the harbor entrance piers, and from 16.7 to 23 ft. to the car ferry slip. At Port Stanley, to 23 ft. at the south end of the west breakwater, to 22 ft. to the south end of the harbor piers, and to 22 ft. to the foot of George St. At Rondeau, to 19 ft. in the east half of the channel between the harbor entrance piers, and to 19 ft. in the Lake Erie Coal Co.'s dock, all below zero of the gauge, which is 571.8 ft. above mean tide at New York.

### British Columbia and Pacific Coast.

The Grand Trunk Pacific Coast Steamship Co. is reported to have removed its accounting department from Vancouver to Prince Rupert.

The Coastwise Steamship & Barge Co., Vancouver, is reported to have purchased the British steamship Marmon, for its ore service between Alaska, British Columbia and Puget Sound ports.

The Naval Service Department received tenders Apr. 20, for the purchase of the schooner Naden as she lay at New Westminster, B.C. Her dimensions are: length 80 ft., breadth 20.1 ft., depth 8.6 ft.; tonnage 100.29 gross, 88.35 register.

A notice has been issued warning small craft, and boats generally, that they must be careful to go alongside the examination vessel on entering Esquimalt harbor, and not to pass without having actually stopped and received permission to proceed.

An order in council has been passed defining the harbor of Port Alberni, as, all navigable waters of Alberni Canal and of harbors, inlets, rivers, etc., falling into it, inside, or north of a line across the mouth of the canal, southeast, astronomically from the extreme of Nob Point.

The auxiliary powered schooner Margaret Haney, owned by Canada West Coast Navigation Co., which sailed from Vancouver last year with a cargo of lumber for Bombay, India, is reported to be engaged in transporting supplies to allied troops in Mesopotamia, sailing to a point near the junction of the Euphrates and Tigris Rivers.

The C.P.R. s.s. Tees, while on her route between Vancouver, Victoria and the west coast of Vancouver Island, Apr. 4, struck Zero Rock, near Sidney, and sank. She was built at Thornaby on Tees, Eng., in 1893, and was equipped with engine of 95 n.h.p., driving a screw. Her dimensions were: length 165 ft., breadth 26 ft., depth 10.8 ft.; tonnage, 679 gross, 441 register.

The management of Canada West Coast Navigation Co., which owns nine auxiliary powered schooners, is reported to have been transferred from H. W. Brown & Co., Ltd., Vancouver, B.C., to Jas. W. Elwell & Co., 17 State St., New York. It is stated that H. W. Brown & Co. will continue to manage the auxiliary schooner Malahat, and that H. W. Brown will take personal charge of his interests in Cameron-Genoa Mills Shipbuilders, Ltd., until the vessels under construction by that company for the Imperial Munitions Board, are completed.

**Motor Ships on the Pacific.**—The motor ship Janet Carruthers, owned by Canada West Coast Navigation Co., and chartered to Australia with lumber, arrived at Adelaide recently in a disabled condition, due to very heavy weather, and with a salvage claim against her, of \$10,000. She sailed from Vancouver in Sept., 1917, and was compelled to put into Honolulu with a broken shaft and cracked engine cylinders, stated to be due to negligence, possibly through ignorance of the workings of the engine. As repairs could not be made there, the propellers were disconnected and the voyage was continued under sail, but she was again compelled to put into another port for further repairs due to heavy weather. The company's motor ship Jessie Norcross, which arrived at Vancouver recently, on her return trip from Australia, encountered heavy weather and squalls, it being necessary to cut away some sails to prevent her from being capsized.

**Dominion Government Dredge Galveston.**—The Marine Department received tenders Apr. 8, for the purchase of the dredge Galveston, and it has been sold. We are advised that the purchaser intends to convert it into a cargo steamship for Atlantic service. The dredge was built in Germany in 1904, and is equipped with two suction pumps of the Dutch type, the propelling machinery consisting of triple expansion engines with cylinders 15, 24 and 39 in. diam. by 34 in. stroke, supplied with steam by 2 Scotch boilers 13½ ft. diam. by 11 ft. long, at 180 lb. working pressure. The propellers are solid, 4 bladed, 8 ft. 4 in. diam. by 10 ft. pitch. The hopper has a capacity of 1,500 cu. yds., and the loaded draft is 14¾ ft. aft and 13 ft. 1 in. forward. The dimensions are: length 223 ft., breadth 39 ft., depth 15½ ft.; tonnage, 1,332 gross, 838 net.

**Toronto Harbor.**—The Minister of Public Works stated in the House of Commons, Apr. 24, in regard to the work in Toronto harbor, that after making a careful personal inspection, he came to the conclusion that the only work that should be proceeded with during the war, is the completion of the ship channel through Ashbridge Bay, so that the munition factories established and to be established there, can be served. In regard to the western breakwater, he maintained that the additional expenditure of \$3,000,000, in order to complete it, is not justifiable under present conditions. The department's engineers, he stated, had been consulted, and they were of the opinion that no serious damage would result to the work already done, by deferring the completion.

### Mainly About Marine People.

N. W. Van Wyck, heretofore Freight Claims Agent, has been appointed Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, vice Peter Paton, who has resigned to engage in private business.

J. B. Brophy, M.Can.Soc.C.E., who died at Cornwall, Ont., April 1, from pneumonia, had been in the Railways and Canals Department service for many years, on the Trent Canal, at Trenton, Ont., then on the St. Peter's Canal, at St. Peter's, N.S., and latterly on the Cornwall Canal, at Cornwall, Ont.

Peter Paton, Purchasing Agent, Canada Steamship Lines, Montreal, has resigned, to become President of MacKenzie, Milne & Co., Ltd., hardware and oil well supplies, Sarnia, Ont., having bought out the interests of C. & M. MacKenzie and D. Milne. It is his intention to develop the company's ship chandlery business. The company has bought the metallic life boat building business of Watt & Son, Collingwood, and will add this line to its others.

Reginald Beaumont, whose appointment as Superintendent in charge of operation, Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C., was announced in a recent issue, was born in Norfolk, Eng., Aug. 7, 1877, and entered transportation service in May, 1893, since when he has been, to May, 1900, clerk, Beaver Line, Montreal; May, 1901, to June, 1904, assistant, Muskoka Lakes Navigation and Hotel Co., Gravenhurst, Ont.; June, 1904, to Dec., 1906, purser, Northern Navigation Co., Sarnia, Ont.; Apr., 1907, to Aug., 1909, Travelling Freight and Passenger Agent, Northern Navigation Co., and G. T.R., Sarnia, Ont.; Sept., 1909, to Feb., 1910, General Agent, Northern Navigation Co., Port Arthur, Ont.; Mar., 1910, to Feb., 1918, Assistant to Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C.

The Lancaster Tugboat Co., Ltd., has been incorporated under the New Brunswick Companies Act, with \$20,000 capital and office at Lancaster, N.B., to carry on a general tugboat business, and to own and operate steam and other vessels and conduct a general navigation business. The incorporators are: J. A. and A. L. Gregory, J. D. and L. B. Mitchell, Lancaster, N.B.

**Men on Government Vessels.**—The Minister of Railways informed the House of Commons recently that 19 men were employed on vessels engaged in quarantine service. Two vessels of the service were laid up in Louise basin, Quebec, with one watchman in charge at Dec. 31, 1917. These men were engaged by the Department of Agriculture. The Marine and Fisheries Department employed 427 men for its work at the same date. It was not considered advisable to give any information as to the number of men engaged in the naval service.

**Concrete Shipbuilding in the U.S.**—It is reported that the Cleveland Builders Supply Co. will erect a shipbuilding yard at Cleveland, Ohio, for the exclusive construction of concrete ships, barges, etc. The size of the vessels to be built will be the limit of the Welland Canal, and it is expected to turn out four vessels a month.

Steamer Eric W., Ltd., has been incorporated under the Quebec Companies Act, with \$10,000 capital and office at Quebec, to own and operate steam and other vessels and to carry on a general navigation business. The incorporators are W. Q. Stobo, H. C. Thorn, C. St. J. Griffiths, H. G. deGuise and L. H. Cote, Quebec.

# Concrete Shipbuilding for United States Government.

The U.S. Shipping Board decided some little time ago to begin the construction of large ocean going self propelled concrete ships. Following a long investigation by the U. S. Bureau of Standards and Shipping Board, the latter body on Dec. 27, 1917, formed a Department of Concrete Ship Construction, which has already developed a considerable organization. This organization, which is being built up around the one started by the Bureau of Standards, is studying the problems of concrete ship design, is checking over such designs as are submitted to it by outside engineers and has recommended and had approved by the board the letting of several contracts for the construction of concrete ships.

A corps of designers is engaged in the development of a standard design for a reinforced concrete ship of approximately 3,500 tons deadweight cargo carrying capacity. In this study an original investigation is being made into the moments

will all be in the nature of experiments, and upon their success or failure will depend the future of the government's concrete ship construction.

The design of all but the 7,500 ton ship is such that the boilers, machinery and wooden ship can be used. Such fittings will be available for installation when the concrete hulls are launched. The Shipping Board has let contracts to a number of well established plants and yards at which the assembling and fitting out of the wooden ships is to be done. These yards are convenient to the yards where the concrete hulls are to be made, and those hulls will be towed to the fitting out yards as soon as launched, there to be completed for service.

In addition to the work set forth above, the board is conducting a number of tests, under the direction of the Bureau of Standards. It is also co-operating with the U. S. Steamboat Inspection Service and Lloyd's Registry, both of which bodies

of steel, and after launching, she drew 9¼ ft. forward and 10¼ ft. aft. It is announced that she will be equipped with triple expansion engine of 1,750 h.p., supplied with steam by Scotch boilers. Oil fuel will be used, and she will carry about 30 days' supply. Her loaded speed is calculated at 10 knots an hour. She is expected to be ready for her trials early in May.

**The Lusitania Case.**—The Cunard Steamship Co. is applying to the Admiralty Branch of the Federal Court of New York, to be relieved of all liability in damage suits for \$6,000,000, or to have its liability limited, in connection with the loss of the s.s. Lusitania, which was torpedoed and sunk with great loss of life, by Germans. The company contends that the loss of the vessel was not due to negligence on its part, but was the wanton act of the common enemy. It is well to note that evidence given by A. M. Chalmers,

Concrete Vessel Construction. Working on the Interior of a Hull.

to which an ocean going vessel is subjected, as a result of which the stresses are analyzed and the design made. The complete drawings and specifications for this ship were completed early in March, at which time bids will be asked from certain selected contractors. This same designing force is also supervising the design of the ships already contracted for. The board requires that plans and specifications for all such contracts must be approved before construction is started. It is reported that satisfactory progress is being made in this work. In addition the board considers any design submitted by others persons, although so far no complete design for a reinforced concrete ship has been submitted. Many suggestions as to details, however, have proved useful to the designing force.

Three contracts have been let, to the Liberty Shipbuilding Co., Boston; the Fougner American Steel Concrete Shipbuilding Co., New York, and the Ferro Concrete Shipbuilding Corporation, New York. All three contracts are provisionally for a number of ships, but are contingent upon the seaworthiness and satisfactory character of the first ship built, which building will be under the direction of the Shipping Board. A fourth contract is under negotiation with the firm building the 5,000 ton ship at San Francisco, which is to be a 7,500 ton vessel, by far the largest concrete ship ever attempted. The board's present programme, therefore, contemplates the construction of five large concrete ships of different design. They

have detailed engineers to co-operate with and assist the board. An officer of the Bureau of Lighthouses is also giving some co-operative service. It is expected, too, that the question of concrete barges for harbor and inland waterway transport will soon be taken up with the various governmental bureaus concerned with that work. The Department of Concrete Ship Construction is under the direction of J. O. Heyworth, of the U. S. Emergency Fleet Corporation. Every effort is being made to expedite the work sufficiently to put the experimental ships in the water at the beginning of warm weather, so that should they prove successful, quantity production can be well under way by the middle of summer.

The U.S. Shipping Board announces that the President has approved an appropriation of \$50,000,000 for the acquisition or establishment of plants suitable for concrete shipbuilding, or for the extension of such plants, and for the cost of construction of concrete ships. The board has planned for the construction of three launching ways for three 3,500 ton vessels, and if these are successful, ways for the 7,500 ton type will be arranged. Work is reported to have been started at the plant at Wilmington, N.C.

The reinforced concrete vessel which was under construction at San Francisco, Cal., by private interests, was launched during March, and named Faith. Her dimensions are: length between perpendiculars 320 ft., beam 45 ft., moulded depth 31 ft. The stem and stern port are

Assistant Pier Superintendent of the company at New York, showed that he superintended the loading of the vessel, and that no explosives were taken on board. It was also stated that the allegations that the vessel carried guns, ammunition and troops, had been withdrawn, so that the matter is being fought out as to whether the sinking of the vessel was a wanton act of the common enemy, or whether the company was guilty of conspiracy.

**U.S. Lake Vessels Requisitioned for Ocean Service.**—The U.S. Government is reported to have requisitioned the following lake steamships for ocean service:—City of South Haven, steel, 232 x 40 x 16 ft., 1,719 tons gross, owned by Chicago & South Haven Steamship Co., Chicago, Ill.; Manitou, steel, 275 x 42 x 24½ ft., 2,944 tons gross, owned by Northern Michigan Transportation Co., Chicago, Ill.; Puritan, steel, 260 x 40 x 24½ ft., 1,762 tons gross, owned by Graham & Morton Transportation Co., Benton Harbor, Mich.; Theodore Roosevelt, steel, 264 x 40 x 16 ft., 1,955 tons gross, owned by Indiana Transportation Co., Chicago, Ill.; and Virginia, steel, 269 x 38 x 24 ft., 1,606 tons gross, owned by Goodrich Transportation Co., Chicago. These vessels were engaged chiefly in traffic to summer resorts.

Tide Tables for Nelson, Hudson Bay, and tidal data for Hudson Strait and James Bay, for the 1918 season, have been issued in pamphlet form by the Naval Service's tidal and current survey at Ottawa.

## Cargo Steamship Building for Dominion Government.

**Orders for Steamships.**—Up to April 24 no further orders had been placed by the Marine Department for cargo steamship. In addition to those mentioned in Canadian Railway and Marine World for April, viz.: Canadian Vickers Ltd., one of 4,300 tons and one of 8,100 tons; Collingwood Shipbuilding Co., one of 2,750 tons, and Wallace Shipyards, Ltd., North Vancouver, one of 4,300 tons, the tonnage stated in each case being dead weight capacity. Other orders will be placed as the steel shipbuilding companies notify the department that they will have berths available. Among the first will probably be the Collingwood Shipbuilding Co., which stated recently that it would have two berths available in May, and which has already been given an order for one steamship, as above stated, and Canadian Allis-Chalmers, Ltd., which stated recently that it would have one berth available in June. All the department's contracts are being placed at a price per ton for completed vessels, and it is said that the prices range about \$200 a ton d.w.

**Steel Plates from United States.**—In answer to a question as to what price per 100 lb. the Dominion Government had agreed to pay for 80,000 tons of ships plates bought in the United States, for use in building ships in Canada, the Minister of Marine stated in the House of Commons, Apr. 15, the price as \$3.25 per 100 lb., base, f.o.b. mills.

**Victoria Machinery Depot, Ltd., Victoria, B.C.**—The Vancouver World stated recently that this company had been offered contracts by the Dominion Government to build 3 steel steamships of 5,100 tons each, and that it declined the offer. The same paper credited C. G. V. Spratt, of the Victoria company, with saying:—"To begin with, we are offered the same terms to construct ships of 5,100 tons as are offered to contractors in the east on vessels of 8,800 tons, that is, \$200 a ton. Everyone knows that it costs much less to build the additional thousands of tons, proportionately, than it does to build those below that. We have to bring all our steel plates from the east and pay heavy freight rates on them. We are not allowed anything additional for this. Then again there is the plant to think of. We would have to expend between \$500,000 and \$1,000,000 in getting machinery and getting the yard in running order. Another thing that we have been forced to take into consideration is the undependable state of the labor market. Even if the Dominion Government was willing to protect us, as the U.S. protects government ship contractors, against possible increase in wages, it would, perhaps, tempt us to reconsider our decision. I am not saying that it would, but it would certainly help to clear the way for our accepting the contracts."

On enquiry at Ottawa on April 24, Canadian Railway and Marine World was informed that the Victoria company had not been offered any contracts. A representative of the company visited Ottawa a short time ago, was shown the plans and specifications for the 5,100 and 8,100 ton vessels, and was told that if the company wished to submit an offer, it might do so, but up to the date mentioned no offer had been received. We are also informed that no price was mentioned by the department officials, as an offer in any way.

**Wallace Shipyards, Ltd., North Vancouver, B.C.**—Some details were given in

our last issue of the steel cargo steamship which the Dominion Government has ordered from this company. As stated, it will be of the single deck type, with poop bridge and forecastle, straight stem and elliptical stern, 5 watertight bulkheads, single screw triple expansion engines, 2 Scotch boilers, 180 lb. working pressure with forced draft. Other particulars are as follows:—

Length between perpendiculars.....	320 ft.
Breadth moulded.....	44 ft.
Depth moulded.....	25 ft.
Draft loaded.....	21 ft. 2 in.
Deadweight carrying capacity.....	4,300 tons
Sea speed loaded.....	11 knots

**The Great Lakes Transportation Co., Midland, Ont.,** has purchased the S.S. Oceanica, formerly owned by the Tonawanda Iron & Steel Co., Tonawanda, N.Y., and intends operating her between Lake Erie ports and Montreal. The hull of the vessel is of oak, and she was built at West Bay City, Mich., in 1881. She has diagonal strapping on the frames, steel boiler house, steel arches, bow sheathed for ice, windlass between decks with no efficient bulkhead abaft same, and was practically rebuilt in 1913, when her name was changed from Sevona. She is equipped with fore and aft compound engines, with cylinders 27 and 50 in. diam. by 40 in. stroke, 600 i.h.p. at 40 r.p.m., and supplied with steam by 2 boilers of the fire-box type, 9 ft. diam. by 16 ft. long, at 95 lb. working pressure. Her dimensions are: length 263 ft., breadth 37½ ft., depth 21 ft.; tonnage, 1,490 gross, 1,241 register, and she has capacity for 2,600 tons of coal. The company is said to be negotiating for another vessel.

**Notice to Ocean Navigators.**—Masters of vessels are warned to keep clear of all convoys which they may meet or overtaken; the practice of cutting through a convoy is not permissible. Any merchant vessel entering a United Kingdom port must display her name in white letters on a black board, on the side on which she is approaching the examination steamer, and at such other times and in such manner as may be directed by the port authorities. Vessels under 500 tons gross shall display one such sign in the vicinity of the bridge, and vessels over 500 tons gross shall display two such signs, one in the vicinity of the bridge, and the other in the next most conspicuous position over the side. This does not relieve the vessel of the necessity of complying with Board of Trade requirements as to proper equipment of signal flags.

**Boiler Inspection Regulations.**—As the result of an interview with the Marine Department by a Dominion Marine Association deputation, the Steamboat Inspection Board's provisions regarding the pressure under which boilers made in the U.S. are allowed to be operated in Canadian vessels, have been modified, so that such boilers need not be run under an unnecessarily low pressure, on account of an old rule which placed a penalty on them on account of the absence of inspection by a Dominion officer during construction. A certain latitude was allowed upon application, but the strict rule meant that a number of U.S. made boilers were being used in Canada under a limited steam pressure and consequent disadvantage both as to speed and safety in difficult weather.

**Buoy Steamships for Maritime Provinces.**—The estimates submitted to the House of Commons recently, contain an item of \$300,000, for two steamships for buoy purposes in the Maritime Provinces. Plans have not yet been prepared for them

and it has not been decided when tenders for construction will be asked. The vessels will be designed especially for carrying and placing buoys, and will replace the C.G.S. Montmagny, which sank in the St. Lawrence River, near Crane Island, and the C.G.S. Simcoe, which foundered off the Magdalen Islands.

**The Montreal, Ottawa & Georgian Bay Canal Co.'s** application for an extension of time within which it may commence and complete its undertaking, came before the House of Commons, Apr. 18, and met with considerable opposition. Consideration was postponed, with a view to drafting a clause which would make certain that there would be no further increase in the government's moral liability in connection with the project.

**The New York State Barge Canal system** has been taken over by the U.S. Director of Railways, and will, it is stated, be operated under the direction of G. A. Tomlinson, Duluth, Minn. Other canal systems will, it is expected, be similarly dealt with, and the whole operated with a view to relieving traffic on the railways. It is announced that the U.S. Government will have a number of barges built for canal use.

**Welland Ship Canal Construction.**—The Dominion Government's estimates for the fiscal year ending Mar. 31, 1919, provide for \$1,860,000 for construction on the Welland Ship Canal. Canadian Railway and Marine World is officially advised that this is to settle up claims the contractors have against the government, and not for the continuance of the work, which is closed down until after the war.

**U.S. Government Great Lakes Service.** It is announced that the Director General of U.S. railways has ordered the establishment of a Great Lakes steamship line between Milwaukee, Chicago and Buffalo, with the object of relieving the railways of considerable through traffic. He is also stated to have assigned seven steamships to the service, which is likely to be extended and more vessels added.

**Maximum Vessel Loading.**—On representations from the British Food Controller, vessels trading with United Kingdom ports will be allowed to load ships' stores in excess of the voyage requirements, provided they conform to the regulations of the shipowners' provision pool. This will enable all available store accommodation, including staterooms, where practicable, to carry food supplies.

**Shipbuilding in Japan.**—It is announced that approximately 331,300 tons of shipping will be launched in Japan during this year. This, it is stated, will be disposed of as follows: for Great Britain, 148,000 tons; for France, 23,000 tons; for Italy, 5,600 tons; for service between Japan, U.S., Russia and British territories, 16,700 tons; for probable sale to allied countries, 87,000 tons.

**U.S. Ship Deliveries and Launchings in March.**—The U.S. Shipping Board states the deliveries and launchings for March as follows:—Deliveries, 21 vessels, 166,700 tons deadweight; launchings, 6 contract steel vessels, 51,650 tons deadweight, 21 requisitioned vessels, 149,636 tons deadweight; 9 others wood and composite, 31,500 tons deadweight.

**Vessel Insurance on the Great Lakes.** A press report states that the Great Lakes Protective Association will carry 25% of the insurance on the vessels owned by its membership, the initial rate of contribution for the year being fixed at 3¼%, as last year. The valuation of steel vessels has been advanced \$5 a ton, making it \$56 a ton.

## Harbor, River and Graving Dock Estimates for 1918-1919.

The Public Works Department's estimates for the year end Mar. 31, 1919, submitted to the House of Commons recently, contain, among others, the following items chargeable to capital:—

### HARBORS AND RIVERS.

St. John Harbor, improvements .....	\$ 250,000.00
Quebec Harbor, Champlain dry dock .....	355,000.00
Quebec Harbor, River St. Charles, improvements to navigation .....	15,000.00
Toronto harbor, improvements .....	550,000.00
Port Arthur and Fort William, harbor and river improvements .....	350,000.00
Vancouver harbor, improvements .....	150,000.00
Victoria harbor, improvements .....	166,000.00

\$1,836,000.00

The following public works items (Marine Department) are chargeable to capital:—

River St. Lawrence, ship channel ...	\$ 478,000.00
To provide for construction and completion of dredging plant on St. Lawrence River from Montreal to Father Point .....	163,900.00
For converting six ship channel tugs for salt water service .....	50,000.00

\$691,900.00

The following items are chargeable to income:—

### NOVA SCOTIA.

Barrington's Cove, Sydney Mines, partial reconstruction of wharf .....	\$ 1,100.00
Battery Point, breakwater repairs and reconstruction .....	3,100.00
Breen's Pond, repairs to breakwater .....	1,050.00
Burlington, repairs to wharf .....	1,200.00
Cow Bay (Port Morien), repairs to breakwater .....	5,600.00
Cribbin's Point, repairs to and reconstruction of wharf .....	1,800.00
Devil's Island, repairs to breakwater .....	1,300.00
Digby Pier, renewals .....	5,000.00
East River, improvements .....	10,000.00
Eatonville, repairs to breakwater .....	2,500.00
Felzen South, repairs to breakwater .....	1,100.00
Five Islands, repairs to wharf .....	600.00
Freeport, repairs to breakwater .....	1,500.00
French Village, repairs to wharf .....	1,000.00
Great Village, repairs to wharf .....	700.00
Harbors and rivers generally, repairs and improvements .....	60,000.00
Harbor au Bouche, repairs to wharf .....	700.00
Jamesville, completion of breakwater .....	2,000.00
Kelly's Cove, repairs to wharf and breakwater .....	1,700.00
L'Ardoise, repairs to breakwater .....	1,800.00
Maitland, repairs to wharf .....	1,100.00
Malagash, repairs to wharf .....	1,000.00
Margaree harbor, repairs and improvements .....	10,900.00
Margaretville, repairs to breakwater .....	3,000.00
McKay's Point (Judique), repairs and renewals to breakwater .....	4,500.00
McNair's Cove, repairs to breakwater .....	2,800.00
Mosher's Bay, repairs to breakwater .....	1,300.00
Parrsboro, repairs to beach protection .....	1,000.00
Petite Riviere, repairs to breakwater .....	740.00
Portuguese Cove, repairs to breakwater .....	1,320.00
Ross' Ferry, repairs to wharf .....	750.00
Round Hill, repairs to wharf .....	2,000.00
South Ingonish, to repair and reconstruct beach protection .....	1,900.00
Sydney Harbor, repairs to quarantine wharf .....	850.00

\$136,910.00

### PRINCE EDWARD ISLAND.

Harbors and rivers generally, repairs and improvements .....	\$ 14,000.00
Miminigash Harbor, repairs to breakwaters .....	2,000.00
Souris, to repair and strengthen breakwater .....	35,000.00
Summerside, repairs to breakwater .....	750.00
Tignish, repairs to breakwaters .....	1,000.00
Victoria, repairs to pier .....	1,500.00
Wood Islands, repairs to breakwaters .....	2,100.00

\$56,350.00

### NEW BRUNSWICK.

Back Bay, wharf repairs and improvements .....	\$ 3,500.00
Cape Bald, repairs to breakwater pier .....	3,100.00
Dorchester, wharf improvements .....	800.00
Fort Dufferin, reconstruction of breastwork .....	18,000.00
Grand Anse, repairs to breakwater and pier .....	750.00
Harbors and rivers generally, repairs and improvements .....	40,000.00
Neguc, repairs to wharf .....	3,000.00
Richibucto Beach, breakwater repairs and improvements .....	800.00
Shediac, repairs to wharf .....	1,400.00

Shippigan Gully, repairs to breakwater and breastworks .....	3,500.00
St. John River and tributaries, to provide for full and final contribution to local Government, not to exceed one-half cost of certain wharfs built by it in tidal waters .....	5,923.99

\$80,773.99

### QUEBEC.

Anse aux Gascons, repairs to wharf ..	\$ 10,600.00
Baie St. Paul, repairs to wharf ..	600.00
Chicoutimi, repairs to wharf .....	2,000.00
Cross Point, repairs to wharf .....	2,000.00
East Templeton, repairs to wharf ..	925.00
Graham, reconstruction of wharf ..	1,700.00
Harbors and rivers generally, repairs and improvements .....	75,000.00
Kamouraska, repairs to wharf .....	1,200.00
Laprairie, protection works, maintenance and repairs .....	20,000.00
Les Eboulements, repairs to wharf ..	900.00
Matane, repairs to breakwater .....	1,000.00
Murray Bay, repairs and improvements to wharf .....	2,000.00
Pointe a Elie, repairs to breakwater, wharf .....	1,200.00
Rimouski, harbor improvements .....	100,000.00
Rimouski wharf, water supply .....	6,000.00
River du Loup (en bas), repairs to wharf .....	1,500.00
Riviere Onelle, repairs and improvements to wharf .....	1,500.00
Sabrevois, repairs to wharf .....	600.00
St. Alphonse, repairs to wharf .....	2,100.00
St. Godfroy, repairs to wharf .....	1,000.00
St. Irene, repairs to wharf .....	850.00
St. Johns, reconstruction of booms ..	1,300.00
St. Laurent, Island of Orleans, repairs to wharf .....	2,700.00
Three Rivers, repairs to wharf .....	2,000.00
Yamaska, reconstruction of dam .....	1,500.00

\$240,175.00

### ONTARIO.

Bayfield, repairs to pier .....	\$ 4,000.00
Blind River, repairs to wharf .....	1,000.00
Burlington channel, repairs to wharf ..	1,000.00
Cobourg, repairs to Langevin pier ..	40,000.00
French River dams, repairs and maintenance .....	3,000.00
Jennings and Ross in connection with contract for construction of substructure of Big Chaudiere dam ..	5,800.00
Goderich, repairs to lumber dock ..	3,000.00
Grand Bend, repairs to piers .....	1,000.00
Harbors and rivers generally, repairs and improvements .....	65,000.00
Kingston, maintenance and operation of combined roadway wharf and bridges .....	8,500.00
Port Bruce, repairs to pier .....	2,100.00
Port Burwell, repairs to piers .....	14,600.00
Port Colborne, repairs to breakwaters ..	7,400.00
Port Hope, harbor improvements .....	2,000.00
Port Stanley, harbor improvements ..	77,000.00
Rondeau Harbor, repairs to piers and placing of riprap .....	4,000.00
Saugeen River, Southampton, repairs to piers .....	4,000.00
Shediac, repairs to wharf .....	1,000.00
Southampton, repairs to breakwaters ..	1,800.00
Sturgeon Falls, repairs to wharf .....	875.00
Thessalon, repairs to wharf .....	1,000.00
Wellington, in final settlement of claims of McFarlane, Pratt, Hanley, Ltd., in connection with contract for harbor improvements .....	3,240.00
Wendover, repairs to wharf .....	1,000.00

\$252,315.00

### MANITOBA.

Harbors and rivers generally, repairs and improvements .....	\$ 15,000.00
Little Pembina River, diversion into Pelican Lake .....	15,500.00
Red River, repairs to channel protection work .....	3,000.00

\$33,500.00

### SASKATCHEWAN AND ALBERTA.

Harbors and rivers generally, repairs and improvements .....	\$ 20,000.00
--	--------------

### BRITISH COLUMBIA.

Fraser River (lower), improvements ..	\$ 21,500.00
Goose Bay, repairs to wharf .....	1,000.00
Harbors and rivers generally, repairs and improvements .....	75,000.00
Prince Rupert quarantine station, repairs to wharf .....	2,000.00
Tofino, repairs to wharf .....	1,600.00
Victoria harbor, repairs to wharf ..	4,500.00
Williams Head quarantine station, improvements and repairs .....	13,200.00

\$118,800.00

### GENERALLY.

Harbors and rivers, generally .....	\$ 30,000.00
DREDGING.	
New dredging plant, Ontario and Quebec .....	\$ 6,000.00

Dredging, Maritime Provinces .....	200,000.00
Dredging, Ontario and Quebec .....	200,000.00
Dredging, Manitoba, Saskatchewan and Alberta .....	64,000.00
Dredging, British Columbia .....	250,000.00

\$720,000.00

### SLIDES AND BOOMS.

Gatineau River, new boom .....	\$ 11,000.00
Slides and booms generally .....	5,000.00

\$16,000.00

The following Public Works Department items are chargeable to collection of revenue:—

### SLIDES AND BOOMS.

Upper Ottawa Improvement Co.'s yearly allowance for logs passed through Chenaux Boom .....	\$ 1,800.00
Gatineau River, annual allowance for the use of Gilmour & Hughson's boom at Cascades .....	600.00
Ottawa District, slides and booms, etc. .....	43,500.00
Saguenay District, booms, piers, etc. ....	8,000.00

\$53,900.00

### GRAVING DOCKS.

Champlain graving dock .....	\$ 20,000.00
Levis graving dock .....	27,300.00
Esquimalt graving dock .....	21,000.00

\$68,300.00

### HARBOR AND RIVER WORKS, ETC.

Burlington channel bridge .....	\$ 5,800.00
Montreal River, dam at Latchford ..	3,000.00
River Yamaska lock and dam .....	2,500.00
Riviere du Lievre lock and dam .....	3,500.00
St. Andrew's Rapids lock and dam, Red River, Man. ....	20,700.00
Selkirk, Man., repair slip .....	5,200.00

MISCELLANEOUS.	
Maintenance and operation of water storage dams on Ottawa River and tributaries, surveys in connection therewith, and settlement of land damages .....	\$ 125,000.00
Dry docks generally, inspection, etc. ....	4,000.00
For operation and maintenance of inspection boats .....	15,000.00
Gratuity to Capt. Barney Freeman, who was seriously injured while at work in government shipyard at Selkirk .....	2,000.00
River gauging and metering .....	24,000.00
To pay Western Dry Dock & Shipbuilding Co., Port Arthur, a portion of fifth payment of subsidy due upon completion of work covered by agreement, notwithstanding that the work is not completed .....	35,641.50

### AUTHORIZED BY STATUTE.

Collingwood dry dock No. 1 .....	15,000.00
Collingwood dry dock No. 2 .....	9,208.96
Montreal floating dock .....	105,000.00

## Naval Service Estimates for 1918-1919.

The estimates for the year ending Mar. 31, 1919, submitted to the House of Commons recently, contain, among others, the following items:—

Naval Service, to provide for the maintenance and upkeep of ships, Naval College, dockyards at Halifax and Esquimalt, and Royal Naval Canadian Volunteer Reserve .....	\$ 600,000.00
Fisheries Protection Service, to provide for repairs and maintenance of fisheries protection steamships ..	300,000.00
Hydrographic Survey .....	215,000.00
Radiotelegraph Service, to provide for building and maintenance of wireless stations .....	225,000.00
Tidal Service, to provide for maintenance of tidal stations and surveying steamers .....	25,000.00
Patrol of northern waters of Canada ..	40,000.00
Life saving stations, including rewards for saving life .....	100,000.00
Royal Naval College of Canada, restoration .....	25,000.00

\$1,530,000.00

## Marine Department Estimates for 1918-1919.

The estimates for the year ending Mar. 31, 1919, submitted to the House of Commons recently, contain, among others, the following items:—

### LIGHTHOUSE AND COAST SERVICE.

Agencies, rents and contingencies .....	\$ 178,000.00
Salaries and allowances to lightkeepers .....	485,000.00

Maintenance and repairs to light-houses . . . . .	700,000.00
Construction of lighthouses and aids to navigation, including apparatus, submarine signals, and providing suitable boats for carrying on construction work . . . . .	400,000.00
Signal service . . . . .	60,000.00
Administration of pilotage and maintenance and repairs to steamship Eureka . . . . .	56,300.00
Maintenance and repairs to wharfs breaking ice in Thunder Bay and Lake Superior and other points deemed advisable for good of navigation . . . . .	40,000.00
To pay pension of \$300 each per annum to retired pilots . . . . .	9,300.00
To provide telephones at different points throughout the Dominion in connection with aids to navigation . . . . .	500.00
Allowance to harbor master at Amherstburg, for supervision of lights and buoys in St. Clair River, Detroit River, Lake Erie, and other services during navigation . . . . .	400.00
	\$1,939,500.00

OCEAN AND RIVER SERVICE.	
Maintenance and repairs to Dominion steamships and ice breakers . . . . .	\$ 1,500,000.00
Examiners of masters and mates . . . . .	16,500.00
Investigations into wrecks . . . . .	12,300.00
Expenses of schools of navigation . . . . .	8,000.00
Registration of shipping . . . . .	3,000.00
Removal of obstructions in navigable waters . . . . .	5,000.00
Inspection of live stock shipments . . . . .	3,000.00
To continue subsidy for wrecking plants, Quebec, Maritime Provinces and British Columbia . . . . .	35,000.00
Unforeseen expenses . . . . .	5,000.00
Amount required for two boilers for C.G.S. Montreal . . . . .	60,000.00
Amount required for two steamships for buoy service in Maritime Provinces . . . . .	300,000.00
MISCELLANEOUS.	
Compassionate allowances to the widows, or fathers, or mothers, or dependents of the captain and members of the crew of the C. G. S. Simcoe, who lost their lives when that vessel foundered in the Gulf of St. Lawrence, Dec., 1917 . . . . .	\$ 61,500.00
	\$1,947,800.00

## Mail Subsidies and Steamship Subventions for 1918-1919.

The estimates for the year ending Mar. 31, 1919, submitted to the House of Commons recently, contain, among others, the following items:—

ATLANTIC OCEAN, STEAM SERVICES.	
Between Canadian Atlantic ports and Australia and New Zealand . . . . .	\$ 70,600.00
Between Canada and Great Britain . . . . .	400,000.00
Between Canada and Newfoundland . . . . .	70,000.00
Between Canada and the West Indies or South America, or both . . . . .	250,666.66
Between Canada and South Africa . . . . .	73,000.00
PACIFIC OCEAN.	
Between Canada and Australia or New Zealand or both, on Pacific Ocean . . . . .	180,500.00
Between Canada, China and Japan . . . . .	253,333.33
Between Prince Rupert, B.C., and Queen Charlotte Islands . . . . .	21,000.00
Between Victoria and San Francisco . . . . .	3,000.00
Between Victoria, Vancouver way ports and Skagway . . . . .	12,500.00
Between Victoria and West Coast Vancouver Island . . . . .	5,000.00
Between Vancouver and northern ports of British Columbia . . . . .	16,800.00
LOCAL STEAM SERVICES.	
Between Baddeck and Iona, N.S. . . . .	5,825.00
Between Charlottetown, Victoria and Holiday's Wharf, P.E.I. . . . .	2,500.00
Between Froude's Point and Lockeport, N.S. . . . .	600.00
Between Grand Manan and the mainland of N.B. . . . .	10,000.00
Between Halifax, Canso and Guysboro, N.S. . . . .	5,000.00
Between Halifax and Newfoundland via Cape Breton ports . . . . .	10,000.00
Between Halifax, Mabou Bay, Tanook Islands and La Have River ports . . . . .	4,000.00
Between Halifax and Spry Bay and ports in Cape Breton . . . . .	4,000.00
Between Halifax, South Cape Breton and Bras d'Or Lake ports . . . . .	6,000.00
Between Halifax and west coast Cape Breton, calling at way ports . . . . .	1,000.00
Between Halifax and Sherbrooke . . . . .	2,000.00
And between the mainland and the Magdalen Islands . . . . .	18,000.00
Between Mulgrave and Canso . . . . .	6,500.00
Between Mulgrave and Guysboro, calling at intermediate ports . . . . .	5,500.00
Between Newcastle, Neguac and Escomiac, calling at all intermediate points on Miramichi River and Miramichi Bay . . . . .	2,500.00
Between Pelce Island and mainland . . . . .	8,000.00
Between Petit de Grat and Intercolonial Ry. terminus at Mulgrave . . . . .	7,000.00
On Petitdiac River between Moncton and way ports, and a port or ports on west coast of Cumberland County . . . . .	2,500.00
From opening to closing of navigation in 1918, between Pictou, Mulgrave and Cheticamp . . . . .	7,500.00
From opening to closing of navigation in 1918, between Port Mulgrave, St. Peter's, Irish Cove and Marble Mountain and other ports on Bras d'Or Lakes . . . . .	6,500.00
During 1918, between Quebec and Harrington, calling at ports and places along northern shore of the River St. Lawrence between such terminals . . . . .	28,000.00
Between Quebec and Gaspé Basin, touching at intermediate ports . . . . .	8,500.00

Between River du Loup, Tadoussac and other north shore ports . . . . .	6,000.00
Between St. John, N.B., and ports in Cumberland Basin . . . . .	3,000.00
Between St. John, N.B., and Bridge-town . . . . .	2,500.00
Between St. John, N.B., and Digby . . . . .	20,000.00
Between St. John, N.B., Digby, Annapolis and Granville, viz., along west coast of Annapolis Basin . . . . .	2,000.00
Between St. John, N.B., and ports on Bay of Fundy and Minas Basin, and Margareville, N.S. . . . .	8,000.00
Between St. John, Westport and Yarmouth and other way ports . . . . .	10,000.00
During year 1918 between St. Stephen, N.B., Ste. Croix River points, Deer Island, Campobello and inner islands, Passamaquoddy Bay and L'Etete or Back Bay . . . . .	6,000.00
During season of 1918, between Sydney and Bay St. Lawrence, calling at way ports . . . . .	6,000.00
During season of 1918 between Sydney and Whycomagh . . . . .	3,000.00
From Sydney, N.S., around east coast of Cape Breton to Hastings and return to Sydney via Bras d'Or Lakes . . . . .	5,500.00
Expenses in connection with supervision of subsidized steamship services . . . . .	3,000.00
	\$1,585,234.00
AUTHORIZED BY STATUTE.	
Canada, China and Japan . . . . .	\$ 121,666.55
Canada and France . . . . .	200,000.00
	\$321,666.55

## Jurisdiction Over Coastwise and Great Lakes Vessels.

In introducing a bill to amend the Railway Act, into the House of Commons, Apr. 4, J. E. Armstrong, M.P. for East Lambton, who is chairman of the Railway Committee, said:—

"This bill is similar to the one I introduced in 1915. The legislation is along the same line as that which I have asked Parliament during the last five years, to bring into force. It is for the purpose of bringing the boats engaged on our inland waters and our coastwise trade under the control of the Board of Railway Commissioners. The railways are compelled to file their tolls, rates and tariff agreements with the board, and they are also compelled to do this with regard to boats connected with the railways. I firmly believe it would be in the public interest, not only to compel the boats on our inland waters and along the coast to file their tariff rates with the board, but to bring them under the board's absolute control. There are on the Canadian register 8,500 vessels, with some 45,000 employees. In view of the fact that these vessels are allowed to make use of our rivers, harbors, docks and canals free of

charge, in which improvements the people of this country have invested over \$350,000,000. I think members will readily agree that it would be in the public interest for Parliament to have control over these."

When this matter was brought up last year, and it was proposed to embody a similar provision in the Consolidated Railway Act, the committee, after strong and general opposition, in which the Dominion Marine Association and the leading boards of trade took part, struck out the provision objected to, but the bill did not become law, as Parliament adjourned before final action could be taken. It is probable that the Consolidated Railway Act, which has been before the Senate, will be sent back to the House of Commons for further amendment, when another attempt may be made to incorporate the objectionable provision in the act. It is, however, expected that there will be little, if any, time for a fair discussion of the question, and that no action will be taken in view of the opposition of last year.

## Decision in a Vessel Partnership Case.

At Toronto, April 10, Mr. Justice Rose gave judgment in the non-jury assize court in favor of Capt. James B. Foote, of Toronto, who had instituted a suit against A. B. Mackay, of Hamilton, Ont., for a declaration that he had a 5% interest in the two former lake steamships, the Turret Chief and the Algonquin, and for an accounting of profits, both vessels figuring in war sales.

The Turret Chief was wrecked in the storm that swept the great lakes in the autumn of 1913 and was abandoned by the owners to the underwriters, who subsequently released her and took her to Port Arthur, Ont. Foote claimed that Mackay and he bought the vessel from the underwriters for \$8,500, made repairs and thereafter sent her with a cargo from Chicago to Leith, Scotland, where the vessel was sold for £30,250.

In Dec., 1915, the Algonquin was purchased from the Port Colborne & St. Lawrence Navigation Co., for \$80,000. Foote claimed that his profits from the first sale, or some of them, remained in the Algonquin, which was sold to interests affiliated with the Nova Scotia Steel Co. and engaged in coastwise trade in the Lower St. Lawrence until the autumn of 1916, when she was again sold to New York interests, and on her first voyage thereafter was sunk by a German submarine off the Irish coast.

**The Tunisie-Cabotia Collision.**—Cross actions for damages were heard in the Admiralty Court, Montreal, recently, arising out of the collision between the Belgian steamship Tunisie and Canada Shipping Co.'s s.s. Cabotia, near Windmill Point, Montreal harbor, Oct. 28, 1917. The court found that the s.s. Cabotia was entirely at fault and gave judgment accordingly, leaving the assessment of damages to the Registrar of the Court. The result of the Wreck Commissioner's enquiry into the causes of the casualty, as published in Canadian Railway and Marine World for Dec., 1917, showed that the master of the s.s. Cabotia, was needlessly daring and showed bad judgment and recklessness, and that he violated the port's bylaws in obstructing navigation, and his certificate was suspended for six months from Nov. 10, 1917. The master and officers of the s.s. Tunisie were exonerated from all blame.

## Turning Vessels in the River at Fort William.

In pursuance of a resolution passed at the Dominion Marine Association's annual meeting recently, a committee had an interview with the Deputy Minister of Marine at Ottawa on Mar. 7 and as a result an order in council was passed Mar. 14, cancelling sec 15 of the special regulations for the Fort William, Ont., harbor, and substituting the following section therefor:—

"Steam vessels not exceeding 200 tons gross may turn in any part of the Kaministiquia River, McKellar channel or Mission channel, under their own power, excepting in the immediate vicinity of any bridge crossing those rivers or channels. Steam vessels exceeding 200 tons gross are prohibited from turning in the local harbor, excepting at the turning basins constructed for that purpose at West Fort, above the G.T.P. Ry. bridge, at the confluence of the Kaministiquia River with Mission channel, at the confluence of the Kaministiquia River with McKellar channel and at the G.T.P.R. turning basin near the mouth of Mission channel; provided that steam vessels exceeding 200 tons gross, but not exceeding 330 ft. long may turn in the section of the Kaministiquia River lying between the bend above the C.P.R. elevator D and the westerly limit of the G.T.P.R. rail dock and in the section of the river lying between C.P.R. slip 1 and elevator C, but the turning of such vessels in those sections of the river shall not take place without the use of a tug, unless sanctioned by the harbor master."

**Naval Patrol Boats and Mine Sweepers.** Mr. Sinclair asked the following questions in the House of Commons on April 10:—How many naval patrol boats and mine sweepers of all classes were ordered on Government account in 1916 and 1917? How many have been delivered to date? What is the speed of these boats? If various, specify? Are they constructed of wood or steel? What service are they intended for? What has been the total expenditure to date? How many officers and men are employed in this branch of the service? The Minister of Marine stated in reply, that as the information asked was of a confidential nature, it was not considered advisable in the public interests to publish it.

**JOHN DATE**

Brass Founder and Coppersmith

13-15 Concord St., Montreal

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**The Northern Electric Co., Montreal.** has been appointed exclusive agent for Canada and Newfoundland, for the Drew Electric & Manufacturing Co., Indianapolis, Indiana, manufacturers of electric light, power and gas materials.

**Independent Pneumatic Tool Co.—F. J. Hurley,** who travelled for the company's New York office for several years, died at East Orange, N.J., Mar. 10, aged 29, from Hodgkins disease, from which he had suffered for some time.

**Canada Foundries & Forgings, Ltd., Welland, Ont.,** has issued an illustrated booklet, "Craft of the Hammersmith," dealing with the art of forging, and with heat treatment, and referring among other things to heavy marine and locomotive parts.

**Berry Bros., Inc.—M. F. Enrich,** who was with the Glidden Co. for 28 years, having risen from the bottom to the position of assistant to Mr. Glidden, has been appointed Assistant General Manager for Berry Bros., varnish manufacturers, Detroit, Mich., and Walkerville, Ont.

**The Canuck Supply Co.'s** manufacturing subsidiary, the Spartan Machine Company, Ltd., Montreal, is making a considerable addition to its existing plant, in order to manufacture railway and mechanical devices and supplies. J. Bruce Robb, who served with the P.P.C.L. Infantry, and was invalided home to Canada early in the war, has been able to take up work again with the Canuck Supply Co. and is taking over the territory formerly attended to by E. L. Foley, who volunteered some three months ago and is now on military service.

**Consolidated Equipment Co., Ltd.,** was incorporated recently under the Dominion Companies Act, with an authorized capital of \$25,000, and office at Montreal. The officers are: Herbert Ewan, President; J. W. Coleman, Vice President and Treasurer; and H. B. Duke, Secretary. The company announces that it represents the following, among others:—Murphy Lines, including Imperial Appliance Co. and Standard Railway Equipment Co.; Nathan Mfg. Co., lubricators and injectors; Brown & Co., stay and engine bolt irons; R. W. Young Mfg. Co., electric turntable tractors; Standard Paint & Varnish Co.,

Windsor, Ont.; Spencer Otis Co., Chicago; Bako Maccoo Co., union renewable fuses; Howe locomotive bell ringer.

**T. McAvity & Sons, Ltd., St. John, N. B.,** have issued an illustrated catalogue of McAvity marine specialties, to pass British Admiralty, Lloyd's, and Imperial Munitions Board's specifications, including valves, cocks, water columns, water gauges, side or port lights, ventilating posts, steam whistles, gauges, plugs, brass and copper pipes and tubes, gongs, signal and binnacle bells, bell pulls, crank, chain and leaders, ships' pumps, deck pumps, deck plates, ships' rudder braces, dumb braces, dovetails, brass and lead figures, letters and water marks, sounding leads, steering wheel caps, diamonds and stars, bushings, marine hardware, cordage, galvanized wire rope, chains, bolt, scupper and sheathing nails, ship and boat spikes, steel and brass wooden screws, tackle blocks, shipbuilders tools, mallets, caulking irons, augers, pulley blocks, jack screws, etc.

## Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Society of Civil Engineers—F. S. Keira, 174 Manfield St., Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Railway Association for National Defence—W. M. Neal, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

## Steamer For Sale

Twin Screw, Steel Hull "Steamer Oiseau," now operating on Ottawa River from Pembroke. Length 120 ft. Beam 22 ft. 8 in. Gross tonnage 148. Horse power of engines 250 each. Fully equipped with Electric Light Plant, Life Belts, Buoys, etc. For further particulars apply to

**PEMBROKE TRANSPORTATION COMPANY, LIMITED.**

Pembroke, Ontario.

Capital Authorized \$10,000,000  
Capital Paid up 7,000,000  
Reserve Fund 7,000,000

Head Office: Toronto.

Letters of Credit, Travellers' Cheques and Drafts issued, available in all parts of the World.

Sterling and New York Exchange bought and sold.

Savings Department: Interest allowed on deposits at best current rates.

Branches throughout the Dominion of Canada.

## Get This Booklet

It gives up-to-date facts on Railroad Upholstery problems and the experience of one of the foremost railroad men in the country with

REG. U. S. PAT. OFF.

It is full of interesting and valuable information for Purchasing Agents, Superintendents of Motive Power, Master Mechanics, Shop Foremen, Car Upholsterers, Car Builders and Officials interested in Railway Equipment.

*Booklet will be sent promptly to all persons requesting it of*

61 Broadway, New York

## National Railway Motor Cars

Railway motor cars have come to stay. The days of the old pump car are numbered. A motor car is the biggest labor and time saver that has ever been put into service in the Maintenance-of-Way Dept. It has become practically impossible to hire track men unless equipped with motor cars. National cars are in service on practically all railways throughout the United States and Canada and are thoroughly practical for their different purposes. If interested in Motor

Cars send for our catalog describing and illustrating our complete line of cars.

We are also the manufacturers of the famous "Casey Jones" hand car engine which is furnished complete with all necessary equipment for the converting of a standard hand car or push car into a motor car. Thousands in service throughout the United States and Canada.

## Freight Brake Maintenance.

By F. B. Farmer, Northwestern Representative, Westinghouse Air Brake Co., St. Paul, Minn.

My first purpose in this paper is to show that freight brake maintenance is generally unsatisfactory; next to show why; and then to suggest how to improve it. As is generally known, the Westinghouse Air Brake Co. maintains a large, selected and trained organization for the special purpose of co-operating with customers in obtaining good and economical installation, maintenance and operation of brake equipment. Several years ago, while two of us Westinghouse men and two railway air brake experts were giving particular attention to reducing freight train break-in-twos, we became convinced that freight train brakes in interchange service were not being maintained as well as the needs and the time and money spent on them would warrant, but to effect an improvement the proof and the causes were required.

The proof of unsatisfactory conditions was finally obtained at a "dead line" division point on a road where, to control an increased tonnage safely, and without aid from hand brakes, down a subsequent steep, descending grade, it was required that at this terminal all brakes in each freight train must apply with the ordinary terminal test application of a 20-lb., continuous service reduction from 70 lb., and that none leak off entirely during the period of inspection. As this application should produce approximately 50 lb. in every brake cylinder; as brake pipe leakage causes more to be fed in from the auxiliary reservoirs during the inspection, as the inspection is finished ordinarily in 12 to 14 minutes; as 1 in. recession of piston travel means the loss of all effective holding power; as 5 or 6 lb. in a brake cylinder will hold the brake cylinder in applied position; as no test of the retaining valves was included; and as no brake was considered ineffective unless entirely off when inspected, it will be appreciated that this test requirement was very moderate, yet, when the rule was first put in force, and although division terminals in advance of this one did more brake cleaning than before, 10 to 12% of the cars had to be set out for brake repairs.

The even more disturbing feature noted was the short time since a large proportion of these defective brakes had, as indicated by the stencils, been supposedly put in good condition. This was in 1913. That you may appreciate not only how bad the situation was, but also the great possibilities remaining after two years of special and unusual work done to improve it, as described later, please see table 1, which shows, out of the total ineffective brakes set out and repaired at the "dead line" point for July of three years, the number of such bearing system stencils, and the elapsed periods since they had supposedly been put in good order. System-cleaned brakes only were taken, because we were seeking to improve the work on this particular road. The foreign-cleaned brakes on it showed a much worse condition. In fact, a check made in Oct. and Nov., 1917, of freight trains yet uninfluenced by steep grade conditions,

the latter resulting in improved brake maintenance, showed that of 1,103 system cars 14.1% had defective brakes, as compared with 25.3% on 659 foreign cars.

aged 22 lb. or 44% of a full service application.

Regarding the present general condition of freight brakes in interchange ser-

Table 1—Brakes Cleaned at "Dead Line" Point.

System	% system work recleaned in months.											
July	1	2	3	4	5	6	7	8	9	10	11	12
1913	596	21.3	35.7	44.7	51.9	56.9	63.9					
1914	823	18.9	28.1	36.2	43.0	48.2	52.6	58.4	65.1	76.1	81.9	93.5
1915	630	8.8	16.1	23.8	30.9	36.3	44.6	47.7	54.1	65.2	75.7	85.4

In this tabulation the average car months since previous brake cleaning were 6.6 for 1914 and 7.1 for 1915, a gain of 7.5%. But these brakes had not suddenly become inefficient. Hence, with more "dead lines," which would have caught the defective brakes sooner, these averages would have been lower. Even so, note in 1913 that 44.7% of the defective brakes were inefficient three months after cleaning; that this was 23.8% in 1915; and that with but one "dead line" and it operating in one direction only, less than 5% had run over 12 months.

Although a special effort was made in 1914 to improve conditions, and in spite of the encouraging results shown in table 1, a gauge test for brake cylinder leakage made at various division terminals in 1915 on 164 freight brakes showed that of 52 tested immediately after cleaning 46.1% leaked down over 5 lb. in one minute. The customary method of lubricating had been followed, this including filling the expander space, next to the inside of the packing leather, with the lubricating grease. As this temporarily stops or reduces leakage through a defective packing leather, the unfavorable results stated were minimized.

As illustrating this feature, a special gauge test was made of a packing leather, that the average cleaner would judge by inspection to be good, but which we had found to be very porous. With a dry surface on the expander side and a lubricated cylinder wall it leaked 38 lb. from 50 lb. in one minute. This was reduced to 7 lb. leakage by filling the expander space with lubricant. After being under pressure of from 50 lb. down to about 30 lb. for 90 minutes, representing not over 2 or 3 days' ordinary service, the leakage had increased to 37 lb. The lubricating grease on the porous portion had been forced through the packing.

Reverting to the gauge tests, 12 brakes just cleaned leaked up over 3 lb. from 50 lb. in one minute, due to faults in the triple valves or their gaskets. A limit of 3 lb. should certainly not be exceeded. From this cause and excessive cylinder leakage 40.6% of these 64 brakes were defective immediately after cleaning. The average leakage was 8.4 lb. A gauge test of 76 brakes that, caught at random in 1915, had run from one to three months since cleaned, showed the following leakage from 50 lb. in one minute:

71.0% leaked over 5 lb.  
59.2% leaked over 10 lb.  
40.7% leaked over 15 lb.  
21.0% leaked over 20 lb.

The 50.2% that leaked over 10 lb. aver-

vice, thorough terminal tests and inspections made personally by the four of us air brake men on freight trains in transit during Oct. and Nov., 1917, covering 51 trains far removed from mountain grade service and 26 others ready for or having recently come down steep, descending grades, indicated a very noticeable improvement in the brakes of the 26 trains, as compared with 1915, but absolutely none in the others. The 51 trains had 2,276 cars, and 14.1% of these cars had inefficient brakes. This emphasizes the statement in the report of the Chief of the Bureau of Safety to the Interstate Commerce Commission for the year ended June 30, 1917, that: "The maintenance of the air brakes to the point of maximum efficiency is a consummation to be striven for by all carriers, regardless of whether the grade on a particular line of road demands such efficiency in the ordinary movement of trains. Level roads should maintain their air brake equipment to the same degree as those having steep mountain grades."

**Causes for unsatisfactory condition.**—As will doubtless appeal to you, the "dead line" data for 1913 (see table 1) gave ample proof that freight brake maintenance was very unsatisfactory, but we required the causes to effect a betterment. It may be said, in passing, that "cleaning with the stencil" was not an explanation. After failing in an attempt to learn the causes by having brake cleaners report their findings, the four of us in 1914 took our over-coats, wrenches, and test gauges and spent six weeks working with the brake cleaners at the various division terminals. We made gauge and soap suds tests of a large number of brakes, including those just cleaned and others that had run for various periods. With each brake found to have over 5 lb. brake cylinder leakage per minute from an initial pressure of 50 lb. we personally located and remedied the faults, thereby instructing the accompanying, local brake cleaners. Other existing defects were treated similarly. The Air Brake Association recommends that no newly repaired brake be considered satisfactory until it will pass the above cylinder leakage test, as well as other tests. This work disclosed such opportunities for betterment that we repeated it in 1915 and 1916. It has convinced me that large roads should have a special man giving it regular attention, as more particularly referred to later.

The more common causes for brakes failing to apply or leaking off quickly, as indicated by tables 1 and 2, are, in the order of their estimated proportions:—

1. Defective brake cylinder packing leathers, due to being worn, cracked, cut, porous, off center and applied reversed.
2. Loose brake cylinder piston follower nuts.
3. Dry and dirty brake cylinders.
4. Expanders out of place or not fitted.
5. Release valve or "bleeder" leakage.
6. Pressure cylinder head gasket leakage.
7. Cylinder pipe leakage with detached equipment. The last mentioned is usually due to no provision for reasonable flexibility in the pipe, and to the cylinder moving when the brake is applied and released. On roads handling much of such equipment this cause for defective brakes will be relatively much more prominent.

In addition to the ineffective brakes due to the foregoing causes, as disclosed by terminal brake tests, are others resulting from:—8. Bad order brake rigging, such as rods broken, due to being cut by axles or to flaws, broken brake hangers and beams. 9. Good order brakes received cut out and left so without test, or cut out on the trip for insufficient reason, all uncarded. 10. Leaks at or near branch pipe connections to triple valves (requiring cutting out), due to shifted main brake pipes or to brake cylinders and auxiliary reservoirs being loose at the bracket connections. 11. Piston travel over 10 in. (U.S. Federal rules designate such as ineffective brakes.) As regards brake beams, a recent tabulation on a mountain division of one road showed an average for a week, based on conductors' reports, of 2 beams down per day. The principal causes were hanger pins out or hangers broken. A partial explanation is the difficulty of seeing the hanger pin cotters and keys, due to the varied and obscured locations.

**Retaining valve.**—Trains cannot be held down steep grades, with the air brakes, without the aid of retaining valves, and no part of the air brake requires less to maintain it if once properly installed; also, no part gets less needed attention. A very few years ago, while examining the piece work list for freight brake repairs on a large, level grade railway, the omission of any price for testing and repairing the retaining valve and its pipe was noted. The results are obvious. It is difficult for level grade roads, and even level grade divisions of roads having mountain grades, to appreciate that they must give these parts good attention if trains are to be handled safely down mountain grades. Willingness to pay mountain grade roads for repairs necessary to make retaining valves hold will not answer. The time now required to put the rest of the brake equipment in sufficiently good order is so excessive at mountain grade terminals as to generally preclude doing anything for retaining valves. We must depend essentially on the valve and its pipe being properly installed and on needed repairs being made when the brake is cleaned.

**Underlying cause.**—Rightly termed, the brake cleaning faults indicated are merely symptoms, and the real or underlying cause for this portion of the unsatisfactory freight brake maintenance is superficial inspecting, testing and repairing. The main reasons for this are undue haste, the pressure applied to get quantity without equal insistence on quality, unskilled men, and insufficient supervision. A letter to X asks why less brakes were cleaned last month than the previous one, or why less than by Y. Then there is the daily, local pressure to "have those B.O. loads ready at ——— o'clock," and like pressure to have the repair track ready to pull at the appointed time, each occasionally requiring more speed than will

permit of good work. The letter enquiry mentioned is always undesirable, as such comparisons cannot be made fairly. If there is good reason to believe more should be done generally, then the air brake man should personally look into it on the ground. The daily pressure, understandingly applied, is largely necessary, but the almost entire absence of a balancing pressure and provision for good work, and the more or less inadequate time, lack of sufficient proficient workmen, and needed tools and material to accomplish, will inevitably result in superficial repairing.

One very competent railway air brake man is confident that with good, initial brake installation and with efficient cleaning and lubricating, freight brakes will, as a rule, be reasonably efficient for 9 to 12 months. The results with many brakes apparently support this contention. But, even if this is impossible, the gap between it and the actual condition shown in table 1 proves that a big improvement is easily practicable.

**Wasting material.**—A natural corollary of the quantity only basis of repairing is the expensive "economy" resulting from failure to replace material that is worn out or otherwise defective. Illustrating: A gauge test of a newly-cleaned brake showed excessive cylinder leakage. Removal of the piston disclosed the cause as a badly worn and cracked packing leather. The workman assured us that he had noted the condition of the leather, but that, as he had recently been "jumped on for using too many leathers," he thought he had "better take a chance on that one." This was not local, for at another point, where we found much better work being done, we were asked to test a large accumulation of removed packing leathers, because there, too, they had been criticized for using too many packing leathers. We did so, and found all so defective as to unquestionably warrant removal. There is generally more reason to criticize undue retention of defective packing leathers, gaskets and rubber seats for emergency valve, than of applying new ones unnecessarily. All of such removed parts should be sent to a central point for inspection, so that any yet good may be saved, the best scrap value got from the others (pipe gaskets can be made from same), and to get ample evidence of wastefulness before criticizing adversely. Don't nag.

**Car brake instructions and inspections.** Various well known factors have long operated to cause rather frequent changes in a portion of the freight car brake repair force, and the war has magnified this. The new men are seldom properly instructed, and there is little adequate supervision of the work done. The remedy is to give the general air brake inspector an assistant whose main duty will be to instruct the car brake inspectors and repairmen, inspect their work, and inform local foremen of results. His instructions should be largely demonstrations of train, repair track, and shop inspecting, repairing and testing, requiring overclothes as part of his daily habit. The latter is imperative if he is to meet the demands.

A timely editorial in a railway periodical recently said: "In the present emergency, and particularly with the large labor turnover, it is more than ever necessary that adequate supervision be provided." Before the war the freight car brake equipment, complete, cost about \$75 a car for the 8 in. size and \$85 for the 10 in. size. Cleaning and repairing will cost over \$1 a car a year. Multiply these separately by the number of cars owned

and then consider whether the original investment and annual repair cost for cleaning only do not alone warrant a special inspecting and demonstrating instructor. If more proof is needed designate one or more "dead lines," points where all ineffective brakes will be found and repaired before being allowed to pass, then tabulate the periods such have run since the previous repairs were made and the causes for the short-time periods.

**Time.**—While trite to say that a car is earning only when it is moving, yet we should ever keep this in mind so as to help to avoid any unnecessary standing time. D. Willard, President, B. & O. Rd., in a remarkable address to the officers of that road last June, gave some astonishing figures on this, as shown by the following quotation:—"We have had tests made by our own people, and they have also been made on other railways, which show that the freight cars in this country are upon the average under control of the shippers 37% of the time—37% the shipper has the car; 6% out of that 37 being Sundays and holidays. That leaves 63% of the time of the car in the control of the railway. Now, what does the railway do with it? You may say, I suppose, that out of that 63, probably 45 or 50% of the time the car is moving on the road. Nothing of the sort. Only 11% of the total time of the car is it actually being moved. What happens to that other 52% of the time? Standing still in terminals, waiting to be switched, standing on connecting tracks with other railways, waiting to be repaired, being moved from the yard where the train left it to the warehouse—and things of that kind. Only 11% of the time is the car actually in motion; only 37% of the time is it under the control of the shipper; and the Baltimore & Ohio is not any worse than others—as a matter of fact, figures show that had as we are, we were slightly better than the average, but that is the problem that confronts the railways."

Mr. Willard also stated that they were then making 28 miles a day with their freight cars, expressed the opinion that it should be 30, and advised that this gain of 2 miles a day would be equivalent to adding 6,000 ears to their equipment, and which would cost then, for steel hopper cars, approximately \$15,000,000. He said also that for some months their had order cars had not exceeded 2½%. But does such a measure imply that the air brakes on the balance are in good order?

We should keep prominently before us the statement made in a railway periodical recently that "the cars must be kept in good condition, and when repairs are made they should be done thoroughly so that the equipment will not spend an excessive time on the repair tracks." While the car air brake repairs have not generally been made thoroughly, yet making such repairs has not contributed seriously to the percentage of bad order cars, those out of service for repairs. If this percentage could, for this reason, have been a little higher on our eastern lines during last summer, it would have helped materially to prevent the serious troubles experienced during the winter from inadequate control down steep grades.

One time saving not used as extensively as warranted is, where the destination of loads with defective brakes is a terminal, to mark them on arrival "B.O. when empty," with defect, and instruct switchmen to deliver same to the repair tracks promptly when empty.

**Incoming freight train brake test.**—It being obvious that we are far from the time when even fairly modern freight cars will reach the repair tracks for other work

at such intervals as will permit of satisfactory brake maintenance, those with ineffective brakes in trains must be located and set out for repairs with the minimum possible interference with transportation. For this we depend on the train brake test. The defect card can be made to help a little, but not much. Some claim that the train yard test plant is needed and useful for this. I believe it is not, in other than the very exceptional yard, as in special service, such as ore, where there is unusual dead time with no switching to be done. Repairs cannot be made safely while switching is going on, and when a train is made up it should start with the least delay thereafter.

The outgoing freight brake test is, or should be, merely a check against error. To then set out defective brakes for repairs is to disorganize dispatching and switching, thus delaying cars ready to proceed, and greatly augmenting expenses, hence, is as unthinkable as a means of maintenance as it would be to depend on an inspection of locomotives and reports of work needed alone when they were being got out for departure.

Immediately on arrival each train must have a general inspection under blue signals. Assuming that the proper brake application was made by the incoming engineer, a thorough brake inspection can now be given, minor repairs made, and cars with inoperative brakes marked for repair tracks, all during the time and protection afforded by the general inspection. As the air brake inspection must be begun as soon as the brakes are applied, and must be completed quickly (not over 20 minutes and preferably less, so as to avoid an unduly severe test and the setting out of cars with reasonably efficient brakes), it cannot be performed by the men making the general inspection. Under the above plan, the yard master is informed, before switching, just what cars are ready to proceed. Thus brake delays to departing trains are avoided, brakes are maintained, and incident expense is kept at the minimum.

But these desirable ends all depend on the correct performance of a simple duty by the incoming crew. The locomotive man must leave the brakes applied by a 20 lb. reduction, merely adding to any reduction needed for stopping the amount necessary to total 20 lb. It is preferable to have this made as one reduction, and some locomotive men do so by carefully making the stop with the locomotive brakes only, but the other method will have to answer in many cases to avoid the delay of releasing and recharging. Where time will permit of releasing, stretching the slack (hand brakes set at rear), recharging and then applying, a better inspection of draft gear will be possible. If less than 20 lb. is drawn off some brakes in condition to proceed will be found unapplied. On being sent to the repair tracks these will be found operative, and the inspector may be criticized for the unnecessary work and delay. Thereafter he will fear to bad order brakes found unapplied, especially if there are several in a train. Thus there will be either useless expense and delay or brake maintenance will depreciate, with its resultant dangers and ultimate greater expenses, all due to even a few improperly-made incoming brake test applications. The errors are due either to the locomotive man failing to make the proper reduction (even after drawing off 20 lb. he will generally need to add more to have 20 lb. off when the brake valve exhaust ceases), or to the brakeman closing the angle cocks (to cut off) before the reduction is completed. Yet the delay, if

any, to make the test application right will not exceed 15 seconds. For this reason, the simplicity of the test, and especially because of the value of the inspection depends primarily on the application being made properly, it is reasonable and necessary to require 100% efficiency in this.

War time merely emphasizes the need for making the incoming brake test invariably and correctly. We must depend mainly on road foremen and trainmasters to, while on other duties on the locomotive or in the caboose, instruct and check against errors and delinquencies. They cannot do so if they get off when entering yards. Carmen cannot check this. An attempt to do so under existing conditions would result only in more trouble for them. Instructions to govern the method of making the incoming freight brake test, arranged so that they may be issued conveniently in bulletin form, are given at the end of this paper. These are the result of several years' experience with this test on one large road, being a recent revision. Where, as in some instances at mountain terminals, trains arrive with 90 lb., this should be reduced to 70 lb., by suitable application and release, before making the test application. Tests from 90 lb. are less severe, because the high pressure left in the auxiliary reservoir after the reduction of 20 lb. will supply brake cylinder leakage longer than where the application is made from 70 lb.

**Car brake repair instructions.**—It is generally understood that triple valves cannot be well maintained, unless at each periodical cleaning they are cared for in a suitable room, having among its facilities a standard test rack. At two points where experienced cleaners cared for good order triple valves without removing them, but where instructions were to get a good order valve from the near by repair room to replace each found defective, the change was made to sending all valves to the repair room. The effect was shown by one shop repair foreman complaining of the additional work required on triple valves, other than cleaning, while the other and more far seeing foreman expressed surprise that they had, considering the additional serious defects found and repaired, got along as well as they had. Both repair rooms had standard test racks.

The manufacturer's instruction book for use of the standard test rack gives much of the information needed to care for the triple valve repairs fairly well, but the men who maintain the rest of the brake equipment on the car have generally had to depend upon verbal instructions. To aid such men the Westinghouse Air Brake Co. has had certain of its men, who are closely in touch with such work, prepare instructions for the brake work to be done on the car. They represent in concrete form a large part of the remedies proposed for unsatisfactory freight brake maintenance.

**Piston travel and brake pipe leakage.** Short piston travel (less than 6 in.) and brake pipe leakage render good braking far more difficult. A piston travel of 9 in. is actually less objectionable than one of 6 in. The former, by giving a much less increase for ordinary braking reductions, lessens slack action and consequent shocks, yet is almost as efficient in a full application as the 6 in. travel.

Regarding the caution in the appended instructions against altering piston travel until it has been determined, by ascertaining if a brake beam can be moved, whether the brake has partially leaked off, it will be of interest to know that tests made a number of freight cars,

starting with 50 to 60 lb. in the brake cylinder, gradually reducing the pressure, and noting the amount remaining after each  $\frac{1}{4}$  in. recession or loss in piston travel, gave an average amount left of 30 lb. after  $\frac{1}{4}$  in. recession, 20 lb. after  $\frac{1}{2}$  in., 10 lb. after  $\frac{3}{4}$  in. and 5 lb. after 1 in. This explains the statement elsewhere that 1 in. loss in piston travel means the loss of all effective holding power.

The bad results from brake pipe leakage are much greater with long trains and increase more rapidly than the train length. That is, a rate of leakage that would not be particularly detrimental with 40 cars would prevent good handling with 80. But as any leakage is detrimental and wasteful, and as the many moderate leaks, while harder to find and remedy in a train, make a large total leakage, it is very important that all such be located and stopped substantially when cars are on repair tracks. The needed results cannot be obtained without the soap suds test. A loose pipe means a future leak, as also does a rigid pipe where the need of some flexibility is plainly indicated. One illustration of the latter is a branch pipe connection (from main pipe to triple valve) consisting of two straight pieces and one ell. Another that destroys the pipe fit in the triple valve and breaks the pipe is a retaining valve pipe connection running close to the auxiliary reservoir and horizontal or nearly so.

**Brake head spacing.**—In these days, when conservation of material is of the greatest importance, attention may well be given to the waste of shoe metal and brake efficiency resulting from the brake shoes that overlap the wheel treads. This is due to the old head spacing of 60½ in., magnified by manufacturing errors and the spreading action of the overlapping shoes. In addition to insuring that all new beams have the 60 in. spacing, the errors should be rectified in repairing old beams.

**Efficient train inspection.**—Is not considerable of the unsatisfactory maintenance, and which extends beyond the brakes, due to lack of system, insufficient or untrained inspectors, and undue haste in train inspecting and repairing? Where a specified time is allotted for this work is it based on tests with a certain number of reasonably competent men, modern inspection requirement, and certain car limits per train? Is the number of men apportioned for this work generally adequate for the time allotted? Do the switchmen, in an effort to meet the requirements of their superiors, as to when trains must be ready to depart, prevent the inspectors from doing the work properly, as by emptying the brake pipe of air, bleeding uninspected brakes, and by commencing to switch the train before the inspector's work can possibly be completed properly? These questions do not necessarily suggest the belief that the most thorough inspection required should be made of each freight train at every locomotive terminal, but if the rules require it and gross deviations occur regularly, due either to insufficient time or men, how can any really good inspection be expected? If the circumstances will not permit of or justify a thorough inspection at each locomotive terminal, why not outline a less complete one for, say, through trains at alternate terminals, specifying for particular attention only the most important details? Of course, the term inspection includes the making of needed repairs, either on cars while in the train yard or by sending them to repair tracks. Unfortunately, the tendency

is against taking "the stitch in time," with the readily-appreciated results. For example, a cotter is seen to be out, but is not replaced, possibly because its pin is yet in place. Or, piston travel of 9 $\frac{3}{4}$  in. is not shortened, maybe because it is not over the government limit. However, with competent men it is believed that the underlying reason will generally be inadequate time.

**Freight brake repairing and stencilling.** The Northwest Air Brake Club of St. Paul, Minn., has proposed to the Air Brake Association a revision of M.C.B. requirement regarding brake repairing and stencilling, as follows:—It is submitted that the present M.C.B. stencilling for freight brake cleaning, etc., can be simplified, time and money saved, brake maintenance improved and more use got from cars by adopting a rule that when either the triple valve or the brake cylinder must be cleaned, lubricated and tested, all other parts, including the retaining valve and, where had, the dirt collector, be cared for at the same time; also, that any other repairs needed by the brake equipment be made then. Stencilling should then be modified as follows:—Use but two lines; the upper to show the shop or station letters indicating where the work was done, followed by the numerals indicating the month, day and year; the second line to be the initials of the road that did the work. Also, duplicate this on the opposite side of the reservoir or car so that one man inspecting can read all dates without frequently crossing over the train, as is now necessary. The present requirements are to stencil on one side only, and that the shop mark, date and road be repeated each for the "Cylinder," "Triple," and "Dirt Collector," the parts to be lettered as quoted. There is now just enough room to get all of it on the auxiliary reservoir of an 8 in. equipment. The retaining valve is supposed to be cared for at the same time, but there would be no room for a similar stencil for it even were this desirable, as it is not.

The thought back of this separate and complete stencil for each part is that one may require attention, with incident billing if a foreign car, when the others may not. In the rare event of this being so it will be cheaper to care for all then; first, because the broken dates that would otherwise follow would require that the car be switched to the repair tracks twice as often and held from service doubly as long per year to care for the brake cleaning; second, because in the necessarily rapid work of inspection the presence of two or more dates increases errors; and, third, because of the additional expense, if, when a defective brake is found in a train and sent to the repair tracks, a test must be made to positively locate the defect before cleaning and lubricating are begun, as must be if only the then imperative work be done. In that rare case where, for example, a triple valve must be changed (usually cared for in the train) and the other parts may be let go, time and money will be saved if the stencil is not changed and, if a foreign car, no charge is made.

In view of the obvious advantages of the foregoing, and as the cost of switching a car to and from the repair tracks, with the time it must be out of service, means a greater expense than the entire permissible charge for properly caring for all of the details covered by the present stencil, it is hoped that the proposed change in the stencilling rule and in others relating to the work involved will be favorably recommended to the M.C.B. Association and will meet with its consideration.

#### Incoming Freight Brake Terminal Test.

To all concerned—Enginemen and trainmen of freight trains on arrival at terminals will leave the brakes applied by a 20 lb. service reduction made from 70 lb. Where engineman has made an automatic application for stopping, he will, as soon as stopped, add to it by one farther, continuous reduction sufficient to make a total of 20 lb., and, watching the gauge, insure that this amount is had when the brake valve discharge ceases. On its completion he will give one short whistle blast, as advice to brakeman that he may cut off and to inspectors that inspection may begin. The brakeman will not close angle cocks until this signal is given. When the train must be left on two or more tracks, or when crossings must be cut, those concerned will follow the foregoing plan before cutting off each part. To avoid preventing inspectors from ascertaining the condition of air brakes, switchmen, carmen and others must not discharge any air from the auxiliary reservoirs or brake pipe of cars that have not been inspected. Before discharging any air from those already inspected, an angle cock must be closed between such and any uninspected brakes.

On brakes being applied, as indicated by whistle signal, inspectors will at once, and rapidly, examine for piston travel, brakes failing to apply, any that have leaked off and brake pipe leaks. At this time, make no repairs; merely indicate the defect with chalk. After completing inspection, repair the defects that should be cared for in the yard. For other defects, bad order cars for repair tracks unless impracticable, as may be with perishable or time freight. The air brake and the general inspection must not be made by the same man or men.

Adjust incorrect piston travel (less than 6 in. or over 8 in.) to 7 in., but before marking for apparent short travel, be sure, by trying a brake beam, that the brake has not partially leaked off. When a brake shoe can be moved back easily, as with one's foot, the brake piston has leaked back 1 in. or more. Consider cars over 12 months since brakes were cleaned as having defective brakes. Loads that cannot be held for brake repairs earlier will, where destination is a terminal, be marked on arrival "B. O. when empty," with date, and defect. These will be delivered to repair tracks as soon as practicable after unloading.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

**Quebec & Saguenay Ry. Purchase.**—The Minister of Railways informed the House of Commons recently, that an agreement was entered into on July 25, 1916, as authorized under the statutes of 1915, chap. 16, and under the statutes of 1916, chap. 22, for the purchase of the railway lines from Quebec to Nairns Falls, and another line from Lyster to St. Jean des Châllons, Que. The first mentioned lines include a line from and inclusive of its terminals in Quebec, easterly. The lines are fully described in the statutes, and the fixing of the prices to be paid for the same is set out in the statutes of 1916, sec. 2. Up to the time the information was given, no money had been paid by the government on account of the purchase price of these lines.

G. Gordon Gale, M.Sc., M.Can.Soc.C.E., Vice President and General Manager, Hull Electric Co., Hull, Que., writes: "I take a very great interest in Canadian Railway and Marine World, and have obtained considerable valuable information by reading each issue carefully."

## Timiskaming and Northern Ontario Railway Report.

The Timiskaming & Northern Ontario Ry.'s report for the year ended Oct. 31, 1917, has been issued by the commission which operates it, and the Nipissing Central Ry.—an electric line—for the Province of Ontario. Following are extracts:

Mileage.	
Main Line, North Bay to Cochrane.....	252.29
Branch lines (three).....	76.21
Nipissing Jet, spur leased to G.T.R.....	2.10
Yards and sidings.....	114.05
Second track.....	1.70
Total mileage T. & N.O. Ry.....	446.35

Assets.	
Cost of road.....	\$18,297,149.50
Cost of equipment.....	2,563,911.79
Nipissing Central Ry.....	483,123.31
Empire Lumber Co. plant, Hatchford.....	805.00
Working assets.....	1,129,751.46
Deferred debit items.....	9,595.55
	\$22,484,336.61

Liabilities.	
Provincial loan account.....	\$21,593,869.99
Working liabilities.....	324,358.00
Deferred credit items.....	292,802.98
Balance profit and loss.....	273,305.64
	\$22,484,336.61

Earnings and Expenses.	
Revenue from transportation.....	\$2,220,892.22
Revenue other than transportation.....	111,013.57

Total operating revenue.....	\$2,331,905.79
Maintenance of way structures.....	\$419,266.84
Maintenance of equipment.....	305,268.86
Traffic expenses.....	17,676.10
Transportation expenses.....	985,452.19
Miscellaneous operations.....	47,824.69
General expenses.....	107,255.05
Transportation for investment—cr.....	1,465.44

Total operating expenses.....	\$1,881,296.29
-------------------------------	----------------

Net operating revenue.....	\$ 450,609.50
Ore royalties.....	119,567.04
Rent from joint facilities.....	12,849.94
Rent from lease of road.....	13,624.15
Interest—dr.....	5,649.48
Miscellaneous income.....	9,417.21

Total income.....	\$ 600,427.36
Deductions from income.....	83,726.80

Total earnings.....	\$ 516,700.56
---------------------	---------------

Compared with the year ended Oct. 31, 1916, the total operating revenue increased \$193,783.84; total operating expenses increased \$287,118.83, and net operating revenue decreased \$93,334.99. Income from ore royalties increased \$69,698.42; rent from joint facilities decreased \$5,770.51; rent from lease of road increased \$287.11; interest decreased \$7,385.84, and miscellaneous income increased \$8,387.43. The deductions from income show a decrease of \$16,123.48, and the total earnings decreased \$12,004.90. From the profit and loss \$250,000 was paid to the Treasurer of Ontario, certain adjustments were made, and uncollectable accounts cancelled, and \$273,305.64 was carried forward.

Traffic Statistics.	
Revenue passengers.....	499,759
Passengers carried one mile.....	28,616,324
Passengers carried one mile per mile or road.....	87,112
Average distance carried (miles).....	57.20
Average amount received.....	\$1.31
Average receipts per passenger per mile.....	2.29 cts.
Passenger service train revenue per train mile.....	\$1.52
Revenue freight carried (tons).....	960,714
Tons carried one mile.....	161,476,723
Carried one mile per mile of road.....	491,558
Average distance of haul of one ton (miles).....	168.03
Average revenue per ton.....	\$1.52
Average amount received per ton per mile.....	60.9 cts.
Freight revenue per train mile.....	\$2.56
Freight originating on the line (tons).....	465,350
Received from Canadian lines (tons).....	417,473
Received from U.S. lines (tons).....	77,891
Total (tons).....	960,714
Mileage of revenue passenger trains.....	435,769
Mileage of revenue mixed trains.....	58,132
Mileage of revenue freight trains.....	512,161
Total revenue train mileage.....	1,006,052

## Birthdays of Transportation Men in June.

Many happy returns of the day to:

Jas. Anderson, Vice President, Sandwich, Windsor & Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Rochester, N.Y., June 4, 1860.

W. C. Bowles, General Freight Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, Brownville Division, New Brunswick District, C.P.R., Brownville Jct., Me., born at Waterloo, Que., June 26, 1869.

F. P. Brady, General Manager, Western Lines, Canadian Government Railways, Winnipeg, Man., born at Haverhill, N.H., June 22, 1852.

H. W. Brodie, General Passenger Agent, Lines West of Revelstoke, C.P.R., Vancouver, B.C., born at Fredericton, N.B., June 8, 1874.

J. A. Clancey, Trainmaster, Districts 27 and 28, Detroit Division, Western Lines, G.T.R., Durand, Mich., born at Walkerton, Ont., June 8, 1884.

G. W. Coburn, Resident Engineer, C.P.R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., Ltd., Hamilton, Ont., born at Taunton, Mass., June 14, 1867.

W. S. Cookson, General Passenger Agent, G.T.R., Montreal, born at Port Jervis, N.Y., June 12, 1871.

E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commission, Toronto, born there, June 11, 1883.

A. Craig, City Passenger Agent, C.P.R., Hamilton, Ont., born there, June 5, 1884.

A. E. Doucet, M.Can.Soc.C.E., Quebec, ex-District Engineer, National Transcontinental Ry., Quebec, born at Montreal, June 9, 1860.

E. W. DuVal, formerly Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, now on active military service, born at Toledo, Ohio, June 5, 1885.

Knowlson Elliott, City Freight Agent, C.P.R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, M.Can.Soc.C.E., Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal, born at Peterborough, Ont., June 30, 1873.

W. E. Foster, Solicitor for Ontario, G.T.R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines, C.P.R., Montreal, born at Peckham, London, Eng., June 3, 1866.

H. W. Harding, Local Secretary, Canadian Northern Ry., London, Eng., born there, June 6, 1869.

J. A. Heaman, A.M.Can.Soc.C.E., Assistant Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, born at Memphis, Tenn., June 3, 1874.

L. K. Jones, I.S.O., Assistant Deputy Minister, Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

M. W. Kirkwood, General Manager, Grand River Ry., and Lake Erie & Northern Ry., Galt, Ont., born at Cheltenham, Ont., June 8, 1877.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at Hemmingford, Que., June 6, 1854.

J. D. McAuley, Commercial Agent, Grand Trunk Pacific Ry., and Grand

Trunk Pacific Coast Steamship Co., Ltd., Prince Rupert, B.C., born at Tantagenet, Ont., June 11, 1884.

R. S. McCormick, M.Am.Soc.C.E., Chief Engineer and General Superintendent, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

Duncan McDonald, ex-General Manager, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., June 17, 1859.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, born at Hamilton, Ont., June 7, 1867.

J. R. C. Macredie, M.Can.Soc.C.E., Engineer, Saskatchewan District, C.P.R., Moose Jaw, born at St. John, N.B., June 13, 1880.

James Manson, Assistant to Vice President, C.P.R., Montreal, born at Thurso, Scotland, June 8, 1863.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, Division Freight Agent, C.P.R., St. John, N.B., born at London, Ont., June 18, 1871.

J. E. Pinault, General Superintendent, Canada & Gulf Terminal Ry., Mont. Joli, Que., born at Rimouski, Que., June 24, 1884.

F. R. Porter, Assistant General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., June 13, 1875.

F. Price, Superintendent of Car Service, G.T.R., Montreal, born there, June 11, 1864.

Allan Purvis, General Superintendent, Quebec District, C.P.R., Montreal, born at Batavia, Java, June 29, 1878.

L. J. Reyecraft, Solicitor, Manitoba and Saskatchewan Districts, C.P.R., Winnipeg, born in Orford Tp., Kent County, Ont., June 20, 1868.

L. G. Rogers, Yardmaster, C.P.R., Trenton, Ont., born at Richford, Vt., June 18, 1874.

J. R. Shaw, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, born at Montreal, June 28, 1871.

J. L. Simpson, agent, C.P.R., Port McNicoll, Ont., born at Mount Forest, Ont., June 9, 1866.

H. H. Smith, Car Accountant, Canadian Northern Ry., Toronto, born at Quebec, Que., June 14, 1872.

N. Van Wyck, Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, ex-Manager, Foreign Department, and Superintendent, Atlantic Division, Dominion Express Co., now Vice President, The Holden Co., Ltd., Montreal, born at Toronto, June 1, 1866.

Walter White, Trainmaster, G.T.R., Palmerston, Ont., born at Toronto, June 4, 1866.

**Colored Men on Dining Cars.**—A Winnipeg dispatch says that, to release men for more important work elsewhere, the C.P.R. has decided to place colored men on dining cars as waiters and cooks, and that the change will be made as soon as the men are secured.

## The St. John and Quebec Railway's Arbitration Suit.

The arbitration proceedings in connection with the claims made by A. R. Gould and those associated with him in the St. J. & Q. Ry.'s affairs, against the New Brunswick Government, which confiscated the charter, and took over the work, were concluded recently, when Mr. Justice McKeown, who presided, made his report to the legislature. Following are the findings:—That the government carried out all obligations arising under and out of the contract entered into between the province and the railway company. That the railway company defaulted in its obligations under the contract. That the defaults so made were of such a nature as to justify the government in terminating the contract and taking over and vesting in His Majesty the stock of the company, heretofore belonging to the claimants. That the claimants have no right which should be recognized or enforced in any court or before any arbitrator because the contracts are void by reason of an act of bribery committed by A. R. Gould during the negotiations for the building of the road, between the province and the railway company. That neither in law nor in equity is there any amount whatever due from the Province of New Brunswick to A. R. Gould and his associates.

Two claims were made by Gould, the first, \$445,560, was for contractors' profits at 10% upon the construction cost of the railway, and the alternative claim was for \$334,230, representing the alleged value of the stock of which Gould and his associates were deprived in 1915.

The Provincial Secretary informed the New Brunswick Legislature recently that the Prudential Trust Co. of Montreal, on Feb. 1, held \$563,880 available for the railway. Since that date \$43,406 had been paid over to the company, which is now composed of nominees of the government. This fund is one of the complications arising out of the circumstances which brought about the determination of the contract by the government.

## Tie Supplies for Timiskaming and Northern Ontario Railway.

In his annual report to the T. & N.O. Ry. Commission, S. B. Clement, Chief Engineer and Superintendent of Maintenance, says:—The Commission has obtained from the Lands, Forests and Mines Department the reservation of the timber on several townships tributary to Night Hawk Lake. There are in the reserved area several large stands of jackpine, from which it is estimated the commission will be able to obtain all the ties it requires for renewals for at least 20 years. It is proposed to contract for the cutting of the timber, the making and delivery of the ties at Connaught, where the Porcupine Branch of the railway crosses the Frederick House River, which runs from Night Hawk Lake. It is hoped that before long a creosoting plant will be built in Northern Ontario, where all ties could be creosoted. A proper treatment with creosote will probably increase the life of a jackpine tie from 8 to 20 years, provided suitable tie plates are used to protect the face of the tie from mechanical wear. The growing scarcity of suitable tie timber, and increased cost of ties, and the greatly increased wages now paid trackmen, make a reduction in the cost of tie renewals a matter of first importance. The area of the reserve is about 135 square miles.

# Fluework in a Railway Shop.

The accompany engravings illustrate some of the methods and equipment used in connection with fluework at the Southern Pacific shops at Sparks, Nev. Figs

tube just withdrawn from the oil-fired heating furnace at the left and placed in the roll swager at the center of the illustration. At the right is the air-operated

cylinder and piston, placed in inverted position in a framework built up of a top plate, pipe and through bolts on an old machine bed. The air pipes may be seen

Fig. 1. Tumbling apparatus for tubes.

Fig. 2. Loading side of tumbling apparatus.

1 and 2 are views of the flue-tumbling apparatus located just outside the shop building. It consists of a perforated cylinder long enough to receive the tubes and provided at the end next the shop wall with power driving mechanism for rotating the cylinder upon its journals. At one side, as shown in fig. 2, there is a longitudinal opening extending the full length of the cylinder to admit the tubes, which are hauled up on a car on the inclined track to a point directly in front of the cylinder. At the rear there is a series of inclined rails upon which the tubes fall when the cylinder is opened for their discharge. Down these rails the tubes roll on to a car placed on the track below, as shown by fig. 1. This track leads directly into the building, so the tubes are readily handled between tumbler and shop.

Fig. 3 shows a lot of tubes in the shop, tacked up on a sloping rack immediately

Fig. 7. Flue swaging equipment.

at the right-hand side of the structure. The machine is controlled by pressure of the foot upon a lever near the floor, so that the operator has both hands free to move the tube about under the dies as is required for the operation. The machine in fig. 6 is for trimming the tubes to length. It is another home-made device built up on a long bed, with supporting rollers at each end to receive the tube and hold it in horizontal position for the application of the trimming knife, which is a revolving disc about 6 in. in diameter. This disc is mounted upon the end of a spindle that is gear driven from an electric motor at the rear end of the head, as indicated in the engraving. The lever for forcing the cutting or trimming disc into the tube is at the top of the machine with the handle bent forward to convenient position for the operator.

Fig. 7 shows the apparatus for testing the tubes under water pressure. The

Fig. 4. Heater and swagers.

Fig. 5. A tube in the swaging dies.

behind the swaging machines. Figs. 4 and 5 illustrate the roll swager and the pneumatically operated dies for the tube end. The front view, fig. 4, shows a

swaging die. A better view of this is given in fig. 5 with a tube in place for working under the dies.

The machine consists of a short-stroke

outer end of the tube rests against a closing gasket on a fixture adjustably mounted upon the long bed of the machine. The other end is closed by a pack-

ing ring in the cylinder head. Water is admitted by the valve near the operator's hand. The tubes as tested are placed upon the skeleton truck, which will be seen immediately behind the workman. This holds a large number of tubes and is of such form and weight as to be easily moved about with a full load of tubes. It is one of a number of very handy appliances for handling work of various kinds about different departments in this plant.

The foregoing article is reproduced from the American Machinist, to which we are indebted for the photographs from which the illustrations were made.

### Standardization of Locomotives for United States Railways.

Under authority from the U.S. Director General of Railroads, a committee of 11 railway officials and representatives of the three principal locomotive builders in the U.S., has prepared standard specifications and drawings for 12 types of locomotives to be used in ordering for all U.S. railways. They are as follows:—

Two sizes of the mikado type, 2-8-2, based respectively on 55,000 and 60,000 lb. per axle; the lighter of these has a

No one railway will be compelled to order all of the 12 standards, and it is probable that even the large trunk lines will find that half of this number is sufficient for their needs. It will, however, greatly simplify the building of locomotives for the rehabilitation of the railway motive power, which is so badly needed, and also greatly reduce the cost of carrying spare parts by the different roads.

A Washington correspondent writes:—"As is always the case when any kind of standardization is proposed, there are those who fear that it will prevent improvements and discourage new ideas. That such fear is unfounded may be seen from the automobile industry, which, perhaps, has standardized more of its products than any other branch of manufacture. It is probable that for the duration of the war at least we can well afford to omit special new locomotive development; but when we return to normal conditions an experimenting department should be established for the purpose of trying out new devices for all the railways instead of a dozen or more railways spending money on the same experiments. The money that has been needlessly spent on experiments during the past 25 years would go a long way toward paying the war debt. When we consider that on the

cations for which have been developed and perfected by committees of experts, who for many weeks have devoted much time and study to the subject, particulars of which are given in another article in this issue.

The six standard types of locomotives, two sizes of each class, are expected eventually to supersede the many miscellaneous types and varieties of locomotives now in service, embracing ones built according to 500 or more varying specifications. This is the first time that any real forward step has been taken looking to the wide standardization of locomotives.

The contracts were awarded on terms much more favorable to the railways than the bids originally submitted by the builders. The order was distributed approximately evenly between the American Locomotive Co. and the Baldwin Locomotive Works.

### Orders for Freight Cars Placed by United States Government.

The Director General of U.S. Railroads announced, early in May, the allotment of orders for the construction of 70,000 additional steel underframe freight cars to various car building concerns on the same

Fig. 6. Trimming machine.

Fig. 7. Testing apparatus.

weight in working order of 290,000 lb., and the heavier 325,000 lb.

Two sizes of the mountain type, 4-8-2, based respectively on 55,000 and 60,000 lb. per axle, the lighter having a total weight in working order of 320,000 and the heavier of 350,000 lb.

Two sizes of the Pacific type, 4-6-2, based respectively on 55,000 and 60,000 lb. per axle, the former having a weight of 270,000 lb. and the latter 300,000 lb. in working order.

Two sizes of the Santa Fe type, 2-10-2, based respectively on 55,000 and 60,000 lb. per axle, the lighter having a weight of 360,000 lb. and the heavier 390,000 lb. in working order.

A 6-wheel locomotive, 0-6-0, with tender, 55,000 lb. per axle; weight in working order, 165,000 lb.

An 8-wheel switching, or hump, locomotive, 0-8-0, with tender, 55,000 lb. per axle; 220,000 lb. in working order.

A 6-coupled Mallet locomotive, with trucks, 2-6-6-2, based on 60,000 lb. per axle, weighing in working order 540,000 lb.

The tenders have been standardized with tanks of 8,000, 10,000 and 12,000 gal. respectively.

Santa Fe Ry. alone there have been at times over 300 different types of locomotives to keep in repair, the advantage of confining all experimental work of this kind to one department can easily be estimated."

### Locomotives Ordered for United States Railways.

The Director General of U.S. Railroads announced, on May 1, that he had awarded contracts for the immediate construction of 1,025 locomotives. Deliveries are to begin in July and continue monthly during the remainder of the year.

The locomotives are to be of six standard types—one heavy and one light of each type—covering both freight and passenger service, and vary in weight from 290,000 lb. to 540,000 lb. The order involves an expenditure of approximately \$60,000,000. The locomotives will be allotted, upon completion, to the various railway systems where they are most needed.

The awarding of this contract marks the establishment by the government of the standard type of locomotives, speci-

basis on which the order was placed a short time previously for 30,000 cars. These 70,000 cars include 15,000 40-ton double-sheathed box cars, 16,000 50-ton single-sheathed box cars, 15,000 50-ton composite gondola coal cars, 5,000 70-ton low-side gondola cars, 19,000 55-ton hopper coal cars.

The 70,000 cars have been apportioned among the following builders: Bettendorf Co., Bettendorf, Iowa, 3,000; Cambria Steel Co., Johnstown, Pa., 3,000; Haskell & Barker Works, Michigan City, Ind., 8,000; Keith Car Manufacturing Co., Sagamore, Mass., 1,000; Laconia Car Co., Laconia, N.H., 1,000; Lenoir Car Works, Lenoir, Tenn., 2,000; Liberty Car & Equipment Co., Chicago, Ill., 1,000; Mago Car Corporation, Passaic, N.J., 1,000; Mount Vernon Car Manufacturing Co., Mount Vernon, Ill., 4,000; Pacific Car & Foundry Co., Seattle, Wash., 2,000; Pressed Steel Car Co., Pittsburgh, Pa., 14,000; Pullman Co., Chicago, Ill., 8,000; Ralston Steel Car Co., Columbus, Ohio, 4,000; St. Louis Car Co., St. Louis, Mo., 1,000; Standard Steel Car Co., Pittsburgh, Pa., 15,000. Also, pending, to Barney & Smith Car Co., Dayton, Ohio, 2,000. It is possible that there may be some modi-

fifications in the number and types of cars apportioned respectively among the above car builders before the final detailed contracts are executed.

These 70,000 freight cars, together with the 30,000 awarded a few days ago, will involve an aggregate cost of between \$250,000,000 and \$300,000,000. The orders were all placed upon the basis of the minimum bids as to costs for labor and overhead charges, with the understanding that any reduction in costs which may be obtained from these fixed prices will be divided equally between the Railroad Administration and the car builders, but any increase in these costs will be borne exclusively by the builders. The government will have supervision or control as to prices of the materials required in construction. The compensation of the builders will be approximately 5% on the cost, as estimated on the minimum bid.

The five types of cars represent the standard forms of freight cars adopted by the Railroad Administration. These standards are the result of the labors of a committee of experts who were working upon the problem for weeks. The adoption of these standard types, it is believed, will eventually substitute a few scientifically worked out designs for the numerous miscellaneous varieties of cars, representing probably more than a thousand different old styles and specifications now in use, the accumulations of the past.

### Compensation for Government Employees Killed or Injured.

The following act, passed by the Dominion Parliament at its recent session, refers, among others, to government railway employees:—

1. (1) An employee in the service of His Majesty who is injured, and the dependents of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependent of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same board, officers or authority, as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependents of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this act, shall be paid to such employee or dependent or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurs.

(3) Any compensation or costs awarded hereunder may be paid by the Minister of Finance out of any unappropriated moneys in the Consolidated Revenue Fund of Canada.

(4) Provided that no employee on the Canadian Government Railways, who is an employee within the meaning of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act, shall be entitled to compensation under this act for or on account of any injury for which an allowance is provided under

the provisions of the said Provident Fund Act, unless such employee has, prior to the date of the injury for which compensation is sought, given notice in writing to the General Manager of the said railways under whom he is employed, electing to accept the compensation under this act instead of such allowance, and no person who has so elected shall be entitled to any such allowance; and provided further, that no dependent of any such employee who is killed shall be entitled to any compensation under this act unless such employee has made election as aforesaid.

2. The Governor in council may make regulations as to the title of the defendant and the effecting of service of process in proceedings under this act.

### Contract System for Ballasting Track Disapproved by Engineers.

That track ballasting by contract is inadvisable, especially on lines under operation, is the conclusion arrived at by the committee on ballast and presented with its report at the American Railway Engineering Association's recent annual meeting.

Enquiry was made of more than 100 railways. The contract system was favored by 9 out of 18 which have employed this method on new construction,

and by 2 out of 6 which have employed it on lines under operation. Of 86 and 87 which have not used the method under these two conditions, only 13 and 8 respectively were in favor of trying it.

Two advantages are assigned to the contract system: 1, flexibility of supply and control of labor owing to freedom in fixing rates of pay; 2, possibility of a low cost where lack of proper equipment would make the work expensive if done by company forces. Disadvantages comprise loss of control over the work; less thoroughness even under close inspection; possible increase in ultimate cost and disputes over the work. On operated lines there are the additional advantages of difficulty of ensuring proper maintenance of surface, less complete co-ordination between the constructing and operating forces, some added danger due to loss of direct control, greater interruptions to traffic and claims for extras on account of interruptions to the work.

According to the report, those who advocate the contract system do so largely as an emergency measure, because of the greater flexibility of a contractor's organization in changing the rates of pay and so securing labor in time of stress. The committee considers that the matter is best summed up in the following remark that was made by one of the engineers favorable to the system: "My experience is that contract ballasting is to a large extent a necessary evil."

## Canadian Pacific Railway's Honor Roll 34.

Beaton, John R.	Brakeman	Medicine Hat	Wounded
Bernard, Austin	Stationary fireman	Regina	Killed in action
Chagnon, Jack	Trainman	Winnipeg	Gas poisoning
Franklin, Vivian	Sheeter	Winnipeg	Wounded
Gardiner, Edward May	Dump foreman	Savona	Wounded
Hand, Albert	Collector	Winnipeg Terminals	Wounded
Hanna, John	Oiler	Montreal	Wounded
Hart, John Edward	Checker	Winnipeg	Wounded
Haskins, Walter S.	Call boy	Chapleau	Killed in action
Haywood, John Robert	Humpmaster	Fort William	Killed in action
Hulme, Cyril	Apprentice	Ogden Shops	Died of wounds
Jackson, Fred	Apprentice	Winnipeg Shops	Wounded
Jefferson, Wm.	Checker	Regina	Wounded
King, Wm. Stuart	Freight solicitor	Winnipeg	Wounded
Laird, Thomas	Car repairer	Winnipeg	Wounded
Larman, William Arthur	Locomotive fireman	Kenora	Wounded
Leitch, John Franklin	Yardman	Winnipeg	Wounded
Leonard, George	Examiner	Vancouver	Killed in action
Linow, Nicholas	Deckhand	B.C. Lake Steamers	Wounded
Livingston, David A.	Assistant engineer	Golden South	Wounded
McDonald, George	Locomotive fireman	Winnipeg	Gas poisoning
McDonnell, Robt. Craig	Clerk	Fort William	Wounded
McGregor, Norman Donald	Conductor	Moose Jaw	Wounded
McLeod, Robt. Kenneth	Locomotive fireman	Moose Jaw	Wounded
McMorland, Andrew	Yard foreman	Winnipeg	Wounded
McTague, Robert M.	Asst. extra gang foreman	Algoma District	Wounded
Mason, Charles P.	Saw filer	Winnipeg	Wounded
Mayo, Guy Sherwin	Sergeant	Moose Jaw	Wounded
Mersereaux, Lorne A.	Clerk	McAdam Junction	Wounded
Mulhearn, Wm. Edward	Pipe fitter	Winnipeg	Killed in action
Neale, Arnold Selwyn	Section foreman	Markinch	Wounded
Nelson, Thos. Wm.	Trainman	Edmonton	Wounded
Nottman, James Dixon	Waiter	Montreal	Wounded
Packham, Benjamin P.	Engineer	Sutherland	Wounded
Patterson, John S.	Trainman	Winnipeg	Gas poisoning
Pelletier, Henri	Foreman	Angus	Gassed
Pennington, George	Clerk	Saskatoon	Wounded
Philip, John R. D.	Draftsman	Kamloops	Killed in action
Ralph, William C.	Freight carpenter	North Bay	Wounded
Renwick, Herbert A.	Clerk	Calgary	Wounded
Rewse, B. W. S.	Resident engineer	Weyburn West	Killed in action
Ridley, Stanley	Stower	Moose Jaw	Killed in action
Robbins, Herbert Wm.	Car cleaner	Strathcona	Wounded
Robertson, John	Trucker	Revelstoke	Wounded
Robison, Stephen F.	Instrumentman	Calgary	Presumed dead.
Ross, Harold	Clerk	Toronto	Gassed
Sampson, Thos. H.	Apprentice	Angus	Wounded
Seright, Samuel	Machinist's apprentice	East Calgary	Gassed
Skellton, Daniel A.	Laborer	Angus	Wounded
Spick, Arthur	Car repairer	Emerson	Killed in action
Stacey, Austin R.	Clerk	Weyburn	Wounded
Starkey, Edward	Machinist	Ogden Shops	Killed in action
Stewart, Alexander A.	Clerk	Montreal	Wounded
Sutherland, Wm. E.	Accountant	Winnipeg	Wounded
Tattersall, Thomas H.	Waiter	Winnipeg	Wounded
Thomas, John R.	Clerk	Angus	Gas poisoning
Thorne, Wm. Benner	Clerk	Winnipeg	Killed in action
Trenblay, Ernest B.	Trainman	Schreiber	Wounded
Trapp, James E. R.	Clerk	Hardisty	Wounded
Tuff, John Arthur	Conductor	Bredenburg	Wounded
Turnbull, A.	Steam fitter	London	Concussion
Ward, Arnold	Porter	Calgary	Wounded

Shown on Honor Lists to May 1: Killed 629; Wounded 1,452; Total 2,027.

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1914, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 229, May 9.—Extending to Sept. 30, 1919, time within which railway companies subject to board's jurisdiction shall make changes in safety appliances on freight cars, as required under general order 128, Apr. 20, 1914; companies to continue present practice of filing monthly reports of progress made in complying with requirements of said order.

General order 230, May 17.—Defining the interpretation, application and operation of inter-switching of freight traffic, and rates to be applied.

27138, Apr. 23.—Relieving C.P.R. from providing further protection at crossing near Sceptre, Alta.

27139, Apr. 22.—Authorizing G.T.R. to build siding and spur for Thomas Davidson Mfg Co., Montreal.

27140, Apr. 23.—Authorizing Canadian Northern Ontario Ry. to connect its main line and spur to drydock at Port Arthur, Ont., as authorized by order 25315, Aug. 25, 1916, until Dec. 31, trains to stop before crossing diamond and be flagged over C.P.R. spur.

27141, Apr. 23.—Ordering Grand Trunk Pacific Ry. to appoint station agent at Kinsella, Alta., as soon as it can obtain services of competent man and not later than June 1.

27142, Apr. 22.—Authorizing C.P.R. to rebuild bridge at mileage 25.9, Orangeville Subdivision, Ont.

27143, Apr. 23.—Suspending order 27015, Feb. 20, re installation of G.T.R. locomotive repair facilities at Brockville, or Prescott, Ont., pending further bearing.

27144, Apr. 20.—Extending to Aug. 1, time within which Kettle Valley Ry. shall complete enlargement of freight shed end of station at Rock Creek, B.C., by 12 ft., so that freight shed room will be 14 x 20 ft.

27145, Apr. 24.—Approving re-location of C.P. R. station at Oakbank, Man.

27146, Apr. 19.—Approving proposed alteration and additions to C.P.R. coaling plant at John St., Toronto; and approving clearances.

27147, Apr. 22.—Relieving C.P.R. from providing further protection at crossing, about 2½ miles west of Blind River, Ont.

27148, Apr. 22.—Ordering C.P.R. to raise road on south side of track about 5 ft. at its lowest point for approximately 250 ft. from track to erect standard guard railing and blast off top of rock bluffs on each side of road; to be completed by June 1.

27149, Apr. 23.—Ordering G.T.R. to operate trains 389 and 390 between Lindsay and Haliburton, Ont., Tuesdays, Thursdays and Saturdays; present schedule between Lindsay and Kilmount Jct., Mondays, Wednesdays and Fridays, and connection with C.P.R. train at Kilmount Jct. to be maintained; effective Apr. 28 and until further order.

27150, Apr. 25.—Ordering C.P.R. to restore train service between Moose Jaw and North Portal, Sask.; effective by Apr. 29.

27151 to 27155, Apr. 19.—Extending to June 1, time within which G.T.R. shall install gates at St. Ferdinand, Convent, St. Ambrose, St. Philippe, and Ste. Marguerite Sts., Montreal.

27156, Apr. 18.—Authorizing G.T.R. to build two extensions to sidings for Canada Foundries & Forgings, Ltd., Welland, Ont.; and to remove existing siding built under order 23954, July 8, 1915.

27157, Apr. 24.—Authorizing C.P.R. to build spur for Canada Steamship Lines, Ltd., Cap de la Madeleine Parish, Que.

27158, Apr. 22.—Authorizing C.P.R. to rebuild bridge 7.6, Kimberley Subdivision, B.C.

27159, Apr. 26.—Authorizing British Columbia Electric Ry. to increase by 10¢ its freight rates on portions of its system, subject to Board's jurisdiction; rate on coal to be increased 15¢ a ton; effective within 15 days from date.

27160, Apr. 26.—Suspending, pending hearing and order, proposed joint freight tariff of class rates, C.P.R.-C.R.C. no. E-3439 and G.T.R. C.R.C. no. E-3842.

27161 to 27164, Apr. 26.—Approving proposed locations of C.P.R. stations at Tramping Lake, Sask.; Amisk, Alta.; Primate, Sask.; and Magrath, Alta.; all according to C.P.R. standard A-2 plan on file.

27165, Apr. 29.—Extending for two months from date time within which C.P.R. shall complete work, within limits of its right of way, in connection with removal of old piles and abutments from bed of Big Creek, Tilbury Tp., Ont., as per order 24295, Act. 7, 1915.

27166, Apr. 30.—Amending order 24825, Mar. 10, 1916, re G.T.R. crossing of C.P.R. spur to Dominion Sugar Co., Chatham, Ont.

27167, 27168, Apr. 25, 27.—Approving Bell Telephone Co. agreements with Greenwood Telephone Association, Algoma District, Ont., Jan. 15, 1915; and Lievre River Telephone Co., Labelle and Ottawa Counties, Que., Mar. 6, 1915.

27169, May 2.—Authorizing Canadian Northern Ry. to build main line and siding across highway at Grahamdale, Man.

27170, Apr. 30.—Ordering C.P.R. to build transfer track with Canadian Northern Ry. west of Baintree station, Alta.; to be completed within 60 days after approval of plans; cost to be apportioned equally.

27171, May 1.—Authorizing C.P.R. to build spur for Northern Electric Co., Regina, Sask.

27172, Apr. 22.—Approving plan of structure across Canadian Northern Ry. on public road between Lot 359, Cote St. Laurent Subdivision and Lt. 622, Cote St. Laurent Nord, St. Laurent Parish, Que., as authorized by order 17414, Sept. 7, 1912; and approving clearances.

27173, May 2.—Approving Canadian Northern Ry. revised location in north ½ Sec. 14, Tp. 26, R. 25, west 3rd meridian, Sask.

27174, May 2.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Lake Lumber Co., in Block 37, Newcastle District, Vancouver Island, B.C.

27175, May 2.—Authorizing G.T.R. to take up siding and spur in Verdun, Que., as authorized by order 15160; to remove piles across tail-race of aqueduct and Little St. Pierre River, and restore dyke on other side of tail-race which was cut when siding was built; and rescinding order 15160, Oct. 24, 1911.

27176, May 2.—Ordering G.T.R. to erect station and platform at Glen Robertson, Ont., by Nov. 1.

27177, May 3.—Amending order 27150, Apr. 25, re C.P.R. train service between Moose Jaw and North Portal, Sask.

27178, May 2.—Ordering Canadian Northern Ry. to enlarge waiting room at Lamont, Alta., and provide heated room for perishable and express shipments; work to be completed by Oct. 1.

27179, May 3.—Ordering Michigan Central Rd. forthwith to appoint day watchman at Tuscarora St., Hagersville, Ont.; wages to be paid 80% by M.C.R. and balance by Hagersville Village.

27180, May 3.—Authorizing Lake Erie & Northern Ry. to install an electric train staff system for protection of G.T.R. in Port Dover, Ont., to be operated jointly.

27181, Apr. 30.—Approving clearances of Oshawa Ry. poles carrying electric wires along, and across G.T.R. yard track at Oshawa, Ont.

27182, May 6.—Approving Temiscouata Ry. bylaw, Apr. 29, authorizing C. A. Stewart, Manager, and A. Nadeau, General Freight and Passenger Agent, to issue tariffs of tolls.

27183, May 6.—Ordering G.T.R. to stop trains 13 and 16, on flag, at Hillhurst, Que.

27184, May 10.—Approving British Columbia Electric Ry. standard freight tariff of maximum mileage tolls, C.R.C. 107, effective May 20.

27185, May 8.—Authorizing G.T.R. to build additional sidings for Beaver Wood Fibre Co., Thorold Tp., Ont.; and approving change in existing sidings, as shown on plan.

27186, May 6.—Authorizing G.T.R. to build sidings for Goodyear Tire & Rubber Co. of Canada, New Toronto, Ont.

27187, May 6.—Authorizing Canadian Northern Quebec Ry. to build two sidings for Howard Smith Paper Mills, Crabtree, Que.

27188, Apr. 26.—Ordering C.P.R. to build highway crossing at mileage 82.08, Ste. Agathe Subdivision, Que., at expense of July Tp.

27189, May 7.—Approving agreement between Bell Telephone Co. and Megantic People's Telephone Co., Megantic County, Que., Apr. 1.

27190, May 7.—Ordering G.T.R. to make connection between its eastbound passenger trains, due to leave Cornwall 4.15 and 4.35 p.m., arriving Coteau Jct. 5.18 and 5.30 p.m., respectively; and train due to leave Montreal at 5 and now due at Coteau Jct. at 6, arriving in Ottawa at 8.45 p.m.

27191, May 8.—Authorizing C.P.R. to rebuild bridge 41 over Quisibis stream on Edmundston Subdivision, N.B.

27192, May 6.—Authorizing C.P.R. to remove station agent at Senate, Sask., until Sept. 1, when order 26246, Jan. 25, shall be put into effect.

27193, May 9.—Approving Grand Trunk Pacific Ry. revised location of right of way and land required for station grounds in Lot 4200, Cariboo District, B.C.

27194, May 8.—Relieving G.T.R. from providing further protection at crossing of Hespeler road, Galt, Ont.

27195, May 10.—Approving amendment to London & Lake Erie Ry. & Transportation Co.'s bylaw 3, Nov. 19, 1912, substituting W. N. Warburton, General Manager, for S. W. Mower.

27196, May 8.—Ordering Grand Trunk Pacific Ry. to install at least a one unit stock yard at Carvel station, Alta., to be completed by Aug. 1.

27197, May 8.—Authorizing C.P.R. to build spur for Fraser, Brace & Co., Montreal.

27198, May 10.—Approving plan, Nov. 1, 1917, showing general layout of falsework for truss span over C.P.R. at Moose Jaw, Sask., subject to conditions to be fixed after hearing by Board in Winnipeg.

27199, May 10.—Authorizing C.P.R. to operate locomotives and cars over G.T.R. siding to John Inglis Co.'s premises at Toronto, and approving clearances.

27200, May 10.—Approving Kettle Valley Ry. location between Princeton and Copper Mountain, B.C.

27201, May 10.—Authorizing G.T.R. to build siding and spur for Imperial Munitions Board at Beamsville, Ont.

27202, May 10.—Relieving G.T.R. from providing further protection at highway near Dorchester station, Ont.

27203, Apr. 25.—Ordering Canadian Northern Ry. to maintain day and night watchmen at crossing of Marmora St., Trenton, Ont., and to install indicator bell to warn watchmen when trains are approaching from the east.

27204, May 9.—Dismissing application of Provincial Stone & Supply Co., Toronto, for order directing C.P.R. to publish specific commodity rates from Burritts, Ont.

27205, May 6.—Authorizing form of "Release of liability in respect of persons travelling in non passenger cars," for Algoma Central & Hudson Bay Ry.

27206, May 10.—Amending order 21350, Feb. 11, 1914, re crossing protection at Bennet Ave., Maisonneuve, Que., by Canadian Northern Quebec Ry. and Montreal Terminal Ry.

27207, May 11.—Authorizing C.P.R. to rebuild bridge 104.1 over Old Man River, Macleod Subdivision, Alta.

27208, May 7.—Authorizing Quebec Ry., Light & Power Co. to file tariffs increasing passenger tolls 15%, to maximum of 2.875¢ a mile; effective after compliance with sec. 331 of Railway Act.

27209, May 13.—Authorizing G.T.R. to build two sidings for Ford Motor Co. of Canada, Sandwich Tp., Ont.

27210, May 13.—Authorizing Alberta Public Works Department to build highway over C.P.R. at Czar, Alta.

27211, May 13.—Declaring that Grand Trunk Pacific Ry. is senior company at crossing with Midland Ry. of Manitoba in Lot 55, St. Boniface Tp., Winnipeg.

27212, May 14.—Approving agreement, May 2, between Bell Telephone Co. and Town Line Telephone Association of Stafford and Pembroke, Renfrew County, Ont.

27213, May 14.—Approving Napierville Jct. Ry. bylaw 29, authorizing N. J. Ferguson, G. F. & P. A., to issue tariffs of tolls.

27214, May 15.—Approving Grand Trunk Pacific Ry. revised location across Pine and Mule creeks, mileage 92.20 to 94.60, west of Winnipeg.

27215, May 9.—Ordering G.T.R. to appoint watchmen at crossing of Main St., Hawkesbury, Ont., from 8 a.m. to 8 p.m.; wages to be paid two-thirds by G.T.R. and balance by Town of Hawkesbury.

27216, May 9.—Ordering G.T.R. to install, within 60 days from date, improved type of automatic bell at Regent St., Hawkesbury, Ont., 20% of cost to be paid out of railway grade crossing fund.

27217, May 9.—Dismissing application of Town of Welland, Ont., for order directing Michigan Central Rd. to stop train no. 1 at Welland, as formerly.

27218, May 17.—Amending order 27202, May 10, re crossing protection by G.T.R. near Dorchester station, Ont.

**Quebec & Saguenay Ry. Purchase.**—It was announced, May 17, that an agreement has been reached between the Dominion Government and the company as to the price to be paid for the partially completed line and its rights. The supplementary estimates submitted in the House of Commons May 20, provided not exceeding \$3,489,313 for the purpose of acquiring freeway and clearing of all charges, encumbrances or claims at any public sale, the Q. & S.R. extending from a junction with the Quebec, Montmorency & Charlevoix Ry. to Nairn Falls, 62.3 miles.

**Board of Railway Commissioners' Western Sitting.**—D'Arcy Scott, Assistant Chief Commissioner, and A. H. Boyce, K.C., commissioner, will hold sittings at various points in the west for the hearing of land cases, as follows:—Victoria, June 4; Vancouver, June 6; Calgary, June 10; Edmonton, June 11; Saskatoon, June 12; Regina, June 13; Winnipeg, June 14; Fort Francis, June 17; Port Arthur, June 18.

**The Toronto, Hamilton & Buffalo Ry.** has obtained power, under sec. 364 of the Railway Act, to enter into running and other arrangements with the Grand Trunk Ry. Power to make similar arrangements with the C.P.R. was obtained in 1917.

# The Canadian Railway War Board's Work.

**Name Changed.**—The Canadian Railway Association for National Defence has changed its name to the Canadian Railway War Board.

**Administrative Committee Meetings.**—Heretofore the administrative committee has met in Montreal, but in view of the number of matters presented having to do with conditions in Ontario, and for the convenience of members whose headquarters are in that territory, it has been arranged to hold meetings alternately in Montreal and Toronto.

**Accidents to Employees Through Carelessness.**—The Chief Operating Officer of the Board of Railway Commissioners has drawn the board's attention to personal injuries sustained by railway employees through being struck by material falling from partly loaded or unloaded cars. By way of illustration, he mentioned a case where a yardman was seriously hurt by lumber falling from a flat car during switching operations. The car had been placed for unloading, some of the stakes and cross pieces had been removed. When the car was moved the load shifted, causing the remaining stakes to break, and releasing the lumber. The shortage of labor and necessity for obtaining maximum service from railway employees, apart from the interests of the men themselves, make it desirable that railway officers constantly keep before their employees the need for care in the performance of their duties, to the end that casualties incident to railway work may be kept at the minimum.

**Agricultural Exhibitions.**—Representations having been made that, in view of the desirability of giving the greatest impetus possible to the campaign for increased food production, the influence that agricultural exhibitions undoubtedly have in stimulating production, and the lack of accommodation in most of the places where exhibitions are held for persons staying over night, the railways should provide reasonable extra train service for those travelling to and from the exhibitions. The board has recommended to the railways that they should provide, up to the extent furnished last year, extra train service, for the accommodation of parties travelling to and from agricultural exhibitions this year.

**Army and Navy Veterans Conventions.** Applications having been made for passenger rates for delegates to conventions to be held in Winnipeg, May 11 to 14, and in Toronto in July, the board decided that as special consideration is rightfully due those who have returned from the front, railways should be recommended to give special rates to delegates attending the conventions named.

**Cinders Prices.**—It is suggested that in order to provide a standard arrangement for sale of cinders by railway companies, all member lines adopt the schedule now in effect on certain roads, whereby a charge of not less than \$10 a car is made for cinders, plus regular tariff freight rate covering railway haulage.

**Embargo Exemptions.**—In laying other than general embargoes, it is requested that member lines make the following exemptions in the order of priority shown:—1. Livestock and perishable; 2. Fuel (coal, coke, charcoal, cordwood, slabs, edgings); 3. Shipments consigned to or on account of Imperial Munitions Board and Director of Overseas Transport; 4. Agricultural implements for spring work and materials required for manufacture of same; 5. Field and garden seeds; 6. Fertilizers and components;

7. Spraying materials and spraying implements; 8. Food for human consumption, including grain, grain products, sugar, salt, canned goods; 9. Food for animals and poultry; 10. Railway material and supplies (other than coal or coke); 11. Supplies for coal mines; 12. Oils; 13. Tank cars, loaded and empty; 14. Empty gas cylinders.

**Freight Tracing.**—With a view to further discouraging unnecessary freight tracing and relieving telegraph wires which are heavily overburdened, the board has suggested to all member lines that they place in effect the arrangement recently adopted by the U.S. Railroad Administration, whereby in wiring replies to shippers or consignees, either in answer to letter request for wire reply or to telegrams, such replies are sent by collect telegram. It is suggested also that unless applicant for information expressly requests telegraphic reply, such communications be answered by mail.

**Glue Stock, Hides, Oil, Etc.**—The board's attention has been directed to the practice existing at certain points of using box cars in good condition for the carriage in bulk of commodities such as green hides, oil, glue stock, etc., which render the car unsuitable for the handling of foodstuffs. In view of the very great demand for equipment for the movement of foodstuffs, at present, which will become still heavier during the year, members are asked to take action to restrict the loading of commodities such as the above mentioned to cars which are unsuitable for the handling of foodstuffs.

**Labor Negotiations.**—Certain railway labor unions, including those whose members are engaged in car and locomotive shops, expressed a desire recently to deal with the railways as a whole, on questions of schedule revision and similar matters, instead of with individual companies as heretofore. This desire was conveyed to the board, by the Dominion Government, and the board decided to appoint a sub-committee of three, with the necessary staff, to deal with all questions of railway labor, on behalf of all the railways which are members of the board, the sub-committee to report to the board's administrative committee. The sub-committee's work includes dealings and negotiations with representatives of railway labor organizations, the obtaining of data required for the conduct of the work assigned to it by the administrative committee, and the submission of the result of negotiations with labor organizations to the administrative committee, whose approval of any proposed agreement or arrangement with labor organizations must be obtained before it can become effective. The board's administrative sub-committee will, under the proposed arrangement, deal on behalf of railways west of the Great Lakes, and in the case of the Canadian Government Railways west of the City of Quebec, with labor matters pertaining distinctly to the lines mentioned, and will refer to the administrative committee all questions of a general nature which may affect the east as well as the west.

The administrative committee appointed as a sub-committee on wages agreements, S. J. Hungerford, General Manager, Eastern Lines, Canadian Northern, as chairman; Geo. Hodge, Assistant to General Manager, Eastern Lines, C.P.R., and H. E. Whittenberger, General Superintendent, Ontario Lines, G.T.R. On Mr. Whittenberger being transferred to Chicago, Robt. Patterson, ex-Master Mechanic,

G.T.R., Stratford, Ont., was appointed to succeed him. We are advised that the appointments to the sub-committee are all a temporary nature, and that the personnel may be changed as may become necessary later. The sub-committee was engaged in Montreal during parts of May in negotiations with representatives of employees of the car, locomotive and mechanical departments of the following railways: Algoma Central, Canadian Government, Canadian Northern, Canadian Pacific, Dominion Atlantic, Duluth, Winnipeg & Pacific, Edmonton, Dunvegan & British Columbia, Esquimalt & Nanaimo, Grand Trunk Pacific, Halifax & Southwestern, Kettle Valley, Quebec Central, Timiskaming & Northern Ontario. After spending some time in the negotiations, they were adjourned pending a decision by the United States Railroad Administration on the wages question, and some representatives of the board went to Washington in connection with the matter.

**Open Top Car Situation.**—At the end of April, Canadian railways owed the United States 14,165 open cars, and so that U.S. railways will not be compelled to restrict the deliveries of their coal cars to Canada, all Canadian railways have been asked to closely follow up the handling of coal cars, to check up the placing and unloading, and to place embargoes against consignees who fail to give disposition orders for their cars within 48 hours of service of notice of arrival, or who fail to unload cars within 5 days after time of placing for unloading.

**Private Sidings Applications.**—Certain member lines have informed the board that on many occasions they have been caused useless expense, and loss of time, as a result of parties applying for lease of site on railway property or construction of private sidings, and after plans and leases were prepared the matter was dropped. With a view to affording protection against such losses, it is suggested that all member lines adopt the practice of requiring a deposit of, say, \$20 to accompany the application for site or siding, of which amount \$10 be applied against engineering and legal expenses and the remainder be credited to the first year's rental, the whole amount to remain in the hands of the railway company in the event of the application being withdrawn.

**Settlers' Effects, With Stoves.**—In view of the danger to life and property involved in the handling of cars of settlers' effects when the cars contain lighted stoves, the board has suggested to member lines that they adopt generally the practice in vogue on certain railways whereby cars of settlers' effects containing stoves lighted, or set up for lighting, are not accepted at shipping point, or interchange point with connecting railway, as the case may be, or moved over the line until the stove is dismantled.

**Ticket Offices.**—Member companies having furnished particulars of up town ticket offices maintained in Canada, the administrative committee is considering what offices can be closed or consolidated without serious detriment to the railway business or inconvenience to the travelling public.

**Tickets To Be Bought Before Boarding Trains.**—The board issued the following notice to the public on May 1:—"Effective May 15, passengers will be required to purchase tickets at ticket office, and will be called upon to show their tickets be-

fore entering train."

In connection with this, it was suggested that assistant superintendents or trainmasters be instructed to see all passenger conductors, advising them how anxious the railways are to carry out the provisions of the notice without any friction or trouble with passengers. It was pointed out that on one road where an effort was made to enforce the rule, the conductors, when finding that passengers were resolved not to purchase tickets at the station, requested them to stand aside and did not allow them to enter the train until all passengers with tickets had entered. This had the effect in some cases of passengers going back for tickets and had an educational value, because, very often, they missed getting comfortable seats, people with tickets having the first choice.

The following circular was issued to trainmen, ticket agents and other employees concerned:—"It is desirable that increased efforts be made by railway employees to have passengers purchase tickets before arrival of trains for which ticket offices are open, and for this purpose the following instructions will take effect, commencing May 15.

"In addition to having ticket offices open as regulations require, and as frequently as their observations indicate to be necessary, agents will announce in a distinct and sufficiently loud voice, the following:—"Please purchase your tickets at office and have them ready to present when entering train." At the larger stations where station masters or station police are employed, they, instead of the agent, will make the announcement.

"Conductors and other employees of trains whose usual duty is to receive the passengers, while standing in their usual positions on station platform, will courteously request passengers to present their tickets before they attempt to enter train. If passengers do not present tickets, courteously request them to procure them at the ticket office, and to enable them to do so, train is to be held a reasonable time, if necessary. All vestibule doors and traps, except those used for receiving and discharging passengers, must be kept closed while train remains at stations. When two or more cars in train are open for use by passengers, two or more vestibule doors must be open for the convenience of passengers. If, after the foregoing efforts are made, a passenger should insist upon boarding a train, indicating a willingness to pay fare on board, no physical obstruction should be offered. If passengers state that they could not procure tickets at stations where ticket offices should be open, conductors will report to proper officer."

The Toronto Terminal Transportation Association is now known as the Toronto sub-committee of the Canadian Railway War Board, reporting to the Ontario sub-committee, which in turn reports to the administrative committee. This has been done to co-ordinate the Toronto association's activities with those of the Canadian Railway War Board's various committees. No arrangements or regulations decided upon by the Toronto sub-committee are effective until approved by the administrative committee.

**War Society Shipments.**—The question having been presented to the board as to the continuation of practice of free handling of goods on account of various patriotic, red cross and relief societies connected with war work, it is recommended to members that they continue the free handling of such shipments. The organizations in connection with whom the board has been addressed are as follows:

France-Amerique Society, St. John Ambulance Association, Serbian Relief Fund Committee, Secours Nationale, Belgian Relief Fund, Red Cross Societies.

### Penalties for Non-Registration of Persons Over 16.

The order in council passed April 22 providing for the registration of all males and females in Canada over 16 years of age, on a day to be fixed by proclamation, provides various penalties for those who do not comply, among others the following:—

"Sec. 34. (e) he shall, for so long as he remains unregistered, forfeit his right and be disentitled to purchase, receive or have in his possession any railway, steamboat or other public conveyance ticket, other than a tramcar or street car ticket, or to travel by any railway, steamboat or other public conveyance, except a tramcar or street car, unless for the purpose of any prosecution or execution of sentence under these regulations."

It is further provided as follows:—

"35. Any person who sells, gives or delivers any railway, steamboat or other public conveyance ticket, other than a tramcar or street car ticket, to an unregistered person after the time when the latter person should have registered, knowing such person to be unregistered; and any person in charge of any railway, steamboat or other public conveyance, except a tramcar or street car, who permits any unregistered person to travel thereby after the time when he should have registered, knowing such person to be unregistered, shall be guilty of an offence, and liable to a fine not exceeding \$100."

"37. Every person who shall have registered shall at all times thereafter carry upon his person his registration certificate, and shall produce it for inspection upon reasonable demand to any peace officer, police officer or constable; who may in particular, without limiting the generality of this section, require any person present or attending at any public assembly, place of public resort or entertainment, ticket or telegraph office, or post office, or being in or upon any car, train or steamboat, to produce his registration certificate upon that occasion; and, if any person so required shall, without reasonable excuse, refuse, neglect, or fail to produce his registration certificate, he shall incur a penalty of \$20, and may, if a male person, be taken immediately before a justice of the peace to be dealt with according to law."

**Taxes on Parlor Car and Sleeping Car Fares.**—The Special War Revenue Act, 1915, provided in sec. 9, subsec. 3, that every purchaser of a sleeping car berth, or parlor car seat, should, in addition to the regular charge, pay a tax of 10c for each berth bought and 5c for each seat bought. An amending act passed at the Dominion Parliament's recent session has raised the tax from 5c to 10c for each seat in a sleeping or parlor car, and to 10c of the price of each sleeping car berth, the latter tax to be not less than 25c in any case.

The Canadian Industrial Reconstruction Association has been organized, to maintain industrial stability, and to secure wise consideration and prudent treatment of problems of reconstruction. Lord Shaughnessy, President, C.P.R., is Honorary President of the association, and H. G. Kelley, President, G.T.R., and E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., are members of the Montreal executive committee.

### Canadian Pacific Railway Construction, Betterments, Etc.

**Eastern Lines.**—It is intended to relay 135 miles of track with new steel rails, to put in 720,000 new tie plates, and 52,000 new rail anchors, and to reballast approximately 400 miles of track. Automatic signals will be installed at Bolton, Ont., and on the main Toronto-Windsor line, between Guelph Jct. and Galt, Ont., and an interlocking plant will be installed at Kempton, Ont. Nine section houses will be built; the locomotive house at Sherbrooke, Que., will be extended; the locomotive house and machine shop at Toronto will be extended; the coaling plant at Bay Shore, St. John, N.B., will be extended, and coaling plants will be built at Mattawamkeag and Fredericton Jct., Sherbrooke and Sortin, Que., and Renfrew and Parkdale, Ont. Additional tracks will be laid at Washburn Jct., Me.; West St. John, St. Martins Jct., N.B.; Shawinigan Falls, Que.; Port Hope, John St., Toronto, and Windsor, Ont. It is estimated that \$1,100,000 will be spent on tie renewals, \$335,000 in improving bridges and culverts, and \$240,000 upon new sidings.

**Chateau Frontenac.**—The company is carrying out an extensive plan of alterations and improvements at the Chateau Frontenac, Que., including the renovation and redecoration of the entire interior, with the exception of the wing added recently. Every bedroom is being renewed, and 48 additional bathrooms are being added. All plumbing and heating pipes are being renewed, and new installations of electric wiring and lighting and telephone equipment are being made. Two passenger and two freight elevators have been replaced by new and improved elevators, and an additional elevator for freight purposes has been added in the new wing. The work is being done in sections, so as to avoid inconvenience to guests, and is under the charge of D. H. Mapes, Engineer of Buildings. (April, pg. 149.)

**Saskatchewan District.**—Tenders are under consideration for altering and enlarging the icehouse at Moose Jaw, Sask.

**Alberta District.**—Tenders are under consideration for the construction of concrete piers and abutment at the Old Man River bridge near Macleod, Alta.

The Board of Railway Commissioners has directed the company to build a transfer track from near Tudor, on the Bassano-Irricana Branch, to a connection with the Canadian Northern Ry. west of Baintree on the line into Calgary. This will enable coal shipments from the Drumheller field to be distributed over the C.P.R. lines from Baintree, instead of from Calgary as at present.

**British Columbia District.**—The Vancouver City Council has authorized the company to erect an addition to the passenger car shops at the foot of Drake St., to cost \$11,500.

The Dominion Government has advised the Vancouver City Council that permission was never granted for the erection by the C.P.R. of the bridge across the Kitsilano River, which was originally built in 1886, and after being disused for some years, was rebuilt by the company as a part of the Vancouver & Lulu Island Ry., which was subsequently leased to the British Columbia Electric Ry. The bridge question arises in connection with the removal of the span to provide for the passing through of vessels built at the Coughlan yards. The bridge is a fixed span, which has to be removed to enable vessels to pass through.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta & Great Waterways Ry.**—Owing to the rapid break up of the ice on the Christina River, at the end of April, the company's temporary trestle bridge at Conklin was swept away. The train which was between Conklin and the end of track was held up until the bridge was restored. (May, pg. 186.)

**Capilano Timber Co.**—It was expected that the first six miles of the company's logging railway from North Vancouver into the hill country towards Capilano, would be completed and ready for operation May 30. (Mar., pg. 99.)

**Edmonton, Dunvegan & British Columbia Ry.**—The Edmonton, Alta., City Council has authorized the company to build a platform for the accommodation of its traffic at 121st St. and Nelson Ave., and has authorized the utilities committee to supervise the construction of the necessary spur line there. This is a temporary arrangement for a year. (May, pg. 186.)

**Esquimalt & Nanaimo Ry.**—The Board of Railway Commissioners has given judgment in connection with the question of general traffic rights over the Johnson St. bridge, Victoria, B.C. An order in council passed in 1887 directed the company to provide general highway facilities for the public over the bridge, but nothing was done, as there was no imperative necessity to provide for the traffic. Owing, however, to the development of the Songhees Reserve, and surrounding district, the city desires to have traffic facilities provided in connection with the company's proposed replacement of the present structure. The judgment states that all the documents and exhibits refer to plans for a bridge for vehicular and pedestrian traffic, and that provision has only been made for pedestrian traffic, which must be maintained over any new bridge. As to vehicular traffic, there being a conflict between the company and the city as to the plans, the board felt that application should be made to the Public Works Department, the board apparently not having jurisdiction to order the provision of the accommodation sought. The city council has since memorialized the Public Works Department, asking that it will compel the E. & N.R. to carry out the obligation as to the making of provision of facilities for vehicular and passenger traffic, imposed by the order of 1887.

**Grand Lake Ry. & Transportation Co.** The Quebec Legislature has granted a subsidy of \$5,000 a mile for 10 miles of railway from any point on the Bell River to Grand Lake. This subsidy is to be paid to the company by the Minister of Lands and Forests, by deducting for not more than 10 years, 50% of the duties due to the government for the right to cut, on the timber cut by the company in the region to be crossed by the railway. (June, 1917, pg. 225.)

**Grand Trunk Pacific Ry.**—Under an agreement with the Province of British Columbia, the company undertook to provide highway accommodation on its railway bridge across the Fraser River at Fort George, and to maintain the provincial portion in good order. The cost of the highway portion of the bridge, according to the company, was \$371,000, towards which the province paid \$150,000 on account on June 12, 1916. Since then negotiations have been in progress as to the payment of the balance. An agreement was reached under which the province was to pay a further sum of \$200,000 in full settlement of all claims.

The British Columbia Legislature has authorized the payment of this amount in full settlement of all claims upon the signing of an agreement defining the rights of the province in and to the bridge.

It is reported from Prince Rupert that arrangements are in progress for starting work on enlarged terminal buildings there, including a new station, locomotive house, machine shops and a wharf. (May, pg. 186.)

**Hudson Bay Ry.**—Senator Casgrain suggested in the Senate, on May 15, that all construction in connection with this project be discontinued during the war at any rate, and expressed his continued opposition to the entire project, concluding with the statement that some members of the house, if they lived long enough, would see that he had reasons for opposing the enterprise. Sir James Loughheed, in reply, said he believed that when the Hudson Bay route came to be operated, it would be demonstrated to be one of the most successful of Canada's transportation systems. No construction on the road itself had been done during the year. A bridge had been completed at the second crossing of the Nelson River, but no additional track had been laid for over a year. There had been completed 332 miles of the line, and track had yet to be laid on 92 miles. Of the completed mileage, trains had been operated on 214 miles, a daily train service being run on part of the line. The part of the line operated had been self sustaining. The line was being operated by the contractors and the government. When the line was finally completed it would, he believed, be found of inestimable advantage to the people of the country through which it runs. The last serious transportation of materials to Nelson occurred in 1914. In that summer 36 voyages were successfully made and many tons of freight carried by ordinary tramp steamers without hazard or difficulty. With specially constructed ships the season, it was believed, could be considerably prolonged. During six weeks of this period engineers and navigators reported that the navigation to the bay was safer than the navigation of the St. Lawrence to Quebec and during the remaining six weeks the navigation of Hudson Strait was as safe as the route to Quebec.

The Minister of Railways stated in the House of Commons May 17, that there had been expended upon the Hudson Bay Ry. up to Feb. 28, \$20,161,000, of which \$13,814,000 was on account of the railway and \$6,347,000 on account of the harbor and terminals at Port Nelson, Man. The latter sum includes the expenditures incurred in the purchase of steamships which are now in general service throughout the year, as well as the valuable plant at Port Nelson. The north and south arms of the bridge across the Nelson River at Kettle Rapids were connected in Dec., 1917, so that track laying could be continued this season. Grading between Kettle Rapids and Port Nelson has been fully completed, and train filling and ballasting had been gone on with on the line up to Kettle Rapids. At Port Nelson a restricted programme was followed, in which materials and supplies on hand were utilized. Owing to the general shortage of ocean tonnage, no further shipments of supplies were made to Hudson Bay this season. The island cribwork has been extended and dredging has been continued.

**Intercolonial Ry.**—We are officially advised in respect to a press report that it is proposed to expend about \$100,000 on improvements on the railway yards at Levis, Que., that the only work at present proposed to be done consists, in addition to some slight track changes in the Laurier Ave. yard there, of some alterations to the interior of the old station building, in order to improve the facilities for handling passenger business. (May, pg. 186.)

**Kettle Valley Ry.**—Arrangements for starting work on the construction of the branch from near Princeton, B.C., to the Canadian Copper Co.'s mines at Copper Mountain are reported to have been completed by W. P. Tierney, contractor, and preliminary work has been started. The branch will be 15 miles long, and the work will include several open cuts of considerable height, one big fill, as well as a number of small ones, 27 lengths of trestle work, and the boring of four tunnels of considerable length. It is expected to have the branch completed within a year. (May, pg. 186.)

**The Magdalene River Ry.** was originally projected in 1907, when the Quebec Legislature incorporated the company to build a railway from near Cap à la Ours to the Little Falls of the Magdalene River, and thence to a connection with the Atlantic, Quebec & Western Ry.'s projected inland extension. In 1916 the legislature passed an act confirming the original charter powers. The legislature last session authorized the company to build a line from the prevailing authorized line to the Great Falls on the Magdalene River, and by the valley of the Dartmouth River to deep water in Gaspé Basin, and to connect there with the Atlantic, Quebec & Western Ry. This line of railway need not be completed until 1929, and in connection with its completion, is authorized to operate its line on all wharves, piers or other constructions to deep water in Gaspé Basin, and to build and maintain, if necessary, its own wharves, piers and deep water facilities. The provisional directors were: C. W. Mullin, S. H. Boardman, Bangor, Me.; T. B. Launing, Boston, Mass.; J. O. Drouin, E. Brassard, Montreal. The notices in connection with the recent application were signed by F. Murphy, New Carlisle, Que., as Secretary of the company. (Jan., p. 12.)

**National Transcontinental Ry.**—Tenders were received to May 29 for the construction of concrete culverts, stream tunnels and concrete trestles on the Fort William and Raith subdivisions, including 3 concrete trestles, two 10 x 10 ft. stream tunnels, 4 reinforced culverts, the longest being 12 ft., and one double 16 ft. culvert. (Jan., pg. 12.)

The Minister of Railways stated in the House of Commons, May 17, that it is impossible for the government to go into the question of widening the gauge of the P.E.I.R. while the war continues. It is not merely a question of widening the gauge, but it practically means the entire reconstruction of the railway and the provision of new equipment at an expenditure of at least \$2,000,000, which cannot be entertained at present.

The total amount expended upon the car ferry works is \$2,875,000. The department asked a further appropriation of \$65,000 to cover certain minor additions which had been deferred until actual operating conditions could be observed. The main contracts for the construction

of terminals were completed during 1917, and the car ferry steamship Prince Edward Island was placed on the route in the beginning of Oct., 1917. All freight offering since that date has been handled satisfactorily by the new route.

**Pacific Great Eastern Ry.**—The contract for the erection of the new bridge over the Capilano River has been let to Robertson & Partners, Limited, who expect it completed by July 1. The line is being operated to Ambleside, and it is expected to reopen traffic to Whytecliffe, 13 miles, soon after the Capilano bridge is completed.

In connection with the line from Squamish, which is in operation to Clinton, 167.7 miles, it has been announced by the British Columbia Government that it is not proposed to do anything more at present than to complete the line to Soda Creek, where there is a navigable stretch of the Fraser River to Fort George. Grading has been completed to Soda Creek, but there are a number of small bridges to be erected. Rails have been laid for a few miles beyond Clinton, and it is expected that deliveries of the 20,000 tons of steel rails on order in the U.S., will be made at an early date. It is hoped to complete this work by the end of the year, and to have the line in operation with a river connection to Fort George, in the spring of 1919. (May, pg. 187.)

**Prince Edward Island Ry.**—C. A. Hayes, General Manager Canadian Government Ry.'s Eastern Lines, concluded a three day inspection of the line recently. Before leaving the Island he met the Charlottetown Board of Trade and discussed the commercial aspects of the suggested standardization of the gauge of the railway. He stated that the practical side of the matter would have to be fully considered before any definite decision was reached. (May, pg. 187.)

**Quebec & Atlantic Ry.**—The Quebec Legislature has incorporated a company with this title to build a railway from Quebec to Chicoutimi, thence to Cape St. Charles on the Labrador coast, together with branch lines north and south; and also to secure a connection with the National Transcontinental Ry. The company is empowered to carry on a lumbering business within the counties of Quebec, Montmorency, Charlevoix, Saguenay, Chicoutimi, Lake St. John, and in the territory known as New Quebec; it may also operate sawmills north of the St. Lawrence River, and eastward of the St. Charles River; carry on farming and mining operations, own and operate steel plants, construct canals, build and operate steam and other vessels, wharves, docks, etc., and subscribe for stock in such companies. The authorized capital stock is \$1,000,000, in ordinary and preferred stock, as may be deemed advisable; the company may issue bonds on its railway undertaking to the extent of \$60,000 a mile, and such securities as may be necessary for its other undertakings. The company's office is to be located in Quebec. The provisional directors are: H. Lavigne, N. Drouin, A. Picard, L. H. Gaudry and P. J. Cote, Quebec.

**Quebec Bridge.**—In the Dominion estimates for the year, \$700,000 is provided on construction account. In the discussion in the Commons it was stated that, although the Canadian Government Railways were operating trains over the bridge, it had not been taken over from the contractors—the St. Lawrence Bridge Co. The Minister of Railways stated that none of the other railways converging upon Quebec had made applica-

tions for running rights over the bridge. It was not expected that such rights would be applied for until after the war. (Feb., pg. 57.)

**Quebec & Saguenay Ry.**—It was reported in Montreal, May 6, that track had been laid to Baie St. Paul, Que., and that it was expected to have track laid to Murray Bay, 56 miles, by Aug. 30.

**River Rouge Ry.**—The Quebec Legislature has incorporated a company with this title to build a railway from Amherst Tp., Labelle county, southerly through Amherst, Ponsonby, Little Nation, Arundel, Harrington and Grenville townships to the Ottawa River between Montebello and Grenville. The authorized capital stock is \$300,000, and the office is to be in Montreal. The provisional directors are: A. Orsati, J. R. Meadowcroft, A. H. Ross, D. E. Parker, A. G. Spencer, Montreal. (Mar., pg. 98.)

**Roberval-Saguenay Ry.**—A press report states that the company is about to invite tenders for the building of a small extension to its lines. J. F. Grenon, Chicoutimi, Que., is Chief Engineer.

**Roberval-Saguenay Ry.**—The Quebec Legislature has authorized the granting of a subsidy of 3,000 acres of land a mile, not convertible into cash, for the construction of the following lines of railway by the Ha Ha Bay Ry., which is now merged in the R.-S. Ry.—An extension of the main line from Mathias Jct. to the wharf at Bagotville, 0.44 of a mile; a branch from La Brosse Jct. to Chicoutimi Basin, 3½ miles; a branch from Laterrière to Lake Kenogami, 12 miles; a branch from Laterrière to Rivière du Moulin, half a mile; a branch from St. Alexis, 1½ miles; and an extension to deep water at Port Alfred, half a mile. (Jan., pg. 12.)

**Toronto, Hamilton & Buffalo Ry.**—The proposal to apply to the Dominion Parliament at the recent session for authority to extend the line from Hamilton to Toronto was abandoned. (Mar., pg. 98.)

### Canadian Northern Railway Construction, Betterments, Etc.

A press report states that a contract has been let to Jos. Gosselin, Quebec, for the erection of the substructure of a bridge across the St. Maurice River, at Grand Mere, Que. The superstructure will be erected by the Dominion Bridge Co., Montreal. The estimated cost of the entire work is \$170,000.

Satisfactory progress is reported to have been made with the company's terminal facilities at Leaside, Toronto. The buildings under construction include a 10-stall locomotive house with turntable, water tank and coaling station, locomotive repair shop, freight and passenger car repair shops, planing mill, transfer table, icehouse, and general offices.

M. H. MacLeod, General Manager, Western Lines, was in Port Arthur, May 3, in consultation with the city council in connection with trackage matters at the Port Arthur Pulp & Paper Co.'s plant.

The Fort William, Ont., City Council, on May 14, authorized the company to build a spur line across Cameron St. to reach the freight sheds proposed to be erected near the new station building.

A press report states that six work trains will be put on during the summer between Port Arthur and Rainy River, Ont.; that a considerable mileage will be relaid with heavier rails, and that large quantities of ballast will be spread. The same report states that a new brick station will be built at Rainy River.

A press report states that during this year about \$2,000,000 will be expended upon betterments of the company's lines west of Winnipeg, and that the major part of this work will be done on the lines in Saskatchewan and Alberta. The line from Battleford to Edmonton, 248 miles, and from Edmonton to Edson (a station on one of the sections of the Grand Trunk Pacific Ry., linked up when track was taken from these two companies' lines for use in France), will be ballasted. There will be considerable sums expended upon station buildings, works of water supply, building section houses, the laying down of passing tracks, and increasing yard and siding accommodation all along the lines. New 80-lb. rails will be laid from Manson to Hanna, 42 miles, and 25 miles of second track work will be built from Drumheller, easterly, to provide for the increasing traffic from the collieries there. In the vicinity of Edmonton, work is reported to have been restarted on the filling in of the trestle at the west end of the bridge across the Saskatchewan River at Fort Saskatchewan, and it is reported filling in on all the trestlework on the line right up to the Edmonton city limits will be completed this season.

The Medicine Hat, Alta., City Council has been advised of the passing of an order in council authorizing the company to proceed with the construction of the Hanna-Medicine Hat branch. Hanna is situated at mileage 262 on the line from Saskatoon to Calgary, 52 miles west of Drumheller, where the line south from Vegreville, runs in, and projected branch runs southerly and easterly. A press report states that if rails can be obtained, track will be laid to the South Saskatchewan River this year. (May, pg. 196.)

Tenders were received to May 27 for the excavation of a reservoir at McCreary, mileage 142.1, Dauphin subdivision, Man.

**Nelson & Fort Sheppard Ry. Land Grant.**—The British Columbia Legislature has passed an act defining the lands granted as a subsidy in aid of the building of this railway. Under the terms of the N. & F.S. Ry. Subsidy Act of 1892, provision was made for the granting of lands in the West Kootenay electoral district as a subsidy in aid of construction, and on Mar. 8, 1895, a crown grant for Township 9A, Kootenay District, with the exception of certain areas specifically named and "all other lands which, prior to Mar. 23, 1893, were alienated by the Crown or held in presumption, uncompleted sale or lease, or as mineral claims." Doubts have arisen as to certain properties, and both the Crown and the company have erroneously assumed ownership of certain properties in the district. A map has been prepared of all the land within the grant, on which are shown all the areas claimed by the company under the grant of 1895, and of the lands excepted under the grant. Any claims to possession of any of these lands founded on the strength of a grant or presumption prior to 1893, are to be made within three months, and will be pronounced upon by a commissioner. After the expiration of three months all claims for such lands will be barred.

The Saskatchewan Co-operative Elevator Co. has awarded a contract to the Fegles-Bellows Engineering Co., Fort William, Ont., for the construction of a hospital elevator at Port Arthur, Ont., to be completed by the autumn. The working house will have storage capacity for about 200,000 bush., and the storage annex will have capacity for 450,000 bush. It will be of reinforced concrete construction, with electrically driven equipment.

## Railway Rolling Stock Orders and Deliveries.

The G.T.R. has received 240 box cars, 80,000 lb. capacity, from American Car & Foundry Co.

The Bengal & Nagpur Ry., India, has ordered 160 cars from National Steel Car Co., Hamilton, Ont.

Canadian Government Railways have received 5 mikado locomotives from Canadian Locomotive Co.

The C.P.R. has ordered 136 box cars and 10 mikado type locomotives, to be built at its Angus shops, Montreal, and 12 vans at its Winnipeg shops.

The Canadian Northern Ry. has received the balance of the 500 box cars ordered by the Dominion Government last year from the National Steel Car Co.

The C.P.R., between Apr. 15 and May 15, received 2 steel baggage and express cars, 101 freight refrigerator cars, and 2 decapod locomotives, from its Angus shops, Montreal.

The Argentine Government is reported to be in the market for \$5,000,000 worth of railway material, and it is stated that the purchases will be made in Great Britain and the U.S.

The Timiskaming & Northern Ontario Ry. has ordered a steel snow plough from Canadian Car & Foundry Co. We are advised that it will be similar to those built recently by the company for the C.P.R. and Canadian Government Railways.

The Dominion Government has, we are officially advised, ordered 15 additional Pacific type passenger locomotives, and 20 additional switching locomotives, from Montreal Locomotive Works, the prices being arranged on the same basis as those already on order, particulars of which were given in our May issue. Delivery is to be made not later than Dec. 31.

United States press reports stated recently that the Canadian Car & Foundry Co. was in line for a substantial part of the large order for cars to be placed by the U.S. Government. It has since been stated that the reason that the order did not materialize, was that U.S. car building companies had made strong objection to any part of the order being placed outside the U.S.

The locomotive building companies which have been given orders for locomotives recently by the Dominion Government, for the Canadian Government Railways, Canadian Northern Ry. and Grand Trunk Ry., are experiencing some difficulty in getting sufficient plates rolled in the United States, owing to the U.S. Government giving priority to shipbuilding requirements. The Dominion Government has taken the matter up with the U.S. Government and it is expected that it will be possible to obtain sufficient plates to enable the locomotives to be built within the contract time.

Jacques Bureau, M.P., stated in the House of Commons recently, in the discussion in connection with railway rolling stock orders, that he had a letter from a person in Three Rivers, Que., who had had considerable experience in car building, and who was prepared to deliver 10 freight cars a day, beginning in five months from date of order, provided the order was of sufficient size to justify him in starting manufacturing. We are informed that the person referred to is Mr. Ditchfield of the Mechanical Engineering Co., Three Rivers, and who was at one time with the Canadian Car & Foundry Co.

The Canadian Government Railways' ballast cars, 450 of which have been or-

dered from the Hart-Otis Car Co., as mentioned in our last issue, will be designed to carry 100,000 lb. with a 10% overload. They will be equipped with Simplex couplers, 5 by 7 in. shank; Yost friction draft gear with M.C.B. springs; McCord journal boxes and M.C.B. journal bearings, 5½ by 10 in.; Simplex truck bolsters, and cast iron wheels, 33 in. diam. They will be built of wood, and 250 will be with side dump only, and the balance with side and center dump. Following are the chief dimensions:—

Length over end sills	36 ft. 8 in.
Width over side sills	8 ft. 9 in.
Length inside as hopper car	20 ft. 10 in.
Length inside as gondola car	34 ft. 8 in.
Width inside	8 ft. 8 in.
Width over all	10 ft. 3¾ in.
Width at top	9 ft. 9¾ in.
Height from rail to top of floor	4 ft. 4¼ in.
Height from rail to top of car	8 ft. 4¼ in.
Height inside	4 ft. 4 in.
Truck centers	26 ft. 8 in.
Wheel base of truck	5 ft. 6 in.
Total wheel base of car	32 ft. 2 in.
Length of hopper door opening	16 ft. 8½ in.
Width of hopper door opening	2 ft. 1 in.

Following are chief details of the 25 general service, and 25 water service, tank cars, which the Dominion Government has ordered from Pressed Steel Car Co., as mentioned in our last issue:—

Length over striking plates	36 ft. 6 in.
Center to center of trucks	26 ft.
Width over running boards	10 ft. 1 in.
Width over all	10 ft. 2¼ in.
Height from rail to center of tank	7 ft. 6 in.
Height from rail to bottom of center sills	26 ft. 6 in.
Height from rail to center of draft gear	2 ft. 10½ in.
Length over tank heads	33 ft. 6 in.
Diam. of tank inside at heads	7 ft. 2 in.
Length over running boards	32 ft. 6 in.
Height from rail to top of running boards	3 ft. 11½ in.
Height from rail to top of brake mast	7 ft. 9¼ in.
Truck wheel base	5 ft. 6 in.
Journals	5½ by 10 in.
Tank capacity	8,000 imp. galls.
Height from rail to highest point on dome (general service)	13 ft. 3¼ in.
Diam. of dome (general service)	5 ft.
Height from rail to highest point on manhole (water service)	12 ft. 4½ in.
Diam. of manhole (water service)	1 ft. 7 in.
Air brakes, Westinghouse K.C. 1012 with J.M. expander rings	
Couplers	M.C.B. cast steel, type D
Body center plates	cast steel
Bolsters	Simplex
Brake beams	M.C.B.2
Brake shoes	Dominion steel back
Journal boxes	McCord malleable
Journal wedges	cast steel
Wheels	M.C.B. grey iron
Journal bearings	M.C.B.

The Timiskaming & Northern Ontario Ry. snow plough, which has been ordered from the Canadian Car & Foundry Co., will be fitted with spring draft gear and Simplex couplers. The front end will have a draw bar casting designed to receive M.C.B. knuckle; the wings are to be flared at top and bottom for elevating the snow, and will be operated by air, and the apron at front will be arranged for operation by hand as well as by air. The leading trucks, which will be of the arch bar design, will carry wheels 28 in. diam., McCord journal boxes, 5 x 9 in. M.C.B. axles, brasses and wedges, Simplex bolsters with rollers and friction surfaces to take care of lateral movement when going round curves at high speed, and ice cutters operated by air and springs. The rear truck will have cast iron wheels 33 in. diam., Simplex brake beams and 4¼ x 8 in. axles. The chief dimensions will be as follows:—

Length over all	32 ft. 1 9/16 in.
Width over side sills	8 ft. 9½ in.
Height rail to top of eaves angle	11 ft. 3 in.
Height rail to top of cupola	about 14 ft. 10 in.
Width over wings extended	16 ft.
Extreme width, cupola	9 ft. 8½ in.
Extreme length, cupola	4 ft. 11¼ in.
Truck centers	18 ft.
Wheel base, leader truck	4 ft. 2 in.
Wheel base, rear truck	5 ft. 3 in.
Weight, approximate	60,700 lb.

## Railway Finance, Meetings, Etc.

**New Brunswick & Prince Edward Island Ry.**—The Minister of Railways stated in the House of Commons, May 2, that this railway, running between Sackville and Cape Tormentine, N.B., was acquired by the Dominion Government as from Aug. 1, 1914, the purchase price being \$270,000. There had been paid \$180,000 on account of principal and \$18,552.32 on account of interest. The reason for the non payment of the balance of the purchase money was the inability of the company, in view of certain outstanding bonds, to give a clear title to the property.

**Maritime Coal, Ry. & Power Co.**—Following are the officers and directors for this year:—President, W. Hanson; Vice President, A. E. Dymont; other directors, Senator Mitchell, A. MacLaurin, D. W. Campbell, E. Hanson, W. L. Magden, and W. H. Tothe; Secretary, R. Wilson, Jr.

**Nakusp & Slocan Ry.**—Under the terms of the Railway Aid Act of 1893, and Nakusp & Slocan Ry. Act of 1894, the Province of British Columbia guaranteed bonds of this railway for £131,400 at 4%, the bond issue falling due July 1, 1918. The legislature has authorized the payment of the principal of the bonds out of the consolidated revenue fund of the province, in the event of the company failing to pay it.

**New York Central Lines.**—There was deposited with the Secretary of State at Ottawa, April 6, an agreement between the Guaranty Trust Co., New York, and the New York Central Rd., the Michigan Central Rd., the Cleveland, Cincinnati, Chicago & St. Louis Rd., the Pittsburg & Lake Erie Rd., and the Toledo & Ohio Central Rd., under the provisions of the New York Central Lines Trust of 1913.

**Timiskaming & Northern Ontario Ry.** Passenger receipts for March, \$51,403.97; freight receipts, \$214,884.14; total revenue, \$266,288.11, against \$47,554.71 passenger receipts; \$127,641.23 freight receipts; \$175,195.94 total revenue for Mar., 1917. Aggregate total revenue for three months ended Mar. 31, \$575,182.39, against \$459,515.98 for same period 1917.

**United States & Canada Ry.**—Following are the officers and directors for this year:—President, H. G. Kelley; Vice President, U. E. Gillen; Secretary-Treasurer, F. Scott; other directors: J. E. Dalrymple, W. T. Ardley, J. A. Yates, F. J. Watson, G. E. Britton, W. J. Snarthe. This is a G.T.R. subsidiary, owning the line from Massena Springs, N.Y., to the International Boundary at Fort Covington, about 21 miles.

**White Pass & Yukon Route.**—Earnings for February, \$8,256, against \$18,441 for Feb., 1917. Aggregate earnings for two months to Feb. 28, \$19,161, against \$39,207 for same period 1917.

**Locomotive Headlight Regulations.**—General order 199, passed by the Board of Railway Commissioners July 24, 1917, and published in Canadian Railway and Marine World for Sept., 1917, required each railway company to equip its locomotives used in road service, between sunset and sunrise, with headlights which will enable persons with normal vision, in the cab of a locomotive, under normal weather conditions, to see a dark object the size of a man for 1,000 ft. or more ahead of the locomotive, such headlight to be maintained in good condition. By general order 225, passed April 4, 1918, general order 199 has been amended by substituting 800 ft. for 1,000 ft.

# Mainly About Railway People Throughout Canada.

**E. W. Williams**, Travelling Inspector, G.T.R., London, Ont., returned to duty during May, after an absence through illness.

**Ashmore Kennedy**, C.P.R. locomotive man, Winnipeg, has been re-elected Assistant Grand Chief of the Brotherhood of Locomotive Engineers for six years.

**Hon. J. D. Reid**, Minister of Railways and Canals, and **Hon. F. B. Carvell**, Minister of Public Works, left Ottawa on May 25 for a fishing trip up the Gatineau River.

**Lord Shaughnessy**, K.C.V.O., has been given the degree of Doctor of Laws by McGill University, Montreal, for his distinguished services to Canada and the Empire.

**T. Duff Smith**, Fuel Agent, Grand Trunk Pacific Ry., addressed the Canadian Society of Civil Engineers', Manitoba Branch, at Winnipeg, recently, on the subject of coal.

**C. N. Monsarrat**, M.Can.Soc.C.E., Chairman of Quebec Bridge Commission, has also been appointed Consulting Engineer of the Dominion Government, with office in Ottawa.

**W. A. Mather**, Assistant General Superintendent, British Columbia District, C.P.R., Vancouver, who has been suffering from neuritis, was reported during May to be improving rapidly.

**Sir Edmund B. Osler**, President, Dominion Bank, and a director of the C.P.R., has been elected a director of Imperial Oil Ltd., in place of the late T. H. Smallman, Vice President, London, St. Ry.

**Hon. F. Cochrane**, M.P., formerly Minister of Railways and Canals, received word, May 23, that his brother, **James Cochrane**, who farmed at Clarenceville, Que., had been killed in a motor accident near Milton, Vt.

**A. McL. Campbell**, of the C.P.R. accounting staff at Montreal, was presented with a club bag by his associates, May 15, on leaving to take up his duties as general accountant, Lake Erie & Northern Ry. and Grand River Ry., at Galt, Ont.

**Col. F. Firebrace**, of Crawley Down, Sussex, Eng., who died recently, was Chairman of the Great Indian Peninsula Ry., and a director of the Grand Trunk Ry. for 22 years. He left an estate of £24,297 gross value.

**C. Graham Drinkwater**, B.Sc., Vice President, Canadian Fairbanks-Morse Co., Montreal, has been elected by McGill University graduates, as a representative fellow in the applied science faculty, for three years from Sept. 1 next.

**J. J. Cunningham**, who died at Brantford, Ont., May 19, was formerly in the G.T.R. Freight Department in Montreal, retiring several years ago. He came to Canada in 1872, prior to which he had spent some years in railway service in Ireland.

**V. R. Hawthorne**, who has latterly been engaged in work for the American Railway Association, has been appointed Secretary of the American Railway Master Mechanics' Association and the Master Car Builders' Association, vice **J. W. Taylor**, deceased. He was formerly in the Pennsylvania Rd. service.

**Howard P. Creighton**, who has been appointed Bridge and Building Master, C.P.R., Schreiber Division, Algoma District, Schreiber, Ont., was born at Bristol, Que., Mar. 16, 1888, and entered C.P.R. service

in May, 1908, since when he has been, to Apr., 1910, bridge man, Ottawa, Ont.; May, 1910, to Aug., 1912, bridge man, Chapleau, Ont.; Aug., 1912, to May, 1918, bridge foreman, Chapleau, Ont.

**Brigadier-General H. N. Ruttan**, M.Can.Soc.C.E., of the Canadian Militia, and formerly general officer commanding military district 10, at Winnipeg, has retired from the militia service, and has been granted six months leave with full pay and allowances. He has been connected with the militia since early life, and was for 30 years City Engineer at Winnipeg, retiring a few years ago with a pension.

**James Boyd**, Assistant Engineer, Hamilton Division, G.T.R., who died at Hamilton, Ont., May 20, aged 41, was born at Airdrie, Scotland. After graduating from Glasgow University, he spent 10 years in North British Ry. service there, and came to Canada in May, 1910, when he entered G.T.R. service as Assistant to Resident Engineer, Middle and Southern Divisions. He was appointed Assistant Engineer, Hamilton Division, Feb., 1913. He was a member of the Engineers Club of Toronto, of the American Railway Association, and also of the 13th Regiment of Hamilton.

**Henry K. York**, who has been appointed Car Foreman, C.P.R., Alyth, Alta., was born at Victoria Corner, Carleton County, N.B., Mar. 20, 1881, and entered C.P.R. service, Dec. 3, 1903, since when he has been, to June 30, 1904, car repairing, Fort William, Ont.; June 30, 1904, to Feb. 28, 1905, air brake tester, Fort William, Ont.; Feb. 28, 1905, to May 20, 1906, car inspector, Fort William, Ont.; May 20, 1906, to May 1, 1908, Assistant Car Foreman, Fort William, Ont.; May 1, 1908, to June 30, 1910, Car Foreman, Ignace, Ont.; June 30, 1910, to Apr. 27, 1914, Car Foreman, Kenora, Ont.; Apr. 27, 1914, to Nov. 30, 1917, Car Foreman, Transcona, Man.; Nov. 30, 1917, to Mar. 31, 1918, Car Foreman, Swift Current, Sask.

**Jos. W. Taylor**, Secretary, American Railway Master Mechanics' Association and Master Car Builders' Association, and also Secretary of the Western Railway Club, died suddenly at Chicago, Ill., Apr. 24, from organic heart disease. He was born at Saltsburg, Pa., Mar. 9, 1862, and entered railway service with the Erie Rd. as locomotive fireman. He was subsequently in Westinghouse Air Brake Co.'s service at Chicago, and about 19 years ago he gave up his position to devote his time to the secretarial work of the mechanical associations named. A great deal of credit is due to him for the successful organization of the work of the associations, which has increased in volume and importance each year, with the growth of membership.

**J. B. Blair**, whose appointment as Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, Que., was announced in our last issue, was born at Whitby, Ont., Nov. 17, 1876, and educated at the Dufferin and Normal Schools, Toronto. He entered railway service in May, 1894, since when he has been, to June, 1914, consecutively in various capacities in train service, with the New York, Ontario & Western Ry., Norwich, N.Y.; Chicago & North Western Ry., Chicago, Milwaukee & St. Paul Ry., and Southern Ry.; June, 1914, to Jan., 1916, General Yardmaster, C.P.R., Windsor, Ont.; Jan. to Feb., 1916, Assistant Superintendent, C.P.R., London, Ont.; Feb., 1916, to Apr.,

1918, Assistant Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal.

**William Tansley**, who has been appointed Car Service Agent, New Brunswick District, C.P.R., St. John, N.B., was born at Shelburne, Ont., Dec. 27, 1872, and entered C.P.R. service in Sept., 1889, since when he has been, to 1900, operator and agent at various points on the Ontario Division; 1901 to 1907, dispatcher, Toronto; 1907 to 1912, Chief Dispatcher, Toronto; 1912 to 1914, Assistant Superintendent, Havelock, Ont.; 1914 to 1915, Assistant Superintendent, Toronto; May 18 to July, 1915, Assistant Superintendent, Smiths Falls, Ont.; July to Dec., 1915, acting Superintendent of Car Service, Eastern Lines, Montreal; Dec., 1915, to Feb., 1916, Assistant Superintendent, Montreal Terminals; Feb., 1916, to Jan., 1917, Assistant Superintendent, London, Ont.; Jan. to Apr., 1917, acting Superintendent, London, Ont.; Apr., 1917, to Apr., 1918, Superintendent, Laurentian Division, Quebec District, Montreal.

**E. L. Lancelot**, who has been elected a member of the Canadian Society of Civil Engineers, was born at Port Arthur, Ont., Jan. 14, 1883, and entered railway service in 1898, as rodman on location and construction, Restigouche & Western Ry. in New Brunswick. In 1901 he was clerk to the first field engineer, Dominion Iron & Steel Co., Sydney, N.S.; 1902 to 1903, draftsman and instrument man, Bangor & Aroostook Ry., Houlton, Me.; 1903 to 1904, instrument man, Chicago, Indianapolis & St. Louis Ry., Mattoon, Ill.; 1904 to 1905, Resident Engineer on construction, Toronto-Sudbury line, C.P.R., French River, Ont.; 1905 to 1906, chief draftsman, Construction Department, C.P.R., Toronto; 1906 to 1908, Assistant Division Engineer, Toronto-Sudbury line and Muskoka yards; 1909 to 1910, Resident Engineer on waterworks construction, Wetaskiwin, Alta.; 1910 to 1915, with The John Galt Engineering Co., Calgary, Alta., for the latter portion, as Vice President and Secretary; 1915, topographer, Dominion Government survey of Milk River, Alta.; and from 1916, Special Inspector, Irrigation Branch, Interior Department, Calgary, Alta.

**John M. Rapelje**, whose appointment as acting Vice President in charge of operation of lines east of St. Paul, Minn., Northern Pacific Ry., was announced in our last issue, was born at Chippewa, Ont., Jan. 22, 1857, and entered railway service in Aug., 1879, since when he has been, to May, 1882, consecutively, brakeman, G.T.R., and fireman, Atchison, Topeka & Santa Fe Ry.; May, 1882, to Nov., 1887, conductor, C.P.R.; Jan., 1888, to June, 1898, conductor, Yellowstone Division, Northern Pacific Ry.; June, 1898, to June, 1902, Trainmaster, and again conductor, same division; June, 1902, to Apr., 1905, Trainmaster, same division; Apr., 1905, to July, 1908, Superintendent, same division, Glendive, Mont.; July, 1908, to May, 1910, Superintendent, Rocky Mountain Division, same road, Missoula, Mont.; May, 1910, to Apr., 1912, Superintendent, Idaho Division, same road, Spokane, Wash.; Apr., 1912, to May, 1914, General Superintendent, Mandan, N.D., to Paradise, Mont., same road, Livingston, Mont.; May to Oct., 1914, Assistant General Manager, same road, St. Paul, Minn.; Oct., 1914, to Apr., 1918, General Manager, lines east of Paradise, Mont., same road.

## Freight and Passenger Traffic Notes.

The Greater Winnipeg Water District Board has fixed the rates on its railway on the same basis as the other railways centering on Winnipeg.

The Canadian Northern Ry., according to a Vancouver dispatch, will not increase the number of trains in and out of that city over the summer schedule from 1917.

A Vancouver, B.C., press report states that it is likely that the train which was run from St. Paul, Minn., to Vancouver during last summer will not be operated this year.

The Marsh Navigation Co. is operating a passenger and freight steamboat service on Lake Timagami, connecting with the Timiskaming & Northern Ontario Ry. at Timagami, Ont.

The Edmonton, Dunvegan & British Columbia Ry. train leaves Edmonton at 4.50 p.m. Mondays and Thursdays for the Grande Prairie and Spirit River, returning at 7.15 p.m. on Wednesdays and Saturdays.

The Quebec & Saguenay Ry. is reported to have started a daily train service from Quebec to the St. Francis River, Que., and expects to put on a freight service as far as Baie St. Paul, Que., 16 miles beyond the St. Francis River, at an early date.

The C.P.R. has resumed running observation cars on trains 1 and 2 between Montreal and Vancouver, and on trains 3 and 4 between Toronto and Vancouver. These cars were taken off during the winter as a part of the fuel conservation plans.

The car ferry service schedule between Borden, P.E.I., and Tormentine, N.B., for the summer season commenced May 1, leaving Borden daily at 8.55, reaching Tormentine an hour later, and returning leaving Tormentine at 3.30 p.m., reaching Borden at 4.30 p.m.

The Canadian Government Railways on May 1, cancelled all fares and arrangements for the granting of Saturday to Monday excursion tickets on Intercolonial and Transcontinental Divisions, except so far as Quebec, Levis and eastern points, to be found in tariff 136, are concerned.

The White Pass and Yukon Route summer service from Skagway to Dawson City, Yukon, and points in Alaska, by train and boat, shows no change from previous years. A daily train service is given during the season, while up to May 1, the service was twice a week by train and stage.

The Moncton & Buctouche Ry. resumed operations recently, one train a day, except Sundays, in each direction having been put on by arrangement with the Railways Department, as follows: Leave Buctouche, N.B., 8 a.m., arrive Moncton 10.30 a.m.; leave Moncton 3.35 p.m., arrive Buctouche 6.05 p.m.

The C.P.R. is carrying on an advertising campaign in connection with its Rocky Mountain tourist district. In addition to an attractive series of booklets, and several moving picture films taken last year, a new moving picture film of the route from Swift Current into the heart of the Rockies, will, it is reported, be taken this year.

The Lacombe & Blindman Valley Electric Ry. is operating a train service from apposite the C.P.R. station at Lacombe to Bentley, Alta., leaving at 9 a.m. Mondays, Tuesdays, Thursdays and Saturdays, and at 2 p.m. Wednesdays and Fridays, re-

turning at 3 p.m. and 5 p.m. respectively. Although called an electric railway, it is not one.

The G.T.R. has been ordered by the Board of Railway Commissioners to make connection between its eastbound passenger trains due to leave Cornwall, Ont., at 4.15 and 4.45, and arriving at Coteau Jct., Que., 5.18 and 5.30 p.m., respectively, and train due to leave Montreal at 5 p.m., due at Coteau Jct. at 6 p.m., and arriving at Ottawa at 8.45 p.m.

The C.P.R. has been ordered by the Board of Railway Commissioners to restore its train service between Moose Jaw and North Portal, Sask., covering train 315, leaving Moose Jaw at 8 a.m. and arriving at North Portal at 1.55 p.m., and train 316, leaving North Portal at 4.30 p.m. and arriving at Moose Jaw at 10.30 p.m., daily except Sundays.

The Edmonton, Dunvegan & British Columbia Ry., started recently running its trains from its own terminal, which is five miles outside Edmonton, Alta., over the Grand Trunk Pacific Ry. tracks to 121st St., where passengers are transferred to the Edmonton Radial Ry. A round trip gas car service is being given between 121st St. and Westlock, 52.2 miles, on Mondays, Wednesdays and Fridays.

The C.P.R. will on June 2, resume its seven day a week service between Montreal and Winnipeg and Toronto and Winnipeg, continuing through to Vancouver. Observation cars of the Mount class, consisting each of one drawing room, three compartments, buffet, lounge room and observation platform, will be run on these trains. The seven day a week service between St. Paul, Minn., and Vancouver will also be resumed on the same date.

The G.T.R. has been ordered by the Board of Railway Commissioners to operate its trains 389 and 390 between Lindsay and Haliburton, Ont., three times a week, viz., on Tuesdays, Thursdays and Saturdays, leaving Lindsay at 11 a.m. and arriving at Haliburton at 2.05 p.m., and leaving Haliburton at 3 p.m. and arriving at Lindsay at 6 p.m. The present schedule between Lindsay and Kinnmount Jct. on Mondays, Wednesdays and Fridays is to be maintained, and connection made at Kinnmount Jct. with the C.P.R. train.

The Canadian Railway Club's annual meeting was held at Montreal, May 14, the report for the past year showing considerable progress, both in membership and finances. The officers, etc., for the current year were elected as follows:—President, C. W. VanBuren, General Master Car Builder, C.P.R.; Vice Presidents, T. C. Hudson, Master Mechanic, Canadian Northern Ry., Joliette, Que., and J. Hendry, Master Car Builder, G.T.R.; Treasurer, E. E. Lloyd, Auditor of Disbursements, C.P.R.; Secretary, Jas. Powell, Chief Draftsman, G.T.R. The executive committee is as follows:—W. H. Winterrowd, Chief Mechanical Engineer, C.P.R.; C. H. N. Connell, Division Engineer, C.N.R.; A. Crompton, Assistant Valuation Engineer, G.T.R.; E. A. Nix, Assistant Works Manager, C.P.R.; W. H. Sample, Superintendent of Motive Power, G.T.R.; B. F. Shortley, Terminal Agent, Canadian Government Railways; audit committee: D. R. Arnold, Sales Manager, Canadian Car & Foundry Co.; G. Whiteley, Assistant Superintendent of Motive Power, C.P.R.; G. M. Wilson, Master Mechanic, G.T.R.

## Grand Trunk Railway Annual Report and Meeting.

The report for 1917 which was presented at the recent annual meeting in London, Eng., shows an increase in gross receipts of £905,742, or 9.22%, the largest traffic carried in the company's history, although train mileage decreased by 3,051,932 miles, or 13.34%. There was, however, a large increase in operating expenses, totalling £1,774,807.

The passenger revenue decreased £121,482, the decrease in passengers carried being 999,727, the average fare being 1.28d higher. Mails increased £21,130, and freight and live stock £952,400, and other receipts £53,694. The average rate per ton mile on the entire freight business was 0.76c, compared with 0.67c in 1916.

Of the additional working expenses, £326,764 was for maintenance of way and structures, £421,487 for maintenance of equipment, £4,924 in traffic expenses, £994,220 in conducting transportation, £731 in miscellaneous operations, £4,199 in general expenses and £24,542 in taxes. The total expenditure of £9,002,894 was an increase of £1,774,867, representing 83.94% of the gross receipts, against 73.60% in 1916. The train mile cost was 108.95d, against 75.80d in the previous year. The surplus for 1917 was £26,279, against £802,081 in 1916. Adding the balance at credit of the net revenue account at Dec. 31, 1916, or £20,027, there is a balance of £46,307 carried forward to the current year.

The total charges on capital account were £444,856, of which £42,329 was for the acquisition of securities of the Lachine, Jacques Cartier & Maisonneuve Ry. and the Montreal & Southern Counties Ry. (electric). The expenditure on capital account for new works, machinery and tools, increased weight of rails, new rolling stock and land purchased, was £402,527.

During the year, E. J. Chamberlin, who was appointed President, May 24, 1912, for five years, and continued in office to Sept. 1, retired, but he continues with the company as a director. H. G. Kelley, then Vice President, was elected President, Sept. 1. The directors reported the death of Col. F. Firebrace, R.E., one of the directors for 22 years, and also the resignation of S. Baldwin, M.P., owing to his having accepted office under the British Government. H. G. Kelley, President, was elected one of the directors.

**Alberta Workmen's Compensation Act.** The act passed by the Alberta Legislature for the provision of compensation to workmen who are injured in the course of their work, does not come into operation until Jan. 1, 1919, so far as the following trades or occupations, among others, are concerned: engineering, transportation, operation of electric power lines and power plants, waterworks and other public utilities, navigation, operation of boats, ships, tugs and dredges, operation of grain elevators and warehouses, telegraph systems. The act does not apply to railway companies, except so far as their employees are engaged in any employment specifically mentioned in schedule A, which is now in operation, or in schedule B, which comes into operation in 1919.

**Port Huron Car Shops.** G.T.R.—The construction of these shops having been completed, they have been taken over by J. Coleman, Superintendent Car Department, and a large working force, which it is said will eventually number about 600, is being installed.

# Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, to Jan. 31, contributed \$21,709.72 to the Red Cross; \$25,767.23 to the Canadian Patriotic Association, all from employees, and in addition, \$11,666.65 to the Red Cross; \$13,333.35 to the Canadian Patriotic Association, and \$13,765.16 to enlisted employees, from the Commission.

## Canadian Railway Troops in Action.

The following is a dispatch from Roland Hill, at the war correspondents' headquarters in France, to the Dominion Government, which was given out at Ottawa, May 9:—

"In the defence of Marcelcave, and the Nesle-Amiens railway line, one battalion of Canadian Railway Troops, from York County, Ont., went into the battle line like veterans, and helped to stave off the German advance for five days. From Mar. 27, in spite of the fact that they had long marches and hard work in saving their construction equipment from the Huns in the Ham neighborhood, this battalion fought with the gallant 61st Division. Although they had many men who were trained in machine gun work, they were not, of course, equipped with this armament when they started for the support line. The Colonel foraged in Villers-Bretonneux and discovered a sympathetic Canadian who was quartermaster for an Imperial unit. Sixteen machine guns and two lorries filled with ammunition were obtained from him. Then the Canadians swung down the main road and into position, singing lustily, cheering up the tired British troops whom they joined.

"The spell in the line is best told in one of their Major's own words: 'All through our retirement the feeling of the men was keen to do something better than merely save equipment. We wanted to do something to help to stop the German advance, and now the opportunity had come. I never saw a happier crowd on their way to the trenches. After outfitting with machine guns we took up our position in support in a small wood about a quarter of a mile northwest of Marcelcave about five in the morning. Things were fairly quiet until 10, when a counter-attack by the 61st Division took place. About 1,200 men took part, and went doggedly at the Huns, but they were worn out by days and nights of continuous fighting, and the attack petered out just after 11 o'clock. The enemy immediately attacked again and captured Warfusee, on the left, and got a footing in Marcelcave, on our right.

"We were then left in an advanced position in the wood and Hun guns began a terrific shelling of the place. No reserves could be spared, and as the holding of the wood began to be costly, we established scattered machine gun posts in it and our main body fell back to support lines they built themselves astride the railway. The men carried out this movement in extended order and as coolly as if they were on parade, in spite of heavy shelling from the Huns. In some mysterious way the men had obtained shovels

and it was here that we demonstrated what a wonderful tool the shovel is in the hands of a C.R.T. sapper when he is under fire. The rapidity with which they dug cover was a marvel to all who saw those trenches dug. That night it started to rain and we salved tarpaulins from an abandoned aerodrome and made ourselves fairly comfortable. Our patrols kept well forward, but the Germans never continued the attack that night, although there was very heavy fighting to the north.

"In the morning the enemy was actively preparing for an attack in the direction of Marcelcave. He came out on the roads freely and began digging positions, and we let him—for a little while. When he was in sufficient strength, we opened up on him with every gun and rifle we had. We killed scores of Huns, and he gave up his idea of attacking, thinking we were in greater force than we were. All that day the boys had fine sport with the machine guns. That night was again quiet, except where Fritz put up flares and we plastered him with bullets.

"In the morning the Germans attacked in dense masses, and in spite of the fight the Gloucesters and Warwicks on our right put up they were forced back. The Boche followed up, and for over an hour all our machine guns poured into them, doing great execution. We fired all the ammunition we had and all we could carry up. It was a great day's sport, and we did tremendous damage to old Fritz. As soon as he finished his work on the right he turned his guns on us. A young Toronto captain and some volunteers with machine guns held the trenches whilst we retired again. But Fritz had had enough for the day, and never molested us that night. He seemed to be very nervous of the chances of a possible counter-attack. It was easy fighting then until we were relieved.

"Our transport men were splendid all through and each night, and sometimes, when possible, in the day time, they ran their lorries up the roads close to our trenches and delivered hot meals to the men."

"That is the modest account of what this York County battalion did."

## PERSONAL NOTES.

G. McL. Brown, European Manager, C. P.R., London, Eng., who has been acting as Assistant Director of Movements, has been appointed Assistant Director General of Movements and Railways at the War Office, with the rank of colonel.

Flight-Lieut. Gordon Burchard, an instructor in the Royal Air Force, was killed at Camp Borden, Ont., May 23, owing to a cadet who he had taken up having fainted at the wheel, allowing the plane to crash to the ground. Before enlisting, he was on the Pullman Co.'s staff at Toronto.

Lieut. A. J. Cameron of the Canadian Railway Troops, has been awarded the Military Cross, for conspicuous gallantry and devotion to duty when in charge of a party repairing damage to a light railway by shell fire. When a dugout was hit, and the occupants buried, he called for volunteers, went through the enemy barrage and rescued five wounded and recovered five bodies.

Capt. Lloyd Fleming, who has been awarded the Military Cross, and promoted from lieutenant, is a son of R. J. Fleming, General Manager, Toronto Ry.,

and allied companies. He joined the Army Service Corps in Toronto, in Jan., 1916, as lieutenant, and later transferred to the Mechanical Transport Corps, and acted for some time at Ottawa as assistant instructor. In order to get overseas more quickly, he joined the Royal Flying Corps, and went to England in Nov., 1916, and to France after completing his flying course. He was subsequently sent to the far east, where he has since served with the Egyptian forces. In January, he accounted for five enemy planes in two weeks.

Major Chas. Flint, of the 4th Battalion, Canadian Railway Troops, who has been awarded the Croix de Guerre, is a B.A.Sc. of Toronto University. When he enlisted as a lieutenant he was in the C.P.R. engineering service at Winnipeg.

Sergt. J. Goulding of the Canadian Railway Troops, has been awarded the Distinguished Conduct Medal. On one occasion, although he and his party were three times shelled off the work, by his courage and skill he completed it under heavy fire, thereby enabling a navy gun to be put into the required position.

Capt. F. Harcourt, who is reported to have been appointed Assistant Commander of Labor Units in France, was formerly Harbor Engineer at Port Arthur, Ont.

Major D. Hillman, of Canada, has been gazetted as a lieutenant-colonel while employed as a railway construction engineer at the front.

Lieut. W. Johnston, Royal Naval Air Service, who was reported recently to have been killed whilst engaged in bombing the German warship Goeben in the Dardanelles, had, before enlisting, completed his final year at McGill University, under one of the C.P.R. engineering scholarships.

Major T. R. Loudon, A.M.Can.Soc.C.E., lecturer of Faculty of Applied Science, University of Toronto, and one of the partners in James, Loudon & Hertzberg, civil engineers, Toronto, has returned to Canada from France, on leave. He was invalided to England in January, and had been mentioned in dispatches. He joined the 1st Railway Construction Battalion as a lieutenant, and was promoted to captain, and to major, while in France.

General D. S. MacInnes, whose death by accident in France, was reported May 24, was brother of W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, and a son of the late Senator MacInnes, who was a C.P.R. director for many years. No details of the accident have been given, but from the latest information, he was acting as Inspector of Mines on the British Headquarters Staff, and it is presumed that the accident occurred in the course of his duties. He commenced his military career in 1891 as second lieutenant, Royal Engineers, and in 1895 and 1896 served in the Ashanti expedition, during which he was mentioned in dispatches. From 1899 to 1902 he was in the South African war, and commanded the Royal Engineers through the defence of Kimberley. For services rendered in the Orange Free State and the Orange River Colony, he was mentioned in dispatches, and received the Queen's and King's medals. He served subsequently under the Dominion Government, and in 1905-07 was Deputy Assistant Quartermaster General, and in 1907, Chief Staff Officer of the Maritime Provinces, and occupied that position until his transfer to England to the General Staff.

Lieut. H. W. Morris, who was killed in action recently, was, prior to enlistment, travelling electrician in the Car Department, G.T.R., Montreal. He went overseas with the 3rd Canadian Field Artillery in Sept., 1914, and later won a commission and was attached to an infantry battalion. During an attack on strong enemy positions, his devotion to duty led to his being recommended for the Military Cross. However, he was killed in a subsequent engagement, the cross being sent to Canada and presented to his widow at Montreal.

Lieut. E. G. O'Brien, who was reported, Apr. 12, to have been slightly wounded in France, was, before enlisting, a C.P.R. car inspector at Montreal.

Lieut.-Col. J. V. P. O'Donahoe, D.S.O., whose death following wounds received from shrapnel at Passchendaele in April, was reported May 8, was born at Brockville, Ont., in 1881, and was, for some years, engaged in transportation service. Prior to 1905, he was in the Audit Department, Canada Atlantic Ry., now part of the G.T.R., and in 1905 was appointed private secretary to C. J. Smith, then General Manager, Richelieu & Ontario Navigation Co., Montreal, and from 1906 to Mar. 1, 1913, when Jas. Playfair and associates secured control, he was Manager's Assistant of that company. He subsequently became Assistant to the Vice President and General Manager, and Purchasing Agent, of the North Ry. project, and in Jan., 1915, was appointed to the military headquarters staff at Montreal. He went overseas in May, 1915, as junior Major of the 60th Battalion, and went to France with the rank of captain, and later obtained promotion as major and finally lieutenant-colonel. He was mentioned in dispatches several times, and was awarded the D.S.O. for gallantry on the Somme.

Sergt. C. H. Olson of the Canadian Railway Troops, has been awarded the Distinguished Conduct Medal for conspicuous gallantry and devotion to duty at all times. He has invariably displayed the greatest courage and coolness under direct and heavy shell fire, and his fine example has been of invaluable service in encouraging all ranks with him.

Lieut. R. S. Richardson, No. 13 Light Railway Operating Co., R.E., British Expeditionary Force, formerly Superintendent, Canadian Government Railways, Fort William, Ont., in writing from the front early in April said: "We made a nice retirement, getting out our equipment, and all of our men, but when we thought we were quite clear, on the seventh day, after running the gauntlet through many hot shelling and bombing districts, we lost 24 killed and 18 wounded. The poor, brave boys never grumbled, although badly cut up. We moved eight times in the 10 days and buried our dead."

E. J. Shea, formerly a clerk in the Superintendent's office, Canadian Ex. Co., Winnipeg, was reported recently to have been killed in action on Apr. 3. He went overseas about two years ago with Canadian cavalry.

Capt. Paul F. Sise, Vice President and Managing Director, Northern Electric Co., who went overseas with the 148th Battalion, and has for some time past been in the United States on special service, returned to Montreal early in May, to undertake the recruiting of young men, for the Hebrew Battalion now being raised in Canada and the U.S., for service with the British Expeditionary Force in Palestine.

E. A. Stewart, Chief Accountant, Montreal Tramways Co., was presented with a

purse of money, May 3, on leaving the company's service to enlist with the McGill College section of the tank battalion.

Major J. J. Sullivan, of the Canadian Railway Troops, who has served a considerable time in France, and whose portrait was published in our April issue, has returned to Winnipeg, and will probably shortly resume his duties as a construction engineer and roadmaster, C.P.R.

W. Tourigny, formerly of the Maintenance of Way Department, C.P.R., is reported to have been wounded. He is a son of H. B. Tourigny, District Engineer, Public Works Department, Three Rivers, Que.

Lieut. R. P. Williams of the Canadian Railway Troops, was awarded the Military Cross recently for conspicuous gallantry and devotion to duty, in directing the work of repairing a light railway track during a heavy barrage. Owing to his efforts the line was kept open, and he volunteered for the work in the most forward area.

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,900	\$2,940,000	\$ 904,900	\$ 292,500
Aug.	3,405,200	2,812,000	693,200	478,800
Sept.	3,341,700	2,916,800	1,924,000	306,700
Oct.	3,941,600	3,350,500	591,100	629,200
Nov.	4,060,200	3,295,500	764,700	495,300
Dec.	3,273,200	3,207,900	65,300	758,500
Jan.	2,715,300	3,290,300	x575,000	1,067,100
Feb.	2,691,600	3,171,400	x480,400	588,600
Mar.	3,436,300	3,225,900	210,400	407,700
	\$30,699,400	\$28,209,300	\$2,490,100	\$6,014,400
Incr.	\$ 603,400	\$ 6,617,900		
Decr.			\$5,014,400	
	x Deficit.			

Approximate earnings for April, \$3,949,100, against \$3,313,500, and for three weeks ended May 21, \$2,531,100, against \$2,476,900 for same periods 1917.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, compared with those of 1917, from Jan. 1, 1918:

	Gross Earnings	Expenses	Net Earnings	Decrease
Jan.	\$10,789,818	\$9,621,824	\$1,167,993	\$1,263,485
Feb.	9,574,302	8,983,404	590,898	1,396,161
Mar.	12,427,915	9,435,134	2,992,781	944,536
	\$32,792,035	\$28,040,362	\$4,751,673	\$3,603,172
Incr.	\$1,702,907	\$6,305,079		
Decr.			\$ 3,603,172	

Approximate earnings for April, \$13,007,000, against \$12,036,000 for April, 1917, and for three weeks ended May 21, \$8,989,000, against \$9,262,000 for same period 1917.

### Grand Trunk Railway Earnings.

Aggregate from Jan. 1 to Apr. 30:—

	1918	1917	Increase Decrease
G.T.R.	\$15,296,909	\$14,617,203	\$679,706
G.T.W.R.	2,806,523	2,807,321	\$ 798
D.G.H. & M.R.	912,536	1,045,457	93,397

\$19,015,968 \$18,430,457 \$585,511 .....  
Approximate earnings for April, \$6,118,935, against \$4,885,211 for Apr., 1917, and for three weeks ended May 21, \$4,492,138, against \$3,917,291 for same period 1917.

### Grand Trunk Pacific Ry. Earnings.

Approximate receipts for April, \$505,316, against \$454,011 for Apr., 1917; aggregate receipts from Jan. 1 to Apr. 30, \$2,010,341, against \$1,485,326 for same period 1917.

Liquor on a Locomotive.—Jno. Reading, locomotive man, and W. C. Tretheway, locomotive fireman, were each fined \$250 and costs at Windsor, Ont., May 22, for having a bottle of intoxicating liquor on a C.P.R. locomotive.

### Traffic Orders by the Board of Railway Commissioners.

#### Minimum Weight of Tan Bark.

General order 232. May 14. Re application of Canadian Manufacturers' Association for an order disallowing the increased carload minimum weights of tan bark, published in Supplement 8 to C.P.R. Tariff C.P.C. no. E-3225, and Supplement 1 to G.T.R. Tariff C.R.C. no. E-3477: It is ordered that the minimum carload weights of tan bark, when carried in box or stock cars under special commodity tariffs, be as follows:—For cars not over 30½ ft. long, inside measurement, 21,000 lb.; for cars over 30½ ft. and not over 34½ ft. long, inside measurement, 23,000 lb.; for cars over 34½ ft. and not over 36½ ft. long, inside measurement, 28,000 lb. And it is further ordered that general order 221 made here-in be rescinded.

#### Protection of Old Rates on Grain.

General order 234. May 22. Re applications of United Grain Growers, Ltd., Northwestern Grain Dealers Association, Campbell Flour Mills Co., Quaker Oats Co., Cambridge Roller Mills, Northern Grain Co., et al, for a ruling in the matter of protection of the old rates on grain shipped prior to Mar. 15, 1918, to interior mills and elevators, with published transit privileges, and reshipped after the new rates came into effect; and re general order 212, Jan. 15, 1918, and orders in council pertaining thereto: Upon reading the applications and what was alleged in support thereof and the written argument filed by C.P.R. counsel, it is ordered as follows, with respect to carriers whose tariffs provide for the milling, malting, storage or cleaning of western grain in transit:—

1. That with respect to all grain originally shipped prior to Mar. 15, 1918, the said grain or the produce thereof reshipped within six months, from the stop over point, shall be entitled to the balance of the through rate existing at the time of the original shipment of the grain under the transit tariffs applicable.

2. That with respect to all wheat originally shipped on and after Mar. 15, 1918; the said wheat or the product thereof, reshipped from the stop over point west of Fort William, before June 1, 1918, to destinations west of and including Port Arthur and Armstrong, Ont., shall be entitled to the balance of the through rate to the said destinations existing at the time of the original shipment of the wheat under the transit tariffs applicable.

3. That with respect to all grain other than wheat, as referred to in sec. 3 hereof, originally shipped on and after Mar. 15, 1918, under the transit tariffs applicable thereto, which, or the product whereof, is reshipped from the stop over point within six months; the rate to be applied on the said reshipped grain or product may be the balance of the through rate existing from the original point of shipment of the grain to the final destination thereof, or of the products at the time of the reshipment from the stop over point.

4. That the charge for the terminal service at the stop over point, also the charge for the haul, if any, out of the direct line of transit, in accordance with the tariffs applicable, shall be additional in each case.

#### Increases in Electric Railway Freight and Passenger Rates.

Orders passed by the board, authorizing increases in freight and passenger rates on certain electric railways, are

given in the electric railway department of this issue on page 254.

#### Joint Rates On Canned Goods.

27160. April 26. Re complaint of Dominion Canners, Limited, Hamilton, Ont., and Board of Trade, Picton, Ont., regarding joint rates on canned goods, and re proposed Joint Class Freight Tariff of Canadian Pacific and Grand Trunk Railways. The matter having been heard at Ottawa, April 16, and upon its appearing that the parties will not be able to agree prior to April 30, it is ordered that, pending a hearing and until further order, the proposed Joint Freight Tariff of class rates, Canadian Pacific Ry. C.R.C. B-2459

and Grand Trunk Ry. C.R.C. B-3542, be suspended.

#### Specific Commodity Rates from Burritts, Ont.

27204. May 9. Re application of Provincial Stone & Supply Company, Toronto, for an order directing the C.P.R. to publish specific commodity rates from Burritts, Ont., to various points. Upon hearing the application at Toronto, Feb. 15, 1918, in the presence of counsel for the applicant company and the railway company, and upon the report and recommendation of the board's Traffic Officer, it is ordered that the application be dismissed.

#### Pacific Coast Terminal Rates.

27220. May 18. Re complaint of Nanaimo Board of Trade against withdrawal of Pacific coast terminal rates to Nanaimo and the substitution of an arbitrary over the Vancouver rates; and re order 24808, Mar. 10, 1916, dismissing the complaint: Upon rehearing the matter at Vancouver, June 26, 1916, the complainant and the C.P.R. being represented, and upon reading the further written submissions filed, it is ordered that the complaint be dismissed, with leave to the applicants to move for further consideration of the application as and when future traffic conditions may warrant.

## The Prime Minister's Explanation of the Dominion Government's Railway Policy.

The Premier, Sir Robert Borden, made a general statement in the House of Commons May 15, with regard to the whole railway situation in Canada. He reviewed the history of railway development since 1903, at which time the Canadian Northern Ry., which had attained considerable development in the prairie provinces, began to expand easterly and westerly. Since then, not only had the C.N.R. expanded into a complete transcontinental system, but the Grand Trunk Pacific Ry. had been built from Winnipeg to Prince Rupert, and the National Transcontinental Ry. from Moncton to Winnipeg. Having explained the financial legislation which parliament had passed with a view of aiding the construction of these lines, and of safeguarding the country's interests in them, as well as the legislation passed in 1917, with respect to the Canadian Northern Ry., under which arbitration proceedings are being carried on to fix the value of the non-government owned shares of that system—which price is not to exceed \$10,000,000—the Premier outlined the general future policy of the government with respect to the Canadian Northern, the Grand Trunk Pacific, and the Grand Trunk, suggesting the amalgamation of the whole, together with the National Transcontinental Ry., the Intercolonial Ry. and the Prince Edward Island Ry. as one state owned system under independent corporate management.

Pending the completion of the arbitration as to the value of the Canadian Northern stock—the time for making the award having been extended to June 1—the management of the line has not been disturbed, except that the government has had appointed three directors. This gives the government access to all the company's documents and records, and such being the case, there is no reason why the actual management should be changed in the meantime. In connection with a reconstituted board, it is not intended that either Sir William Mackenzie or Sir Donald Mann will be members; both had expressed their desire to be relieved from further responsibility after the government assumes full control, but Sir William Mackenzie has offered to make his services available in any way the board might determine, without remuneration or recompense. As to the immediate future, it is not intended to operate the Canadian Northern system directly under a government department, but through the corporate machinery by which it has been operated in the past. There will be a reconstituted board of directors, to which the best men obtainable will be appointed, and the government will not interfere with that board. Every means will be used by the govern-

ment, and extra powers will be obtained, if necessary, in order that anything like political influence, patronage or interference shall be absolutely eliminated from the administration of the line.

The government has had under consideration the question as to whether it might not be possible in the immediate future to bring the National Transcontinental Ry., the Intercolonial Ry. and the Prince Edward Island Ry. under the same corporate ownership as the Canadian Northern. The matter has not yet received the mature consideration necessary, but it may be possible and desirable to bring these lines under the ownership of the corporation which will control the C.N.R. system. That suggestion is before the government, and so far as he has been able to give it consideration, it commends itself to his judgment.

With respect to the Grand Trunk Pacific Ry., he regards it as inevitable that, for many reasons, it should be taken over by the Dominion Government. It is a national enterprise to which the credit of the Canadian people had been committed, and it is expedient to sustain it and not permit it to go into liquidation. It is intimately connected with the Grand Trunk Ry. in the east; branches of the C.N.R. system in the west in many cases could be utilized as feeders without any great expenditure, but it is not self-sustaining. The G.T.P. Ry. could not be successfully operated without suitable arrangements with the C.N.R. and with the G.T.R. The G.T.P.R. cannot pay its interest charges, and it is utterly impossible for the G.T.R. to meet the obligations it has undertaken in respect to the G.T.P.R. It is, therefore, inevitable that the G.T.P. R. be acquired. As to the method of its acquisition, he has no doubt that the G.T. R. would be willing to hand it over if the Dominion Government would relieve the G.T.R. of the obligations it had incurred. There were several conditions to be taken into account before such a proposal could be entertained, and the government is discussing the whole situation with the G.T. R. management.

If the government took over the G.T.P. R., it would practically involve taking over the G.T.R. as well. He is of this opinion because the G.T.P.R. and the C.N.R. would lack the adequate eastern connections which the G.T.R. would give, and because even if relieved from its obligations as to the G.T.P.R., the G.T.R. has no very bright future prospects. It is very easy to say that the Dominion should acquire the G.T.R., but when the practical problem of how it is to be acquired is faced, it is not quite so simple. While it might be possible to force the acquisition of the G.T.R., it must be remembered that Canada for many years to come will be

a borrowing country, and that if the government were to lay itself open to the charge of acting unfairly or unjustly towards those who have invested their capital in the country, it would lose in the end more than it would gain by any such injustice. So the government will have to act reasonably with the G.T.R., and further, it must be remembered that the G.T.R. has lines and terminals in the United States which are vested in U.S. companies, of which the G.T.R. controls the stock. So the acquisition of the G.T. R. must depend upon negotiations, and the government is conducting such negotiations. For the present they are confidential. The government has made what it considers to be a reasonable offer, somewhat along the lines suggested in the Drayton-Acworth report, but rather more favorable to the G.T.R. That company replied by making a counter offer, which the government could not ask parliament to accept. The government then suggested to the G.T.R. that, failing an agreement, the question of the annual payment be left to arbitration, without any limit being fixed. Whatever sum might be fixed to be paid by the government for a lease of the G.T.R. should be distributed among the holders of the various stocks by the directors of the G.T.R. themselves.

A sub-committee of the government has been dealing with the general railway problems of the country during the past six months, and two of the members of that committee will be in England during the summer. He has some reasonable hope that when parliament is again summoned the government will be in a position to place before it proposals which will involve the constitution into one state-owned system, all the chief railways of Canada, except the Canadian Pacific Ry. It might be possible, indeed he thought it probable, that at some later date, all the land transportation facilities of Canada in the shape of railways might, so far as operation is concerned, be amalgamated into one system and carried on under one management.

The Ministers of the Interior and of Immigration, Messrs. Meighen and Calder, will carry on negotiations in England during the summer in connection with the proposal to acquire the G.T. Pacific Ry. and the G.T.R.

**Western Grain Unloading at Head of Lakes.**—The Board of Grain Commissioners has ordered that all wheat shipped from country points after May 10, must be unloaded into terminal elevators at Fort William and Port Arthur, by the various railways, unless permits are granted by the board, to allow unloading at other destinations.

## Arbitrators Value 600,000 Shares Canadian Northern Railway Stock at \$10,800,000.

After sitting on 50 days in March, April and May, taking over 1,500,000 words of evidence, and filing 211 exhibits, the three arbitrators, Sir Wm. Meredith, Chief Justice of Ontario, representing the Dominion Government; Wallace Nesbitt, K.C., of Toronto, representing Mackenzie, Mann & Co., and Chief Justice Harris, of Nova Scotia, selected as the third, gave the following unanimous award on May 25:—

"That the value of the 600,000 shares of the Canadian Northern Ry.'s capital stock, as of the date of the agreement entered into on Nov. 15, 1917, between the King, Mackenzie, Mann & Co., Ltd., and the Canadian Bank of Commerce, was \$10,000,000; that the parties shall respectively pay and bear their own costs of the arbitration, except that the Dominion Government shall pay the expenses of taking and transcribing the evidence, the remuneration of the secretary and messenger employed by us and the incidental expenses incurred by the secretary.

"The question to be determined by us was one of great difficulty, and one which, of necessity, admitted of great diversity of opinion. We heard much testimony and had the benefit of assistance of experienced and able counsel on both sides, and carefully investigated every matter which seemed to throw any light upon the question to be determined. As to whether or not there was a surplus of assets over liabilities, was naturally a subject which engaged much time and consideration. It is, of course, not a conclusive test as to the value of the stock, but it is an element which cannot be ignored. Its importance was perhaps emphasized by the fact that a Royal commission had reported the company's assets and liabilities to be about equal. This report, which was made in a proceeding to which the company and its shareholders were not parties, was admittedly based on a misconception of some of the facts, and there were omissions of both assets and liabilities. It should also be pointed out that the work of the Royal commission had reference to a date anterior to Oct. 1, 1917, and there were changes in the interval.

"In arriving at the surplus of assets over liabilities, the report of Prof. Swain as to the reproduction cost now of the physical property, based on pre-war prices, and also his estimate of the depreciation, has been adopted and after a careful examination we found the surplus of assets over liabilities of the company on Oct. 1, 1917, on a conservative basis, to be not less than \$25,000,000, after deducting the full amount of depreciation found by Prof. Swain and making such reduction in the value of the land grants and other assets as seemed reasonable. It is to be pointed out that a valuation of the physical property of a railway company by the reproduction new method, less depreciation, is not to be regarded as an ascertainment of the actual value. It is only a means to that end, but as it was the best, and in fact the only estimate available, it has been adopted as a basis for the foregoing calculations.

"While the surplus of assets over liabilities is an element for consideration, as has been already pointed out, it is not conclusive as to the value of the company's stock. Its prospective earning power is perhaps more important than any other element in ascertaining such

value, and in arriving at a conclusion, we have given careful consideration to the past history of the company, its earnings and expenditures, the present financial position of the company, the location of its lines and their construction, the other railways already existing in competition, the rate of interest on the company's funded and other debts, the probable future growth of the population and business of the country, and all other factors which seemed to us to have any bearing upon the question. It is apparent that there was great room for difference of opinion in a matter involving so many elements of uncertainty and speculation, but after taking into consideration all the circumstances which appeared to us to be entitled to weight in determining so difficult a question, we came to the conclusion we have mentioned."

### Terms of Agreement.

The agreement, under which the arbitration was held, was entered into Oct. 1, 1917, between the King, represented by the Ministers of Finance and of Railways and Canals, Mackenzie, Mann & Co., Ltd., and the Canadian Bank of Commerce. Under authority of the act passed at the Dominion Parliament's 1917 session providing for the acquisition of the C.N.R.'s capital stock, the arbitrators were to determine the value of the 600,000 shares as at Oct. 1, 1917, and might consider the reproduction cost of the C.N.R. system, but should not include therein any increase in value, due to the war, of labor, material, or of property. Should the value of the 600,000 shares be determined as \$10,000,000 or more, the price to be paid therefor was fixed at \$10,000,000, but if the value determined should be less than \$10,000,000, the value so determined is to be the price to be paid. The arbitrators' decision is to be final, if unanimous, but if not unanimous, is to be subject to appeal as provided in the act. The price determined is to be paid by the government within three months from the receipt of the award, less its proportionate share of the amount of any liabilities ascertained by the government to be outstanding against the C.N.R. system or any of its constituent companies, and undisclosed to, or in excess of the liabilities disclosed to, the arbitrators, apart from liabilities which will be properly chargeable to capital account, unless the corresponding value produced thereby has been taken into consideration as an asset of the company.

The agreement provided that immediately after its execution, at least five-sixths of the 600,000 shares be transferred to the Finance Minister, free of all encumbrances. Sixteen thousand shares, par value \$1,000,000, deposited with the British Columbia Government as security for contracts made by the Canadian Northern Pacific Ry. with that government were to be transferred to the Finance Minister on an order from the owners. Unless the whole 600,000 shares are transferred to the Finance Minister, the Governor in council may declare any shares not transferred to be so transferred, and until all the shares are transferred the Dominion Government may retain, out of the purchase price decided by the arbitrators, the pro rata value of such shares, to be paid over as they are transferred.

During the debate on the Canadian Northern bill in the House of Commons

recently, it was announced that Mackenzie, Mann & Co., had transferred to the government \$51,000,000 of common stock, making with the \$40,000,000 acquired by the government previously, \$91,000,000 out of a total of \$100,000,000.

The \$10,800,000 award places a value on the 600,000 shares of \$18 each, but as the amount to be paid is limited by the agreement to \$10,000,000, it will be at the rate of \$16.66 a share. Mackenzie, Mann & Co. are said to have 510,000 shares prior to transferring them to the government, a portion at least of which was pledged to the Canadian Bank of Commerce, and the other 90,000 were distributed among various holders.

It is said that the arbitration cost approximately \$500,000.

### Joint Traffic Arrangement at St. Leonards, N.B.

The Dominion Parliament was asked at its recent session to confirm an agreement, dated Mar. 8, between the Dominion Government and the Van Buren Bridge Co. The company owns a railway bridge across the St. John River, giving connection between a branch of the Bangor & Aroostook Ry. in the State of Maine, and the Province of New Brunswick, and a short piece of line connecting the bridge with St. Leonards, N.B. The Dominion Government holds, under an agreement to purchase, the International Ry. of New Brunswick, which connects with this piece of railway at St. Leonards, and also owns the National Transcontinental Ry., which passes through St. Leonards, but does not connect with the International Ry. or the Van Buren Bridge Co.'s line. The Dominion Government is thus maintaining two stations and staffs. The agreement provides for the leasing by the Van Buren Bridge Co. to the Dominion Government of certain lands lying between the International Ry. and the National Transcontinental Ry., together with all the railway tracks thereon, or crossing the C.P.R. or the N.T.R., from May 1 to Aug. 1, 1934, at a rental of \$1,200 a year, in addition to the entire cost of maintenance and operation, and the cost of any additional tracks and interlocking plants that may be required. The agreement contains other sections as to interchange of traffic, etc.

The Minister of Railways, in the course of the discussion on the bill, stated that the object of the agreement was that International Ry. trains would pass over the two miles of track leased to the National Transcontinental station at St. Leonards, which would serve as a union station for both lines, thus effecting a saving in cost of operation. At present passengers going in on the N.T.R. have to drive or walk over to the International Ry. if they are going on to Levis or Moncton. Two miles of the present International Ry. would be taken up, and the present station abandoned, and all the International Ry. traffic would be taken to the N.T.R. station. Opposition to the agreement was made on behalf of people of St. Leonards, who claimed that they would be deprived of the present station in the village, and would have to go some distance to the proposed union station. The measure was, however, passed.

Canadian Car & Foundry Co., Ltd., has deposited plans with the Public Works Department at Ottawa, of a dock and ship launching track, to be built in the Kaministiquia River, Fort William, Ont.

## Transportation Appointments Throughout Canada.

**Canada Steamship Lines, Ltd.—**JOHN V. FOY, heretofore General Passenger and Freight Agent, Kingston and west to the Detroit and Port Huron frontier, has been appointed General Passenger Agent, same territory; all communications dealing with passenger traffic matters are addressed to him. Office, Toronto.

L. J. BURNS, heretofore chief clerk to Assistant Traffic Manager, Toronto, has been appointed Division Freight Agent in charge of territory Kingston and west to the Detroit and Port Huron frontier. All communications dealing with freight traffic matters are addressed to him. Office, Toronto.

**Canadian Government Railways.—**R. Z. WALKER, heretofore agent, Fredericton, N.B., has been appointed Assistant Superintendent, District 2, Eastern Lines, vice M. M. McLearn, whose appointment as acting Assistant Superintendent, was announced in our last issue, and who has resumed his previous position as Chief Dispatcher at Truro, N.S. Office, Fredericton, N.B.

L. A. STEVENS, heretofore acting Locomotive Foreman, Fitzpatrick, Que., has been appointed Locomotive Foreman there.

A. E. BRYANT, heretofore Erecting Foreman, Canadian Northern Ry. Shops, Limoilu, Que., has been appointed Locomotive Foreman, C.G.R., Parent, Que., vice G. Wells, transferred.

L. SANTERRE has been appointed acting Locomotive Foreman, Doucet, Que., vice G. W. Bachelidor, transferred.

H. LOWTHIN, heretofore acting Locomotive Foreman, O'Brien, Que., has been appointed Locomotive Foreman there.

JAMES HALL has been appointed Locomotive Foreman, Armstrong, Ont., vice S. Jocelyn, acting Locomotive Foreman, transferred.

**Canadian Pacific Ry.—**C. GRIBBIN, heretofore Master Mechanic, Algoma District, North Bay, Ont., has been appointed Master Mechanic, New Brunswick District, vice C. Kyle, transferred. Office, St. John, N.B.

W. TANSLEY, heretofore Superintendent, Laurentian Division, Quebec District, Montreal, has been appointed Car Service Agent, New Brunswick District, vice W. Brown, transferred. Office, St. John, N.B.

J. H. BOYLE, heretofore Superintendent, Farnham Division, Quebec District, Farnham, has been appointed Superintendent, Brownville Division, New Brunswick District, vice H. J. Humphrey, transferred. Office, Brownville Jct., Me.

W. WELLS, heretofore Master Mechanic, Schreiber Division, Algoma District, Schreiber, Ont., has been appointed Master Mechanic, Farnham Division, Quebec District, vice J. Craig, who has resumed his former position as locomotive man. Office, Farnham, Que.

C. KYLE, heretofore Master Mechanic, New Brunswick District, St. John, has been appointed Supervisor of Apprentices, Angus shops, Montreal.

T. HAMBLEY, heretofore Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Master Mechanic, Algoma District, vice C. Gribbin, transferred. Office, North Bay, Ont.

J. S. ALLEN, heretofore Locomotive Foreman, North Bay, Ont., has been appointed General Foreman, Locomotive Erecting Shop, North Bay, Ont.

W. J. McDIARMID has been appointed

Locomotive Foreman, North Bay, Ont., vice J. S. Allen, transferred.

C. A. WHEELER, heretofore Locomotive Foreman, North Bay, Ont., has been appointed Master Mechanic, Sudbury Division, Algoma District, vice T. Hambley, promoted. Office, Sudbury, Ont.

H. P. CREIGHTON, heretofore bridge foreman, Chapleau, Ont., has been appointed Bridge and Building Master, Schreiber Division, Algoma District, vice E. T. Draper, transferred. Office, Schreiber, Ont.

T. V. BEARDMORE, heretofore Assistant Foreman, locomotive repair shops, Chapleau, Ont., has been appointed Locomotive Foreman, Schreiber, Ont., vice R. Gardiner, resigned.

J. MARSHALL, heretofore Assistant Car Foreman, Transcona, Man., has been appointed Car Foreman, Fort William, Ont., vice H. Dibley, transferred.

J. RAMSBOTTOM, heretofore in the passenger car yard at Winnipeg, has been appointed Assistant Car Foreman, Transcona, Man., vice J. Marshall, promoted.

P. F. WEISBROD, heretofore Superintendent, Calgary Division, Alberta District, Calgary, and who has been on leave of absence for some time, has been appointed station master, Winnipeg Terminals.

A. E. DALES, heretofore Master Mechanic, Calgary Division, Alberta District, Calgary, has resumed his former position as locomotive man, running out of Winnipeg.

H. DIBLEY, heretofore Car Foreman, Fort William, Ont., has been appointed Car Foreman, Swift Current, Sask., vice H. K. York, transferred.

H. K. YORK, heretofore Car Foreman, Swift Current, Sask., has been appointed Car Foreman, Alyth, Alta. This is a new position.

E. THACKER, heretofore in the passenger car yard, Winnipeg, has been appointed Car Foreman, Field, B.C.

**Grand Trunk Ry.—**H. G. KELLEY, President, G.T.R. and Grand Trunk Pacific Ry., has been elected a director of the G.T.R.

JOHN BOYD, heretofore Weighing Inspector, has been appointed Superintendent Weighing Department, Toronto, and his former position has been abolished.

J. S. LILLIE, heretofore Land Accountant, has been appointed Assistant Land and Tax Commissioner, Western Lines, Detroit, Mich.

**Northern Navigation Co., Ltd.—**R. V. ROBINSON, heretofore General Freight Agent, Sarnia, Ont., whose appointment as Freight Claims Agent, Canada Steamship Lines, Ltd., Montreal, was announced in our last issue, has also been appointed General Claim Agent, Northern Navigation Co., covering freight, marine and fire claims. Office, Montreal. The Freight Traffic Department is now under the Manager's jurisdiction.

**Grand Trunk Pacific Ry. Hotels.—**A press report from Winnipeg stated recently that the Fort Garry Hotel in Winnipeg, and the Macdonald Hotel in Edmonton were to be closed, it being stated that each was run at a loss of about \$40,000 last year. We are officially advised that it is not the company's intention to close the hotels.

The Canadian Car & Foundry Co.'s plant at Fort William, Ont., was damaged by fire, May 23, the oil and paint store being destroyed, and the damage being estimated at \$15,000.

## Duplicate Pacific Coast Trains Abolished in the United States.

The Director General of U.S. Railroads has approved the recommendation of Regional Director Aishton for a reduction in the mileage of transcontinental passenger trains starting from Chicago aggregating 11,728,000 miles, the revised schedules to take effect on June 2.

This economy has been accomplished by abandoning duplicate service between Chicago and the Pacific coast cities and assigning to the short and direct routes to each city the fastest through service. Under this plan the Atchison, Topeka & Santa Fe Ry. will be the preferred route to Los Angeles; Chicago & North Western, Union Pacific and Southern Pacific to San Francisco; Burlington and Northern Pacific to Portland; and the Chicago, Milwaukee & St. Paul to Seattle. The fast trains will make the run in 72 hours to each city. There will be a secondary train carrying all classes of equipment scheduled in 72 hours. The other transcontinental roads will operate such service as may be necessary to accommodate their intermediate travel on reasonable schedules.

On the same date the mail schedules will be adjusted so that there will be a parity of mail service between Chicago and each of the rival commercial centers on the Pacific coast. The fast mail trains will cover the distance between Chicago and Pacific coast terminals in 65 hours.

The public will be adequately served under the new arrangement, although it is probable that more upper berths will be sold in the future than in the past.

The passenger committee for the western district has now started working on the rearrangement of the schedules to the southwest, where important economies can also be effected without affecting public convenience.

## Compensation of Railways for Carrying Mails.

On May 3, the Board of Railway Commissioners gave notice of its intention to hear in Ottawa, on May 16, the application of the C.P.R. and G.T.R., on behalf of themselves and other railways carrying mails, asking that fair and reasonable rates be fixed for such carriage, pursuant to the reference of the matter to the board by order in council of Mar. 7, 1917, for the determination as to the accuracy or inaccuracy of the claim made by the railways that the present rates are inadequate, and if it is found that they are inadequate, then to determine, as the result of evidence to be submitted by the Post Office Department and by the railways, what would be a fair rate of payment for service.

On May 14, notice was sent by the board to parties interested, that at the request of W. D. Hogg, K.C., and by consent of the C.P.R. and the G.T.R. counsel, the application would be heard on May 16. The notice added:—"Should the matter be set down for hearing at a subsequent date, due notice thereof will be given."

Canadian Railway and Marine World understands that the application for the abandonment of the hearing fixed for May 16 was made by the acting Postmaster General's request. The application has not been withdrawn and will probably be heard in the near future.

The Canadian Northern Ex. Co.'s service has been put in operation over the C.N.R., between Capreol and North Bay.

## Canadian Government Railways Operating Results.

The Canadian Government Railways, as operated at Mar. 31, 1917, had a total length of 4,063.84 miles, extending from the Maritime Provinces in the east to Winnipeg in the west. The lines making up the system are the original government lines, the Intercolonial Ry., 1,518.39 miles; the Prince Edward Island Ry., 275.20 miles; acquired branches of the Intercolonial Ry., the New Brunswick & Prince Edward Island Ry., 36.05 miles; the International Ry. of New Brunswick, 111.30 miles, and the St. John & Quebec Ry., owned by the Province of New Brunswick and operated by the C.G. Ry., 119.87 miles; the National Transcontinental Ry., 1,811.28 miles, with the Lake Superior branch, 191.75 miles, which branch is leased from the Grand Trunk Pacific Ry.

Earnings.	
Intercolonial .....	\$16,767,386.89
Prince Edward Island .....	630,045.69
International Ry. of N.B. ....	116,678.67

Total mileage .....	326,836,728	9,931,236	285,083	1,387,821	49,321,113
Total freight—tons.....	6,770,224	150,101	67,533	125,044	3,161,260
Freight mileage .....	1,809,471,327	5,740,617	1,437,952	6,364,955	1,185,789,413

The excess of earnings over working expenses on the Intercolonial of \$1,114,029.11 was partly absorbed by the payment of \$1,200 rental of the Vale Ry. at New Glasgow, N.S.; \$1,070,334.64 credited to the rail, fire and equipment renewal accounts as provided by the act of 1912, and the payment of \$4,000 as compassionate allowances under special votes of parliament. The total operating deficiencies on the other lines were \$1,604,168.98, to which is added \$90,000 paid as interest on the purchase price of the International Ry. of N.B., \$5,673.42 interest on the purchase price of the New Brunswick & P.E.I. Ry., pending payment, and \$600,000 paid to the Grand Trunk Pacific Ry. for rental of the Lake Superior branch, making a total deficiency on operation of \$2,299,842.40. The country is also called upon to find the interest on the public debt created by the issue of bonds to meet the construction cost of the Intercolonial Ry., the Prince Edward Island Ry. and the National Transcontinental Ry.

Following are statistics of the steamship traffic between Prince Edward Island and the mainland:—Passengers, 48,712; mileage, 1,903,929; freight tons, 75,314; mileage, 3,340,617.

### Results for Year Ended Mar. 31, 1918.

The Minister of Railways in the House of Commons on May 17, in dealing with a

vote for construction and betterments, including equipment, for the Canadian Government Railways, gave information as to the receipts and expenditure for the year ended Mar. 31, 1918, the figures for the last two months being estimated. The total mileage operated by the C.G.R. was 4,130.84. He said that during the past financial year, Canadian railways have been working at full capacity and the government railways have received their fair share of business. But though the earnings during that period reached high water mark, the actual net results were not such as he would have liked to report. The reason for this was that the costs of operation and maintenance had so largely increased. Fuel had almost doubled in price, living conditions, owing to the war, had necessitated very large increases of wages to all classes of labor; supplies of all kinds had very greatly advanced; equipment had at least doubled in price; but, taking everything into consideration, the results achieved had been equal to those of other railways. The total working expenses on all the government railways were \$32,298,947.60, against \$24,627,271.48 for the year ended Mar. 31, 1917, and \$17,797,061.11 for the year ended Mar. 31, 1916. The earnings for the year ended Mar. 31, 1918 were \$27,004,666.61, against \$23,468,998.99 for the year ended Mar. 31, 1917, and \$18,373,143.45 for the year ended Mar. 31, 1916. Although there was an increase of nearly \$4,000,000 in the earnings for the year, the deficit was \$5,294,280.99, compared

with a deficit of \$1,158,272.49 for the year ended Mar. 31, 1917, and a surplus of \$576,082.34 for the year ended Mar. 31, 1916.

The deficit on the Prince Edward Island Ry. for the year ended Mar. 31, 1918, was \$488,172, the largest in the history of the line. It had never been possible to make this railway pay.

### A Railway Manager's Poem.

G. E. Graham, General Manager, Dominion Atlantic Ry., is the author of the following verses, which were sung at a public meeting recently at Kentville, N.S., where he is located.

Johnny get your hoe, get your hoe, get your hoe,  
Make your garden grow, make it grow, make it grow,  
Plant your seeds from sea to sea,  
Let them work for liberty.  
Hurry right away, don't delay, start today,  
Forward to the land with a right willing hand,  
So we'll help defeat the Hun,  
Now we've got him on the run.

Over there, over there, over there,  
Send the food, send the food, over there,  
For our brave boys need it, our brave boys need it,  
The calls are coming everywhere.  
So observe and preserve  
Preserve the food, save the food, and conserve,  
So we'll help win the cause of freedom,  
And we'll plant, save and send, till it's over, over there.

## Acquisition of Maritime Province Railways by Dominion Government.

The supplementary estimates submitted to the House of Commons, May 20, provided \$518,000 for the purchase of local lines in the Maritime Provinces, under the terms of the act relating to the taking over of lines built under corporate ownership. Following is the provision in the estimates:—

To provide for the purchase of the following railways at amounts not exceeding those set out in each case:—

Caracquet & Gulf Shore Ry. ....	\$200,000
Elgin & Havelock Ry. ....	30,000
Kent Northern Ry. ....	60,000
Moncton & Buctouche Ry. ....	70,000
St. Martin's Ry. ....	65,000
Salisbury & Albert Ry. ....	75,000
York & Carleton County Ry. ....	18,000

We are officially advised that the Government has bought the Elgin & Havelock, Moncton & Buctouche, St. Martin's, Salisbury & Albert, and York & Carleton Railways. Amounts have also been provided to buy the Caracquet & Gulf Shore and Kent Northern Railways, and if the owners do not wish to sell at the amounts named, the government will not buy the lines.

When the items were under discussion in the Commons on May 23, the Minister of Railways said:—"The lines covered by these items have been operating for years at a loss, and it is really now impossible for them to operate on account of the loss they are making. We are now taking them over, and not at a price that any one would feel is exorbitant. For instance, in the case of the Elgin & Havelock, they have agreed to sell their line for \$30,000. The rails alone on that line, if we were to sell them for scrap, are worth about \$80,000. We are getting five of the railways mentioned at about one-third the value of the rails. For the Kent Northern, I have put in \$60,000. They have not agreed to accept it. Neither have the Caracquet & Gulf Shore people agreed to accept the \$200,000. To those two lines we have made these offers, which are on about the same basis as the others mentioned before. If they do not accept, we will not pay any higher price, and the amounts will not be paid. But I am placing them in the estimates to give the owners the opportunity, and to allow us to take over the lines, and thus close out the small lines which are so unsatisfactory in New Brunswick."

In reference to the Caracquet & Gulf Shore, the Minister of Public Works said: "We have offered them \$200,000 for the railway. They cannot make 200,000 cents out of it for the next 10 years. We will not arbitrate. We will not pay any more. We think they will take it."

The supplementary estimates also provided \$200,000 to bring the lines mentioned up to the Canadian Government Railways branch lines standard, in connection with which the Minister of Railways said:—"If we do not get the Caracquet & Gulf Shore or the Kent Northern, we will only need probably a third of the amount."

The Pullman Co.'s carrier business has been taken over by the U.S. Government, and placed under the U.S. Railroad Administration. It is stated that the company will be paid a rental based on the average of three years earnings prior to June 30, 1917, and that the manufacturing part of the business will not be interfered with.

## Halifax Ocean Terminals Canadian Government Railways.

The Minister of Railways stated in the House of Commons, May 17, that it is expected to have the Halifax ocean terminals practically completed during this year. During the past year use was made of such portions of the terminals as were available, and had the works not been undertaken, it would not have been possible to handle the traffic which has developed at the port during the war. The present status of the works is as follows: Grading is practically completed; overhead bridges carrying streets across the railway are all practically completed. Sufficient trackage has been installed to serve the two temporary sheds built last year, and two large temporary sheds on pier A, which were rushed to completion after the explosion of Dec. 6, 1917, and which are now in use, together with a 100 car train track yard for serving the north end of the city. The placing of concrete blocks for quay walls is practically completed, and there remains only a small quantity of concrete work and granite facing in order to finish the quay walls. The filling has been proceeded with, but there still remains over 500,000 yards of filling to be placed behind the quay walls. Arrangements are being made for the erection of a temporary station and the construction of passenger car yard with car cleaning and repair facilities for the handling of the passenger traffic business of the city, as North St. station and facilities are not suitable for the carrying on of this work since the explosion. The North St. station was so badly damaged that business must be removed from it at the earliest possible moment. The contractor had stated that the new station would be ready for occupation by September.

## Preventable Accidents to Railway Employees.

The Board of Railway Commissioners has issued a circular stating that it notes from its reports that a considerable number of accidents result from employees attempting to get on or off moving cars or locomotives, or attempting to crawl under moving cars, or to get through moving cars between or over couplers. The following detail shows the situation for 1916 and 1917, as disclosed in the board's reports:—

	1916.		1917.	
	K.	I.	K.	I.
Jumping off train in motion .....	5	14	1	28
Attempting to board train .....	2	14	2	26
Adjusting couplers, coupling and uncoupling .....	5	39	5	53
Crawling under cars .....	1	—	—	1
Crawling through cars over cou- plers .....	1	—	—	7
Caught while passing through cars between couplers .....	3	4	—	—
Riding on pilot of engine .....	2	2	1	3
	18	74	9	118

The employees killed in 1916 from the classes of accidents above set out amount to 15% of the total employees killed, while for 1917 the figures are 5.7%. Those injured represent, for 1916, 9.5%, and for 1917, 10%. This represents a preventable injury; and the board desires each railway to bring this matter, by bulletin or other publication, properly before the attention of its employees, so as to prevent in so far as possible the occurrence of such accidents.

The board has also issued a circular stating that the following rule has been adopted by some railways for the protection of employees, viz.: "Where two main

tracks parallel each other and are less than 20 ft. from center to center, whether such tracks are for double or single track operations, employees in every instance, when stepping out of the way of approaching trains, must move to the right of way and not to the other track. Foremen will be personally responsible for educating their men accordingly."

The board desires to be informed by all railways whether they have such a rule in effect, and if not, what, if any, objection they would urge against the rule in question being applied generally.

## Consolidation of Railway Ticket Offices in the United States.

The Director General of U.S. Railroads announced, early in May, that arrangements have been made for the consolidation of city ticket offices in the following cities in the eastern region: New York, N.Y.; Boston, Mass.; Philadelphia, Pa.; Baltimore, Md.; Wilmington, Del.; Pittsburgh, Pa.; Atlantic City, N. J.; Buffalo, Syracuse, Rochester, N.Y.; Reading, Pa.; Williamsport, Pa.; Newark, N.J.; Cincinnati, Ohio; Columbus, Ohio; Detroit, Mich.; Dayton, Ohio; Cleveland, Ohio; Indianapolis, Ind.; Toledo, Ohio.

There will be five offices in Greater New York—four on Manhattan Island—located as follows: 66 Broadway; Stewart Building, on Chambers St., facing City Hall Park; somewhere in the lower 30's in the hotel district in that section; 114 West Forty-second St.; and one office in Brooklyn on Fulton St., present offices of the Pennsylvania Rd. and New York Central Rd.

Rental of the offices vacated in these cities is approximately \$1,070,000 a year. The rental of the consolidated offices will be \$213,200 a year.

Arrangements are also being made to consolidate the offices in Chicago, St. Louis, and Louisville. These are borderline points and require joint action on the part of the eastern and western districts. Similar consolidations will be made in the western and southern districts, and will be announced later.

**Pacific Great Eastern Ry. Settlement.**  
The British Columbia Legislature ratified the agreement made between the Province and Foley, Welch & Stewart, F. Wilson, D'Arcy Tate and E. F. White, respecting this railway, which was summarized in Canadian Railway and Marine World for April. The act authorizes the taking over of the company's charter by the province, and the appointment of future directors by the government, with such powers as may be delegated to them. There are to be three directors of the P.G.E. Ry., and three for the P.G.E. Development Co. The formal transfer of the stock, etc., to the government was made at a meeting of the original directors and the representatives of the government, April 24.

**Canadian Government Railways—Suspense Account.**—Early in the Dominion Parliament's recent session the Minister of Railways introduced a resolution to provide that the working expenses of the Canadian Government Railways and of any railway under the charge and management or direction of the Minister of Railways and Canals shall be paid out of the receipts and revenues of the said railways, etc. Considerable opposition was shown by several members of the Commons and, after being on the order paper for some weeks, the notice of motion was withdrawn.

## Railway Wages and Rates Raised in the United States.

The Director General of U.S. Railroads announced on May 26 pay increases for nearly 2,000,000 railway employees, effective June 1, and retroactive to Jan. 1 last, carrying out substantially recommendations of the Railroad Wage Commission. The aggregate of the increases probably will be more than \$300,000,000 a year, half of which will be distributed within a few weeks as back pay in lump sums ranging from about \$100 to nearly \$200 each.

The Director General departed from the Wage Commission's recommendations in the following particulars: "The principle of the basic eight-hour day is recognized, but owing to exigencies of the war situation, hours of employment are not actually reduced and overtime is to be paid pro rata; future adjustments of pay are to be on the basis of eight hours. In addition to the ordinary scale of increase, day laborers employed mainly on track work are to get at least 2½c an hour more than they received Dec. 21, 1917. A minimum of 55c an hour is established for the shop trades, including machinists, boilermakers and blacksmiths, and women are to receive the same pay for the same class of work. Negroes are to get the same pay as white men get for similar employment."

### Increases in Freight and Passenger Rates.

To meet wage increases announced above and higher cost of coal and other supplies this year, the Director General has ordered railway freight rates raised 25%, and passenger fares increased to 3c a mile from the present basis of about 2½c. It is estimated that this will bring between \$800,000,000 and \$900,000,000 more revenue to the railways within the next year. It represents by far the biggest rate increase in the history of railways. The new freight charges, which cover both class and commodity rates, become effective June 25, and the passenger increase will go into effect June 10.

Issued under authority granted by the Railroad Act to President Wilson, acting through the Director General, the order wipes out all intra-state lower rates effective on either freight or passenger traffic. Travellers in standard sleeping and parlor cars are required to pay 3½c a mile in addition to sleeping and parlor car fares, and in tourist sleeping cars, 3¼c. Sleeping and parlor car rates remain the same.

Commutation and other suburban rates on railways are increased 10c. Fares on electric interurban lines are not affected. Special excursion, mileage, convention and tourist rates, with a few exceptions, are discontinued; privileges, such as stop-overs and free side trips, are abolished, and excess baggage charges are increased.

Both freight and passenger rates on boat lines operated on the lakes, rivers and coastwise by railways are to be raised proportionately with the general increases. Export and import freight rates are ordered cancelled, and the higher domestic rates will apply to and from ports. A number of flat increases, instead of percentage additions, are ordered for coal, coke, lumber, ore, stone, grain, cotton, live stock, meats, sugar, bullion and other commodities.

A. H. Magee, formerly local manager, Great North Western Telegraph Co., Port Arthur, Ont., died at Moncton, N.B., May 16, aged 26.

## Daylight Saving to End October 27.

The Board of Railway Commissioners passed general order 233, May 11, as follows:—Re general order 227, April 12, as amended by general order 228, April 16, directing all railway companies, including government railways, in Canada to advance by one hour the standard time used by them in the different zones in which they operate; the said change to become effective on the respective railways and in the said different zones not before 12 o'clock Saturday evening, April 13, and not later than 2 o'clock Sunday morning, April 14, and to remain in force until 2 o'clock on Thursday morning, Oct. 31, 1918: Whereas the Governor in Council by order in council dated May 7, has amended order in council 898, dated April 12, so that the prescribed time during which the Daylight Saving Act, 1918, shall be in force shall be until 2 o'clock on the morning of Sunday, Oct. 27, the day fixed in the United States for returning to the usual time, it is ordered that the general order 227 be amended to provide that the prescribed time during which the Daylight Saving Act, 1918, shall be in force shall be until 2 o'clock on the morning of Sunday, Oct. 27.

## Delaware & Hudson Co's Report.

The Delaware & Hudson Co. operates 909.38 miles of main track mileage, of which 805.20 miles represents railways owned, the latter including the Quebec, Montreal & Southern Ry., and the Napierville Junction Ry. in Quebec. The directors report for the year ended June 30, 1917, says, under the heading of "Allied Steam Railways": "The Quebec, Montreal & Southern Ry. had an increase in its operating revenues of \$132,361; its operating expenses increased \$123,454; its income from hire of equipment increased \$65,636, and its net income, not making any deduction for interest due to your company, was \$282,411, an increase over 1916 of \$91,565. The Napierville Junction Ry. had an increase in operating revenue of \$66,452; operating expenses increased \$49,886, and net income was \$52,684, an increase of \$2,152 over 1916. A dividend on the capital stock, at the rate of 6%, for the year ended Dec. 31, 1917, was declared."

The stocks owned by the D. & H. Co. include 10,000 shares of the Quebec, Montreal & Southern Ry., of the par value of \$1,000,000, and 12,000 shares of the Napierville Junction Ry., of the par value of \$600,000.

**Toronto Union Station.**—While work is going on all the time upon the new union station in Toronto, from the outside point of view very little progress is seen. Sir George Bury, and other officers of the company, made an inspection of the building recently and expressed themselves as being satisfied with the progress made. The contractors expect to have the work completed by the end of the year, but Sir George Bury is said to have expressed the opinion that with a little hustling the station would be ready for occupation by September. The question of the entrance of the trains is, however, one that may stand in the way of the immediate use of the station, as the city may desire to have the viaduct project carried out in connection. The railway companies will probably make application for the temporary use of the station, with the tracks on the present low level. (Dec., 1917, pg. 471.)

## Miscellaneous Marine Items.

**The International Mercantile Marine Co.** is reported, from New York, to have practically completed arrangements for the transfer of its steamships, which at present run under the British flag, to British interests.

**Dominion Government Steamship Montmagny.**—The Marine Department has accepted a tender from C. C. Chauveau, of Quebec, and Horace Dussault, of Levis, for the purchase and removal of the s.s. Montmagny, which foundered in the St. Lawrence a few months ago.

**Vessel Classification for Customs Drawback.**—An order in council has been passed at Ottawa providing that the classification of the American Bureau of Shipping may be accepted for drawback purposes in respect of ships and vessels built in Canada since Nov. 1, 1916.

**Fort William-Georgian Bay Freight Rates.**—Cleveland, Ohio, press dispatch, May 7:—A small steamship was placed today to load wheat at Fort William at 3½c to Georgian Bay and 4c to Buffalo, and indications are that vessels of that class will take care of the grain movement for some weeks to come.

**British Columbia and Alaska Freight Rates.**—Washington, D.C., press dispatch, May 7:—The Interstate Commerce Commission has tentatively approved the Pacific & Arctic Railway and Navigation Co.'s application for increased class and commodity transportation rates between Seattle and other Pacific ports of call and points in Alaska and British Columbia.

**Electrically Propelled Ship.**—London, Eng., press dispatch:—The first electrically propelled merchantship built in England, and the largest electric vessel in the world, is undergoing its finishing touches at a British shipyard, and will soon start on its first voyage. The vessel is designed on a system in which a combination of steam and electricity is employed.

**Crews for Canadian Built Wooden Steamships.**—It is announced from Victoria, B.C., that owing to a lack of white seamen on the Pacific coast, the British authorities, for whom the Imperial Munitions Board has been superintending the building of wooden steamships in British Columbia, have been compelled to engage Chinese for deck and engine room work. The first lot arrived on this side from Hong Kong recently, for service on the s.s. War Yukon.

**The Montreal, Ottawa & Georgian Bay Canal Co.** has been granted an extension of time for the commencement and completion of the works authorized by its act of incorporation, to May 1, 1921, for the commencement, and to May 1, 1927, for the completion. It is provided that \$50,000 must be expended on actual construction by the first mentioned date, and that the Dominion Government's rights under the existing acts respecting the projected work, are not impaired.

**St. Lawrence Canal Proposal.**—In a discussion on the estimates in the House of Commons, May 19, a statement was read, dealing with the navigation problem, and suggesting the construction of a canal from Cardinal, Ont., on the St. Lawrence River, to Ottawa, so as to avoid the St. Lawrence Rapids. This project was estimated to cost \$50,000,000, and was considered preferable to the Georgian Bay canal scheme, which was estimated to cost \$150,000,000. It was stated that under the former scheme vessels would be able to go from the Great Lakes to Cardinal, through the canal to the Ottawa River and on to Montreal.

# Electric Railway Department

## The Winnipeg Electric Railway's Agreement with the City.

The Winnipeg City Council passed a bylaw April 29, confirming an agreement made between the city and the Winnipeg Electric Ry. The preamble sets forth that there has been developed and is being carried on in the city in competition with the company's street railway, another method of transportation of passengers for hire at cheap rates, commonly called jitneys, and that the city has agreed to use all its powers to eliminate such competition. It is agreed that in consideration of the council passing a bylaw to eliminate the jitney competition, that the company will carry out certain betterments and give an improved service, the agreement to run to Jan. 31, 1927. The following are the bylaw's principal provisions:—

The company undertakes to furnish adequate transportation for the city by means of its street railway, supplemented by motor busses. It will at once proceed to remodel its present rolling stock, making the cars modern in every respect. The improvements are to include folding steps, proper front exits, latest type of lighting, and the removal of running boards on all cars without center aisles. Six of the remodelled cars at least per month are to be provided until the whole of the cars are renewed.

A sufficient number of modern trailer cars, with central entrances, are to be provided, to be used in connection with extra cars, so as to secure adequate service during the rush hour periods.

The company will operate motor busses to provide a service on Westminister Ave., and on such other streets as the council may order, where, under bylaw 543, the company is under obligation to extend its street railway system. These busses are to be operated as part of the street railway system, with the same fares and transfers, and they are to be operated until the railway lines are extended to serve the Westminister Ave. or other districts. The company shall not have the right to operate a system of motor busses, except on Westminister Ave., without the consent of the council, and then only upon such streets as may be prescribed. Such motor bus services to be supplemental to the electric railway service, and as a means of giving the public adequate facilities, but shall in no sense be exclusive. Nothing in the agreement is to extend or restrict the rights or liberties of the city or company as expressed or implied in sec. 24 of bylaw 543.

The company agrees to forthwith extend and operate its Sargent Ave. line 2,200 ft. from the present western terminus, in accordance with the terms of bylaw 543.

Several sections deal with the question of electrolysis, which has been a source of controversy and legal action between the city and the company for several years. The company agrees to instal by Mar. 31, 1921, a system of insulated return feeders to eliminate electrolysis, in accordance with Professor Ganz' recommendations; consents to a judgment being entered in favor of the city in connection with a suit now pending in the courts, for damages to city water mains due to electrolysis, a reference being made to a referee for the assessment of damages, which shall be paid by the company forthwith after the finding of the

referee; agrees to carry out order 105 of the Manitoba Public Utilities Commission as to the grounding of secondaries; consents to the making of an order by the Manitoba Government embodying the provisions of schedule A, chap. 24, of the statutes of 1918, the obtaining of which order will not preclude the city from applying to the government for additional rules and regulations; and finally it agrees to pay the city the reasonable cost and replacement of any underground structures belonging to the city found to be damaged by electrolysis, until the company has complied with the regulations of schedule A, chap. 24, statutes of 1918, and for five years from the date of this agreement. As chap. 24 of the statutes of 1918 takes the place of order 261 of the Manitoba Public Utilities Commission, the company agrees to abandon its appeal to the Imperial Privy Council, and the city agrees to have the order rescinded, each party to defray its own costs.

The company agrees to remove from the streets at its own expense all poles which have been abandoned; in the business section of the city to transfer its open wires from poles to suitable buildings where there are such, the use of which can be obtained at reasonable rates; and in the business area to replace worn out wooden poles with steel poles. The City Engineer to decide all questions under these sections.

Wherever high potential wires cross the streets, double cross arms shall be placed at each side of each street, and each of the 20,000 volt transmission line conductors running from no. 5 substation to the south city limits shall be dead ended upon suitable strain insulators attached to the cross arms, and the conductors for bridging the gap at the crossing shall be made up and supported in a similar manner, the necessary "jumpers" joining the two sets of conductors being carried over the cross arms and insulated by top-pin insulators supported by the cross arms. All pole lines at street intersections are to be of such a height and strength as to provide proper clearances.

The company agrees that it will at once proceed with the betterments and improvements agreed upon, spending or incurring capital obligations of not less than \$25,000 therefor, averaged over each year for three years, and will give a bond of \$100,000 for the due performance of this contract. The City Engineer is to be the arbitrator in matters where differences arise, but an appeal may be made to the city council. Under certain conditions the City Engineer may grant extensions of time for the carrying out of the various works.

The point upon which there was the greatest difference of opinion was as to passenger fares, and it is agreed that nothing in the agreement or in the negotiations leading up to it, throughout all the stages, shall be construed as a consent by the council that the company is at any time to make an application for an increase of fares, or as an indication that such increase should be granted, the intention being that the company and the city shall be in the same position with reference to fares as if the present agreement had not been made, and as though there had been no negotiations, resolu-

tions or expressions of opinion upon the matter.

The company abandons all claims for damages against the city on the ground that the city allowed the operation of jitneys in contravention of the company's charter, particularly referred to in a letter of April 4, 1917, and it is agreed that the company is not to have any greater privileges or rights than given to it in bylaw 543, except as they are supplemented in this agreement.

The city agrees on its part to pass all further bylaws, or to amend any bylaws as may be necessary to prevent the jitney competition, or to apply to the legislature for any further powers that may be required.

The jitney bylaw, which is attached to the other bylaw, provides as follows:—No person or association of persons, firm or corporation, shall hereafter be allowed to operate for hire any jitney car, automobile or bus along any of the Winnipeg streets. It shall be unlawful to carry for hire or engage in the transportation of any persons for compensation on any Winnipeg streets with any jitney; taxicabs licensed or to be licensed under sec. 9570, or any amendment thereto, to charge 25c or more per passenger, are exempted from the operation of this bylaw. Other sections, four and five, deal with personal solicitation and the use of signs suggesting that passengers may be carried; and declare that no license shall in the future be issued for the operation of a jitney. Another section repeals sec. 2 of bylaw 9539, and another provides that the penalties provided by bylaw 1630 shall be imposed for any breaches of this bylaw.

## The Toronto Railway and City Finances.

In a recent report to the Toronto Board of Control by the city's Commissioner of Finance, it was stated that for the repair and reconstruction of track allowance, there has been appropriated for 1918, \$250,000. In previous years, money for this purpose was raised by the sale of debentures, but as the date for the expiry of the Toronto Ry.'s franchise, Sept., 1921, is fast approaching, this plan has been abandoned. The outstanding loans in this connection, total \$4,231,734, with a debt charge of \$776,814.

The Commissioner also reported as follows:—"From the commencement of the franchise of the company in 1891, up to the close of 1917, the city received on account of mileage, \$2,026,767, and in addition \$10,326,595 on account of percentage, or, in all, \$12,353,362. During the same period, the city expended on repair and reconstruction of track allowance, \$5,944,258, or \$6,409,104 less than the amount received from the company. It is greatly to be regretted that the surplus was not accumulated, instead of being thrown into current revenue from year to year. If such had been done, a very substantial fund would have been available for the acquisition of the railway in 1921."

Raymond Beaudry has been appointed Secretary, Montreal Tramways Commission.

## Increases in Electric Railway Freight and Passenger Rates.

Canadian Railway and Marine World for May gave in full the Board of Railway Commissioners judgment authorizing the London & Port Stanley Ry. to advance its freight and passenger rates, also particulars of orders passed authorizing the Lake Erie & Northern Ry., the London & Lake Erie Ry. & Transportation Co. and the Oshawa Ry. to advance rates. The board has also passed the following orders:—

**British Columbia Electric Ry.**—27,159, April 26. Authorizing British Columbia Electric Ry. to increase freight rates of Vancouver & Lulu Island Ry., and Vancouver & Fraser Valley Ry., to conform with increases granted, under the board's judgment of Dec. 26, 1917, to steam railways operating in Pacific territory, viz., an increase of 10% in freight rates, and an increase in coal freight rates of 15c a ton, the increased rates to become effective within 15 days from date of order.

**British Columbia Electric Ry.**—27,184, May 10. Approving standard freight tariff of maximum mileage tolls, C.R.C. 107, to become effective May 20 on Vancouver & Lulu Island Ry., and Vancouver, Fraser Valley & Southern Ry., the tariff having been filed on the basis permitted by the board in order 27,159, April 26, 1918.

**Quebec Railway, Light, Heat & Power Co.**—27,208, May 7. Authorizing Quebec Ry., Light, Heat & Power Co. to publish and file tariffs increasing its passenger tolls 15% to a maximum of 2.875c a mile, the tariffs to be made effective after the company's compliance with sec. 331 of the Railway Act. This applies to the company's Montmorency Division only, which consists of suburban lines, and not to the city division. See additional information below.

**Quebec Ry., Light & Power Co.**—27,226, May 21. Approving Q.R.L. & P. Co.'s standard passenger tariff of maximum mileage tolls, C.R.C. 34, to become effective June 2, the tariff having been filed on the basis permitted by the board, in order 27,208, May 7.

Following are particulars of other applications, changes, etc.:—

**The Brantford & Hamilton Electric Ry.** has applied to the Board of Railway Commissioners for an order permitting it to file tariffs providing for a general advance of 15% in its freight rates.

**Edmonton Radial Ry.**—Particulars of increases of passenger fares on this municipally owned railway are given on another page of this issue.

**The Chatham, Wallaceburg & Lake Erie Ry.** has applied to the Board of Railway Commissioners for authority to advance its freight and passenger rates to the same rate as the steam railways have been authorized to charge.

**The Cornwall St. Ry., Light & Power Co.** has put in force a new tariff of freight switching charges, viz., 1c per 100 lb., minimum \$3 a car, maximum \$8. The former rate, which was \$2.50 a car of 40,000 lb., and 1<sup>1</sup>/<sub>2</sub>c per 100 lb. over 40,000 lb., was found to be entirely inadequate and less than the service cost. The company handles carload freight only, between the C.P.R., G.T.R. and New York & Ottawa Ry. and the various manufacturing plants. In this connection it may be stated that there is nothing in the Ontario Railway Act, under which the Cornwall Company operates, to prevent a company

increasing its freight rates, provided proper notice is given and that such rates do not exceed the standard or maximum toll approved by the Ontario Railway and Municipal Board.

**The Grand River Ry.** has applied to the Ontario Railway and Municipal Board for authority to advance its freight and passenger rates 15%.

**The Hamilton Radial Electric Ry.**, on April 5, applied to the Board of Railway Commissioners for authority to file tariffs providing for a general advance in freight and passenger tolls to the same extent as was permitted by the board's order 213, Dec. 26, 1917. On April 9 the company amended its application by asking to be allowed to file the same rates that the board may allow in the case of other electric railways. On April 24 it withdrew the previous applications and substituted another, asking to be allowed to advance its passenger rates to 2<sup>1</sup>/<sub>2</sub>c a mile and its freight rates by 15%.

**The Hull Electric Co.** applied to the Board of Railway Commissioners recently for authority to file tariffs providing for a general increase in freight and passenger rates. The case was set down for hearing in Ottawa on May 21, when it was adjourned for 10 days to allow the Town of Aylmer to prepare an argument.

**The London St. Ry.'s** application to the London City Council for permission to increase its passenger fares was given in Canadian Railway and Marine World for March, pg. 113, and the council's practical refusal to entertain it was given in our May issue, pg. 211.

**The Montreal & Southern Counties Ry.** has applied to the Board of Railway Commissioners for authority to file tariffs providing for a general advance in freight and passenger rates to the same extent as the board has permitted in the case of steam railways.

**New Brunswick Power Co.**—Canadian Railway and Marine World for May contained a copy of a bill introduced in the New Brunswick Legislature, to authorize the New Brunswick Power Co. to advance its electric railway fares and its rates for gas and electric current. The bill was defeated in the legislature, owing to opposition by St. John citizens and newspapers, and a bill introduced at the city's instance was passed, providing for an investigation of all the company's property, franchise rates, etc., but with the proviso that the commission to be appointed under it may grant temporary relief, upon being satisfied that the same is necessary.

**The Quebec Ry., Light & Power Co.**, which, as stated above, has been authorized by the Board of Railway Commissioners to advance freight and passenger rates on its Montmorency (suburban) Division, applied in March to the Quebec City Council for permission to increase its street railway fares and gas rates in the city. The application is still before the council. Full particulars of it were given in Canadian Railway and Marine World for April, pg. 161.

**The Toronto & York Radial Ry.**, on April 13, notified the Ontario Railway and Municipal Board that on April 22, the sale of the following tickets would be discontinued on its Mimico Division:—

(a) 4 for 25c, good between Woodbine, East Toronto and West Hill.

(b) 4 for 15c, combination ticket, good between Woodbine, East Toronto and Beech Ave.

(c) 4 for 10c, combination ticket, good between Woodbine, East Toronto and Beech Ave.

(d) 4 for 25c, good between Woodbine and stop 26.

(e) 8 for \$1, combination ticket, good between Woodbine and West Hill.

(f) All return tickets.

The tickets referred to in clauses (b) and (c) were combination tickets, two of which were good for passage on the Toronto Ry. between Woodbine terminal and Beech Ave., the other two tickets being good for passage on the Toronto & York Radial between Woodbine and East Toronto. The franchise covering the issue of these tickets having expired, the company felt justified in withdrawing the rates.

The tickets referred to in sections (a) and (d) were issued under an agreement, which has expired.

The tickets referred to in sections (e) and (f) were voluntarily issued by the company and were subject to cancellation at any time.

The company's new fare is 5c for 3 miles or less, and over 3 miles, 2c a mile or fraction thereof, as allowed by the Ontario Railway Act. The company will take action at an early date to advance fares on its Mimico and Metropolitan Divisions.

**The Windsor, Essex & Lake Shore Rapid Ry.** has applied to the Board of Railway Commissioners for authority to file tariffs providing for a general advance in freight rates to the same extent as the board has permitted in the case of steam railways.

## Toronto Civic Railway Finances.

In a recent report on the city's finances, the Commissioner of Finance pointed out that the cost of operation of the civic railways for 1918, is estimated at \$325,879, and the annual debt charges on \$2,378,737 of outstanding debentures at \$171,064, a total of \$496,943. The revenue for the year is estimated at \$300,000, thus showing an anticipated deficit of \$196,943, apart from taxes and proper depreciation.

In this connection he said:—"It had been earnestly hoped that the recommendation to increase fares on the civic car lines (which was published in Canadian Railway and Marine World for April) would have been adopted, and that, as a consequence, the repeated yearly deficits, which bear so heavily on taxpayers generally, would have been eliminated, and the system placed upon an improved financial basis. There is no greater detriment to the advancement of public ownership than the continued administration of a municipal enterprise upon such a false and artificial basis as that upon which this system is operated. It has always appeared unjust and unfair to settle upon the general body of ratepayers, the cost of special services which are being enjoyed by a certain section of the community. The small increase in fares suggested could not possibly have constituted any hardship upon those who are being benefitted, and it is still hoped that council may see its way clear to adopt the recommendation made, which, if it did, would effect a reduction of one-third of a mill in this year's tax rate."

**London St. Ry. Wages.**—On the company's employees' application, a board of conciliation has been appointed, F. H. McGuigan, of Toronto, representing the company, Charles Ferguson, Secretary, Liberal Association, London, representing the men.

## Dominion Power and Transmission Co's Wages.

The board of conciliation which was appointed to consider the Hamilton St. Ry.'s conductors' and motormen's wages, and which consisted of Judge Livingstone, Chairman; S. F. Washington, K.C., of Hamilton, representing the company, and W. D. Robbins, of Toronto, representing the men, reported to the Minister of Labor on April 24, unanimously recommending an increase from April 1, the same to be in effect for 2 years. Following is a comparison of the old and new rates per hour:—

	New rate	Old rate
1st year .....	30c	24c
2nd year .....	34c	26c
3rd year .....	37c	30c

On April 1 the company made an agreement with the men, putting the new rates in force for 2 years from April 1. The agreement also provides that Sunday work shall be paid for at 4c an hour extra, and that time and a half shall be paid for overtime. Five cents an hour extra is to be paid for work on snow ploughs, sweepers and sand cars, and overalls are to be supplied for such work. For training students, 25c a day, or part of day, is to be paid. Extra conductors and motormen reporting at car barn and for relief changes are to be paid a minimum wage of \$8 a week, on condition that they report regularly.

New rates have also been put in force voluntarily on the company's interurban lines, viz., Brantford & Hamilton, Hamilton & Dundas, Hamilton, Grimsby & Beamsville, and Hamilton Radial, as follows:—

	New rate	Old rate
First 6 months .....	25c	22c
Second 6 months .....	30c	24c
Second year .....	34c	25c
Third and fourth years .....	34c	26c
Fifth year and thereafter .....	37c	30c

## Sandwich, Windsor and Amherstburg Railway Wages.

Following the board of conciliation report, the S.W. & A. Ry. entered into an agreement with its conductors and motormen on April 20, putting a new scale of wages into effect from April 1 for one year. Following is a comparison of the old and new rates:—

	New rate	Old rate
First 6 months .....	35c	29c
Second 6 months .....	37c	30c
Second year .....	38c	31c
Third year and after .....	40c	33c

One cent an hour extra will be paid in lieu of uniforms, the company supplying caps and badges.

Under instructions from the Minister of Labor, the board did not deal with the case of a conductor who had been dismissed for alleged ticket stealing.

**London St. Ry. Passenger Fares.**—In Canadian Railway and Marine World for May, in connection with the negotiations between the London St. Ry. and the London City Council, in regard to the company's application for an increase in passenger fares, the company's present average fare was stated as 4c, this being taken from a press report. We have been advised that the average fare received by the company during 1917 was 3.63c.

**The Toronto Civic Transportation Commission** has appointed Finance Commissioner Bradshaw, Works Commissioner Harris and E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commission, as a committee to make arrangements for taking over the Toronto Ry. by the city in 1921.

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—Work on repairing and improving the line from New Westminster to Chilliwack, B.C., was expected to be completed by May 31. It was badly damaged by storms and floods in the winter. (Feb., pg. 77.)

**Sandwich, Windsor & Amherstburg Ry.**—As a result of the recent arbitration proceedings, the company has to provide signal arms at derailer approaches near Amherstburg, Ont., and lights at the loop at Sandwich, as additional safety appliances.

We are officially advised that the company proposes to divert about three miles of its line through the Canada Steel Co.'s property near Ojibway, Ont., by moving the line back about half a mile. It is also intended to lay a second track on a portion of this diverted line during the summer. (Feb., pg. 77.)

**Winnipeg Electric Ry.**—A press report states that plans are being made for starting operations in connection with the prevention of electrolysis, which the company is to carry out under the terms of its agreement with the city. (May, pg. 211.)

**Vancouver Jitneys' Elimination.**—By an act amending the Vancouver Incorporation Act, the British Columbia Legislature has authorized the Vancouver City Council to pass a bylaw prohibiting jitney or other motor transportation competition with the British Columbia Electric Ry. The section was passed after a lengthened discussion, in the course of which proposals to permit jitney traffic on streets other than those on which the electric railway operates were defeated. A new city bylaw is under consideration, under which the jitney traffic will be prohibited after June 30. The new bylaw will permit the operation of jitneys for hire at fixed rates, and the hiring of autos by the hour. There are one or two urban jitney lines serving routes where the B.C. E. Ry. is not operating which may be continued. This action is the result of Adam Shortt's report on the transportation question, following the strike of British Columbia Electric Ry. employees in June, 1917.

**New Cars for London St. Ry.**—The company has received recently the five single truck cars which it ordered in the U.S. in June, 1917, and it is installing their electrical equipment in its own shops. These cars are of the single end, p.a.y.e. type, 20 ft. 8 in. long on the body; 32 ft. 4 in. long over all; 8 ft. 2 in. wide over sheathing. They are of the same type as those put into service by the company early in 1914, being arranged with cross seats on one side, and a longitudinal seat on the other. The seats are padded, no springs being used, and are upholstered in rattan. The cars were fully described and illustrated in Canadian Railway and Marine World for Dec., 1913, Jan., 1914, and July, 1917.

**Hull Electric Co.'s Wages.**—As stated in Canadian Railway and Marine World for March, the company's employees asked for an increase of wages and other concessions. We have since been advised that the increase asked for was about 60%, also shorter hours, time and a half for overtime, and other minor items. A board of conciliation having been ordered, the company selected G. D. Kelly, barrister, Ottawa, as its representative, and the men selected Fred Bancroft of Toronto. Judge Gunn was appointed subsequently as chairman.

## The Toronto Ry. Appeals Against the Penalty of Car Shortage.

Canadian Railway and Marine World for May gave particulars of the Ontario Railway and Municipal Board's judgment fining the Toronto Ry. \$24,000 up to April 19, which was at the rate of \$1,000 a day, from Mar. 27, for not having provided additional cars, as ordered by the board. The company has appealed to the Appellate Division of the Supreme Court of Ontario on the following grounds:—

That the order is not one which the Ontario Railway and Municipal Board could make on its own motion. That the board had no jurisdiction to make the order, whether on its own motion or on an application for that purpose. That the order was not made for the purpose of enforcing compliance of any order heretofore made by the board. That under the powers contained in the Ontario Railway Act and amendments thereto, the board cannot direct a penalty to be paid for any neglect of the company prior to the date of such order.

The evidence shows that the Toronto Ry. did comply and use its best efforts to comply with the board's order, which directed the purchase of 100 new cars, and that it was impossible at the date of the order, owing to war and other commercial conditions existing, to obtain the cars ordered, although every effort was made to do so. The company should not have been ordered to furnish such cars, and the board's order of Feb. 27, 1917, was improperly made and without jurisdiction.

The company substantially complied with every order of the board, and the board should not therefore, have ordered the company to pay any fine or penalty. The order is against the evidence and the weight of evidence and contrary to law and the weight of evidence. Evidence was wrongfully rejected.

The Ontario Legislative Assembly had no jurisdiction to enact the Ontario Railway and Municipal Board Act, Revised Statutes of Ontario, and amendments thereto, and the Ontario Railway Act, chap. 185 of Revised Statutes of Ontario, and any amendments thereto, and D. N. McIntyre and A. B. Ingram have not been validly appointed as commissioners under such acts for the purpose of making such order, and have no jurisdiction to make the order complained of, upon the ground that the appointment of the said commissioners is not within Ontario's legislative authority. The company also appeals upon other grounds sufficient in law to support the appeal.

**Coal Saving in Montreal.**—The Montreal Tramways Co.'s additional contract for hydro electric power, particulars of which were given in Canadian Railway and Marine World for May, will probably enable it to save about 40,000 tons of coal during the 18 months covered by the contract. In this connection one of our subscribers writes:—"The conservation of about 40,000 tons of coal at, say, \$10 a ton on the power house floor, means far more than the mere money saving. It means that some 5 ships of 8,000 tons each would thus be relieved of one journey from the mines to Montreal—if ships were available. About 8,000 families, using 5 tons of coal each, will get coal easier than if this great quantity went up in smoke. Canada should give every encouragement possible to water power development, so that coal consumption for power production can be reduced."

## Valuation of London and Lake Erie Ry. and Transportation Co's Property.

The question of the purchase of the London & Lake Erie Ry. & Transportation Co.'s electric railway, by the London, Ont., City Council, has been under consideration as a definite proposition since Mar. 20, when the company's directors passed a resolution offering to sell to the city for \$420,000, a price which, it was stated, was equal to 50c on the dollar of the bond issue. The city, before taking any action, proposed that a valuation of the company's property and other assets should be made by the Hydro Electric Power Commission of Ontario, which had at an earlier date been considering the value of the L. & L. E. Ry. At a meeting of the city's board of control, May 10, a letter was read from Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, and was subsequently referred for consideration to the finance committee. The letter was as follows:—

"In further reference to your favor of Mar. 9, in which you ask the Hydro-Electric Power Commission to furnish the board of control with an estimate of the value of the London & Lake Erie Ry. & Transportation Co.'s properties, I may say that, after deducting the cost of removing and disposing of the lands, buildings, materials, equipment and rolling stock, the engineers and land valuers of the commission estimate the value of the lands, buildings, materials, equipment and rolling stock of the company as of April 30, at \$262,164.

"In reply to your question and to enable the City of London to consider the advisability of purchasing and operating the company's properties in conjunction with the London & Port Stanley Ry., the commission's engineers, after a thorough investigation of the whole situation and the acquisition of detailed information from the company, report on the reconstruction and remodelling of the L. & L. E. Ry.'s properties between London and St. Thomas to enable it to operate in conjunction with the L. & P. S. Ry., including an extension of the company's lines to connect with the L. & P. S. Ry. terminals in London; also including the purchase of two new cars suitable for operation on either lines to replace those disposed of. The engineers also report that the value of the lands, materials, equipment and properties through and south of St. Thomas to a point north of Port Stanley, disposed of in connection with the line, would be sufficient to pay for the cost of reconstructing and remodelling the lines above referred to, leaving a balance of approximately \$20,000, which can be applied in the acquiring of the railway.

"The net revenue obtainable from the operation of the remodelled line of the company between London and St. Thomas accruing to the L. & P. S. Ry. between London and Port Stanley is estimated at \$16,425.00, taking into consideration the increased rates now in force and that will be in force, and making no allowance in the operating expenses for depreciation or taxes on the property. The above net revenue capitalized with sinking fund at 1.8%, based on 30-year bonds, would be sufficient to pay interest: 1.—At 5% on \$241,541.00 of bonds; 2.—At 6% on \$210,500.00 of bonds, with no allowance for depreciation and taxes in the operating expenses."

At a meeting of the London Board of Control, May 17, it was decided to take

up with the London Railway Commission the question of the purchase of the London & Lake Erie Ry. & Transportation Co.'s line between London and Port Stanley, Ont., the idea being that all the municipalities through which it runs should join in the purchase. The L. & L. E. Ry. & T. Co. has a connection with the St. Thomas Ry., operated by the city of St. Thomas, and a suggestion has been made that this line also be taken over and operated in connection with the London & Port Stanley Ry., the London Ry. Commission being reconstituted so that all the municipalities be represented on it.

A London press dispatch of May 23 said the L. & L. E. Ry. & T. Co. had made another offer to the city, viz., to sell the portion of its line from London to Stanley St., St. Thomas, for \$300,000, this not to include the car barns or any equipment in St. Thomas.

## The Toronto Railway and Women Conductors.

The company announced early in May, that it was willing to engage women conductors, if they were willing to undertake the work, and that a number of applications had been received. In order to deal with them, it was stated that special quarters would be allocated for their use, in charge of a matron, and that the hours of working and pay would be on the same basis as now applies to the men. It would be required that they first train for two weeks, after which they would be paid 30c an hour for the first six months, 32c for the second six months, 35c for the next 12 months, and 37c an hour afterwards. A press report stated recently that this matter was before the Ontario Railway and Municipal Board for its approval, on the granting of which, the company would proceed with the changing of its cars to the p.a.y.e. type. The question of the employment of women is not before the board, and is not connected with any proposed change in the construction of the company's cars, but is purely a domestic matter, with which the board has no concern. At a meeting of the company's employees, May 11, the following resolution was passed:—

"That it is the opinion of the members of the Toronto St. Ry. Employees' Union that it would be an injustice to women to have them train for two weeks without remuneration for conductors on the street cars, only to realize, after a short period that, owing to the system of operation, hours of labor and the conditions under which the work is performed, they were unable to stand the strain. We are also of the opinion that it would not be conducive to either the health or the moral standing of women to have them collect fares in crowded cars such as are found on the system. We note that in an interview with the press the Manager stated that it is the intention to remodel the cars into the p.a.y.e. type, and that the conductors will virtually become cashiers. We are of the opinion that if this is done returned soldiers should be engaged to fill vacancies as they occur, since men in broken health, or those who have lost a leg, could fill the position, and we feel that we would be remiss in our duty and show a lack of appreciation of what these men have done and suffered, if we did not appeal to the women of this country not to deprive those men of this opportunity of earning a living. Therefore, be it resolved that, if the company insist on employing women, we will refuse to instruct or operate a car on which women are placed for the reasons set forth. And any

attempt on the part of the company to discipline or discharge motormen or conductors for so doing will meet with prompt action by members of the union."

Towards the end of May it was stated that the Toronto Ry.'s General Manager had expressed his willingness to refer the question of the employment of women as conductors to a conciliation board, and the business agent of the Toronto Ry. Employees Union was also stated to be in favor of this.

## Increased Fares on Edmonton Radial Railway.

The Edmonton Radial Ry. put a new schedule of fares in operation on May 1, as follows:—Adults, single cash fares 7c; after 11 p.m., 10c. Tickets may be purchased on the cars at 4 for 25c, or at special places throughout the city at 5 for 25c. Two tickets are required for night fares; no workmen's tickets are issued. Juveniles—Under 6 years, free; 6 to 15 years, or high school students with certificates, 10 tickets for 25c, or half fare; after 11 p.m., 2 tickets or 5c cash. Transfers as usual. Tickets bought before May 1, will be honored after that date. Between 5 and 6.30 p.m., baby carriages and large parcels will be charged for at 5c each.

The Mayor has issued the following appeal to the citizens:—"Owing to the city's general financial condition and the urgent necessity of providing means which may tend to enlarge the street railway revenue, it has been found necessary to institute a new schedule whereby fares have been increased. This change has only been made by reason of the necessity of the situation, and I ask the citizens that they will recognize the action of council in that light. Although there must be some hardship, yet I appeal to the citizens to realize that the step has been taken in their interest, and ask them to rally to the support of the city and the street railway system, in a united effort to raise it to a more profitable basis."

Superintendent Moir reported May 2 that the new fares were proving generally acceptable to the people, and that, while a good deal of explaining had to be done by the conductors, the change from the old rates had been made in a satisfactory manner.

The following figures have been given out, showing the number of passengers carried, and the revenue earned during the first five days of May as compared with the corresponding five days of April. It is claimed that the increase of fares which came into operation at the beginning of May is responsible for the decreases reported.

Day.	Receipts.		Passengers carried.	
	May.	April.	May.	April.
1st .....	\$1,429.80	\$1,591.15	27,595	34,018
2nd .....	1,330.85	1,876.16	25,887	39,887
3rd .....	1,332.36	1,844.35	26,047	39,324
4th .....	1,540.21	1,903.15	30,409	40,522
5th .....	821.90	1,836.05	15,356	29,293

It is to be noted that while May 1 was a Wednesday, April 1 was a Monday.

**Hamilton & Dundas St. Ry. and Toronto, Hamilton & Buffalo Ry.**—The Dominion Parliament has confirmed an agreement made with the Hamilton & Dundas St. Ry., June 17, 1897, under which the Toronto, Hamilton & Buffalo Ry. obtains an entrance over its line into the town of Dundas, Ont. The agreement was made for 50 years, and was approved by the Ontario Legislature in 1898. When application was made to the Dominion Parliament in 1917, such opposition was offered by the town of Dundas, that the bill was withdrawn.

## Pre-payment Cars Proposed for Toronto Railway.

The Toronto Ry. has arranged one of its existing double truck cars on a pre-payment plan, and submitted it to the Ontario Railway and Municipal Board for approval. If it is approved, it is probable that a number of the cars will be so arranged and placed in service.

The changes made, are confined to the rear end, where the bulkhead has been removed, and the main floor of the car projected into the vestibule, in order to accommodate a seat for the conductor, and a stationary fare box. By this arrangement the seating capacity of the car is not interfered with, and there is ample room on either side of the conductor for entrance and exit of passengers. The rear vestibule is fitted with folding doors and folding step, and these are operated by a small pneumatic engine located above the door, and connected with a light signal to the motorman, to indicate immediately the doors are closed, without which signal, he should not start the car.

The space occupied by the conductor projects about 3 ft. into the vestibule, and is 2 ft. wide, the vestibule measuring 6½ ft. from the original car floor line. On entering the car, passengers would pass in front and to the right of the conductor, place fare in the box and pass into the car. Exit would be made either from the front, or back of the car, in the latter case, passing on the conductor's left. When the car is full, the conductor would move the handle in front of him, to start the door mechanism, thus closing the doors and raising the folding step in one operation, and at the same time, automatically giving the light signal to the motorman to start the car.

The door opening is 5 ft. wide, and the folding step, when down to allow passengers to enter the car, is 15 in. from the street level, the next step is 12½ in. to the vestibule floor, which is 9½ in. below the main car floor. The car carries signs on the front, and at the side rear end, requesting passengers to have the exact fare ready, and some improvements have been made in the arrangement of the route signs, which are of the illuminated type.

## The Montreal Tramways Co's Wages and Fares.

The City Commissioners of Montreal wrote, on May 16, to the mayors of the other five municipalities in which the Montreal Tramways Co. operates its electric cars, as follows:—

The Montreal Tramways Co.'s employees are asking for an increase of wages representing a total of about \$1,000,000. After several conferences with the Tramways Co. without any practical solution, the company's employees laid their request before the administrative commission of the City of Montreal, in order to obtain its opinion on the question at issue.

"In virtue of the contract entered into on Jan. 28, 1918, between the city and the Tramways Commission, and ratified by the legislature, the tariff for the transportation of passengers varies according to the amount of operating expenses, of the cost of maintenance, and so forth, of the system. The salary of the employees is included in such expenses. It follows that the increase of the salaries of employees as well as the increase of the price of materials required for operating the

company's system, materially affects the tariff for the transportation of passengers. This tariff must be fixed by the Tramways Commission, not only within the limits of the City of Montreal, but also in the other municipalities in which tramway lines have been established by the company.

"As the citizens of your town will be called upon, as those of Montreal, to pay any increase of rates, your council is interested for the benefit of such of your citizens as are using the tramways, in controlling the company's expenses so that the said rates may not be too high. Your council is therefore directly interested in the question now submitted to the administration commission of the City of Montreal. For the above reason our commission has deemed it advisable to call a meeting, at which the different interested municipalities would be represented, at the City Hall, Montreal, on May 22. Will you kindly call at once a meeting of your council in order that it may appoint one or more representatives, vested with the authority required to reach a decision on this question."

The demand of the employees, who number about 3,600, is for a very considerable increase of wages. Their present rate of pay is 25c an hour for the 1st and 2nd year, 26c for the 3rd and 4th year, and 29c for the 5th and following years. They have asked the company to start at 30c an hour, and increase to 32c after a year service, 35c after two years service, and 40c after three years service, maintaining that the high cost of living makes such an increase necessary, and pointing out that Toronto pays its electric railway conductors and motormen from 30c to 37c an hour.

Some of the company's officials had a conference with officials of the employees' union on May 23 upon the wages question. The union's secretary states that the men are asking for increases running from 25 to 40%, the average being 33 1/3%, while the company offers a minimum of 36c an hour for conductors and motormen. The present scale is 25c for 1st and 2nd year, 26c for 3rd and 4th year, and 29c for 5th year and thereafter. It is reported that the men will accept the company's proposal if an increase of wages is also given to shop men. There are also points in the agreement on which discussion is to take place.

## Calgary Municipal Ry. Finances.

The Calgary, Alta., city auditors' report on the city finances for 1917 contains the following references to the Calgary Municipal Ry.:—"The satisfactory result shown by the street railway is almost entirely accounted for by the large amount of bank interest earned on its depreciation fund, and on the substantial balance owed to the street railway by the general fund. There is also a remarkable rise in the value of inventory of material, which was certified to by the Assistant Superintendent in the absence of the Superintendent. Some three years ago it was decided by the city to reduce the charge to street railway revenue for depreciation until such time as traffic conditions became normal. We have looked into the comparative figures of the car earnings, which are: 1913, \$735,459.79; 1914, \$680,197.71; 1917, \$556,374.33, from which it is evident that the time has not yet arrived for a return to previous rates of depreciation under the ruling then made."

The auditors state that the non-payment of taxes is responsible to a large

extent for the shortage on sinking fund. The total amount at the credit of the sinking fund for the municipal railway should have been, at Dec. 31, 1917, \$302,236.51, whereas it was only \$258,917.86.

The municipal railway showed a profit from operation during 1917 of \$21,492.52.

Following are comparative statistics for the three months ended Mar. 31, 1918, and 1917:—

	1918.	1917.
Miles operated .....	728,983	631,394
Hours operated .....	74,386	64,423
Passengers carried .....	3,919,649	2,264,424
Revenue per car mile .....	21.734c	20.999c
Operating expenses per car mile .....	14.341c	15.255c
Operating expenses per car hour .....	\$1.405	\$1.492
Cost of power per car mile .....	3.371c	3.816c
Average fare per passenger .....	3.967c	3.969c
Average daily receipts .....	\$1,760.42	\$1,473.17
Average daily operating expenses .....	1,161.56	1,068.12
Average daily, operating expenses, including fixed charges .....	1,738.81	1,639.55
Percentage, operating expenses to revenue .....	65.9%	72.5%

The balance of revenue over expenses for the three months was \$53,897.48, against \$36,454.50 in the same period of 1917. After paying all fixed charges, there was a surplus for the three months of \$1,945.41, against a deficit of \$14,974.57 in the same period of 1917.

## Sandwich, Windsor and Amherst-burg Railway Improvements.

A letter written by Jas. Anderson, Vice President, S.W. & A. Ry., to the Ontario Railway and Municipal Board and to the Mayor of Windsor, Ont., was made public May 15. It states that the company is prepared to spend \$76,954.98 for double tracking on London St., and \$32,043.02 for extending double track on Ouellette Ave. from Park, to a little piece beyond Wyandotte, and putting in double curve at the corner of Ouellette and Wyandotte for the belt line cars, thus obviating the necessity of running the cars on the wrong side of the street along Ouellette Ave., as at present.

The letter also says:—"We are willing to carry out the extension in proposition no. 1, although we cannot undertake the whole work in 1918. We will construct the Ferry Ave. loop, the material for which is on hand and has been for four years; this to be the first work completed. We will double track London St. from Jeanette Ave. to the M.C.R., provided we are not asked to pay for laying the second track over the new C.P.R. bridge. If so, we will commence the double track on the west side of the bridge and complete to M.C.R., which will shorten the double track 600 ft. This will provide, if necessary, a 6 minute service along London St. and a 15 minute service along Sandwich St. in both directions, as requested by the city. The double curves at the corner of Sandwich St. and Ouellette Ave., and the extension of double track on Ouellette Ave. to Wyandotte St. will be taken up the following year."

It is stated that although the letter was sent to the Mayor on Jan. 22, it was not laid before the City Council, hence the company's publication of it.

**Guelph Radial Ry. Wages.**—It was reported, May 22, that the management of this municipally owned line had decided not to grant the employees' demands for a flat rate of 30c an hour, but felt that some increase in wages was required, and announced that it was prepared to pay 27c to first year men, and 28c after that period. The old scale was 25½c, 26½c and 27½c an hour.

## Electric Railway Notes Throughout Canada.

The Levis County Ry. put in operation on May 6 its new rates of passenger fares, full particulars of which were given in Canadian Railway and Marine World for April, pg. 160.

The British Columbia Electric Ry. put in operation on May 5 an early Sunday morning car service in Victoria, for the convenience of those desiring to spend the day outside the city.

British Columbia Electric Ry. employees at a meeting held May 11, decided to ask the company for a 20% increase of pay, to date from July 1, the present agreement expiring June 30.

Brantford Municipal Ry. employees sent an application to the railway commission of Brantford, Ont., recently for increases in wages. The chairman announced that the matter was under consideration.

The Montreal Tramways Co. resumed, on May 20, its service on Dorchester Ave., Montreal, which was diverted from the street during the construction of the Canadian Northern Ry. station approaches.

The Calgary Municipal Ry. has added a sight-seeing car to its equipment. The car was given its first run May 1, when a party of returning soldiers, on their way to Vancouver, were given a run round the city.

The Calgary, Alta., City Council discussed, on May 16, a proposal for raising extra revenue by increased charges for public utilities, including the street railway, but it was defeated by a considerable majority.

It is said that the increased wage schedule for the Sandwich, Windsor & Amherstburg Ry., which has been made effective, following the recent arbitration, makes that company's men the highest paid electric railway employees in Ontario.

The Grand River Ry. has, owing to the demands upon the Hydro Electric Power Commission of Ontario for power for munition plants in Galt, Ont., restarted its steam generating plant, for the operation of its lines. 211.)

The British Columbia Electric Ry.'s franchise in Vancouver, expires in Feb., 1919, and unless the city council gives notice of its intention to take over the lines not later than Aug. 11, it will become automatically renewed for a further five years.

Winnipeg Electric Ry. employees struck on May 22, in sympathy with a large number of other union men who went on a sympathetic strike to back up civic employees. The company made no effort to operate the cars. A press dispatch of May 25 said the men had resumed work.

Ottawa Electric Ry. employees decided May 16, to apply for an increase of wages, to start from July 1, when the schedule now in force expires. The present schedule is as follows per hour:—1st year 26c, 2nd year 27c, 3rd year and after 30c, with 4c an hour extra for Sundays and legal holidays.

At a meeting of the St. Thomas, Ont., City Council, April 30, when the question of power conservation was under consideration, a suggestion was made that in the event of any further curtailment being necessary, the operation of the electric railway, which is owned by the city, be suspended.

The Calgary Municipal Ry. has made a combination freight and passenger car,

out of a car which was damaged by fire some time ago and is running it three trips a day between the city car barns and Bowness, Sarcee and Ogden, respectively. The minimum charge for parcels is 10c, with an additional charge of 10c to 25c per 100 lb.

The Winnipeg Electric Ry. put four motor busses in operation on May 1 from Westminster Ave. and Sherbrooke St. to Portage Ave. and return, and a few days later four trailer cars were put in service on extra cars during rush hour traffic. These are the first steps taken to relieve the congestion of traffic under the terms of the new agreement.

The Regina Municipal Ry. has placed the following notice in its car vestibules: "Please deposit your own fare. When you give the conductor a larger coin than 5c, be sure that he gives you the exact change and all of the change. Then drop the exact fare in the box yourself. Don't hand it to the conductor to put in the box. Do it yourself. Please count the change."

Representatives of the five border municipalities met at Windsor, Ont., May 7, and passed a resolution requesting the Hydro Electric Power Commission of Ontario to make a survey of the Sandwich, Windsor & Amherstburg Ry., with a view to municipalities taking over the lines on the expiration of the franchise in 1922. It was stated that the commission had already collected considerable data, and that it was expected to have a report ready in June.

### Electric Railway Finance, Meetings, Etc.

Calgary Municipal Ry.—Net revenue for three months ended Mar. 31, \$10,659.55, against a deficit of \$14,974.55 for the corresponding three months of 1917. The above net revenue will be reduced by some \$6,000, owing to the increased wage schedule adopted recently, which has been made retroactive, to Jan. 1.

Regina Municipal Railway.—  
 Receipts for April ..... \$18,020.70  
 Receipts for April, 1917 ..... 18,072.45  
 Passengers carried, April, 1918 ..... 379,641  
 Passengers carried, April, 1917 ..... 425,177

Toronto Civic Ry.—Passenger receipts for April, \$26,085; passengers carried, 1,541,937, against \$21,791 passenger receipts, and 1,284,185 passengers carried in April, 1917.

Winnipeg Electric Ry.—On May 1, the company paid the City Treasurer \$105,000, the percentage due for 1917. It was understood that this would be done immediately on the signing of the agreement for the elimination of jitney competition.

### Mainly About Electric Railway People.

F. H. Williams has been appointed in charge of the Winnipeg Electric Ry. Publicity Department.

S. Wilkins, heretofore Engineer, Winnipeg Electric Ry., has been appointed Maintenance Engineer.

H. C. Young, heretofore Superintendent of Bridges and Buildings, International Ry., Buffalo, N.Y., has been appointed Purchasing Agent, succeeding J. C. Sheldon, deceased.

C. Bibby has been appointed Assistant

Superintendent and Secretary, Sudbury-Copper Cliff Suburban Electric Ry., succeeding M. J. Powell, who had the title of Secretary.

W. E. Massie, heretofore Master Mechanic, Sudbury-Copper Cliff Suburban Electric Ry., has been appointed General Superintendent, succeeding L. O'Connor, who had the title of General Manager and Treasurer.

Hugh Mackay, Montreal, and H. H. Pitts, Ottawa, have been elected directors, Toronto Ry. Co., thus increasing the board by two, in accordance with the resolution passed at the recent special meeting of shareholders.

C. Loop, formerly Road Master, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., who left that company's service in Dec., 1917, to take charge of track construction on the Essex Terminal Ry., has returned to his former position.

W. R. Robertson, Superintendent, Niagara, St. Catharines & Toronto Ry., has been appointed registrar, for the County of Lincoln, Ont., for the Dominion registration of man and woman power in June. He is secretary of the soldiers aid local branch.

F. L. Butler, heretofore Transportation Engineer, Winnipeg Electric Ry., has been appointed General Superintendent, succeeding Wilson Phillips. Prior to going to Winnipeg, he was General Manager of the Chicago & West Towns Ry. and the Suburban Rd., Chicago, Ill.

T. H. McCauley, Superintendent, Calgary Municipal Ry., has been given an increase of salary to \$4,000. At January, 1913, his salary was increased to \$4,200, but was reduced 20% Jan. 1, 1915, on account of the war. The city council's committee recommended recently an increase to \$3,500, but upon consideration, the council made it \$4,000.

Jno. Murphy, M.Can.Soc.C.E., Electrical Engineer, Railways Department, and Board of Railway Commissioners, Ottawa, has also been appointed by the Fuel Controller, as agent, to promote the substitution of hydro electric power for steam power, for the purpose of conserving coal. Mr. Murphy completed recently a very strenuous winter's campaign in connection with the Niagara power shortage.

George A. Mills, Electrical Engineer, Winnipeg Electric Ry., now has charge of the Electrical Department, the position of Power Superintendent, heretofore held by R. H. Long, having been abolished. Before going to Winnipeg, he was for six years Electrical Engineer for the Waterloo, Cedar Falls & Northern Ry. in Iowa, and in that capacity, installed a system dealing with electrolysis; and prior to that service, he was instructor in electrical engineering at Pennsylvania University. He is a member of the American Institute of Electrical Engineers.

Montreal & Southern Counties Ry.—The Administrative Commission and the Tramways Commission of Montreal, on May 16, granted the company a 10 years' extension of its contract with the city from June 18, when the present contract expires. W. B. Powell, General Manager, laid before the commissions, plans of the station which the company proposes to erect after the war, to face Youville St., and asked permission to lay a curved connection between the company's lines on Youville St. and the Montreal Tramway Co.'s lines on McGill St., and some other connecting lines. The line to McGill St. was approved, but the commissions refused the others.

## The Grand River Railway.

The Grand River Ry. is the title under which the Galt, Preston & Hespeler St. Ry. is being operated, the railway being an electric subsidiary of the C.P.R. The new name has only been assumed recently, although authority to use it was granted by the Dominion Parliament in 1914.

The history of the companies involved in the amalgamation may be briefly summarized as follows:—The Galt & Preston St. Ry. was incorporated under the Ontario law by letters patent on Nov. 20, 1890, to build an electric railway between Galt and Preston. The title was changed to the Galt, Preston & Hespeler St. Ry. by subsequent letters patent, April 10, 1895, when the extension to Hespeler was built, and the line was subsequently operated as the Galt, Preston & Hespeler St. Ry. The Preston & Berlin Ry. is a later Ontario incorporation.

The Berlin, Waterloo, Wellesley & Lake Huron Ry. was incorporated by the Dominion Parliament in 1903, to build a railway from Berlin to Waterloo, Wellesley, Glen Allen, Listowel and Goderich, Ont. In the following year parliament gave the company power to build an additional line from Wellesley to Stratford, St. Marys, Clinton and Bayfield on Lake Huron, and authorized it to enter into agreements under the provisions of the Railway Act, with the Galt, Preston & Hespeler St. Ry., and with the Preston & Berlin Ry. At a later period the Guelph & Goderich Ry., incorporated by the Dominion Parliament to build not only a line from Guelph to Goderich, but also branch lines in somewhat the same territory, became active, and there were many surveys made by one or both companies, under C.P.R. auspices, for a line from the G. & G. Ry., through Listowel and Stratford to St. Marys, to make a connection with another local C.P.R. subsidiary, the St. Marys & Western Ry. Beyond the building of the line from Guelph to Goderich, nothing was done until 1914, when the Dominion Parliament authorized the B.W.W. & L.H. Ry. to change its title to that of the Grand River Ry. Whatever agreements were made between the B.W. & L.H. Ry., the G.P. & H. Ry. and the P. & B. Ry., under the act of 1904, these two lines continued to be operated under the same management, and to retain for public purposes their own independence. A change became apparent upon the publication of the Dominion statistics of electric railways for the year ended June 30, 1915, in May, 1916, when the G.P. & H. Ry. and the P. & B. Ry. disappeared from the reports and their mileage of 17.81 was given as the Berlin, Waterloo, Wellesley & Lake Huron Ry. The old titles still continued to be used for operating purposes, and it is only quite recently that the title Grand River Ry. has been made use of.

In connection with the transfer of the Galt, Preston & Hespeler St. Ry. Co.'s property to the Grand River Ry. Co., several changes have been made in the officials, who are now as follows: President, Sir George Bury, Vice President, C.P.R.; Vice President, M. M. Todd, heretofore President, G.P. & H. St. Ry.; Secretary, H. C. Oswald, Assistant Secretary, C.P.R.; Treasurer, W. H. Lutz, heretofore Secretary-Treasurer, G.P. & H. St. Ry.; General Accountant, A. McL. Campbell, heretofore of C.P.R. Audit Department, Montreal. The following officials have been given the same positions in the Grand River Ry. service as they had heretofore with the G.P. & H. St. Ry., viz.: M. W. Kirkwood, General Manager; C.

J. Whitney, General Freight and Passenger Agent; F. H. Midgley, Resident Engineer; F. Darnley, Purchasing Agent; J. Deans, Roadmaster.

## United States President Authorized to Take Over Electric Railways.

The United States Congress passed an act April 22, providing as follows:—

Sec. 1 of the emergency shipping fund provisions of the urgent deficiency appropriation act of June 15, 1917, is hereby amended by adding a new provision reading as follows:

"(f) To take possession of, lease or assume control of, any street railroad, interurban railroad, or part thereof wherever operated, and all cars, appurtenances, and franchises or parts thereof commonly used in connection with the operation thereof necessary for the transfer and transportation of employees of shipyards or plants engaged or that may hereafter be engaged in the construction of ships or equipment thereof for the United States."

Sec. 2. That paragraph (b) of sec. 1 of said act is hereby amended by adding, after the word "material," in the third line of said paragraph, the following words, "or take possession, lease or assume control of, any street railroad, interurban railroad, or part thereof, cars and other equipment necessary to operation."

Sec. 3. That upon taking possession of such property, or leasing or assuming control thereof, just compensation shall be made therefor, to be determined by the President, and if the amount thereof so determined by the President is unsatisfactory to the person entitled to receive the same, such person shall be paid 75% of the amount so determined by the President and shall be entitled to sue the United States of America to recover such further sums as added to 75% will make up such amount as will be just compensation therefor, in the manner provided for by section 24, paragraph 20, section 145 of the Judicial Code.

The President may exercise the power and authority hereby vested in him through the several departments of the government, and through such agency or agencies as he shall determine from time to time.

## Calgary Municipal Railway Wages.

The Calgary, Alta., City Council has approved of the following new schedule of wages retroactive to June 1, 1918, viz.:

Conductors and motormen—1st year, 40c; 3rd 6 months, 41c; 4th 6 months, 42c; 5th 6 months, 43c.

Motor-conductors—1st year, 45c; 3rd 6 months, 46c; 4th 6 months, 47c; 5th 6 months, 48c.

From July 1, 1918, the following rates will be in force:

Conductors and motormen—6th 6 months, 44c; 7th 6 months and after, 45c.

Motor-conductors—6th 6 months, 49c; 7th 6 months and after, 50c.

The entire system has been operated with one-man cars since Mar. 6, 1917, a motor car seating 78 passengers, and a trailer car seating 84 passengers being operated by two men, or one man on each car. Conductors on trailer cars are classed as conductors. Forty-three regular cars, and from 25 to 35 extra rush hour cars, or trippers, are operated.

Following are the wages per hour of shop and line men:

Shop foreman and general repairs .....55c

Leading hand blacksmith and general repairs.52c  
Leading hand carpenter and general repairs.52c  
Leading armature winder and general repairs.52c  
Leading motor and controller trouble .....47c  
Leading foreman, night repairs.....45c  
Leading brakes and truck repairs.....47c  
2nd blacksmith and general repairs.....45c  
Carpenter, 1st class .....48c to 52c  
Babbiter, fitter and air brake .....50c  
Cash box repairer and locksmith .....48c  
Repairing sanders, fenders and fittings.....48c  
General car repairs, 1st year 38c, 2nd year 42c,  
3rd year and after .....46c  
Foreman painter .....\$118 a month  
Brush hands .....45c to 47c  
Cleaners, washers and assistant car repairs: Head  
car cleaner 42c, 1st year service 37c, 2nd year  
service 38c.

Leading hands are allowed 3c an hour extra when so acting.

## Increased Electric Railway Fares in the United States.

The Missouri Public Service Commission has ordered a 6c car fare in St. Louis, to go into effect June 1. The new schedule will be effective for a year, at the end of which time the commission reserves the right to reduce it should it so desire. Increased cost of operation, including the necessity of paying adequate wages, is given as the cause of the advance. With the addition of St. Louis, the list of 6c far cities is a long one and is constantly growing. Six cent fares will be in force in the following cities on June 1:—St. Louis, Pittsburg, Portland (Oregon), New Haven, Fall River, Lowell, Bridgeport, Hartford, Reading, New Bedford, Lynn, Lawrence, Waterbury, Wilkes Barre, Erie, Brockton, Haverhill, New Britain, Salem, Lexington (Ky.), Meriden, Nashua, Norwalk, Middletown (Conn.), Pottsville, Rutland, Dover, Meadville.

In addition to these cities in which a 6c unit fare is either in effect, or authorized, several cities have had fares increased by the introduction of the zone system, which establishes a central zone within which a 5c fare is charged, while an extra fare is charged for rides that extend beyond this zone. Cities in which fares have been increased in this manner are:—Providence, Springfield, Pawtucket, Woonsocket, Norwich, New London.

That municipally owned roads face the same crisis in their affairs as do the privately owned systems, is shown by the case of the line owned by the City of Tacoma. This line is 3½ miles long and the city has increased its far from 5c to 10c.

Two recent incidents, show that the business community is coming to recognize the necessity of giving electric railways sufficient revenue to enable them to supply the service, which the needs of business, increased by the nation's war programme, demands. The first is a petition directed to the mayor of Rochester, N.Y., and signed by practically every important manufacturer in the city, asking that the New York Railways be permitted to charge a 6c fare. The second is the action of the Merchants' Association of New York, the most representative business body of the city, by which it directly favors the increase of fares on the subway and elevated lines of the city from 5c to 6c.

**Port Arthur Civic Railway Wages.**—A press report says that the Port Arthur, Ont., Public Utilities Commission has advanced conductors and motormen's wages to the following figures: First 6 months, 30c a year; next 18 months, 33c; after two years, 36c.

C. A. Lee, a member of the British Columbia Electric Ry. staff at Vancouver, B.C., has joined the U.S. Navy Civil Engineering Corps, as a lieutenant.

## Fare Increases on Electric Railways in New York State.

The New York State Court of Appeals has decided that public service commissions have not the power to increase electric railway fares when franchise agreements or municipal charter provisions limit the rate to be charged. This decision upholds the City of Rochester in its fight against 6c fares.

In this connection, J. K. Choate, chairman of the committee representing the electric railways of New York State, which have been endeavoring to secure increases in rates for some 33 railways, has issued the following statement:—

"The decision of the Court of Appeals denying the right of the state's public service commissions to increase fares above those fixed in franchises or contracts between communities and their street railways, is a matter of as grave concern to the U.S. Government and to the communities themselves as it is to the electric railways. It means, unless the condition thus produced is immediately corrected, that the transportation utilities of the state cannot render that assistance to the nation's war programme which recent pronouncements of President Wilson, Secretary McAdoo and Comptroller Williams declares to be urgent and necessary. It means that these utilities will no longer be able to furnish to the public the kind and extent of service, needed to further the growth and prosperity of the communities in which they operate nor to properly provide for the convenience and comfort of their patrons. It will mean decided interference with the plans of the National Government, under which the War Finance Corporation was to provide means to enable railways to secure the absolutely necessary new capital for refunding maturing obligations, since the co-operation of the states and communities in securing to the borrowing companies a rate of return which would give stability to the securities pledged with the War Finance Corporation was a fundamental of the plan.

"The problem of providing sufficient revenue to enable electric railways to furnish the service necessary is not a concern of the railways alone. It is a very grave concern of the public authorities and of the public. The Governor of Massachusetts has thought it of sufficient moment to direct a special message to the legislature recommending that the law be amended so as to provide emergency relief. The New Jersey Public Utilities Commission has announced that it will disregard precedents in the consideration of rate cases and will view applications only in the light of the necessity of providing sufficient revenue to enable the utilities to respond to the demands made upon them. The New Hampshire Commission has announced a similar policy, as have the regulatory authorities in other states. Within the last few months, increased fares have been granted to more than 100 companies in 25 states, outside of New York.

"In New York State it was the belief of at least one of the commissions and of the companies represented by this committee that the public service commissions were empowered to grant relief. The Court of Appeals has ruled otherwise. The situation, as far as it affects the public and the companies, is not changed. The need of relief is as imminent and pressing as ever. The Court of Appeals decision simply means that the theory of state regulation as applied in this state has broken down in an emergency and

that some other method must be adopted to meet conditions which threaten to hamper the usefulness of transportation utilities at a time when their increased efficiency is vital to the nation and to the public. It is inconceivable that New York State shall not quickly and effectively meet the issue. It needs no argument to prove that at a time when the cost of material, of labor and of money has increased and is increasing by leaps and bounds, provision must be made whereby utilities as well as other industries may advance the price of their product to meet the contingency."

## One-Man Car Results on Calgary Municipal Railway.

T. H. McCauley, Superintendent, has favored us with the following information:—In 1917 all cars on the Calgary Municipal Ry. were converted over to one-man operation, requiring about half the original staff and paying operators 5c an hour more wages. The cars operated were increased to 42 regular, and 32 extra rush hour cars, or a total of 74 cars operated. The cost of converting the cars was paid out of revenue and the following results are from the auditors report from the calendar year 1917:

Miles operated .....	2,739,923
Passengers carried .....	13,606,663
Revenue (with interest) .....	\$582,553.97
Operating expenses, including fixed charges .....	561,061.45
Surplus profit .....	21,492.52

The financial position at Dec. 31, 1917, being:

All debenture interest paid.	
In sinking fund account .....	\$302,236.51
In depreciation account .....	374,897.15
In contingent reserve account .....	94,711.36
Total .....	\$797,168.85

## Lethbridge Municipal Railway Operating Results.

Commissioner Freeman in his report on the public utilities of Lethbridge, Alta., for 1917, refers to the Lethbridge Municipal Ry. as follows:—"I am pleased to say that the street railway department has done slightly better than had been anticipated, in spite of the ever increasing cost of labor and materials. The cost of operation has been kept as low as possible and the improved patronage has increased the earnings. Earnings for the year were \$52,203, compared with \$49,639, an increase of \$2,564, while operating costs increased from \$41,535 to \$48,821. The profit of the system over operating expenses was \$8,382, an increase of \$277. It had been estimated that the deficit caused by the fixed charges would amount to \$30,178, while in reality the railway came through with a deficit of only \$28,878."

Following are the figures for the calendar year 1917, subject to auditor's report:

Earnings .....	\$52,203.88
Operating expenses .....	43,821.46
Operating profit .....	\$ 8,382.42
Fire insurance, taxes, sinking fund, debenture interest and bank commission on debenture payments .....	\$37,260.44
Deficit .....	\$28,878.02

The Toronto, Hamilton & Buffalo Ry. took a party of business men from Hamilton, Brantford and Dunnville on a trip to Port Maitland, Ont., May 18, to show the terminal facilities there, and the working of the car ferry steamship, Maitland.

## Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has reopened its offices at Beaumaris, Cardinal Canal and Tottenham, Ont., and has closed its offices at Chapeau, Kiskisink and Ste. Anne de la Perade, Que., and Beamsville Camp, and Dunnville, Ont.

A press report from Dawson, Yukon, states that the Dominion Government contemplates the temporary abandonment of the commercial telegraph line connecting Dawson with Ashcroft, B.C., and that no change could be made in the estimates, then before Parliament. The estimates for telegraph lines given in this issue, include an item of \$250,000 for the Ashcroft-Dawson line.

## Among the Express Companies.

The Board of Railway Commissioners has extended the express delivery and collection limits at Walkerville, Ont.

D. W. McNabb, of the Bureau of Explosives, delivered an address, illustrated with lantern slides, at Regina, Sask., recently in the interests of the Express Traffic Association of Canada, on the handling and packing of dangerous packages for express companies.

Unification of the express companies is being considered by the U.S. Railroad Administration. It is stated that the merger plan of four principal express companies operating in the eastern district, will probably be approved shortly. It is suggested that the companies shall amalgamate under the name of the Federal Express Co., with a capital of \$50,000,000, four-fifths of which would represent property, the balance being working capital.

The U.S. Director General of Railroads is reported from Washington, D.C., to be conferring with express companies' representatives, on the terms of a tentative contract under which all the express companies will be merged, with a capital of \$34,000,000, to act as government agent in the express business, but without direct government control. The railways would take a little more than 50% of the express receipts, or approximately the same proportion as at present, and it is considered that the balance would be sufficient to allow the company to pay about 6% on the capital stock. It is suggested that the company be named the Federal Express Co.

Canadian Westinghouse Co.—Alfred R. Miller, Treasurer, died at Hamilton, Ont., April 28, aged 43. He was born in England and removed to Canada with his parents at an early age. His whole business life was virtually spent with the Westinghouse interests in Canada, he having entered the employment about 20 years ago, and having progressed with the company until at the time of his death he occupied the responsible position of Treasurer.

Railway Lands Patented.—Letters patent were issued during April, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Alberta & Great Waterways Ry.....	65.77
Canadian Northern Ry. ....	1,959.32
Central Canada Ry. ....	30.91
Edmonton, Dunvegan & British Columbia Ry. ....	157.29
Grand Trunk Pacific Branch Lines Co....	43.45
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. ....	322.00
Total .....	2,578.74

# Marine Department

## Steamship Building in Canada for British Government.

The Collingwood Shipbuilding Co., Collingwood, Ont., launched on May 8, the ocean going steamship War Wizard, the first of two vessels ordered by the Imperial Munitions Board. The War Wizard is of the poop, bridge and forecastle type.

The engine is of the triple expansion type, the cylinders being 18, 30 and 50 in. x 36 stroke, taking steam from 2 Scotch boilers, 14 ft. diameter by 10<sup>3</sup>/<sub>4</sub> ft. long, working at 180 lb. pressure, with forced draught. The auxiliary machinery and

ond of the 9 steel cargo steamships ordered from the company by the Imperial Munitions Board, and the third vessel to be built by the company, the first, the s.s. Alaska, having been originally intended for Norwegian registry, and being taken over by the British Government while on the ways.

J. Coughlan & Sons, Vancouver, B.C.—

A serious fire occurred at this yard, May 15, the damage being estimated at \$1,500,000. The company has an order from the Imperial Munitions Board for 9 steel steamships, one of which, the s.s. War Camp, has been launched, and with the s.s. Alaska, built for Norwegian register, but taken over by the British Government, was at the fitting out wharf. The engines of the Alaska, which were in the boiler shop, are reported destroyed. Two vessels, the War Charger and War Chariot, were on the ways, the first being considerably damaged by heat, and the second becoming a total loss when the supporting piles were burned away, allowing the hull to settle down in the mud, and break her back. Two keels were laid on the remaining ways, and these are intact. The work of clearing the yards was taken in hand at once, so that as little delay as possible will take place in the execution of the contracts under way.

Foundation Co., Victoria, B.C.—Reference to the panoramic view of four vessels under construction on the following two pages shows the hull of the s.s. War Massett, which was launched Apr. 11, as mentioned in our last issue, and three other hulls in various stages. Hulls 3 and 4 have all the deck work and house work completed and the bulkheads are being finished up. Work on hull 5 is progressing favorably, the ceiling being completed, and the planking for about three strakes above the main deck. All main deck beams and stanchions are in place, and preparations are being made for laying the main deck. All joiner

Cargo steamship, War Wizard, just after launching at Collingwood, Ont., May 8, 1918.

with engines amidships. Her dimensions are: 261 ft. overall, 251 ft. between perpendiculars, 43<sup>1</sup>/<sub>2</sub> ft. beam, 20 ft. depth moulded, to carry approximately 2,900 tons deadweight. The vessel and her equipment have been constructed to the highest classification of the British Corporation Registry. She has 2 large holds and 4 large hatchways. The cargo gear

equipment is of the latest and most complete kind for ocean service. The vessel was launched with the machinery and boilers on board, and will be ready for sea in a very short time. She will be operated under the management of E. C. Downing of Cardiff, Wales. A second vessel, War Witch, is on the stocks for the British Government.

Launching of the s.s. War Massett, for the British Government at Victoria, B.C., April 11, 1918.

is of the most modern type and arranged for quick handling. Accommodation for the officers and engineers is provided for in a large steel deckhouse on the bridge deck. The petty officers' accommodation is under the forecastle, and the crew has commodious accommodation aft. Like all other vessels of this type, provision is made for mounting a gun on the poop.

J. Coughlan & Sons, Vancouver, B.C. It was announced early in May by J. J. Coughlin, that the launching of the s.s. War Charger, which was scheduled for May 9, had to be postponed, owing to the non-arrival of the turbine engines. It was, however, expected that the launching would take place before the end of the month. The War Charger is the sec-

work, decks and all deck machinery and fittings are completed while the hulls are on the ways, so that when they are launched, they are ready for receiving the propelling machinery. At the time we were advised, no date could be set for launching hulls 3 and 4, as delivery of the rudders, propellers, etc., had not then been made, this resting with the Imperial

Munitions Board. The names chosen for the vessels are: Hull 3, War Babine; hull 4, War Camchin; hull 5, War Nanoose. When these are completed, the company's contract with the Imperial Munitions Board will be finished.

Wm. Lyall Shipbuilding Co., Vancouver, B.C.—The third wooden hull to be built by this company under order from the Imperial Munitions Board, was launched Apr. 27, and named War Cayuse. The fourth of the order for six, was expected to be ready for launching during May.

New Westminster Construction & Engineering Co., New Westminster, B.C.—The launching of the second of the four wooden hulls being built by this company under orders from the Imperial Munitions Board, was expected to take place during May. It is announced that it will be named War Kitimat. It is stated that the machinery will be installed by the company in its own yards, instead of tak-

tions, only six vessels can be handled at the Ogden Point assembly plant at the one time. It is reported that hulls will be placed with the British Columbia Marine Railway, Vancouver; Wallace Shipyards, Ltd., North Vancouver; Victoria Machinery Depot, Victoria, and Yarrows, Ltd., Esquimalt.

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to May 14, giving in each case the date of the launching, the name of the steamship, the name of the builder and the deadweight tonnage:—

	Steel Steamships.	Tonnage.
May 18, 1917—	War Dog, Wallace Shipyards, North Vancouver, B.C. ....	4,500
July 9, 1917—	War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N.S. ....	1,500
Aug. 19, 1917—	War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont. ....	4,300

Apr. 13, 1918—	War Tyee, Pacific Construction Co., Coquitlam, B.C. ....	3,080
Apr. 25, 1918—	War Haida, Cameron-Genoa Mills, Victoria, B.C. ....	3,080
Apr. 27, 1918—	War Cayuse, Wm. Lyall Shipbuilding Co., Vancouver, B.C. ....	3,080
May 11, 1918—	War Mohawk, Quinlan & Robertson, Ltd., Quebec, Que. ....	3,080
May 11, 1918—	War Sioux, Great Lakes Dredging Co., Port Arthur, Ont. ....	3,080

Total 13 wooden steamships ..... 40,040

Total dead weight tonnage of 8 steel and 13 wooden steamships launched, 73,700.

**Strike in British Columbia.**—Vancouver press dispatch May 23:—"In obedience to the order of the Metal Trades' Council, issued last night, the shipyard workers, said by union officials to number nearly 10,000, quit work in British Columbia shipyards tonight. The purpose of the strike, the union officials announced, is to compel the Imperial Munitions Board to grant a scale of wages equal to that in

Four hulls of wooden cargo steamships for the British Government, in the Foundation Co.'s yard at Victoria, B.C., Apr. 11, 1918. See also opposite page.

ing the hull to the Ogden Point assembly plant. The machinery was received at the Poplar Island plant early in May.

Quinlan & Robertson, Ltd., Quebec, Que., is reported to be fitting out machine shops, etc., at the Louise docks, for the installation of machinery in the wooden hulls which it is building for the British Government under order from the Imperial Munitions Board. Four standard wooden steamships are under order, the first one being launched recently.

Wallace Shipyards, Ltd., North Vancouver, B.C.—The keel for a steel cargo steamship, ordered by the Imperial Munitions Board, was laid at this plant towards the end of May. It is stated that the company has plans for arranging an additional berth near Lonsdale Ave.

**Machinery Installation.**—It is reported from Victoria, B.C., that the Imperial Munitions Board has decided, owing to the rapidity with which the wooden hulls are now being launched, and the necessity for speeding up the actual completion of the vessels for service, to allot several of them to private firms for the installation of the machinery. Under present condi-

Nov. 3, 1918—	War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont. ....	3,400
Mar. 16, 1918—	War Camp, J. Coughlan & Sons, Vancouver, B.C. ....	8,800
Mar. 23, 1918—	War Power, Wallace Shipyards, North Vancouver, B.C. ....	4,600
Apr. 3, 1918—	War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont. ....	3,400
May 8, 1918—	War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont. ....	2,900
	Total steel steamships .....	33,700

	Wooden Steamships.	
Dec. 28, 1917—	War Songhee, Foundation Co., Victoria, B.C. ....	3,080
Jan. 4, 1918—	War Nootka, Western Canada Shipyards, Vancouver, B.C. ....	3,080
Jan. 24, 1918—	War Yukon, Cameron-Genoa Mills, Victoria, B.C. ....	3,080
Feb. 16, 1918—	War Puget, Wm. Lyall Shipbuilding Co., Vancouver, B.C. ....	3,080
Mar. 6, 1918—	War Selkirk, Western Canada Shipyards, Vancouver, B.C. ....	3,080
Apr. 10, 1918—	War Caribou, Wm. Lyall Shipbuilding Co., Vancouver, B.C. ....	3,080
Apr. 11, 1918—	War Comox, New Westminster Construction & Engineering Co., New Westminster, B.C. ....	3,080
Apr. 11, 1918—	War Massett, Foundation Co., Victoria, B.C. ....	3,080

effect in the United States and a 44 hour week. A payroll estimated at from \$40,000 to \$60,000 a day is cut off. The metal trade employers have taken steps to secure a definite and lasting understanding with labor in the shipbuilding industry, and have decided to offer the men a scale, which in some instances is higher than that given them by the recent Murphy award. The employers complain that the frequent demands of the men have produced a feeling of insecurity in the in-

The s.s. War Yukon, built by Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C., was announced, at the end of April, to be completely equipped and ready for sea. This is the first of the wooden steamships ordered by the Imperial Munitions Board, to be completed, though she was not the first to be launched. So far as launchings are concerned, she was the third, having been preceded by the War Songhee, Foundation Co., Dec. 19, 1917, and the War Nootka, Western Canada Shipyards, Ltd., Jan. 4. The War Yukon was launched Jan. 24, and was immediately taken to the Ogden Point assembly plant for the installation of machinery.

dustry which cannot continue. They offer to pay ordinary labor \$3.50, the basic trades \$6, and caulkers \$7 a day, with all helpers paid \$4 a day.

"The Coughlan shipyards at Vancouver are the only ones in operation in the Province, this by virtue of an agreement which does not expire until August. The shipyards affected are: British Columbia Construction Co., New Westminster; Cameron-Genoa Mills Shipbuilders, Foundation Co., Victoria Shipbuilding Co., Victoria; Wm. Lyall Shipbuilding Co., Wallace Shipyards, Limited, North Vancouver; Western Canada Shipyards, Vancouver; Pacific Construction Co., Port Coquitlam, and Yarrow's, Limited, at Esquimalt."

**Use of Vessels.**—As the steamships being built in Canada for the British Government, under orders from the Imperial Munitions Board, progress in construction, the British Ministry of Shipping assigns them to different shipping com-

## General Shipbuilding Notes Throughout Canada.

**Canada Steamship Lines, Ltd.**—The Quebec Legislature has confirmed a by-law of the municipality of Ste. Marie Madeleine du Cap de la Madeleine, Champlain County, granting exemption from municipal taxes for 20 years on property to be occupied by a shipyard to be established by the company.

**J. Coughlan & Sons, Ltd., Vancouver, B.C.**—have deposited plans with the Public Works Department at Ottawa, for additional wharves, buildings and finishing berths, to be built in False Creek, in front of Columbia St., Vancouver.

**The Dominion Shipbuilding Co., Toronto**, whose plant was damaged by fire recently, expects to resume the construction of ocean going steamships early in July.

**Shipbuilding Employees and Military Service.**—A Quebec press dispatch of May

ada West Coast Navigation Co. It is not stated whether they will be equipped with auxiliary machinery, but that probably they will have topsails.

**Newcastle, N.B.**—The small steamboat The Max was launched here, May 14. It is announced that she will be operated on the Newcastle-Redbank route, with S. Amos, Derby, N.B., as master.

**Standard Shipbuilding Co., Vancouver, B.C.**—With regard to the reports that this company had entered into contracts for the construction of 10 composite steamships for the British Government, as mentioned in our last issue, we have been advised that the company may make contracts with the Imperial Shipping Board of Great Britain for 10, or more, Donohoe type, reinforced steel keelson wood steamships, 3,500 tons deadweight

Four hulls of wooden cargo steamships for the British Government, in the Foundation Co.'s yard at Victoria, B.C., Apr. 11, 1918. See also opposite page.

panies, which are known as managing owners. They send their representatives to the points where the vessels are being constructed, and these representatives remain at those points until the vessels are completed and ready for sea. The cargoes to be carried will doubtless be indicated by the Ministry in the usual way, through the Director for Overseas Transport. For the vessels which are being built in British Columbia, it is likely that lumber will be an important part of the early cargoes at least.

**The Consolidated Whaling Co., Ltd.**, has been incorporated under the Dominion Companies Act, with \$2,500,000 authorized capital and office at Toronto, to carry on a general fishing and whaling business, and in connection therewith to own and operate vessels of all kinds, wharves, docks, piers, and other general transportation facilities. The incorporators are: D. B. Hanna, A. J. Mitchell, R. H. M. Temple, G. N. Limpricht, W. Bowler, R. G. O. Thomson and G. R. Donovan, Toronto, the majority of whom are associated with the Canadian Northern Ry.

13 stated that the Central Appeal Judge, Mr. Justice Duff, of the Supreme Court, at Ottawa, had granted exemption from military service to all employees working on shipbuilding for the Davie Shipbuilding & Repairing Co. at Lauzon, Que., as it was established that should the draftees working at the yards be enlisted their leaving would have interfered with ship construction. The dispatch added that the Davie Co. had been told not to engage any more men of military age. Canadian Railway and Marine World is officially advised that the dispatch is an erroneous one, as no such decision as that mentioned has been given by the Central Appeal Judge.

**Louisburg, N.S.**—Nova Scotia Legislature has authorized the town of Louisburg to bonus a shipbuilding and dry dock company, and to exempt it from taxation.

**Wm. Lyall Shipbuilding Co., Vancouver, B.C.**—It is stated that the six vessels which this company was announced in our last issue to have decided to build on yard account, will be of the bald headed schooner type, similar to those built at Vancouver and Victoria last year for Can-

capacity, Lloyd's classification. We are also advised that a contract has been entered into with French interests for six vessels of this type for operation between English and French ports, to carry oil and merchandise.

**Thor Iron Works, Ltd., Toronto.**—The s.s. Trojan, which was launched at this yard, May 15, was ordered originally by the Great Lakes Transportation Co., Midland, Ont., and transferred, while on the ways, to J. O. Lindvig, of Christiania, Norway, and New York and San Francisco. She is a bulk freighter of the Frederickstad type, with dead weight capacity of 4,300 tons. Her dimensions are: length 261 ft. over all and 251 between perpendiculars; breadth moulded 43½ ft.; depth moulded 28 ft. 2 in. She is equipped with triple expansion engines, with cylinders 20, 33 and 54 in. diam. by 40 in. stroke, 1,500 h.p.; supplied with steam by 2 Scotch boilers each 14 x 12 ft., built by John Inglis & Co., Toronto. All machinery was installed prior to launching. She will be completed about the middle of June, when she will be placed in trans-Atlantic service.

## Drydock Shipbuilding and Harbor Works at St. John, N.B.

Early in 1912, the Dominion Government entered into a contract with the Norton Griffiths Construction Co., for the carrying out of considerable harbor improvement works at Courtenay Bay, St. John, N.B., embracing the construction of a breakwater 4,570 ft. long, including 5 groynes each 150 ft. long; the dredging of a channel about 6,800 ft. long by 500 ft. wide, and 32 ft. depth below low water, from the main ship channel leading into the St. John River to the head of the breakwater; the dredging of a basin to 32 ft. below low water in Courtenay Bay; the construction of about 4,890 lin. ft. of quay walls; the filling in of an area of about 28 acres; and the construction of a dry dock and ship repairing plant. Apart from the dry dock construction, the works were estimated at the then schedule prices, to cost \$7,500,000, and the dry dock was to be built under the provisions of the Dry Dock Subsidies Act, at an estimated cost of \$4,500,000. The shipbuilding and repair plant was to be operated by the contractors.

Considerable work was done, including the practical completion of the breakwater, the excavation for the dry dock with a length of 1,000 ft., the reclamation of a large tract of land, and dredging work in the harbor and channel, and altogether about \$4,000,000 was spent. Towards the end of 1916, the contractors abandoned the contract, the labor problem being mentioned as one of the contributing causes, while, undoubtedly, war conditions generally had some effect. J. Norton Griffiths, M.P., of England, who was the principal of the company, decided, about the same time, to give up all work of a private nature, to devote himself entirely to war service, which he is still continuing, having been made a K.C.B. in connection with special war work in Rumania. Since the abandonment of the contract, nothing has been done to carry out the original plans, the government's attention being chiefly concentrated on war matters.

Canadian Railway and Marine World for May stated that a proposition was reported to have been made to the New Brunswick Government by J. B. Craven, New York, and T. A. Duff, Toronto, for the establishment of a shipbuilding plant at Courtenay Bay, St. John, if the provincial government would give adequate support.

On May 10 a press dispatch was sent out from Ottawa, which said in part: "The government, on the Minister of Public Works' recommendation, has authorized the transfer to the St. John Drydock & Shipbuilding Co. of the contract originally given to the Norton Griffiths Co. for the St. John harbor works. The new company, composed of prominent Canadian shipowners and builders, takes over the contract on the same terms as those granted to the Norton Griffiths Co. A drydock of the first class, capable of handling the largest ocean-going vessels, will be commenced at once, and the necessary harbor works to provide for it and for the proposed big shipbuilding plant in connection therewith will be begun at once. The government will vote a subsidy for the drydock to be built by the company as soon as the plans and specifications are approved. The total expenditure of the contemplated works is estimated at \$7,000,000. The new company has already arranged for contracts

for two 10,000 ton steel steamers, the largest craft ever built in Canada. When the plant is completed it will employ 2,000 men.

"The original plans for the Courtney Bay development, involving a total expenditure of many millions more, will, of course, be curtailed until after the war. The present scheme involves only necessary governmental expenditures to provide for harbor necessities and the establishment of the shipbuilding industry on a big scale at St. John. The government is now considering proposals for nationalizing the entire harbor at St. John and placing it under a federal commission, thus providing for its development in a systematic manner, and on a scale adequate to the needs of the future."

Canadian Railway and Marine World is officially advised from Ottawa that while the press dispatch quoted above is correct in some respects, it is very much exaggerated in regard to others. While the government has decided to have the work, as originally outlined, carried out, at the time of writing, May 22, the arrangements had not been completed. The general scheme contemplates the construction of a dry dock of the first class, under the Dry Dock Subsidies Act, a large amount of work on which has already been done, as above stated, the establishment of a shipbuilding plant, and what small amount of harbor work remains to be done to complete the contract awarded to the Norton Griffiths Construction Co., all on the same terms and conditions. The expenditure under this scheme approximates \$2,000,000 which would be spread over a term of years. During the current year it is not the intention to do anything excepting what is necessary to make available the dry dock and shipbuilding enterprises, and it is expected that less than \$500,000 will be expended this year. The foregoing refers only to expenditures to be made by the Dominion Government.

An order in council has been passed authorizing the Minister of Public Works to enter into a contract with the St. John Drydock & Shipbuilding Co., but up to May 25 the contract had not been arranged.

We have gleaned the following information from different sources and believe it to be approximately correct. The persons particularly interested in the company are: Jas. Playfair and D. L. White of Midland, Ont.; Senator Richardson of Kingston, Ont.; J. B. Tudhope, M.P., Orillia, Ont.; T. A. Duff, Toronto; Robt. Hobson and W. E. Phin, Hamilton, Ont., and J. B. Craven, Larchmont, N.Y. Senator Richardson and James Playfair are President and Vice President, respectively, of the Great Lakes Transportation Co. The latter is also a director of the Midland Shipbuilding Co., of which D. L. White is President. J. B. Tudhope is M. P. for East Simcoe, T. A. Duff is legal advisor for the Great Lakes Transportation Co., Canadian Dredging Co., Midland Shipbuilding Co., Midland Engine Works Co. and other companies in which Mr. Playfair is interested. Robt. Hobson is President of the Steel Co. of Canada, W. E. Phin is a contractor. J. B. Craven is a contractor and electrical engineer. He was interested in the original contract held by the Norton Griffiths Construction Co., and on the abandonment of the contract, he applied at Montreal for an inter-

locutory injunction to prevent the transfer of certain of the company's property, and claimed that he was interested to the extent of one half of 49% of the total net profits on the contract, over and above 15% of the total prime cost of the construction works. He is now said to have secured any rights which the Norton Griffiths Construction Co. may have had remaining in the St. John contract.

The harbor work to be done will probably be carried out by the Great Lakes Dredging Co., in which Mr. Playfair and some of the other persons above mentioned are interested. The drydock is projected to be 1,150 ft. long, 125 ft. wide and 40 ft. deep over sills. The estimate of cost is mentioned as about \$5,500,000, including \$1,250,000 already expended. The Dominion Government will pay the usual annual subsidy on the total cost. The proposed expenditure on the shipbuilding plant is stated at \$2,000,000. As mentioned in a previous issue, the company has applied to the New Brunswick Government, and to the city of St. John, for aid in establishing the plant. It is said that the company has an offer from the Dominion Marine Department to build 2 steel cargo steamships of about 10,000 tons d.w. capacity each.

### United States Government Lake Service.

The Director General of U.S. Railroads has established a lake line service between Chicago, Milwaukee and Buffalo in order to relieve the car situation as much as possible. Cars that have been held up on western railways by the congestion on central railways have been released with the opening of lake navigation and the loads moved east by the way of lake and railway lines east of Buffalo, thereby releasing equipment to the western railways for use in their territory and relieving the railways in the central freight territory of the saving of power, fuel, and cars that can be devoted to other business.

Shippers of heavy staple commodities from the east, such as sugar, coffee, and manufactured articles, are taking advantage of this service, as it will be of a steady and regular movement. There has been assigned to this lake line service seven large modern, electric lighted steamships, and it is intended to work day and night shifts at the terminal points so that the ships can be turned rapidly and afford the greatest possible relief to the railroads.

The line is called the Lehigh Valley Transportation Co., and serves all eastern trunk lines over a common terminal at Buffalo. Two of the ships assigned were owned by the Lehigh Valley Rd.; the other five were chartered from the Great Lakes Transit Corporation. Additional ships will be added as the service requires. All-rail rates prevail in both directions, so that in case of congestion on the railways the freight can be immediately diverted to the lake and given continuous movement to destination; the rates include marine insurance, and the service should be of great assistance to the shipping public.

**Increased Freight Rates on B.C. Coasting Vessels.**—Steamship companies operating vessels in the British Columbia coasting trade announced a 10% increase in freight rates, effective May 1, in order to meet the increase in wages granted to employees. No advance in passenger rates had been announced at the time of writing.

# What the United States Government is Doing in Shipbuilding, Etc.

The following statement concerning the activities of the U.S. Shipping Board and the Emergency Fleet Corporation has been prepared from data furnished by officials of those organizations. It covers briefly the operations of these organizations since the beginning of the war:

At the outset of the war the nation, in addition to expanding the army to proportions adequate to wage the struggle, was confronted with the problem of providing facilities to transport its expeditionary forces and the supplies necessary to subsist them in foreign fields. One step designed to effect this purpose had already been taken; two others followed shortly after the declaration of war. Through the shipping act, approved Sept. 7, 1916, Congress created a U.S. Shipping Board, to encourage and develop a naval auxiliary, a naval reserve, and merchant marine; empowered that board to form a corporation to purchase, construct, and operate merchant vessels, which it exercised through the incorporation of the Emergency Fleet Corporation; and authorized a \$50,000,000 fund for the operation of the corporation.

By joint resolution of the Senate and House of Representatives approved May 12, 1917, the President was authorized to take over the German vessels within the jurisdiction of the U.S., its territories, and insular possessions; and under the emergency shipping fund provision of the urgent deficiency appropriation act approved June 30, 1917, the President was authorized to requisition any vessel under construction or contracted for in shipyards within the U.S. By executive orders dated June 30 and July 3, 1917, the President ordered the Shipping Board to seize the German vessels in U.S. waters, and by another, of July 11, 1917, delegated to the board the power of requisition which Congress had vested in him. Under its power of seizure the Shipping Board has taken over 112 German and Austrian ships of 788,000 d.w. tonnage, all of which have been repaired and are now in operation.

To perform the tasks assigned to the Shipping Board and its operating company, the Emergency Fleet Corporation, large expenditures were necessary. Congress has met the demands by supplementing the original appropriation of \$50,000,000 with succeeding authorizations which on Mar. 1 aggregated \$2,034,000,000, to be expended for construction, requisitioning, and purchasing of ships, the construction of yards, and the erection of housing facilities. Of the sum authorized, \$1,135,000,000 had been appropriated on Mar. 1. The expenditures of the Emergency Fleet Corporation up to that date was \$353,247,955.37, distributed as follows: Wood ships, \$74,590,519.22; steel ships, \$77,968,172.89; steel ships requisitioned, \$169,971,860.55; plants, \$30,717,402.71.

The Emergency Fleet Corporation's programme is divided into steel and wood construction. Exercising its power of requisition the Shipping Board on Mar. 1 had taken over 425 steel vessels of 2,998,108 d.w. tons, and had let contracts for 720 steel vessels of 5,166,400 d.w. tons, a total of 1,145 steel ships, with an aggregate d.w. tonnage of 8,164,508. Of the requisitioned vessels, 72, of 485,576 d.w. tons, had been completed and put into operation; 15, of 152,290 d.w. tons, had been reconveyed to their original owners before completion; while 52 of the 338

still under construction had been launched but not completed.

Of the contract vessels, 2, of 17,600 d.w. tons, had been completed on Mar. 1. Three others, of 26,400 tons, have been launched.

The Division of Wood Ship Construction on Mar. 1 had let contracts for 490 wooden vessels, aggregating approximately 1,715,000 d.w. tons. None of these have been completed, but 17 had been launched on Mar. 30.

The Emergency Fleet Corporation's building programme was being carried on on Mar. 5 in 151 plants, 85 of which were engaged on wood construction and 66 on steel. Of the 151 plants, 81 are classified by the corporation as new, having been constructed especially to take care of contracts let by the corporation, or just as the U.S. was entering upon the war; the remaining 70 are classified as old plants, though some of them were erected to accommodate the boom in shipbuilding that developed in the U.S. in the early days of the European war.

At the time the Emergency Fleet Corporation was organized, practically all the ways of the yards then in existence were occupied by vessels building for the Navy Department or for private contract. This condition of affairs necessitated the construction of the 81 new yards before the building of ships for the Emergency Fleet Corporation could be commenced.

To spur the shipbuilding industry to speed up the government work, the Emergency Fleet Corporation has extended varying degrees of financial assistance to 63 plants, the aid going to the construction of shipways, plants, and the installation of plant equipment.

The expanded old yards and those newly constructed had to be manned. A pressing need for skilled workmen developed. To meet the situation the Emergency Fleet Corporation organized a nation wide campaign and established training schools for the men recruited into its service. The results achieved can be best realized by comparative figures. Census reports for 1916 show that in 45 steel yards then reporting there were only 43,582 workmen employed, while reports made to the Emergency Fleet Corporation on Feb. 16, 1918, by 53 out of a possible 63 steel yards, give an enrollment of 162,880. The census report for 1916 from 18 wooden yards record 1,380 workmen; those of the Emergency Fleet Corporation as of Feb. 16, 1918, from 59 out of a possible 75 yards, record 29,959.

Expansion of the government's wood shipbuilding programme, to include the construction of 200 new vessels of about 4,500 tons displacement each, was announced in Washington May 1 by Chairman Hurley, of the Shipping Board.

Estimates submitted to Congress May 8 by the Shipping Board call for an appropriation of \$2,225,835,000 for the cost of construction of ships.

The U.S. Shipping Board announced on May 19 that one ship a day was the pace wood shipyards were setting for other shipbuilding plants. The first 17 days of May witnessed the launching of 17 vessels of this type, thereby adding 60,000 tons to the U.S. merchant marine. In four successive weeks, including the third week of May, the production of wood ships was better than an average of one launching daily.

Thirty-four new steamships, aggregat-

ing 105,000 tons, completed during the winter and spring at Great Lakes yards, have been allocated to the trans-Atlantic trade, and some of them have already gone through the Welland Canal. The U.S. Shipping Board requisitioned these vessels in the early stages of their construction. All of them had been contracted for over-seas trade. They are of the Frederickstadt type—the well known lake type ship, averaging about 3,100 tons, 261 ft. over all, 43½ ft. beam, and 20 ft. deep. No alterations in them will be required for passage through the locks. Before the ice season set in last year, the Shipping Board moved a total of 43 steamships, including 24 of new construction, from the Great Lakes to the Atlantic coast.

A Cleveland press dispatch of May 20 says:—"An agreement tantamount to a contract to build 130 vessels to cost approximately \$800,000 each, and totalling about \$100,000,000 was reached here today, between C. M. Schwab, Director General of the government's shipbuilding programme, and Great Lakes shipbuilding companies. Every shipbuilding firm on the Great Lakes from Duluth to Cleveland was represented at the conference and the programme was outlined. The order was apportioned among the following:

American Shipbuilding Co., 60; Great Lakes Engineering Co., Detroit, 24; Manitowoc Shipbuilding Co., 12; and the remainder were divided between the Toledo Shipbuilding Co., the McDougall Duluth Shipbuilding Co., and the Glove Shipbuilding Co. of Duluth. The ships will be of 4,200 gross tons d.w. capacity and will have 1,500 h.p. They will be full Welland Canal size of the greatest depth, which is a little more than 28 ft. Deliveries are to be completed by the end of the lake shipping season in 1919."

The construction of 40 additional concrete ships, cargo carriers and tankers, of 7,500 tons capacity each, has been approved by the Emergency Fleet Corporation and they will be constructed in five government controlled yards. It is estimated that they will cost from \$125 to \$140 a ton. Contracts have already been approved for the construction of 18 concrete tankers, 14 of 7,500 tons capacity and 4 with an aggregate tonnage of 12,500 tons. Each of these will be built on the Pacific coast and the others on the Atlantic coast.

**New York State Barge Canal.**—On May 17, the first boat passed through the western section of the canal extending from north of Syracuse to the Niagara River. The eastern sections, which connect Lake Ontario at Oswego and Lake Champlain at Whitehall with the Hudson River above Troy, were completed last summer and were put into use again this season on May 15. Some work still remains on the western section in removing obstructions and widening the channel, but navigation is now possible over the whole canal route.

**Frank Waterhouse & Co. of Canada, Ltd.**, has been incorporated under the Dominion Companies Act, with \$50,000 capital stock and office at Vancouver, B. C., to build, own and operate vessels of all kinds, and to operate a general navigation business in all waters. The provisional directors are: Frank Waterhouse, N. H. Begley, J. R. Lane, Seattle, Wash.; D. G. Marshall, J. Speer, Vancouver, B.C.

## Atlantic and Pacific Ocean Marine.

The first ocean vessel up the St. Lawrence River for the current season of navigation, arrived at Quebec May 7, and Montreal, May 8. The captain was presented with a silk hat and cane by the Montreal Harbor Commissioners.

Canadian Pacific Ocean Services is stated to have made arrangements for the chartering of two of the steamships owned in Holland which have been requisitioned by the allies, for use on the Pacific Ocean. The vessels mentioned as having been secured are, the steamships Tijkembang and Tjison, which were operated formerly by the Nederland Royal Mail, and the Rotterdamsche Lloyd, between San Francisco and the Orient.

The Canadian Pacific Ocean Services' steamships Empress of Asia and Empress of Russia, as announced in a recent issue, have been requisitioned by the Dominion Government and are being handed over to the British Government. The former vessel has had all her furnishings and movable fittings taken out, at Victoria, and has been coaled at Vancouver, after which, as a Victoria reporter states, she "disappears into oblivion." The Empress of Russia is reported to be fitting out at Hong Kong, for special service, and presumably has the same destination.

The s.s. Angouleme, which ran ashore at Scatarie Island, N.S., during last winter, was released by her own steam, May 23. It is stated that the damage is comparatively light, but that she will be drydocked for examination and repairs. She was built in 1917, by Thor Iron Works, Toronto, under contract for Jas. Playfair, President, Great Lakes Transportation Co., but was sold, while on the ways, to the Oriental Navigation Co. of Nantes, France, and New York. On launching, she was named Orleans, the name being changed to Angouleme just prior to sailing for New York, and the casualty occurred while she was outward bound.

Canadian Pacific Ocean Services s.s. Medora was reported May 7, via New York, to have been sunk by a German torpedo while outward bound from Great Britain, it also being stated that there was no loss of life. The Medora was 5,135 tons gross, and built at Liverpool, Eng., in 1912. In connection with the loss of this vessel, T. Robb, Manager, Shipping Federation of Canada, is reported to have stated that word as to the sinking of the Medora was received some time ago, and we may add that Canadian Railway and Marine World had information of the loss of a C.P.O.S. vessel, at least two weeks prior to the date given. There seems to be no reasonable object to be gained in holding back information of this nature, which is of general interest, when it is already known by owners, insurance and brokerage offices.

## Maritime Provinces and Newfoundland.

The Naval Service Department received tenders, May 31, for 2 self propelled coal discharging bridges, to be installed at Halifax, N.S.

The Reid Newfoundland Co.'s s.s. Ethie ran ashore on Mistaken Point, Nfld., May 14, and was later released with light damage. She is a small steel vessel of 441 tons gross, and was built at Glasgow, Scotland, in 1900. She has been engaged for some time in mail and passenger service between St. John's and Placentia Bay ports, Nfld.

The Dominion Government s.s. Stanley, which sailed from Louisburg, N.S., towards the end of April, with mails, etc., for Magdalen Islands, was reported to be in distress off East Point, P.E.I., May 1. Her rudder was reported to have been lost or broken. She, however, arrived at North Sydney, N.S., May 8, under her own steam, and made temporary repairs, afterwards proceeding to Halifax.

It is intimated from Quebec that the coal service between the Maritime Provinces and St. Lawrence ports, hitherto given by the Dominion Coal Co., is likely to be curtailed this year owing to a shortage of bottoms. Some steps are being taken by other companies to meet the situation, and it is stated that the Dominion Government will probably supply some vessels to convey coal to Levis, whence it will be distributed.

The Dominion Coal Co.'s s.s. Louisburg, bound from Sydney, N.S., to St. John's, Nfld., with coal, was wrecked in St. Marys Bay, near Cape English, Nfld., May 4, the crew being saved. She was built at Sunderland, Eng., in 1881, when she was named Thorne Holme. She was equipped with engine of 225 n.h.p., driving a screw, and her dimensions were: length 260 ft., breadth 36 ft., depth 18.5 ft.; tonnage, 1,816 gross, 1,182 register.

## Province of Quebec Marine.

The s.s. Middlesex, registered in the U.S., has been purchased by A. A. Larocque, Montreal, transferred to the Canadian register, and renamed Woodlands.

The Department of Railways and Canals will receive tenders to June 5, for rebuilding the lower entrance piers to lock 25 on the Galops Canal, and to lock 23, Rapide Plat Canal.

The Quebec Board of Trade discussed on May 11, a proposal for the formation of a steamship company for the operation of vessels between Newfoundland, Nova Scotia, Prince Edward Island, Gulf ports, Quebec and Montreal. The details were outlined by L. Fiset, Eastern Harbor, N. S., who stated that it was proposed to purchase four large steel steamships built

recently on the Great Lakes, and to incorporate a company with \$600,000 capital stock, eventually increasing it to \$1,000,000.

## Ontario and the Great Lakes.

A ferry service is announced to have been started between Adolphustown, N. Y., and Picton, Ont.

The C.P.R. s.s. Assiniboia was docked at the Port Arthur Shipbuilding Co.'s dock at Port Arthur, May 4, for the replacement of a number of plates, a new stern bar and other repairs.

The icebreaking s.s. James Whalen is undergoing general repairs at the Port Arthur Shipbuilding Co.'s plant, having suffered considerably while breaking ice prior to the reopening of navigation.

Imperial Oil's s.s. Royalite, which arrived at Sarnia, May 4, with a cargo of oil, encountered heavy ice on her trip there, and was found to be leaking. Her cargo was lightened and she proceeded to Welland for repairs.

The Toronto City Council has approved of the Toronto Ferry Co.'s application for an increase in the fares between the city and Toronto Island, from 10c to 15c for adults for the round trip, in view of the increased costs of coal, material and labor.

The Toronto Harbor Commission has moved to its new offices on the water front. The building is a six story one, of which the commission occupies two floors. The remainder of the accommodation will be taken up by navigation companies, etc., as soon as it is completed, during June.

Judgment for \$14,000 was given against Canada Steamship Lines, Ltd., at Toronto, May 7, on a claim for damages by Austin & Nicholson, Chappleau, Ont., the company having failed to carry out a contract for the carrying of 10,000 cords of pulpwood from Michipicoten Harbor to Thorold, in 1916.

The Livingstone channel, in the Detroit River, was closed for a few days, early in May, owing to the presence of large boulders brought down by the ice, and deposited opposite Amherstburg. The

The Canadian canal opened April 23, and the U.S. canal opened April 20.

channel was announced May 8 to have been cleared, and navigation was resumed, vessels in the meantime having used the Canadian channel.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for April, as follows:—Superior, 601.46; Michigan and Huron, 581.40; St. Clair, 574.46; Erie, 572.25; Ontario, 247.17. Compared with the average April levels for the past ten years, Superior was 0.13 ft. below; Michigan and Huron 0.27 ft. above; Erie 0.15 below, and Ontario 0.75 ft. above.

### Manitoba, Saskatchewan and Alberta.

The Peace River Tramways & Navigation Co.'s s.s. D. A. Thomas sailed north from Peace River Crossing, May 18, opening the navigation season.

### British Columbia and Pacific Coast.

The ice in the Yukon River broke up May 11, and some damage to wharves and riverside property occurred at Dawson, owing to the rush of ice.

Tenders were received May 31, by the Public Works Department for a steamboat service on the Upper Fraser River between South Fort George and Soda Creek.

The B.C. Marine, Ltd., has deposited plans with the Public Works Department at Ottawa, with a description of a proposed addition to its wharf to be built in Burrard Inlet at the foot of Victoria Drive, Vancouver.

Satisfactory progress is being made with the construction of the shed on the Government wharf at Vancouver. The foundations are practically in, and the other work is proceeding according to schedule for completion by the autumn. Hodgson & King are the contractors.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John is reported to have struck an unknown obstacle, presumed to be an uncharted rock, in Masset Inlet on the east side of Queen Charlotte Islands, May 1. She was able to make Vancouver under her own steam, where she was inspected.

The C.P.R. is reported to have purchased the s.s. Daily for its British Columbia Coast service, and to have made extensive alterations, practically involving reconstruction, and renamed her Island Princess. It is stated that she will be put on the Gulf Islands route about the end of May.

The Canadian Merchant Service Guild is endeavoring to obtain a higher schedule of pay for masters and officers of vessels operating in British Columbia waters. It is stated that the present scale is from 30% to 50% below that of similar vessels operating from U.S. Pacific ports, and that the hours worked are about 30% greater.

The Union Steamship Co. of British Columbia is receiving tenders for the construction of a steel cargo steamship, 166 ft. long, 30 ft. beam and 14 ft. moulded depth, for coastwise service. The machinery will be transferred from the s.s. Washington, which has been acquired for the purpose. The engines are of the reciprocating type, 850 h.p.

The motor ship Malahat, built at Victoria last year for Canada West Coast Navigation Co. interests, and which sailed from Alberni, Oct. 2, 1917, for Sydney,

Australia, is now back on the coast, and is having her auxiliary machinery installed. Her maiden trip was undertaken under sail only, as the machinery could not be obtained by the time it was hoped.

The Pacific Steamship Co.'s s.s. Governor collided with the end of the Ogden Pier, Victoria, May 7, when getting alongside on arrival from San Francisco. A hole was torn in the hull at the turn of the bilge abaft on the starboard side, and some plates were strained. Temporary repairs were quickly carried out by Yarrows, Ltd., after which she proceeded to Seattle, where complete repairs were made.

The Grand Trunk Pacific Coast Steamship Co.'s summer schedule goes into effect, June 28. The sailing day for the Queen Charlotte Islands direct service will be changed from Tuesday to Friday, and the steamships Prince John and Prince Albert will alternate weekly, leaving Vancouver on Fridays and Prince Rupert on Saturdays. The steamships Prince Rupert and Prince George will take up their summer schedule between Seattle and Alaska ports, June 26 and 24, respectively, from Seattle, Wash.

### Mainly About Marine People.

J. T. Edmond, who has been in Canada West Coast Navigation Co.'s service for some time, is reported to have been appointed ferry superintendent at North Vancouver, B.C.

James Playfair, President, Great Lakes Transportation Co., has bought and presented to the town of Midland, Ont., a residence to be used as a hospital, the general and marine hospital building there being too small.

Hon. C. C. Ballantyne, Minister of Marine, is reported to have announced at a patriotic meeting in Ottawa, May 25, that he will leave for England shortly to consult with the Imperial authorities on naval and other matters.

Capt. J. B. Forrest, a well known lake mariner, who retired from active service in 1908, died at Walkerville, Ont., May 4, aged 69. He commenced his marine service at the age of 16, on one of the old sailing vessels plying between Port Arthur and Buffalo, and at the time of his retirement was master of the yacht Lurline, then owned by Hiram Walker & Sons, and later purchased by the Dominion Government. Capt. F. D. Forrest, of the Ontario Car Ferry Co.'s car ferry Ontario No. 2, is a brother.

John V. Foy, who has been appointed General Passenger Agent in charge of territory Kingston and west to Detroit and Port Huron frontier, Canada Steamship Lines, Ltd., Toronto, was born at Toronto, Aug. 27, 1882, and entered transportation service in 1901, with Capt. R. S. Melville, general ticket agent, Toronto. He was, from 1902 to 1904, clerk, Niagara Navigation Co., Toronto; 1905 to 1910, chief clerk to General Manager, Niagara Navigation Co., Toronto; 1911 to 1912, General Passenger Agent, Niagara Navigation Co., Toronto; 1913 to 1914, District Passenger Agent, Richelieu & Ontario Navigation Co., Toronto; 1914 to 1915, General Agent, Passenger Department, Canada Steamship Lines, Ltd., Chicago, Ill.; 1915 to 1916, General Agent, Passenger Department, same company, Buffalo, N.Y.; 1916 to 1917, Assistant General Passenger Agent, same company, Toronto; 1917 to Apr. 26, 1918, General Passenger and Freight Agent, same company, Toronto.

### Reduction of United States War Risk Insurance.

The Secretary of the United States Treasury on May 8 ordered Government war risk insurance rates reduced from 3 to 2% on the hulls and cargoes of U.S. steamships traveling through the war zone from U.S. ports to ports in the United Kingdom and on the French Atlantic coast.

On Aug. 15, 1917, the rate was 6½%; on Oct. 6 it was reduced to 5%; on Nov. 23 it was reduced to 4%, and on Mar. 18 it was reduced to 3%.

At the same time the Secretary ordered reductions and adjustments of rates to various other ports, including from U.S. Atlantic ports to Halifax, N.S., St. John, N.B., and St. Lawrence ports from ¼% to ½%.

### Conscription of Sailors.

Senator Bostock asked the following questions in the Senate, May 7:—

1. Is the government aware that sailors of the coasting and deep sea service are being called up under the Military Service Act, causing a depletion of the supply of men for ships sailing from British Columbia ports?

2. Has the government any record of the number of certificated officers and sailors who have been called up in this way?

3. Will the government have immediate inquiry made and stop the conscription of sailors in the future?

4. Is the government aware that the United States Government is offering special inducements to men to qualify as sailors to man the ships sailing from U. S. ports?

Sir Jas. Lougheed replied as follows:—

1. There is no special or exceptional authority with regard to sailors; they are subject to the operation of the law and entitled to exemption in proper cases in like manner as others affected by the outstanding call under the Military Service Act.

2. No, except as this might be gathered by examination of the records at the offices of the various registrars under the Military Service Act.

3. It is not in accord with parliamentary practice for the government to answer what it proposes to do under the circumstances mentioned.

4. No information in Department of Justice.

**Montreal Traffic Arrangements.**—A Montreal press dispatch states that that port will this year be devoted solely to freight and special traffic, all ocean steamships formerly using the St. Lawrence route, being diverted to other ports. This decision, it is stated, was taken after careful consideration of the matter by the Admiralty, whose experts advised that greater economy and expediency could be effected by the concentration of freight vessels at Montreal.

**Women As Vessel Builders.**—A dispatch from Sydney, N.S., says that women have been engaged at Baddeck, N.S., to build lifeboats and dories for the Dominion Government, under the direction of Dr. A. Graham Bell, and, it is stated, that this is the first time in the history of the Dominion that women have been offered work of this nature.

**Lake and Canadian Coal Distribution.** The U.S. Fuel Administration has appointed C. P. White as manager of lake and Canadian coal distribution.

### Customs Duty on Wireless Telegraph Apparatus.

A Dominion order in council, passed April 5, provides as follows:—When imported materials, on which customs duties have been paid, are used in the manufacture of wireless telegraph apparatus supplied to vessels in Canada, subsequent to Jan. 1, 1918, there may be paid a drawback of 99% of the duties paid on the materials so used. Provided, however, that such drawback shall not be paid unless the duty has been paid on the materials so used, within three years of the date when the wireless telegraph apparatus used has been supplied to the ship equipped therewith.

The drawback may be paid to the manufacturer of the wireless telegraph apparatus subject to the following conditions, viz.:—The quantity of material used and the amount of duties paid thereon shall be ascertained; satisfactory evidence shall be furnished in respect of the manufacture of the wireless telegraph apparatus in Canada and its installation on board the vessel equipped therewith. The claim for drawback shall be verified under oath before a collector of customs to the satisfaction of the Minister of Customs, in such form as he shall prescribe, within one year after the apparatus has been supplied to the vessel in Canada. The Minister may also require in any case the production of such further evidence as he deems necessary to establish the bona fides of the claim.

**Customs Duty on Shipbuilding Material.**—A Dominion order in council passed April 19, under the provisions of section 286 of the Customs Act, makes the following regulations respecting the drawback of customs duty on ships and vessels measuring over 80 tons gross tonnage, built in Canada. The drawback of 99% of the customs duty allowed on imported materials used in the original construction of ships and vessels built in Canada since Nov. 1, 1916, may, with the consent of the builder of the vessel, be paid to the manufacturer of articles made in Canada from imported materials and used in such original construction of the vessel, subject to the same conditions and restrictions as when that drawback is paid to the builder of the vessel, and also subject to such further regulations as the Minister of Customs deems necessary to establish the bona fides of the claim.

**Norwegian Shipbuilding in United States:**—New York press dispatch May 12:—Land has been acquired in New Jersey by Norwegian shipping interests for the construction of "one of the largest shipyards in the world," it was announced here Saturday by Christoffer Hannevig, of Christoffer Hannevig, Inc., a prominent Norwegian steamship concern, with headquarters here. The location of the proposed yard was not disclosed by Mr. Hannevig, who said that the ships to be constructed would fly the Norwegian flag, but would be used in United States trade.

**Electric Welding for Shipbuilding.**—A. J. Mason has been authorized to test on a large scale electric welding as applied to shipbuilding. This work will take the form of constructing part of a hull at the U.S. Government shipbuilding plant at Newark, N.J. The material will be assembled and tacked together and rendered watertight by various forms of arc welding. Foundations are being prepared to allow of severe tests by pressure, as well as every agency to develop the merits of the system.

### The Great Lakes Transportation Co. Purchases U.S. Vessels.

Canadian Railway and Marine World for May contained information as to the purchase by the Great Lakes Transportation Co., Midland, Ont., of the s.s. Oceanica, formerly owned by the Western Steamship Corporation. The company has also purchased the s.s. A. E. Stewart, owned by the Stewart Transportation Co., Detroit, Mich., and the s.s. Western Star, owned by the Cadillac Steamship Co., Cleveland, Ohio. The name of the s.s. A. E. Stewart has been changed to Glenorchy, and that of the Western Star, to Glenisla, both being transferred to the Canadian register.

We are advised that the Oceanica will be operated by Lake Transportation Co. in the interests of the Valley Camp Coal Co., Cleveland, Ohio.

The A. E. Stewart was built at West Bay City, Mich., in 1902, of steel on the channel system, with steel tank top, 2 non watertight and 2 watertight compartments, steam pump wells, steel boiler house, electric light, etc., and is equipped with triple expansion engines with cylinders 20, 33 and 54 in. diam., by 42 in. stroke, 1,100 i.h.p. at 85 r.p.m., and supplied with steam by 2 Scotch boilers, 14 x 12 ft., at 170 lb. Her dimensions are: length 365 ft., breadth 50 ft., depth 28 ft.; tonnage, 3,943 gross, 3,049 register.

The Western Star was built at Wyandotte, Mich., in 1903 of steel, on the channel system, with steel tank top, steel boiler house, electric light, etc., and she is equipped with triple expansion engines with cylinders 22, 35 and 58 in. diam. by 42 in. stroke, 1,490 i.h.p., and supplied with steam by 2 Scotch boilers 13 ft. 2 in. by 11½ ft., at 170 lb. under induced draft. Her dimensions are: length 416 ft., breadth 50 ft., depth 28 ft.; tonnage, 4,764 gross, 3,593 register.

**The St. Lawrence Coal & Freighting Co.,** which was incorporated in New York State recently, with a capital of \$50,000, is operating the s.s. W. J. Carter between Oswego, N.Y., Brockville, Ont., and Ogdensburg, N.Y., in the coal trade. She was formerly owned by the Finn & Olsen Freighting Co., Marinette, Wis., and was built at Milwaukee, Wis., of oak, in 1886. She has been overhauled, and will be equipped with a self unloading clam, which will permit of her being loaded one day and unloaded the next, thus enabling her, weather permitting, to make three full trips a week. The head office of the company is at Ogdensburg, N.Y., and the following are the officers and directors: E. F. McCourt, Montreal, President; E. J. Burns, Ogdensburg, Vice President; J. A. Bresnan, Brockville, Ont., Managing Director and Secretary-Treasurer; C. W. Loomis, Ogdensburg, and J. R. Bresnan, Brockville.

**Ocean Shipping of Grain.**—Replying to a question as to what steps the Dominion Government might take to "put a stop to the diversion of the grain trade of the Canadian Northwest, two-thirds of which is now being shipped at United States sea ports, and to give this trade to Canadian ports," the Prime Minister stated in the House of Commons, May 2, that it is necessary under war conditions, and in view of the submarine peril, to utilize from time to time, all Atlantic ports on the continent.

**Shelburne Shipbuilders, Ltd.,** Shelburne, N.S., launched the tern schooner Misty Star recently. Several other vessels are under construction.

### United States Lake Vessels for Ocean Service.

The United States Shipping Board issued the following statement on May 1: Overseas shipping will be further added to from this time on by a steady flow of completed new vessels from the Great Lakes shipyards. With the re-opening of the lakes and the St. Lawrence River to navigation, 34 ships built at the Great Lakes yards during the autumn, winter, and spring are now either en route or loading for trans-Atlantic service. They total approximately 100,000 tons. Four of these new ships have already sailed for the Atlantic coast. The other 30 are reported taking on cargoes at Chicago, Duluth, and ports elsewhere on the Great Lakes. All will be on their maiden voyages during the next seven days.

Of 23 ships in the Great Lakes shipyards scheduled to be completed in May, 16 are reported already so far advanced that they have begun to take on crews and cargoes. The Bureau of Operations of the Shipping Board has allocated these new ships to the New English coal carrying trade. They approximate a total of 50,000 tons.

**The Dominion Government Dredge** Galveston, the sale of which was announced in our last issue, was purchased by W. H. Hutchinson, St. Catharines, Ont., and H. Dussault, Levis, Que. As mentioned previously, it is the purchasers' intention to convert the vessel into a cargo steamship for Atlantic service.

Department of Naval Service.  
NOTICE OF SALE.

Canadian Government Steamer "La Canadienne."

Sealed tenders addressed to the undersigned, and endorsed "Tender for Steamer 'La Canadienne,'" will be received up to noon of the 10th day of June, 1918, for the purchase of the Steamer "La Canadienne," now lying at Owen Sound, Ont. "La Canadienne" is a single screw steamer of iron construction, built in 1880. Her net registered tonnage is 227 and her displacement is 500. Is 154 ft. long with a breadth of 23 ft., and a maximum draught of 11 ft. Her maximum speed is approximately 8 knots. Her boilers are in good condition. She is fully equipped for commission, and carries a motor boat and 4 sail boats, with accommodation for 55 men. She may be seen and inspected at any time upon application to Mr. John Nesbitt of Owen Sound. The ship will be sold as she lies.

Each tender must be accompanied by a certified cheque, made payable to the Department of the Naval Service at Ottawa for a sum equivalent to ten per cent. (10%) of the full amount of the tender. In case of failure to complete the purchase within the time specified the cheque of the successful tenderer becomes forfeited; all others will be returned promptly. The right is reserved to reject any or all tenders.

The terms of sale are cash within fifteen (15) days of the acceptance of tender.

G. J. DESBARATS,  
Deputy Minister of the Naval Service.

Ottawa, May 10, 1918.

Unauthorized publication of this advertisement will not be paid for.

### NOTICE.

All persons are hereby given notice that the undersigned have purchased the steamer "Oceanica" from Western Steamship Corporation, and all persons having liens or claims against said steamer "Oceanica" must immediately file same with undersigned for forwarding to late owner.

Cleveland, Ohio.

# Champlain Dry Dock for Quebec Harbor.

By U. Valiquet, M.Can.Soc.C.E., Superintending Engineer, Department of Public Works.

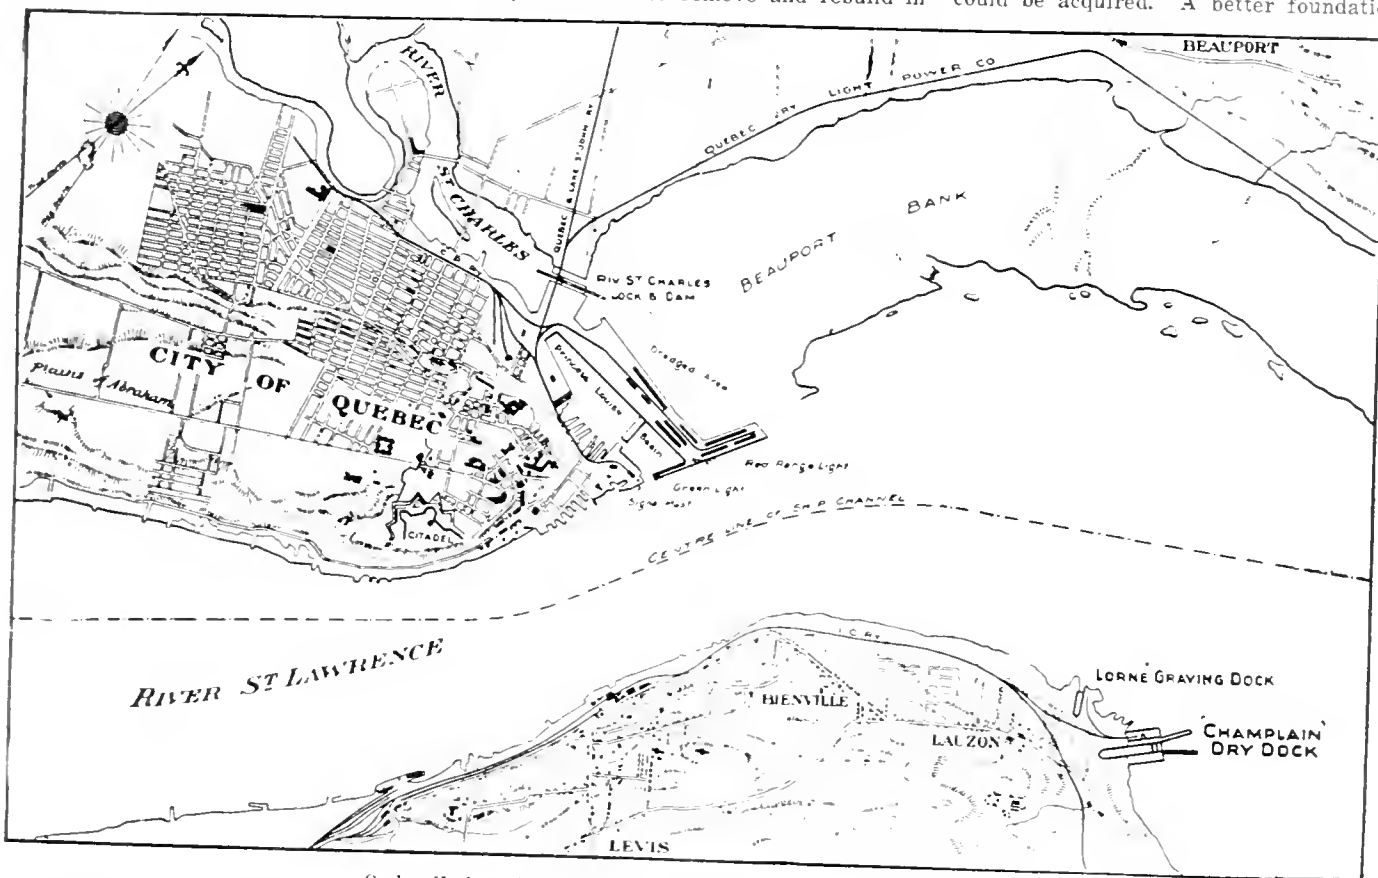

For a number of years the River St. Lawrence has been frequented by ocean steamers of such dimensions that they could not be accommodated in the Lorne dry dock, completed in 1886, at Lauzon, in Quebec harbor. In 1906 the Canadian Pacific Ry. brought out its steamships Empress of Britain and Empress of Ireland, of 65 ft. beam. The Allan Line steamships Virginian and Victorian of 60 ft. beam were also placed on the St. Lawrence route in that year. The Bavarian of somewhat narrower beam, 59½ ft., came to Quebec in 1905; thereafter the number of large ships placed on the St. Lawrence traffic increased rapidly, until in 1912 there were 25 vessels that could not have been repaired in the long stretch of the St. Lawrence navigation for want

scrap. This is the worst case on record in the history of the St. Lawrence navigation. The vessel was only six years old and of a registered tonnage of 10,387 tons.

In the summer of 1898 the writer was instructed to prepare a report on the practicability of widening the entrance of the Lorne dry dock at Levis, which had been completed in 1886. A plan was submitted, showing the possibility of obtaining an entrance 70 ft. wide, by removing part of the timber slides at the outer end of the dock; increasing the length was also suggested. The first was reported to be inadvisable, as it would greatly disfigure the dock and do away with the convenience of the timber slides; the only feasible way would be to remove and rebuild in

cost of \$921,130. In 1888 the Canadian Government relieved the Quebec Harbor Commission of all obligations to refund the sum expended on the dry dock and in 1890 it was placed upon the control of the Department of Public Works; the writer was then placed in charge.

In 1906 the Quebec Harbor Commissioners urged upon the government the necessity for a large dry dock for Quebec harbor. In the autumn of that year the writer was instructed to make a survey of the locality surrounding the old dry dock and report on the best location. Two sites were examined, but the position to the east of the present dock was considered the most advantageous for three principal reasons. A larger area of land could be acquired. A better foundation

Quebec Harbor, showing locations of Champlain and Lorne Drydocks.

of sufficient dock accommodation, the width of entrance of the present dry dock being only 62 ft. Any of these vessels that required docking had to be repaired temporarily, as well as possible, while afloat, and taken either to Halifax or New York, which, in some cases, was a risky undertaking. The case of the s.s. Bavarian was an unfortunate experience in this respect. On Nov. 5, 1905, she ran aground with a full cargo from Montreal and Quebec, about 40 miles below Quebec, opposite Grosse Isle. Although late in the autumn, she could have been raised and brought to Quebec had there been dock accommodation for her. Her beam was 59½ ft., but through the accident her sides had bulged out beyond the width of the dry dock entrance. She was raised in the following spring, although further damaged by ice during the winter, and brought on the beach a short distance below the dry dock, where she was sold as

another position the eastern side wall, thus depriving the harbor of all dock accommodation for probably two seasons. A new caisson would necessarily have to be provided; the cost would have been considerable. Further, it was considered that a new dry dock would be required in Quebec before many years. The suggestion of lengthening the dock was adopted; the length was increased from 484 to 600 ft.; this consisted merely in moving the circular head, stairways and timber slides 116 ft. further, after excavating the rock to proper width and depth. The work was performed under contract awarded in 1900, for \$100,000, and completed in 1901 without interfering with the use of the dock. This dry dock was built by the Quebec Harbor Commissioners under an act, 38 Vict. Cap. 56-1875, by which the issue of bonds was allowed to obtain the necessary amount. The work was started in 1878 and completed in 1886 at a total

could be obtained. The repairing plant of G. T. Davie & Sons could have better access to both the new and old docks. A plan and report were submitted in the early part of 1907; the dock then proposed was 1,000 ft. long with an entrance width of 100 ft. The proposition was not immediately acted upon; the question as to whether the government should build the dock or induce some shipbuilding firm to build it under a subsidy from the government was unsettled. The result of the discussion was the passing at the session of 1910 of an Act to Encourage the Construction of Dry Docks.

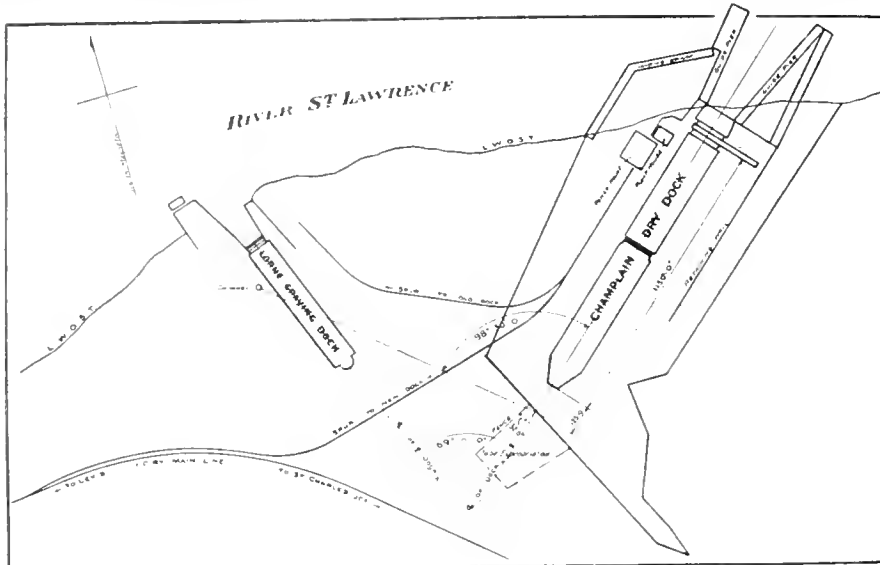

Under this act dry docks were divided into three classes. The first class included dry docks estimated to cost not more than \$4,000,000, and capable of receiving and repairing the largest ships of the British Navy and of the following dimensions: Clear length on bottom 900 ft.; clear width of entrance 100 ft., with depth on

sill at high water ordinary spring tides of 35 ft. Floating dry docks of a lifting capacity of 25,000 tons. The second class included dry docks estimated to cost \$2,500,000, of the following dimensions: Clear length on bottom 650 ft.; clear width of entrance 85 ft.; depth of water on sill at ordinary high water spring tides 30 ft., if in tidal waters; or 25 ft. on sill, if constructed in non-tidal waters. Floating dry docks of a lifting capacity of 15,000 tons. The third class consisted of

1,150 ft.; width of entrance 125 ft.; depth on sill at high water spring tides 38 ft. A subsidy of  $4\frac{1}{2}\%$  on the estimated cost of \$5,500,000 is allowed, payable half-yearly for 35 years from the time of completion. By this amendment no bonds or debentures are to be issued until \$1,000,000 shall have been expended on the construction of the dry dock.

After the passing of the act of 1910, shipbuilding firms were invited to build a dry dock at Lauzon, in Quebec harbor.

Champlain and Lorne Drydocks, Lauzon, Que.

dry docks estimated to cost not more than \$1,500,000, of the following dimensions: Clear length on bottom 400 ft.; clear width of entrance 65 ft.; depth of water on sill at ordinary high water spring tides 22 ft., if in tidal waters; and 18 ft., if in non-tidal water. Floating dry docks of a lifting capacity of 3,500 tons. The estimated cost in all cases includes the totally equipped repairing plant, capable of effecting all sorts of repairs, including machine shops and tools, foundry, administration buildings, etc., together with the dock itself, but does not include marine slips or other installation used in the construction of ships.

According to the act, the subsidy on dry docks of the first class is  $3\frac{1}{2}\%$  per annum on the estimated cost for 35 years from the time it has been reported that the dry dock is entirely completed. The subsidy on the second class is  $3\frac{1}{2}\%$  per annum for 25 years from the time of completion. On the third class, the subsidy is 3% for not exceeding 20 years from the time of completion. In all cases the company making the application must furnish plans, with a detailed list of the plant and a complete estimate of the cost. These are revised and corrected, if found advisable; and, upon a report from the Chief Engineer of the Public Works Department that the works intended to be built are in the public interest, the application is granted upon certain conditions of management and maintenance. The works are to be executed under the superintendence of an officer of the department.

The above act was amended in April, 1912, by making the length of the first class dry docks 1150 ft., the entrance 110 ft. and the estimated cost \$5,500,000. Another amendment was made in May, 1914, by which a subsidy of 4% on the estimated cost is allowed for first class dry docks. The act was further amended in 1917, by which the dimensions of the first class dry docks shall be: length on bottom

under the subsidy act of that year. Two companies submitted plans and offered to build under contract without reference to the subsidy act. In 1912 another company submitted plans for a dry dock to be built on the Quebec side of the harbor, just below the mouth of the St. Charles River, according to the subsidy act, as

the eastward of the Davie shipbuilding yard, so that both the old and new dry docks would be easily accessible from the shops. Tenders for the construction of this work were advertised on May 12, 1913, to be received on June 30, 1913. The contract was awarded to the lowest tenderers, M. P. & J. T. Davis, and was signed on Oct. 7, 1913. The new dock was at first intended to be built on a line parallel to the old dry dock, but this was objected to from the point of view of navigation. A commission was appointed in the autumn of 1913 to investigate and find out which direction would best suit the entrance facilities, and it was decided that the centre line of the dock should form an angle of  $69^\circ$  with the direction of the old dry dock, or approximately  $45^\circ$  n.e., and it was so laid out. Owing to the limited time available before the calling of tenders, general plans only were prepared, together with an estimate of the cost. The requirements as to details for the machinery and caissons were stated in the specification; the contractors were requested to furnish during construction all detail plans, to be submitted for approval by the department. The dry dock has the following general dimensions. Total length from outer caisson to head wall 1,150 ft., divided into two compartments. Outer part 500 ft.: Inner part 650 ft.

Width of entrance .....	120 ft.
Width at coping .....	144 ft.
Width on floor .....	105 ft.
Depth on sill at high water s.t. ....	40 ft.
Depth on sill at low water, s.t. ....	22 ft.
Spring tides rise .....	18 ft.
Coping of side wall above high water s.t. ....	7 ft.
Floor at outer end below outer sill .....	$4\frac{1}{2}$ ft.
Slope of floor transversely .....	1 in 100
Western guide pier .....	400 ft.
Eastern guide pier .....	500 ft.
Depth in entrance channel at low tide .....	30 ft.

The land expropriated in connection with the construction of the dry dock has a superficial area of  $25\frac{1}{2}$  acres, of which  $11\frac{1}{2}$  are reclaimed beach land. The outer entrance of the dock is closed with a rolling caisson, the top of which is provided

Champlain Drydock, Lauzon, Que. Looking toward the St. Lawrence River.

amended in 1912. Some objection having been made to this location and with no prospect in view for any other applicant, the Public Works Department decided that a dry dock would be built by the government.

In the early part of 1913 the writer was instructed to prepare plans and specifications on which tenders could be called as soon as possible for the construction of the new dry dock, the location being to

with an automatic folding bridge; a floating caisson closes the inner entrance. This caisson can also be placed to close the outer entrance in cases when repairs are required to be made to the rolling caisson. Three main centrifugal pumps, each of 63,000 gall. a minute capacity, are used to empty the dock; two pumps of 6,000 gall. a minute each are used to keep the dock dry. All pumps are run by electric power. Eight boilers of a total capacity

of 3,600 h.p. furnish the steam at 209 lb. pressure to run the three direct current turbo generators of 1,500, 750 and 300 kilowatts respectively, which furnish the current at 550 volts to run the pump and other motors. A direct current generator of 100 kilowatts at 220 volts, driven by a steam engine, will furnish the current for the lamps around the dock and in the buildings. There are 24 lamps of 500 watts, hung from poles around the dock. The poles are made of gas pipe, with the lower end set into sockets fitted with electric connections, and made removable in case of necessity. All electric wiring for lamps and motors outside of the buildings is placed underground. The approximate quantities of the materials in the principal items entering into the construction are:

Rock excavation above and below coping ..	342,000 c. yd.
Submarine rock excavation in channel.....	65,000 c. yd.
Dredging entrance channel .....	530,000 c. yd.
Concrete .....	100,000 c. yd.
Granite steps, altars and quoins.....	140,000 c. ft.
Steel beams, reinforcing bars and manhole covers .....	150,000 lb.
Cast iron for roller casings and sluice valves .....	125 tons
Cast steel for caisson rollers .....	65 tons
Gun metal for caisson roller and valves.....	4,500 lb.
Cast iron in keel blocks and bolhard.....	990 tons
Forced steel spindles for rollers .....	11,000 lb.
Bricks for chimney and flues .....	345,000
Fire bricks .....	125,000
Cribwork in approach piers .....	63,300 c. yd.
Concrete in approach piers .....	13,300 c. yd.
Steel in rolling caisson .....	930 tons
Total weight in rolling caisson and machinery .....	1,125 tons
Steel in floating caisson .....	960 tons

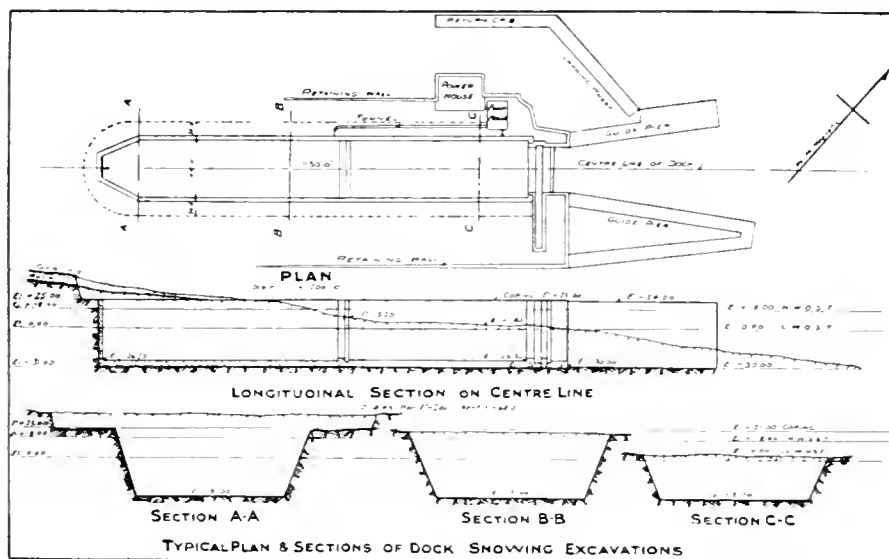

The work was started in May, 1914. The concrete retaining walls on each side of the dock, specified to be built from the natural rock surface to elevation -24 and intended to prevent seepage through the filling, were completed during the season's work, as well as the cofferdam between the outer ends of these walls. Rock drilling in the prism of the dock was also carried on in the part not affected by tides. The largest part of the drilling was done by two well drillers, the holes being sunk down to grade and plugged for future blasting. The average depth of perforation for each drill was about 80 ft. a day, although as much as 130 ft. was done occasionally. Ten or 12 ordinary steam drills were also used on the work. The rock consisted of hard shale, irregularly stratified, at an angle of about 45°. Considerable rock slides occurred on the west side of the cut, which necessitated a much larger quantity of concrete for the dock wall on that side, also the use of rock bolts, to prevent the sliding tendency of this wall. Steam shovels and dump cars were used to remove the blasted rock, which was used for filling, wherever required, on the government property.

The cofferdam was built of timber cribwork, 20 ft. wide, sunk in an average depth of 1 ft. of water, at low tide, and built to the elevation of 3 ft. above high tide; a layer of concrete was deposited along the bottom of the outer face and this face was sheathed with plank. The floor and walls of the dock are built of concrete, the mixture being 1-3-5. All exposed faces are finished with a fine concrete of 1-2-4 mixture for a thickness of 6 in. The concrete for the walls and the floor was cast in alternate sections of approximately 30 ft., with expansion joints. All the cement used was subjected to a laboratory test; apart from other requirements the tensile strength was required to be 600 lb. a sq. in. after 27 days immersion, for neat briquettes, and 275 lb. a sq. in. for 1-3 mixture.

The steps at the top of the walls are built of granite, with treads and risers of 12 in.; the altars are 2½ ft. wide and con-

sist of granite 12 in. thick, tailing 9 in. into the concrete. The caisson stops of both entrances and all culvert openings are built of granite. The floor is 5 ft. thick and finished level from end to end; the sides slope down 6 in. to the side gutters. The floor is provided with three strips of granite slabs, 18 in. thick, intended to receive the cast iron keel and bilge blocks. The middle strip is 10 ft. wide and level; the side strips are 9 ft. wide. In order to prevent the possibility of hydrostatic pressure under the floor and behind the side walls, a system of drains is provided, that will take the seepage water to the sumps. There are 12 stairways from the top of the walls to the floor of the dock, two at each end of the two compartments and two half-way between the ends of each compartment. Four timber slides, built of granite slabs, 18 in. thick, are provided alongside the last set of stairways. There are also 8 ladders, 4 on each side of the dock, that may be used to reach the floor. These are built with galvanized iron gas pipe, and set in recesses in the walls. The coping of the walls stands at elevation -25, or 7 ft. above high tide. They are provided with the ordinary cast iron bollards, set in concrete blocks, 60 ft. apart. There

ters. These are made of cast steel and bored to receive bronze bushings. The forged steel spindles, 4 in. in diameter, are also provided with bronze sleeves. The cast iron casings, containing the rollers, are set in the concrete altars, on each side of the caisson berth and chamber. At an elevation of 15¾ ft. above the sill of the dock the rolling caisson is provided with 6 culverts, 42 in. in diameter, closed by sluice valves that are operated from the upper deck by a 15 h.p. electric motor, driving a longitudinal shaft provided with the necessary gearing; and, by means of clutches, any one or all of the valves may be worked. The culverts are used for flooding the dock. The caisson is divided horizontally by a water-tight deck at the elevation of 23½ ft. above the bottom, forming the ballast and tidal chambers. As the tide rises the sea water comes on this deck through valves in the outer face of the caisson, which are kept constantly open during the summer to prevent the caisson from floating. A sufficient quantity of ballast is provided, so that the total weight of the structure resting on the rollers is approximately 150 tons. During the winter, when the dock is not in operation, the lower or ballast chamber of the caisson is filled with water,

(Champlain Drydock, Lauzon, Que.)

are 9 electrically driven capstans with 15 h.p. motors, 4 on each side of the dock and one at the head.

The keel blocks are each built of three pieces of castings; the middle piece being wedge shaped so that it may be knocked out and the block removed from under a ship, when in the way of repair work; the upper part of the top piece of casting is provided with a piece of white oak tenoned into the casting. All rubbing faces are planed true and smooth. The keel blocks are 4 ft. 4 in. long and 2¼ ft. high. On top of these are placed temporary hard wood timber blocks to obtain the required height above the floor. It had been intended to build bilge blocks, so arranged as to slide under the bilge of vessels. However, this was objected to by the British Admiralty, which insists on having all blocks made of the same pattern, so as to enable building a bed that will conform to the bottom of the vessel.

**Caissons.**—The outer entrance is closed by a rolling caisson built of steel and operated by an electric motor of 125 h.p.; the bottom is provided with two heavy scantlings of steel, resting on flanged rollers, 3 ft. in diameter, placed at 8 ft. cen-

which is kept from freezing by a constant jet of steam. The tidal chamber is then kept dry by closing the valves. The caisson is closed and opened with heavy chains, supported on altars on each side of the caisson recess, and passing over pulleys worked by worm gears connected with the motor. The top of the caisson is provided with a folding bridge for light traffic across the dock; as soon as the caisson starts to open, the apron and railings of the bridge are automatically lowered to allow them to pass under the flooring over the caisson recess. The middle entrance of the dock is closed by an ordinary floating or ship caisson. When in place, the deck is used as a bridge across the dock. This caisson may also be used to close the outer entrance by placing it immediately outside the rolling caisson, where the necessary stop is provided for it. This, however, will be necessary only in cases of repairs being required to the submerged parts of the rolling caisson. These caissons were built by the Dominion Bridge Company, under a subcontract.

**Boilers and electric power.**—Six water tube boilers of 500 h.p. and two of 300 h.p. furnish steam at 200 lb. pressure to

produce electric current. The boilers are provided with automatic stokers, ash and coal conveyors. The coal is unloaded from cars into a coal crusher run by an electric motor, and elevated to a hopper of 500 tons capacity, over the front of the boilers. Water heaters are provided, but the steam is not superheated; one of the small boilers will be constantly under steam pressure to run the drainage pumps and the lighting dynamo. The electric power consists of 3 direct current turbo-generators of 550 volts, one of 1,500 kilowatts, one of 750 and one of 300 kilowatts. The steam turbines are of the Curtis condensing type, built by the General Electric Co. In the large unit the turbine runs at 3,600 r.p.m. It is geared down to 360 revolutions for the generator; the second is geared from 5,000 to 750; the third is geared from 5,000 to 900 r.p.m. A 100-kilowatt generator driven by a high speed direct connected steam engine, furnishes the current for lighting purposes. This power installation is more than ample for all the machinery connected with the running of the dock proper. It is, however, anticipated that the whole of it will be used when large repairing and shipbuilding shops are in operation together with the pumping of the dock.

gall. a minute. The bronze shafts are connected to the armature shafts of 800 h.p. motors, running at 750 revolutions a minute. The motors are built to stand an overload of 25% for two hours; the total lift will very rarely be more than 33 ft. The suction and discharge pipes are 48 in.; the water is discharged into a chamber provided with non return valves, and to a culvert through the entrance wall outside of the caisson. The main pumps are guaranteed by the builders to deliver 63,000 gall. a minute against a total head of 25 ft. At the time of writing these pumps have not been tested as to efficiency. Two auxiliary pumps, each of 6,000 gall. a minute capacity, driven by electric motors of 125 h.p., will take care of leakages and seepage; these pumps will also help while the dock is being pumped. The pumps were manufactured by the Allis-Chalmers Co.

The time occupied in emptying the dock will vary according to the height of tide when the pumps are started and the size of the vessel being docked. At high water of spring tides the dock contains over 38,000,000 gall. of water. This quantity of water, however, will very rarely, if ever, exist, when pumping is started. It is estimated that the average time for

until the water in the dock has reached the center of the culvert opening, to prevent the heavy current that would result from a large opening from disturbing the beds prepared to receive a vessel; further, as the head between the outer and inner levels of water decreases, the valves are fully opened, thus obtaining a large flow. The time required to fill the dock may at times be as much as four hours. The middle entrance is similarly provided with filling culverts as the outer entrance.

In order to obtain sea water by gravity for the purpose of washing the floor of the dock, 6 in. pipes were laid in the concrete side walls of the dock, at an elevation of 2 ft. above low tide; each pipe has 6 hose connections and valves at the face of the walls, where 50 ft. lengths of  $2\frac{1}{2}$  in. hose may be attached for the purpose. The water is available within one hour of extreme low tide. Washing the floor is necessary owing to the sediment accumulated while the dock is flooded.

**Guide piers.**—The western guide pier is 400 ft. long and 75 ft. wide; the one on the eastern side is 500 ft. long, 75 ft. wide at the outer and 200 ft. wide at the inner end. Each is built of two lines of 12 x 12 timber cribwork substructure up to 6 ft. above low water, spring tides; the outer face of each line of cribwork is built close, and sheathed vertically with 10 in. hardwood planks. The cribs facing on the channel were sunk in a depth of 30 ft. at low water, spring tides; those on the eastern side of the east pier were sunk on the natural surface of the rock. Those on the western side of the west pier, as well as those for the landing pier, were sunk in a depth of 24 ft. at low tide. From the elevation of 6 ft. above low tide the superstructure consists of mass concrete walls, stepped at the back and filled between with excavated material. The railway spur track from the Intercolonial Ry. will be extended to the end of the western pier. These piers are intended to be used, when necessary, for unloading parts of cargoes from vessels to be docked. The entrance channel has a depth of 30 ft. at low water, spring tides. The landing pier on the west side of the entrance is intended for unloading the dock supply of coal, when delivered by water.

**Buildings.**—The power house is 120 x 100 ft., divided by a brick wall into 2 rooms, 120 x 50 ft., one being the boiler room and the other the generator room; the walls are solid brick, built on concrete foundation; the roof is built of reinforced concrete slabs, supported by steel I-beams, which were procured from the unused steel of the first Quebec bridge. The building is provided with extra large windows with steel frames. Skylights and ventilators are also provided. The floor is concrete, overlaid with red tiles; and the lower part of the interior walls for the generator room is finished with a white tile wainscoting, 6 ft. high. Each room is furnished with water closets and wash basins; the water is obtained from the Lauzon village aqueduct. A special pump in case of fire and the necessary hose are provided. The generator room has an overhead travelling crane of 15 tons capacity. The lifting is done by motor; the travelling gear is worked by hand.

The pump house is 70 x 47 ft., with foundation walls of concrete, over which solid brick walls are built. The floor is at an elevation of 16 ft. below low water, spring tides, or 41 ft. below coping. It is finished with red tiles. The interior walls up to coping level are finished with white tiles. The pump house is also provided with an overhead travelling crane of 10 tons capacity. The chimney is 180 ft.

CROSS SECTION AT ENTRANCE SHOWING FLOATING CAISSON SILL

Champlain Drydock, Lauzon, Que.

This electric installation has been criticized, on the ground that the large expenditure is not justified when electric current is available from private companies in the vicinity of Quebec. When the electric installation was proposed by the writer the idea in view was that no company would be interested or willing to furnish over 3,000 h.p. at any time of the day or night for the short period of about 50 hours in the year, without interfering seriously with their general service. It had also been ascertained by personal visits to five of the principal U.S. Government navy yards that each of them has provided its own electric power for pumping their dry docks. Out of five, only one had installed alternating current machinery. It has developed since that the only electric company that could furnish the power current is not willing to entertain the proposition unless at a much greater cost to the government than the private installation can be run, including the interest on the outlay, which is approximately \$240,000.

**Pumps.**—The dock is emptied by three main pumps of the horizontal centrifugal type, each having a capacity of 63,000

pumping out the dock will be about  $2\frac{1}{2}$  hours.

Underground culverts 9 x 10 ft. convey the water from the sumps in each compartment of the dock to the pumps; these culverts are provided with sluice gates, so as to permit of operating each compartment separately. The gates are operated from coping-level by 15 h.p. electric motors. The pressure against the gates may at times be due to a head of 50 ft. of water. From the non-return valve chamber the discharge culvert is 7 x 12 ft.; it is also provided with a sluice gate. The capacity of discharge of this culvert was obtained from Chezy's formula  $V = c \sqrt{rs}$ , being obtained from Kutter's formula. Under a head of 4 in. the capacity will be ample to take care of the output of the pumps when discharging in open air.

The dock is filled through the 6 culverts in the outer caisson, each having a sectional area of 9 sq. ft., also 2 culverts, one in each side wall of a sectional area of 30 ft., the valves of which are operated by electric power. These culverts are made exceptionally large, due to the fact that each may only be partially opened

## Canadian Northern Railway Car Ferry for British Columbia.

high, built of brick, with an inner shell of fire brick 190 ft. high. There is an air space of 6 in. between the inner and outer shells; the inside diameter is 11 ft.; the top consists of a cast-iron cap; 4 lighting rods, well grounded, are provided to protect the chimney.

The length of the dock was decided on not merely in anticipation of vessels of, say, 900 ft. or over being employed on the St. Lawrence trade, which may not happen for a great number of years, but owing to the great number of applications received every fall from owners of moderate sized vessels for accommodation during the winter, so that repairs may be done at cheaper rates, and the boats be ready for traffic as soon as navigation opens.

The dock is not yet quite completed: small portions of the floor and walls at the head remain to be finished; the boilers, machinery and pumps, although in working condition, require some final adjustment before they are tested and accepted;—the rolling caisson was operated in Nov., 1917,—the contractors' floating plant was docked and the dock was pumped out. It is fully expected that everything will be entirely completed during July.

The several classes of works in connection with the construction of the dock have been accomplished in a thorough manner both in regard to materials furnished and workmanship; several minor changes which were found to be advantageous were made during construction. The contractors, in all cases, have shown their willingness to give satisfaction in every way irrespective of cost. It must be noted that the works were started shortly before the war and continued without interruption, except in winter, in spite of increased cost of materials and labor. The time required for the construction of the dock is somewhat over four years. It must, however, be remembered that the working season is only six months in each year,—concrete works have to be suspended during the first days of November and cannot be resumed until the beginning of May. The total cost of the works under contract will be approximately \$3,365,000.00. The works have been carried on by the Public Works Department, with E. D. Lafleur as Chief Engineer,—the writer as Superintending Engineer, and J. K. Laflamme as Resident Engineer,—S. Fortin, Steel Structural Engineer, has had the approval of plans submitted for the steel structures. The contractors are M. P. & J. T. Davis, and S. Woodard is their Superintending Engineer.

The foregoing paper was read before the Canadian Society of Civil Engineers in Montreal and Ottawa recently.

**U. S. Atlantic Coast Steamships.**—The Director General of U. S. Railroads, having taken possession and assumed control of steamship companies operating on the Atlantic Coast, has created the Coastwise Advisory Committee, with office at 165 Broadway, N.Y. L. J. Spence has been appointed chairman, with authority to form the committee from the officers of the following lines:—Clyde Steamship Co., Mallory Steamship Co., Merchants & Miners Transportation Co., Ocean Steamship Co., Old Dominion Steamship Co., Southern Pacific Steamship Lines, Southern Steamship Co. The chairman of the committee will report to the Manager, Marine Section, Transportation Division, U. S. Railroad Administration, and will exercise supervision and direction of all coastwise lines under control of the Railroad Administration.

The car ferry steamship Canora, which the Canadian Northern Ry. is having built to carry passengers and freight cars between Port Mann, B.C., on the south side of the Fraser River, opposite New Westminster, and Patricia Bay, Vancouver Island, from which point the company has rail connection with Victoria, will, it is expected, be launched at Lauzon, Que., on June 10. The following are the leading particulars:—

Length over all .....	308 ft.
Length between perpendiculars .....	294 ft.
Breadth moulded .....	52 ft.
Depth moulded to car deck .....	20½ ft.
Depth moulded to shelter deck .....	28½ ft.
Draft loaded .....	14½ ft.
Displacement at above draft .....	3,400 tons
Speed on service .....	14 miles
Number of cars carried .....	20

The type adopted is somewhat similar to that of the car ferries operating on the Great Lakes, with the exception of a rolling gate which will be fitted at the stern, to close in the space between decks where the railway cars will be carried. This gate will be operated by a steam winch at the fore end of the shelter deck, the gate being carried on girders on this deck. When gate is closed, the stern will be completely closed in between the car deck and shelter deck where the cars are carried.

The vessel is being constructed under the supervision of Lloyd's Register of Shipping and will be classed 100A as a train ferry for coast and river service. The construction is on the transverse framing principle, open bottom type, and the hull is subdivided into 6 main transverse water tight compartments by 5 water tight bulkheads. Water tight doors will be fitted for communication between the engine and boiler spaces and shaft tunnel. Water ballast will be provided for, in peak tanks forward and aft, and in trimming tanks on each side of the engine room.

The cars will be carried on the main, or car, deck, on three lines of tracks, one line of tracks being on the center line of the vessel and one line each side of the center. The spaces below the car deck will be devoted to machinery, crew, stores, holds, coal bunkers and steering compartments.

Above the car deck, at a height of 18 ft., there will be a complete shelter deck, extending the full length and width of the vessel, and, on this deck accommodation for passengers and officers will be provided. This accommodation will include rooms for all officers, large dining saloon, parlor, state rooms for passengers, smoking room, kitchen and pantry, bathroom and lavatories, and a large observation cabin at the forward end. The state rooms will be tastefully finished and have berths, clothes closets, wash basins, etc., in each room. The dining saloon will be finished in oak panelling and will have a large dome over the center, with borrowed lights extending all round dome.

Above this accommodation will be the pilot house, and at the stern a pilot house for use in docking the vessel. As the vessel will have to go astern for a distance on her run, she has been designed with propellers at both ends, also steering gears and rudders, and in connection with this arrangement the navigating lights, engine room telegraphs and steering standards will be arranged to automatically change over to suit this condition.

Steam heating will be provided in all rooms. The ventilation to all spaces will

be provided by natural means, through patent ventilators carried well above the roof of the shelter deck accommodation. The sanitary arrangements will provide for a complete service of fresh, salt and hot water throughout the vessel. The crew spaces will be provided with all necessary accommodation for seamen and firemen, including berths, lockers, etc. There will be a complete installation of fire extinguishing pipes. The electric generators will be placed in the engine room, the main switchboard being located conveniently thereto. Two searchlights will be fitted for use when the vessel is landing at the slips at night.

The main propelling machinery will consist of a 4-cylinder, triple expansion, surface condensing engine, balanced on the Yarrow, Schlick & Tweed system, having cylinder 24, 38, 43 and 43 in., with a stroke of 30 in., and indicating about 2,200 h.p. The engine will be arranged to drive a screw propeller at each end of the vessel, the shafting running the full length of the vessel. Steam will be supplied by 4 Scotch return tubular boilers, 11½ ft. diameter by 11½ ft. long, working at a pressure of 175 lb. a square inch, located in two boiler rooms, one on each side of ship. Each boiler will have 2 corrugated furnaces, 41 in. diameter, and a complete installation of forced draft will be fitted. The total heating surface for the 4 boilers will be 5,500 sq. ft. The surface condenser will be of the triangular type and will have a cooling surface of 2,220 sq. ft. The circulating pump for main condenser will be of the centrifugal type and will be driven by its own engine.

The auxiliary machinery will include 2 vertical boiler feed pumps, each having capacity for working the four boilers, sanitary pump, fresh water pump, bilge pump and ballast pump. There will be an evaporating and distilling plant of sufficient capacity to make up loss in feed water and for drinking and galley supply. Ash ejectors will be fitted in each boiler room. Two steam steering gears will be provided in separate compartments at each end of the vessel, the valves on the gears being operated from pedestals in pilot house, by control shafting.

The auxiliary deck machinery will include a large steam windlass, on the shelter deck, for handling the anchor cables, a windlass also being provided, with drums for handling the wire ropes for mooring. The life saving appliances will be sufficient to meet the requirements of all on board and will be in accordance with the requirements of the Canadian Government inspection. Six lifeboats will be carried on the shelter and boat decks with two davits and gear to each boat.

The vessel was designed by A. Angstrom, as Naval Architect for the C.N.R., and is being built by the Davie Shipbuilding & Repair Co., at Lauzon, Que., Jno. Inglis Co., Toronto, building the main propelling machinery.

The Miami Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$10,000 authorized capital and office at Chatham, Ont., to own and operate steam and other vessels, and to carry on a general navigation and transportation business on the Great Lakes. The incorporators are: T. Donovan, F. C. Granville, T. J. Stockwell, J. W. Harrington and T. M. King, Chatham, Ont.

## Shipbuilding at Port Arthur.

The Port Arthur Shipbuilding Co. established a record on April 3, when it launched 2 steamships and laid a keel for a third. A trawler of the Castle class for the Naval Service Department was launched at 11 a.m., followed at noon by the launching of the steel cargo steamship War Isis, 3,400 tons d.w., for the British Government. Immediately after the launching of the War Isis, the keel for a sister ship, the War Heather, was laid down on the same berth.

The War Isis is a single deck, bulk cargo freighter of the following dimensions: Length over all, 261 ft.; moulded breadth, 43½ ft.; moulded depth, 22 ft. 11½ in.; gross tonnage, 2,240; displace-

ment, with 20 ft. draft, approximately 4,800 tons. She is built on the transverse system, inner bottoms throughout, with 2 large cargo holds, each fitted with 2 hatches. This ship represents the full canal size, standard type, being built to the Imperial Munitions Board order. The cargo will be handled by 4 steel derrick

mess rooms for the deck and engine crews will be located under the poop deck. The propelling machinery will consist of a triple expansion engine, h.p. 20 in., i.p. 33 in., l.p. 54 x 40 in. stroke, with attached air, bilge and feed pumps. A piston valve will be fitted to the h.p. and balanced, double ported slide valves will be fitted to the i.p. and l.p. cylinders, with an assistant cylinder on the latter. Steam will be supplied by 2 Scotch boilers 14½ ft. diameter x 11 ft. long, with a working pressure of 190 lb., and developing about 1,200 i.h.p. The steam steering gear will be located on the main deck aft of the engine casing. The propelling machinery, boilers, and a very considerable portion

Steel Steamship War Isis, Just Before Launching at Port Arthur, Ont., Apr. 3, 1918.

ment, with 20 ft. draft, approximately 4,800 tons. She is built on the transverse system, inner bottoms throughout, with 2 large cargo holds, each fitted with 2 hatches. This ship represents the full canal size, standard type, being built to the Imperial Munitions Board order. The cargo will be handled by 4 steel derrick

of the auxiliary machinery were built in the company's shops.

The Port Arthur Shipbuilding Co.'s programme for this season includes 5 full canal size, ocean going freight steamships, similar to the War Isis, and 10 trawlers of the Castle class. At present 6 vessels are under construction.

Shipbuilding at Port Arthur, Ont.

This illustration shows, from left to right, the steel cargo steamship War Isis, building for the British Government, and the trawler Tr. 5, for the Naval Service Department, both of which were launched April 3. At the right hand side is shown the keel for a sister ship to the War Isis, and in the right background, another smaller ship, War Osiris, also under construction.

masts, equipped with 2 booms each, served by 7 x 12 reversible double drum steam winches. The bridge erection will be located amidships, enclosing the engine and boiler casings, the surrounding spaces on the main deck being available for the stowage of cargo or coal. On the bridge deck will be accommodation for the officers, engineers, wireless operators and gun crew. The saloon, galley, pantry and wireless room will also be located on this deck. The captain's quarters and chart room will be located on the boat deck, with the pilot house and flying bridge above. The hospital and quarters for boatswain and carpenter will be located in the forecabin. Separate quarters and

Victoria Harbor Works.—Sir James Loughheed stated in the Senate, May 1, that five tenders were received for the construction of the breakwater and wharves at the outer harbor at Victoria, the contract for the breakwater being awarded to Sir John Jackson (Canada), Ltd., for \$1,797,801.88, schedule rates; and for the wharves to Grant, Smith & Co. and McDonnell, Ltd., for \$2,244,745.15, schedule rates. The total cost of the works, not including sheds, is: on the breakwater, \$2,206,936.02; and on the wharves, \$2,421,830, of which \$23,760, including drawback of \$7,040, is held in abeyance. The total paid to May 1, is \$4,604,106.02.

## Water Ballast Favored for Ocean Going Vessels.

So persistent has been the claim advanced by importers of mineral commodities that these commodities occupy no cargo space—only that usually given over to ballast—that the United States Shipping Board committee on mineral imports and exports decided to make a thorough investigation of the subject. F. W. Paine, one of the committee's experts, was assigned to the work and has submitted a report which shows that the proportion of ocean tonnage using water ballast is now so great as to render negligible the claim that this space is available for the carrying of minerals. He says:—

"Double bottom ballast tanks enable ships to carry a weight of water equal to about one sixth, in most modern ships one quarter, of their cargo carrying capacity. This water is held rigid, and acts as solid ballast. Deep tanks, peak tanks, etc., are other forms in use additional to the bottom tanks, and enable ships to carry a weight of water equal to one fourth to one third of cargo capacity. In consequence of the continual development of the water ballast tank construction ever since the sixties, there are now very few ships afloat that require stone, sand, or other solid ballast. The rare exceptions are very old ships, especially a few old Great Lakes vessels that are now on the ocean.

"This development was a most important one, as trade conditions before the war were such that from one fourth to one half of the voyages made by cargo ships, especially those not belonging to standard steamship lines, had to be made without cargo. Great numbers of ships continually sailed to all parts of the world with no ballast except water.

"If this were the condition in normal or peace times, it is still more the case today. In these days, when the number of ships is inadequate, it is exceedingly

fortunate that there is no necessity for ships to be delayed loading and unloading ballast, when a voyage must be made without cargo, as happens so often. No more is it necessary for ships to be delayed in loading and unloading cargoes of goods, such as luxuries or non essential commodities. Besides loading delays the added weight makes the ship sink low in the water and makes travel slower, especially in calm weather. Also this greater amount of hull under water is a larger target for German torpedoes."

The B.C. Trading & Transportation Co., Ltd., Kamloops, has changed its name to Sawmills Machinery Co., Ltd.

# The Preservation of Hulls, A Problem of Wooden Shipbuilding.

By Bror L. Grondal, Assistant Professor, College of Forestry, University of Washington, Seattle.

A problem that offers more difficulties from the standpoint of wood preservation than the protection of the interior framing of wooden vessels, is the protection of the outer sheathing or planking of the hulls. The salt waters of the ocean harbor a number of wood-destroying organisms that in some places make short work of unprotected wooden bottoms. These organisms are the molluscs known as ship-worms, commonly called *xylotrya* and *teredo*, and a number of crustaceans, the most destructive being the common limnoria. In addition to the problem of preventing the attacks of these, some means must be provided for preventing the accumulation of barnacles and seaweed, which materially affect the speed of a vessel. One of the earliest expedients adopted for this purpose was the charring of ships' bottoms. The planking was periodically charred to a depth of about a quarter of an inch with a slow fire. This was effective for only a few months, when it became necessary to again char the hull. Such charring resulted in the partial destructive distillation of the outermost portion of the wood, liberating small amounts of wood tar containing a high percentage of phenoloid bodies, which are highly distasteful to ship-worms. As these are, however, soluble in water, they soon leached out, leaving the wood unprotected. The charred surface also prevented the accumulation of barnacles, for as soon as a free-swimming larva attempted to attach itself to the charred surface, the charcoal, being very friable, would break loose, releasing the barnacle. The destruction of the wood, due to repeated charrings, makes this method impracticable.

Later the sheathing of bottoms with lead was attempted with only partial success, as it developed that the lead corroded very rapidly around the fastenings, and the adhesion of barnacles was not prevented. Iron sheathings were also found to be impracticable, due to rapid corrosion, though iron sheathings in the form of flat-headed nails driven so closely together that the subsequent rusting forming a complete coating of iron oxide are still used to a limited extent, both for the protection of small ships' bottoms and piling exposed to the attacks of ship-worms. Zinc sheathing also failed to give satisfactory results, corroding very rapidly, possibly due to the galvanic action between the zinc and the fastenings used in attaching it to the hull. Copper and brass sheathings have proved to be by a considerable margin the best protection for ships' bottoms. Brass composed of from 50 to 60% of copper, alloyed with zinc, has given very satisfactory results. If the alloy is not complete, however, such sheathings will disintegrate very rapidly, as corrosion will spread very rapidly from the small nodules of zinc in the metal. Cold rolled furnace copper is the best of metal sheathings for the protection of ships' bottoms. As ship-worms cannot bore through metal, copper, of course, accomplishes its purpose in this regard. The most valuable property of copper, however, lies in the slow and very uniform corrosion of this metal. Though barnacles readily attach themselves to the metallic surface, they do not have time to reach their full development before the slow wasting of the copper loosens their attachment to the copper, compelling them to drop off. As a general thing, 20 to 30 gauge sheet copper is

used. The amount of copper sheathing per gross ton, of course, varies widely with the shape and size of the hull of the vessel, small boats requiring as much as 60 lb. of copper per gross ton.

At present, the high cost of copper prohibits the use of this material in the sheathing of ships. The life of copper sheathing is at the best only from five to seven years, when it is necessary to renew the sheathing. The cost of copper has led to the development of substitutes in the form of paints, which are applied directly to the surface of the wood. There are a number of different brands of paints for this purpose in the market. Some are positively useless, others accomplish their object to a satisfactory degree. The composition of such paint is invariably supposed to be a profound secret—and some of the secrets are truly laughable. One method of preventing the attacks of ship-worms, devised by one of the Anthony Comstocks of New York city in the early part of the nineteenth century (his name has been forgotten), consisted in pitching the hull with hot coal tar pitch, and before the pitch had hardened liberally sprinkling the surface with Scotch snuff. He reasoned that as tobacco was such iniquitous stuff, the ship-worms would surely be discouraged.

Some "copper" paints, are, however, quite effective. The writer will not attempt to say which is the most effective. As the pigment of these paints is invariably copper oxide, they commonly are spoken of as "copper" paints. The nature of the vehicle varies widely, from linseed oil with a high percentage of linseed driers, to soya bean oil and kerosene. "Princess metallic" is very commonly used. Viewing the matter from an impartial standpoint, the writer feels that there is a tremendous waste of good copper oxide in marine paints. Whiting could be made to do very well, for the toxicity necessary to prevent the ingress of ship-worms can readily be supplied through the addition of small amounts of mercuric chloride, or such alkaloids as acridene. Aside from the toxic effect of the paint upon wood-borers, the basic principle in the manufacture of a successful "copper" paint seems to lie in the compounding of the paint in such a manner that the surface will slowly waste away, preventing the adhesion of barnacles and the seaweed which these will gather, and at the same time adhering properly to the wood. From the foregoing it becomes apparent why creosoting or the application of coal tar is not effective in the treatment of ships' bottoms. Either will prevent the ingress of ship-worms, but anyone who is familiar with the use of creosoted piling for dock construction will recall that such piling quickly becomes covered with a healthy growth of barnacles.

"Copper" paints, like all other paints, should only be applied to dry surfaces. In painting scows, tugs and other bottoms, the first or priming coat, which is applied after the seams have been properly caulked, is thinned with refined coal tar creosote or benzine in equal proportions, or one gallon of the paint to one gallon of the thinner. Care must be taken to cover the surface of the planking thoroughly before the painting is continued with a second coat. The caulking seams are then filled with a mixture of Portland cement and sand, in the proportions of about three parts of cement to one part

of sand. Some shipbuilding concerns make a special point of the use of only pure white silica sand in this connection, but the writer feels that this is unnecessary. Care should be taken to use fine sand, however, to enable the smooth troweling of the seam. The mortar is not allowed to completely fill the caulking seam, the point of the trowel being used to remove surplus mortar. When the mortar has thoroughly set, after the course of several days, surplus mortar that has sloped upon the surface of the planking is removed with coarse sandpaper. The hull is then ready for the second coat. While cement adheres very strongly to the caulking seam, its use is objectionable when it becomes necessary to re-caulk a seam, due to the difficulty of removing it, as in time it becomes almost flint hard.

The writer has experimented with mastic for this purpose, composed of paving pitch, asphalt and wood pulp, thinned with engine distillate until it acquires a workable consistency, with seemingly favorable results. A definite statement cannot, however, be made at this time. Some ship owners require the first coat to be unthinned copper paint, though the necessity for this is disputed by some experienced shipbuilders.

After the seams have been cemented, the second coat of copper paint, full strength, is applied. As these paints have approximately the consistency of ordinary paint, though in some cases they may be a little thicker, no difficulty is experienced in finding painters who are capable of doing the work.

After the second coat has dried for at least two days, the application of a third coat is necessary. As an example of the antique ideas that have survived since the earlier days of our shipbuilding industry, the writer regretfully cites the following requirement of one "expert" inspector who is supervising the construction of vessels for the United States Emergency Fleet Corporation at one of the Pacific Coast yards. This inspector has ruled that the third or final coat of paint shall not be applied to the hull until at least the day before the launching of the vessel; preferably the day on which the vessel is to be launched. The effect of such a procedure is, of course, bad in every respect, as the wet paint is washed from the surface of the wood, making the third coat quite useless. Rational practice demands that the final coat be given at least three days before the launching of the vessel, allowing at least time enough for the paint to set before the ship goes down the launching ways.

Formerly all copper paint was applied to the planking by the brush method. This method is almost entirely used in the smaller yards. On the Pacific Coast, however, the larger yards are using paint "guns," or sprayers, which are operated by compressed air. With this method the paint is quickly and evenly applied to the surface of the wood, with a considerable saving in the labor cost of painting. Five good painters, with brushes, will cover the hull of a typical vessel about 250 ft. long in one day. When the "gun" is used, two men will cover the same vessel in one day. Though some paint is, of course, lost when the "gun" is used—about 15 gallons in giving the vessel three coats—this expense is more than compensated for by the saving in labor costs and the added convenience of the method. In spite of the fact that the paint is applied more

evenly and thoroughly with the "gun," the same government inspector mentioned above has ruled against its use, demanding the painting by brush as in the "good old days."

In barrel lots, the cost of copper paint averages about \$2.20 a gallon, and when used without thinning for three coats, one gallon will cover about one and one-fifth squares. By thinning the first coat with an equal quantity of thinner, one gallon of paint will cover approximately two squares.

Sea going vessels that have been properly painted with "copper" paints must be repainted at intervals varying from six to eight months. One company operating a large fleet of scows on Puget Sound reports the repainting of scow bottoms at intervals of 12 months. The first repainting must be done about 6 months after the vessel has been placed in service, as spots that are covered by the propping used in supporting the vessel during construction receive only one coat, which is applied immediately before launching after the vessel is safely resting in the launching cradle.

In conclusion, the writer wishes to emphasize the necessity of allowing each coat of paint to dry thoroughly before the next is applied. When properly applied, copper paint is an excellent substitute for copper sheathing, and where it is convenient to dock the vessel at intervals of from 6 to 3 months, will give even superior service.

### Motor Generator and Switch Arrangement C.P.R. Telegraphs.

W. J. Camp, Assistant Manager, C.P.R. Telegraphs, Montreal, forwards a sketch of the motor-generator and switch arrangement designed by him and which is in use at the company's large terminal offices.

Referring to the diagram, it will be noted that when the single-pole single-throw switches 1 and 4 are closed, positive and negative machines are connected respectively to the positive and negative bus-bars.

When it is desired to run machine C to relieve machine A, the double-pole double-throw switch is thrown to the left. Then, closing switch 2 places machines A and C in multiple to the bus-bar. After machine C has reached running speed switch 1 may be opened, thereby maintaining an uninterrupted application of positive potential to the multiplex sets while one machine is started and another stopped.

Machine C can, in like manner, be used to supply negative potential in place of machine B, by throwing the double-pole double-throw switch to the right.

This arrangement of switches provides against short-circuits between generators; the only precaution required being that the single-pole switch of the generator to be stopped must be opened before the switch in the motor circuit of that machine is opened.—Telegraph Age.

### Telegraph and Telephone Lines' Estimates for 1918-1919.

The Public Works Department estimates, for the year ending Mar. 31, 1919, contain, among others, the following items:—

NOVA SCOTIA.	
Cape Breton telegraph* system, renewal of poles between Eskasoni and East Bay .....	\$ 700.00
PRINCE EDWARD ISLAND.	
Half cost of reconstruction of telegraph lines jointly owned by Anglo-American Telegraph Co., and Dominion Government .....	17,000.00
QUEBEC.	
Improvements to repair service .....	3,000.00
SASKATCHEWAN AND ALBERTA.	
Moose Jaw, Wood Mountain telegraph line, renewal of poles, to complete Peace River line, office and dwelling at Grande Prairie .....	4,000.00
Peace River line, office and dwelling at Dunvegan .....	4,000.00
Peace River line, woods clearance at Edmonton to Peace River .....	5,000.00
Peace River line, completion of pole renewals between Edmonton and Athabaska .....	570.00
Peace River line, repairs and renewals between Spirit River and Pouce Coupe, and between Athabaska and Grouard .....	1,545.00
Qu'Appelle, Edmonton line, shifting wire to pole line of C.N.R. between Humboldt and Warman, Sask. ....	1,000.00
Repairs and improvements to office buildings .....	2,750.00
Shifting line to roadways .....	5,500.00
BRITISH COLUMBIA.	
Mainland telegraph and telephone lines, general repairs and improvements	3,300.00
Mainland telephone line, extensions inootenay District .....	4,000.00

The following items are chargeable to collection of revenue:—

Telegraph and Telephone Lines.	
Prince Edward Island and mainland Land and cable telegraph lines, Lower St. Lawrence and Maritime Provinces, including working expenses of vessels required for cable service .....	\$7,000.00
Saskatchewan .....	202,000.00
Alberta .....	58,000.00
British Columbia, mainland .....	79,000.00
British Columbia, Vancouver Island district .....	60,000.00
Yukon system (Ashcroft-Dawson)...	100,000.00
Telegraph and telephone service generally .....	250,000.00
	10,000.00
	\$766,000.00

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

L. C. Chase & Co., car upholstery, Boston, Mass.—Frank Hopewell, head of the firm, died, Apr. 25, aged 61. He had been associated with the company since 1881.

The Northern Electric Co., Montreal, has established a department for the sale of water sterilizing equipment, on the ultra violet ray system, in charge of S. H. Opdyke.

Commercial Acetylene Supply Co., Inc.

Commercial Acetylene Welding Co., Inc., New York, has changed its name to Commercial Acetylene Supply Co., Inc. H. H. Wood, 18 Toronto St., Toronto, is Canadian Manager.

Robert W. Hunt & Co., Ltd., Montreal, has received an order from the Dominion Government to inspect the 100,000 tons of steel rails which it has ordered from the Dominion Iron & Steel Co.

Independent Pneumatic Tool Co.—A reorganization has been effected of the Independent Pneumatic Tool Co., a New Jersey corporation, and the Aurora Automatic Machinery Co., which was incorporated in Delaware. Both companies were owned by the same interests, the Independent Pneumatic Tool Co. being the selling division for the Thor pneumatic and electric tools, and the Aurora Automatic Machinery Co. being the manufacturing department. The latter company also manufactures and sells Thor motorcycles and gasoline engines. The combining of the two companies under one corporate name is for convenience in handling business. Under the reorganization plans the company is known as the Independent Pneumatic Tool Co., incorporated in Delaware for \$3,000,000. The directors are:—J. P. Hopkins, Chairman; J. D. Hurley, President; R. S. Cooper, Vice President; Fletcher W. Buchanan, Secretary, and E. G. Gustafson, Treasurer; J. J. McCarthy, W. A. Libkeman, L. S. Florsheim, R. T. Scott, and A. Gatzert. The general offices are in the Thor Building, 1307 South Michigan Boulevard, Chicago. Branches are maintained in New York, N.Y.; Pittsburg, Pa.; Detroit, Mich.; Birmingham, Ala.; San Francisco, Cal.; Toronto and Montreal. The pneumatic and electric tool factory is located in Aurora, Ill., and the motorcycles and gasoline engine plant is at 361 West Superior St., Chicago.

### Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Canadian Society of Civil Engineers—F. S. Keith, 176 Mansfield St., Montreal.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Railway Association for National Defence—W. M. Neal, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

# Canadian Railway and Marine World

July, 1918

## Freight and Passenger Rates Increased by United States Government.

The Director General of U.S. Railroads issued general order 28 on May 25, providing for increases in freight and passenger rates. This was followed on June 12 by a supplement making a number of changes. The order is of such great general importance that it is given practically in full, in consolidated form, as follows:—

Whereas it has been found and is hereby certified to the Interstate Commerce Commission, that in order to defray the expenses of federal control and operation fairly chargeable to railway operating expenses, and also to pay railway tax accruals other than war taxes, net rents for joint facilities and equipment, and compensation to the carriers, operating as a unit, it is necessary to increase the railway operating revenues, and whereas the public interest requires that a general advance in all freight rates, passenger fares, and baggage charges on all traffic carried by all railroad and steamship lines taken under federal control under an act of Congress approved Aug. 29, 1916, entitled "An act making appropriations for the support of the army for the fiscal year ending June 30, 1917, and for other purposes," shall be made by initiating the necessary rates, fares, charges, classifications, regulations, and practices by filing the same with the Interstate Commerce Commission under authority of an act of Congress approved Mar. 21, 1918, entitled "An act to provide for the operation of transportation systems while under federal control, for the just compensation of their owners, and for other purposes." Now, therefore, under and by virtue of the provisions of the said act of Mar. 21, 1918, it is ordered that all existing freight rates, passenger fares, and baggage charges, including changes heretofore published but not yet effective, on all traffic carried by all said railroad and steamship lines under federal control, whether the same be carried entirely by railroad, entirely by water, or partly by railroad and partly by water, except traffic carried entirely by water to and from foreign countries, be increased or modified, effective June 25, 1918, as to freight rates, and effective June 10, 1918, as to passenger fares and baggage charges, to the extent and in the manner indicated and set forth in the exhibit hereto attached and made part hereof, by filing schedules with the Interstate Commerce Commission effective on not less than one day's notice.

**Freight Rates.—Sec. 1. Class rates (domestic).—**(a) All class rates, both interstate and intrastate, shall be increased 25%, except that between points in Oklahoma the class rates for single and joint lines prescribed by the Interstate Commerce Commission for use between Shreveport, La., and points in Texas common-point territory, as shown in Interstate Commerce Commission reports, vol. 48, pp. 345 and 346, plus 25%, shall be applied.

(Paragraphs (b) and (c) of order 28 were cancelled by the supplement.)

(d) After such increase no rates shall be applied on any traffic moving under class rates lower than the amounts in cents per 100 lb. for the respective classes

as shown below for the several classifications. The minimum rate on any article shall be the rate for the class at which that article is rated in the classification shown below applying to the territory where the shipment moves.

Official Classification.												
Classes	1	2	3	4	5	6						
Rates	25	21½	17	12½	9	7						
Southern Classification.												
Classes	1	2	3	4	5	6	A	B	C	D		
Rates	25	21½	19	16	13	11	9	10	7½	6½		
Western Classification.												
Classes	1	2	3	4	5	A	B	C	D	E		
Rates	25	21	17½	15	11	12½	9	7½	6½	5		
Illinois Classification.												
Classes	1	2	3	4	5	6	7	8	9	10		
Rates	25	21	17½	15	11	12½	9	7½	6½	5		

**Section 2. Commodity rates (domestic).—**(a) Commodity rates, both interstate and intrastate, on the following articles applicable on carloads, except as otherwise provided, shall be increased by the amounts indicated below:—

Coal, per net ton of 2,000 lb.—Where rate is 0 to 49c a ton; 15c a ton. Where rate is 50 to 99c a ton; 20c a ton. Where rate is \$1 to \$1.99 a ton; 30c a ton. Where rate is \$2 to \$2.99 a ton; 40c a ton. Where rate is \$3 or higher a ton; 50c a ton. Where rates have not been increased since June 1, 1917, the increase to be made now shall be determined by first adding to the present rate 15c a ton, net or gross as rated, or if an increase of less than 15c a ton, net or gross as rated, has been made since that date, then by first adding to the present rate the difference between the amount of that increase and 15c a ton, net or gross as rated; and to the rates so constructed the above increases shall now be added. Where rates from producing points or to destinations have been based on fixed differentials in cents a ton, such differentials to be maintained, the increase to be figured on the highest rated point or group.

Coke, per net ton of 2,000 lb.—Where rate is 0 to 49c a ton; 15c a ton. Where rate is 50 to 99c a ton; 25c a ton. Where rate is \$1 to \$1.99 a ton; 40c a ton. Where rate is \$2 to \$2.99 a ton; 60c a ton. Where rate is \$3 or higher a ton; 75c a ton of 2,000 lb. Where rates have not been increased since June 1, 1917, the increase to be made now shall be determined by first adding to the present rate 15c a ton, net or gross as rated, or if an increase of less than 15c a ton, net or gross as rated, has been made since that date, then by first adding to the present rate the difference between the amount of that increase and 15c a ton, net or gross as rated; and to the rates so constructed the above increases shall now be added. Where rates from producing points or to destinations have been based on fixed differentials in cents a ton, such differentials to be maintained, the increase to be figured on the highest rated point or group.

Ores, iron 30c a net ton of 2,000 lb.; except that no increase shall be made in rates on ex-lake ore that has paid one increased rail rate before reaching lake vessel.

Stone, artificial and natural, building and monumental, except carved, lettered, polished, or traced—2c per 100 lb.

Stone, broken, crushed, and ground—1c per 100 lb.

Sand and gravel 1c per 100 lb.

Brick, except enameled or glazed—2c per 100 lb.

Cement, cement plasters, and plaster—2c per 100 lb.

Lime—1½c per 100 lb.

Lumber and articles taking same rates or arbitraries over lumber rates; also other forest products, rates on which are not higher than on lumber—25%, but not exceeding an increase of 5c per 100 lb.

Grain, wheat—25%, but not exceeding an increase of 6c per 100 lb.

Other grain—New wheat rates.

Flour and other mill products—25%, but not exceeding an increase of 6c per 100 lb., and increases shall be not less than new rates on wheat.

Cotton—15c per 100 lb.

Cotton linters—New cotton rates.

Live stock—25%, but not exceeding an increase of 7c per 100 lb., where rates are published per 100 lb., or \$15 per standard 36 ft. car where rates are published per car.

Packing house products and fresh meats—25%, except that the rates from all Missouri River points to Mississippi River territory and east thereof shall be the same as the new rates from St. Joseph, Mo.

Bullion, base (copper or lead), pig or slab and other smelter products 25%, except that rates from producing points in the States of Arizona, California, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, and Washington, to New York, N.Y., shall be \$16.50 a net ton with established differentials to other Atlantic seaboard points; and rates from points in Colorado and El Paso, Texas, to Atlantic seaboard points shall be increased \$6.50 a net ton. Separately established rates used as factors in making through rates to the Atlantic seaboard shall be increased in amounts sufficient to protect the through rates as above increased.

Sugar, including syrup and molasses where sugar rates apply thereon—25%, except, (1) where the official classification applies, 5th class rates as increased will apply. (2) From points east of the Indiana-Illinois State line to points west of the Mississippi River, rates will continue to be made on combination of local rates or of proportional rates if published, to and from the Mississippi River; except that from points on the Atlantic seaboard to the Missouri River, Kansas City, Mo., to Sioux City, Iowa, inclusive, established differentials over the increased rates from New Orleans, La., shall be maintained. (3) From points in the States south of the Ohio River and east of the Mississippi River, also from points in the States of Louisiana and Texas, rates shall be increased by the following amounts, less the amount of any advance made in such rates since June 1, 1917:—To Chicago, Ill., 23c per 100 lb.; to St. Louis, Mo., 27½c per 100 lb.; to other points west of the Indiana-Illinois State line and west of the Mississippi River, except points in Arkansas, Louisiana, and Texas, 22c per 100 lb.; to points on and north of the Ohio River and east of the Indiana-Illinois State line rates shall be increased to maintain the former established relation to the rates from the same points of origin to Chicago, Ill., and St. Louis, Mo. (4) From producing points in Colorado, Wyoming, Montana, Kansas, and Nebraska to Missouri River territory and points in Arkansas, Oklahoma, Louisiana, and Texas and points east thereof, 22c per 100 lb. (5) From points in Idaho and Utah to points named in paragraph (4) rates shall be 15c above the rates from eastern Colorado. (6) From points in California and Oregon to points taking Missouri River rates and points related thereto under the commission's fourth section orders, and to points east of the Missouri River 22c per 100 lb.

(b) Commodity rates, both interstate and intrastate, not included in the foregoing list, shall be increased 25%.

(Paragraphs (c) and (d) of order 28 were cancelled by the supplement.)

(e) In applying the increases prescribed in this section the increased class rates applicable to like commodity descriptions and minimum weights between the same points are not to be exceeded, except that the increases in rates on sugar in carloads shall be made as expressly provided in paragraph (a) of this section.

**Sec. 3. Export and Import Rates.—**

All export and import rates shall be cancelled and domestic rates applied to and from the ports.

**Sec. 4. Filing Intrastate Tariffs with Interstate Commerce Commission.**—(a) All intrastate rates and all rates for transportation by water which are to be increased under this order, if not now on file, shall be immediately filed with the Interstate Commerce Commission. Such intrastate rates shall not be applied on interstate shipments, and the schedules containing said rates shall be so restricted.

**Sec. 5. Minimum Charges.**—(a) The minimum charge on less than carload shipments shall be as provided in the classification governing, but in no case shall the charge on a single shipment be less than 50c.

(b) The minimum charge for a line haul of a carload shipment shall be \$15, except that on brick, cement, coal, coke, logs, ore, sand and gravel, and stone

(broken, crushed and ground), the existing rates as increased under section 2 of this order, shall apply. Does not apply to charges for switching service.

**Sec. 6. Disposition of Fractions.**—In applying rates, fractions shall be disposed of as follows:

(a) Rates in cents or in dollars and cents per 100 lb. or package. Fractions of less than  $\frac{1}{4}$  or 0.25 to be omitted. Fractions of  $\frac{1}{4}$  or 0.25, or greater, but less than  $\frac{3}{4}$  or 0.75, to be shown as  $\frac{1}{2}$ . Fractions of  $\frac{3}{4}$  or 0.75, or greater, to be increased to the next whole figure.

(b) Rates per ton: Amounts of less than 5c to be omitted. Amounts of 5c or great, but less than 10c, to be increased to 10c.

(c) Rates per car: Amounts of less than 25c to be omitted. Amounts of 25c or greater, but less than 75c, to be shown as 50c. Amounts of 75c or greater, but less than \$1, to be increased to \$1.

**Sec. 7. Observance of Differentials.**—In establishing the freight rates herein ordered, while established rate groupings and fixed differentials are not required to be used, their use is desirable, if found practicable, even though certain rates may result which are lower or higher than would otherwise obtain.

**Passenger Fares and Baggage Charges.**

**Sec. 8.**—This order shall apply to all passenger fares, both interstate and intrastate, of railroads under federal control. No existing fare equal to or in excess of 3c a mile shall be reduced. All fares now constructed on a lower basis than 3c a mile shall be advanced to the basis of 3c a mile. All fares which are on a lower basis than the said existing or advanced fares, as the case may be, such as mileage or excursion tickets, shall be discontinued. These requirements are subject to the following exceptions:

(a) The provisions of sec. 1 and 22 of the act to regulate commerce, which authorize free or reduced fares or transportation, may be observed, except—that no mileage ticket shall be issued at a rate that will afford a lower fare than the regular one-way tariff fare, and that excursion tickets may be issued only to the extent and on the terms set forth in paragraphs (b) and (c) below:

(b) Round-trip tourist fares shall be established on a just and reasonable basis bearing proper relation to the one-way fares authorized by this order, and tariffs governing same shall be filed as promptly as possible with the Interstate Commerce Commission.

(c) For the national encampment of the Grand Army of the Republic and auxiliary and allied organizations at Portland, Ore., in 1918, and for the United Confederate Veterans Reunion, auxiliary and allied organizations at Tulsa, Okla., in 1918, a rate of 1c a mile in each direction via direct routes shall be authorized and confined by certificate of identification to the membership of these organizations and members of their immediate families. For the various state meetings of these organizations held during 1918, fares shall be authorized under like conditions on basis of 2c a mile in each direction and confined to limits of the state in which the meeting is held.

(d) Where public convenience will be served thereby, subject to the approval of the Director General, fares determined by the short line may be applied over longer practicable routes.

(e) Officers, enlisted men, and nurses of the U. S. Army, Navy, and Marine Corps, when traveling in uniform at own expense, shall be granted the privilege of purchasing passage tickets at one-third the regular one-way fare, via route of ticket, applicable in coach, parlor or

sleeping car, as the case may be, when on furlough or official leave of absence, except that this reduced fare shall not be granted on short-term passes from camps or when on liberty from ships or stations to nearby cities. Applicants for such tickets shall be required to submit for inspection of ticket agent military furlough or other official form of leave of absence and to surrender to ticket agent a furlough fare certificate signed by a commanding officer.

(f) Children under five years of age, when accompanied by parent or guardian, shall be carried free; children five years and under 12 years of age shall be charged half fare.

**Sec. 9.**—Commutation fares shall be advanced 10%. Commutation fares shall be construed to include all forms of transportation designed for suburban travel and for the use of those who have daily or frequent occasion to travel between their homes and places of employment or educational institutions.

**Sec. 10.**—Passengers travelling in standard sleeping cars and parlor cars shall be required to pay an additional passage charge of 16  $\frac{2}{3}$ % of the normal one-way fare, and passengers traveling in tourist sleeping cars an additional passage charge of 8  $\frac{1}{3}$ % of the normal one-way fare. The foregoing charges are in addition to those required for the occupancy of berths in sleeping cars or seats in parlor cars.

**Sec. 11.**—The following minimum number of tickets of the class good for passage in sleeping or parlor cars shall be required for occupancy of drawings rooms, compartments or sections in parlor or sleeping cars: Two adult tickets for a drawing room in a sleeping car. Two adult tickets for a compartment. One and one-half adult tickets for a section. Five adult tickets for exclusive occupancy of drawing room in a parlor car.

**Sec. 12.**—Passenger fares or charges for accommodation and transportation of passengers entirely by water, or partly by water and partly by rail, shall be increased proportionately with fares and charges for the transportation of passengers via rail.

**Sec. 13.**—The basis for computing charges for excess baggage transported under lawfully effective tariffs shall be 16  $\frac{2}{3}$ % of the normal one-way passenger fare, with minimum of 15c per 100 lb. and minimum collection of 25c per shipment.

**Sec. 14.**—Tickets purchased prior to June 10, 1918, will not be honored for passage on and after that date, except—

(a) Passengers en route on June 10, 1918, on one-way tickets will be carried to destination by continuous passage without additional charge.

(b) Round-trip tickets, portions of which have been used prior to June 10, 1918, or held by passengers en route on June 10, 1918, shall be honored in accordance with original tariff conditions under which sold without additional payment except that they shall be subject to the same requirements as one-way tickets in respects of additional payment for passage in sleeping or parlor cars as prescribed in section 10.

Tickets made invalid for passage by this order will be redeemed from original purchasers as follows: Unused tickets will be redeemed at amount paid therefor. Partially used one-way tickets will be redeemed by charging tariff fare at time of journey for portion used and refunding difference between such amount and fare at which sold. In redemption of mileage, scrip, or credential forms the purchaser shall be given the benefit for the distance traveled of a net basis pro-

portionate to that which would have applied had the entire book been used according to its contract.

**Sec. 15.**—All passenger fares lower than those hereinbefore prescribed, such as mileage, party, second-class, immigrant, convention, excursion and tourist fares, shall be discontinued until further notice, except that tourist fares shall be reestablished as prescribed in sec. 8, paragraph (b) hereof.

**Sec. 16.**—Tariff provisions intended to assure the long haul to carriers, and which prevent the free interchange of traffic, shall be eliminated.

**Sec. 17.**—Stop-overs on one-way tickets, side trips at free or reduced fares, discounts by use of excess baggage permits or excess money coupon books, and the sale of one-way tickets bearing limit in excess of time necessary to make trip by continuous passage shall be discontinued.

**Sec. 18.**—Optional routes may be used only when specified in tariffs.

**Sec. 19.**—In publishing fares and charges, under this order, tariffs may be used which increase the present fares by fixed percentage to bring them to the bases authorized herein, even though the actual fares so constructed may be fractionally more or less than 3c a mile.

**General.**—**Sec. 20.**—The rates, fares and charges to be increased under this order are those existing on May 25, 1918, including changes theretofore published, but not then effective and not under suspension, except where the Interstate Commerce Commission prior to that date authorized or prescribed rates, fares and charges, which shall have been published after that date, and previous to June 15, 1918, the increases here prescribed shall apply thereto. Such authorized, or prescribed rates, fares and charges not so published shall be subsequently revised when published by applying the increases prescribed herein.

**Sec. 21.**—(a) All schedules, viz., tariffs and supplements, covering passenger fares and baggage charges published under the provisions of this order shall bear on the title page the following:—The fares\* made effective by this schedule are initiated by the President of the U.S. through the Director General, U.S. Railroad Administration, and apply to both interstate and intrastate traffic. This schedule is published and filed on one day's notice with the Interstate Commerce Commission under general order 28 of the Director General, U.S. Railroad Administration, dated May 25, 1918.

(b) All schedules, viz., tariffs and supplements, published to cover freight rates under the provisions of this order shall bear on the title page one of the following legends:—

If all rates therein are to be restricted to apply on intrastate traffic only, use the following:—"The rates made effective by this schedule are initiated by the President of the U.S. through the Director General, U.S. Railroad Administration, and apply to intrastate traffic only. This schedule is published and filed on one day's notice with the Interstate Commerce Commission under general order 28 of the Director General, U.S. Railroad Administration, dated May 25, 1918, and amended June 12, 1918."

If all rates therein are to apply on interstate traffic only, use the following:—"The rates made effective by this schedule are initiated by the President of the U.S. through the Director General, U.S. Railroad Administration, and apply to interstate traffic only. This schedule is published and filed on one day's notice with the Interstate Commerce Commis-

sion under general order 28 of the Director General, U.S. Railroad Administration, dated May 25, 1918, and amended June 12, 1918."

If all rates therein are to apply on both intrastate and interstate traffic, use the following:—"The rates made effective by this schedule are initiated by the President of the U.S. through the Director General, U.S. Railroad Administration, and apply to both interstate and intrastate traffic. This schedule is published and filed on one day's notice with the Interstate Commerce Commission under general order 28 of the Director General, U.S. Railroad Administration, dated May

25, 1918, and amended June 12, 1918."

If some of the rates therein are to apply to interstate traffic and others to intrastate traffic, use the following:—"The rates made effective by this schedule are initiated by the President of the U.S. through the Director General, U.S. Railroad Administration, and apply to interstate or intrastate traffic, as provided herein. This schedule is published and filed on one day's notice with the Interstate Commerce Commission under general order 28 of the Director General, U.S. Railroad Administration, dated May 25, 1918, and amended June 12, 1918."

On baggage tariffs use word charges.

## Regulations for Protection of Railway Employees.

The Board of Railway Commissioners passed general order 236, May 20, as follows:—Upon hearing the application of the Trainmen's Association of Canada, for revision of order 5888, Dec. 16, 1908, making provision for the protection of railway employees, and upon the reports of the board's Chief Operating Officer and Chief Engineer, it is ordered as follows:

1. Whereas subsec. 3 of sec. 264 of the Railway Act provides that

"There shall also be such a number of cars in every train equipped with power or train brakes that the engineer of the locomotive drawing such train can control its speed, or bring the train to a stop in the quickest and best manner possible, without requiring brakemen to use the common hand brake for the purpose."

Therefore, at least 85% of the number of cars in every train shall be equipped as above required.

2. When more than one engine is attached to a train, the engineer of the leading engine shall operate the brakes.

3. No light engine, nor two or more light engines coupled, when the movement is either on a single track or against the current of traffic on a double track, shall be run a greater distance than 25 miles in any one direction without a conductor appointed for service as such and possessed of the qualifications set out in paragraph (b) of sec. 5 of this order.

4. No railway company shall permit any employee to engage in the operation of trains, or handle train orders, without first requiring such employee to pass an examination on train rules and undergo a satisfactory eye and ear test by a competent examiner.

5. (a) Locomotive engineers must be at least 21 years of age; undergo a satisfactory eye and ear test by a competent examiner; and pass an examination on train rules and regulations, and the proper care and operation of locomotives and air brakes.

(b) Conductors must be at least 21 years of age; undergo a satisfactory eye and ear test, and pass an examination on train rules and regulations and the operation of air brakes.

(c) Telegraph or telephone operators engaging in the operation of trains or handling train orders must be at least 18 years of age, write a legible hand, and pass an examination on train rules and regulations. Telegraph operators must be able to send and receive messages at the rate of not less than 20 words a minute.

(d) Train dispatchers must be at least 21 years of age, be familiar with the line over which they have charge, and pass an examination on train rules and regulations.

(e) Railway companies shall (within 90 days from the date of this order) file with the board a copy of each examination paper for the examinations herein re-

quired to be passed by the employees of such railway company.

6. All railway companies shall strictly conform to the rules and regulations from time to time approved by the Master Car Builders' Association, governing the loading of lumber, logs and stone upon open cars, and the loading and carrying of structural material, plates, rails and girders; and no material of any kind shall be carried on the roofs of cars.

7. (a) All open drains crossing tracks in railway yards shall be safely covered for at least 5 ft. from the gauge side of each rail, except in times of flood, when temporary open drains may be provided if necessary.

(b) No semaphores, signals, poles, high or intermediate switchstands, or piles of material, erected or placed in future, shall be nearer than 6 ft. from the gauge side of the nearest rail.

(c) No structure, except mail cranes, which shall be erected and maintained as directed by order 5647, Nov. 20, 1918, over 4 ft. high, shall hereafter be placed within 6 ft. from the gauge side of the nearest rail without first obtaining the board's approval.

(d) Water stand-pipes shall not be nearer than 2½ ft. from the widest engine cab, and the spout of the stand-pipe shall, when not in use, be fastened parallel with main track, and engineers are required to see that this is done after using any such pipe.

8. Every person or company offending against any of the foregoing provisions shall forfeit and pay \$50 for every such offence.

9. Orders 5888 and 12225 (general orders 22 and 65), dated Dec. 16, 1908, and Nov. 9, 1910, made herein are rescinded.

**Protection of Railway Employees.**—The Board of Railway Commissioners passed general order 237, May 31, requiring railway companies to adopt the following rule:—"Where two main tracks parallel each other and are less than 20 ft. from centre to centre, whether such tracks are for double or single track operations, employees in every instance, when stepping out of the way of approaching trains must move to the right of way and not to the other track."

**Great Northern Subsidiaries.**—The Board of Railway Commissioners has approved bylaws of the Great Northern, Crows Nest Southern, New Westminster Southern, and Victoria & Sidney Railways, and Victoria Terminal Ry. & Ferry Co., authorizing H. H. Brown, General Freight Agent, and C. E. Stone, Passenger Traffic Manager, to prepare and issue tariffs of tolls to be charged on those railways.

## Air Sand Blast Machine at Ogden Shops, C.P.R.

The accompanying illustration shows plan of an air sand blast machine, which is used at the C.P.R. shops at Ogden, Alta., for sand blasting tender tanks, cabs,

dome casings, driving wheels, or other parts of locomotives, removing all substances right down to bare iron, and thereby giving the opportunity to do the best painting possible.

## Safety Appliances for Freight Cars.

The Board of Railway Commissioners passed general order 229, May 9, as follows:—Re general order 128, July 20, 1914, and the application of the Grand Trunk Pacific, Canadian Pacific, and Canadian Northern Railways for an extension of time of 18 months within which to equip their freight cars with safety appliances, as required under the said order. Upon hearing the applications at Ottawa, May 7, in the presence of counsel for the railway companies and representatives of the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, it is ordered that the railway companies subject to the board's jurisdiction be granted an extension of time until Sept. 30, 1919, within which to make the changes required under the said order, the railway companies to continue their present practice of filing with the board monthly reports of the progress made in complying with the requirements of said order.

**Tree Planting for Snow Fences.**—T. A. Hoverstad, Agricultural Commissioner, Minneapolis, St. Paul & Sault Ste. Marie Ry., in acknowledging receipt of Canadian Railway and Marine World for May, containing an article on tree planting for railway snow fences, writes: "I feel that you have given the matter of tree planting along railways a great stimulus forward. I am sure that all the northern roads that are troubled with snow blockades will begin a vigorous and systematic campaign for planting trees in the very near future. Owing to the government having taken over the operation of the railways, we shall not extend our planting this year, but we are doing a certain amount of repair planting, and are cultivating the trees now growing on the right of way."

# Acquisition of Maritime Province Railway by Dominion Government.

Canadian Railway and Marine World for June contained full particulars of the sums voted by parliament to take over seven Maritime Province railways, viz., the Elgin & Havelock, Moncton & Buctouche, St. Martins, Salisbury & Albert, York & Carleton, Caraquet & Gulf Shore, and Kent Northern. As then stated, the first five of these mentioned had already been bought by the Government, but no arrangements had been made for buying the Caraquet & Gulf Shore and Kent Northern, although \$200,000 and \$60,000 respectively were provided in the supplementary estimates passed at the Dominion Parliament's recent session and will be available if the owners wish to accept the same. The Elgin & Havelock, Moncton & Buctouche, St. Martins and York & Carleton Railways were taken over on June 1 and are being operated as Intercolonial Ry. branches. The Salisbury & Albert will be taken over on July 1.

Following are details respecting these railways compiled from official information. The figures as to operation are those for the year ended June 30, 1916.

**Caraquet & Gulf Shore Ry.**—The Caraquet Ry. was incorporated by the New Brunswick Legislature in 1882, and Dominion subsidies were voted in 1883, and the line from Gloucester Jet. on the Intercolonial Ry. to Shippegan Harbor, 68 miles, was opened for traffic by the contractor in 1887, and taken over by the company in 1889. The Dominion Government gave subsidies of \$224,000, and the New Brunswick Government \$180,000. In 1884 the Gulf Shore Ry. was incorporated by the N. B. Legislature, and in 1894-7 the Dominion Parliament voted and paid subsidies of \$53,699.20, the New Brunswick Government providing an additional \$41,950, for the construction of a line from the C. Ry. to Tracadie, 16.78 miles. These lines were generally operated as the Caraquet & Gulf Shore Ry., and were acquired about 1906 by a Toronto syndicate. The present capitalization is \$1,250,000 of common stock and \$500,000 of bonds. The company owns 3 locomotives, 3 1st class passenger cars, and 15 flat cars. Its earnings for the year ended June 30, 1916, were \$81,218.37; operating expenses, \$75,494.05; net revenue \$5,724.32. It carried 19,630 passengers and 44,413 tons of freight, its trains running 32,199 miles. It is said that Sir Jno. Gibson, of Hamilton, Ont., is one of the persons principally interested in the ownership. Geo. Collins, Superintendent, Canadian Northern Ry., Trenton, Ont., is President of the company, and W. B. Cronk, Bathurst, N.B., is Vice President and Manager.

The Minister of Railways stated in the House of Commons, May 17, that the company had asked for the property double what the government was willing to pay. The Minister of Public Works said in the Commons May 23:—"We have offered the owners \$200,000 for the railway. They can't make 200,000 cents out of it in the next 10 years. We won't arbitrate. We won't pay any more. We think they will take it."

The Elgin & Havelock Ry. was built under a charter granted by the New Brunswick Legislature to the Elgin, Petitcodiac & Havelock Ry. Co., with which in 1885 the Dominion Government entered into a subsidy contract for the building of 12 miles of railway, from the Intercolonial Ry. at Petitcodiac to Havelock Corner, which was built and put in operation at the end of that year. In 1888 the

Dominion Parliament voted iron rails from the Intercolonial Ry. valued at \$44,252.82 to the company in aid of the line from Petitcodiac to Elgin, 14 miles, which was completed and opened for traffic in 1890. The company got into financial difficulties and its lines were sold under foreclosure in Oct., 1892, when the present company acquired possession and obtained a New Brunswick charter of incorporation. An extension to Keith's Mills was made subsequently, making the total mileage 28. The company owns 1 passenger and 1 freight locomotive, 1 1st class passenger car and 1 combination car; 2 box, 4 flat cars, and 1 stock car. In addition to the Dominion subsidies noted above, the New Brunswick Government voted \$107,500, and \$13,000 was paid by subsidies by municipalities. The capital stock outstanding is \$44,900, and there are \$50,000 of bonds. For the year ended June 30, 1916, the company earned \$10,997.40, its operating expenses were \$10,700.21, leaving a net income of \$297.10. It carried 10,112 passengers and 15,860 tons of freight by mixed trains which ran 16,200 miles. J. M. Lyons, Moncton, is General Manager. A. H. Robinson, who had the title of Superintendent, has been appointed a conductor in Canadian Government Railways service.

The Kent Northern Ry. extends from Kent Jet. on the Intercolonial Ry. to Richibucto, N.B., 27 miles. It was chartered by the New Brunswick Legislature in 1884 and was granted a subsidy by the Dominion Parliament in 1888, on which \$58,334.27, including the value of iron rails, was paid, while the New Brunswick Government paid \$135,960. The St. Louis & Richibucto Ry. was chartered by the New Brunswick Legislature in 1882, and a line was built from St. Louis to Richibucto, 7.5 miles, in aid of the construction of which the Dominion Government paid \$22,400 and the New Brunswick Government \$21,000. Neither of these lines was prosperous; for a time the St. L. & R. was not operated, and then it was leased to the K.N. Ry. and afterwards abandoned. The K.N. Ry. was acquired by a Toronto syndicate in 1911. Its capital stock at June 30, 1916, was \$75,000 of common stock and \$32,000 of bonds. The company has not made any report of its earnings for some years. G. H. D. Lee, of the National Trust Co., Toronto, is President, that company being executors of the estate of the late Thos. Walmsley, of Toronto, who was one of those principally interested in the line.

The Moncton & Buctouche Ry. extends from Moncton to Buctouche, N.B., 32 miles, and was built under a New Brunswick charter, the Dominion Parliament voting a subsidy in 1889, on account of which there was paid \$101,600. The New Brunswick Government paid \$94,500 as subsidy. After a few years of operation, the line, which was then called the Buctouche & Moncton Ry., was sold under foreclosure proceedings in 1895, and the M. & B. Ry. was organized. Efforts were made by the incorporation of the Buctouche Ry. & Transportation Co., and the Moncton & Northumberland Straits Ry. Co., in 1913, to provide for the extension of this railway, but the plans were not successful. For the year ended June 30, 1916, its gross earnings were \$34,663.55; working expenses, \$31,526.69; net earnings of \$3,136.86. It carried 64,833 passengers and 21,141 tons of freight, its trains travelling 17,972 miles. It owns 3 passenger locomotives, 2 1st class and 1

combination passenger cars, 4 box and 36 flat cars. It has \$250,000 of capital stock outstanding, and \$60,000 of bonds. I. G. Merritt, New York, N.Y., is President.

The St. Martin's Ry.'s history begins with 1871, when the St. Martin's & Upham Ry. was incorporated by the New Brunswick Legislature, and a railway was built from Hampton on the Intercolonial Ry. to Quaco, 30 miles. Towards the construction of this line the Dominion Government gave subsidies in cash or in used iron rails to the amount of \$83,612.54, and the New Brunswick Government paid \$145,600. By a Dominion Act passed in 1887 the company was authorized to sell its railway to the Central Ry. Co. of New Brunswick, or any other railway company, and up to 1897 it was operated as the southern division of the Central Ry. of New Brunswick, when the Hampton & St. Martins Ry. was organized. After a chequered career the line was sold at the end of 1906 to satisfy a judgment obtained by A. P. Barnhill under foreclosure proceedings. The New Brunswick Legislature authorized the incorporation of a new company to take over and operate the line under the title of the St. Martins Ry., with a capital of \$99,000 and office at Hampton, N.B., the first directors being:—G. W. Vaughan, St. Martins; W. E. Foster, W. G. Scovil, H. A. McKeown, St. Johns; and F. M. Anderson, Campbellton, N.B. Its capital at June 30, 1916, consisted of \$99,000 of stock, and \$90,000 of bonds. Its earnings for the year were \$21,506.10; operating expenses, \$20,587.97; net revenue of \$918.13. It carried 8,589 passengers, and 19,268 tons of freight, its trains running 16,500 miles. It owns 2 freight locomotives, 1 2nd class and 1 combination passenger car, 1 box and 6 flat freight cars. Hon. W. E. Foster, Premier of New Brunswick, is President.

The Salisbury & Albert Ry. is the name given in 1910 to the Salisbury & Harvey Ry., which company acquired it from the liquidators of the old Albert Ry. in 1888. The Albert Ry. was incorporated by the New Brunswick Legislature to build a railway from Salisbury on the Intercolonial Ry. through Albert County. The line extends from Salisbury to Albert, 45 miles, and all of which is laid with steel rails, 56, 58 and 60 lb. It received \$29,391.01 as cash subsidy, and 726 tons of used iron rails and fastenings, valued at \$14,665.45, in 1888 at the time of reconstruction. It also received altogether as subsidies from the New Brunswick Government, \$455,000, and \$70,000 from municipalities. The Albert Southern Ry. was incorporated to build a line from the southern terminal of the S. & A. Ry. to Alma, 16 miles, and from Albert to Harvey Bank, 3 miles. The A.S. Ry. received \$50,460 from the Dominion Government and \$48,680 from the New Brunswick Government, for this number of miles of extension of the S. & A. Ry. After being operated unsuccessfully for several years from 1887, the extension was abandoned and the rails taken up. The S. & A. Ry. has \$150,000 of capital stock outstanding, and no bonded or other indebtedness. It owns 2 freight locomotives, 1 1st class and 1 combination passenger car, 3 box and 25 flat cars. For the year ended June 30, 1916, its earnings were \$42,076.97; operating expense, \$32,983.58; net earnings of \$9,093.39. It carried 13,328 passengers and 43,687 tons of freight during the year, its trains running 30,620 miles in so doing. The two

latter roads were originally promoted by A. A. Killam, who is now aged 84. E. M. Sherwood, Hillsboro, N.B., is Manager.

The York & Carleton Ry. was built under a charter granted by the New Brunswick Legislature in 1887. The line starts at Cross Creek station on the old Canada Eastern Ry., subsequently taken over by the Intercolonial Ry., and runs to Stanley, 5.85 miles. In 1903 a Dominion subsidy was voted towards an extension from Stanley to Ryan Brook, 4.5 miles, but construction was not undertaken until 1906, when it was completed to Glippen Glen, 3.5 miles, and to Ryan Brook, early in 1907. In 1908 a project was initiated by Dr. D. Moore, President Y. & C. R., and his associates under the title of the Stanley Ry. & Manufacturing Co., for the establishment of industries at Ryan Brook and the extension of the line from there to a junction with the National Transcontinental Ry. at Nappedoggin Lake, 9 miles. Towards the construction

of this line the Dominion Government in 1908 voted a subsidy at the usual rate. Surveys were made, but nothing was done in the way of construction, and the line has continued to be operated from Cross Creek to Ryan Brook, 10.35 miles. This mileage is reported to be laid with steel rails; there do not appear to be any bridges on the line, but there are 11 level crossings, all of which are reported to be unguarded. Its equipment consists of 1 locomotive engine and 1 car. Its earnings for the year ended June 30 were \$4,987.54; operating expenses, \$3,835.38, and net earnings \$1,152.16. It carried 7,461 passengers, and 5,994 tons of freight, its trains making 7,112 miles of mixed train running. The company received \$32,896.00 from the Dominion Government, and \$25,247.00 from the New Brunswick Government as subsidies. Its capital stock outstanding is \$105,990, and there is no bond or other outstanding indebtedness.

## Birthdays of Transportation Men in July.

Many happy returns of the day to:

A. A. Allen, Vice President, Holden Co., Ltd., Montreal, formerly Master Mechanic, Timiskaming & Northern Ontario Ry., born at Grafton, Ont., July 7, 1870.

J. H. Black, ex-Superintendent, Timiskaming & Northern Ontario Ry., now at Toronto, born near Smiths Falls, Ont., July 8, 1874.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

D'Alton C. Coleman, Assistant General Manager, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

G. C. Conn, ex-Freight Traffic Manager, Pere Marquette Ry., Detroit, Mich., now General Traffic Manager, Buick Motor Co., Flint, Mich., born at Woburn, Mass., July 1, 1867.

H. Darling, Locomotive Foreman, G.T. Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

S. E. Dewey, General Eastern Freight Agent, G.T.R., New York, born at Beckenham, Kent, Eng., July 4, 1879.

A. H. Eager, Assistant Superintendent of Rolling Stock, Western Lines, Canadian Northern Ry., Winnipeg, born at Waterloo, Que., July 15, 1868.

F. C. Foy, ex-Canadian Passenger Agent, New York Central Lines, Toronto, now on company's Buffalo staff, born at Toronto, July 5, 1881.

S. J. Hungerford, General Manager, Eastern Lines, Canadian Northern Ry., Toronto, born at Bedford, Que., July 16, 1872.

C. W. Johnston, Assistant General Passenger Agent, G.T.R., Montreal, born at Actonvale, Que., July 27, 1879.

M. Kelly, Resident Engineer, Farnham Division, Quebec District, C.P.R., Farnham, born at Thamesville, Ont., July 6, 1874.

T. King, Superintendent, Detroit Division, Western Lines, G.T.R., Detroit, Mich., born at Dunbarton, Ont., July 18, 1869.

A. E. Lock, Superintendent Car Service, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

G. A. McNicholl, Assistant General Freight and Passenger Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Montreal, July 31, 1876.

H. D. Mackenzie, Master Mechanic, Canadian Government Railways, Edmonton, N.B., born at Churchville, N.S., July 22, 1864.

J. M. Macrae, District Freight Agent, Canadian Northern Ry., Saskatoon, Sask., born at Stornoway, Scotland, July 31, 1884.

W. G. Manders, General Freight Agent, Western Lines, Canadian Northern Ry., Winnipeg, born at Owen Sound, Ont., July 24, 1876.

Neil Marple, Master Car Builder, Canada Southern Division, Michigan Central Rd., St. Thomas, Ont., born in McKillip Tp., Ont., July 1, 1860.

G. A. Mills, Electrical Engineer, Winnipeg Electric Ry., born at Indianapolis, Ind., July 5, 1885.

J. E. Morazain, Superintendent, District 1, Intercolonial Division, Canadian Government Railways, Levis, Que., born at Wheatland, Que., July 31, 1875.

R. E. Perry, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Drayton, Ont., July 5, 1876.

J. E. Quick, General Baggage Agent, G.T.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

George Stephen, Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1876.

Sir Thos. Tait, President, Fredericton & Grand Lake Ry. & Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

M. M. Todd, Vice President, Grand Valley Ry. and Lake Erie & Northern Ry., Galt, Ont., born there July 22, 1891.

G. A. Walton, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Montreal, July 17, 1881.

**Railway Lands Patented.**—Letters patent were issued during May, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Alberta & Great Waterways Ry. ....	13.91
Calgary & Edmonton Ry. ....	2,226.20
Canadian Northern Ry. ....	1,766.00
Edmonton, Dunvegan & British Columbia Ry. ....	85.91
Grand Trunk Pacific Ry. ....	2.68
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. ....	320.00
Total . . . . .	4,414.70

## Report of the Railways Department for 1916-17.

The report of the Railways and Canals Department for the year ended Mar. 31, 1917, was issued recently, in a very much abridged form, as compared with previous years. All maps, plans and illustrations of railway and canal works, and all detail reports of engineers and other officers are omitted, only the direct reports of the chiefs being inserted. Several statistical tables and miscellaneous information relating to previous years, valuable only for reference, are also omitted. The reports of the department's accountant, and of the Comptroller and Treasurer of Government Railways are given in a compressed and rearranged form. The whole report is contained in 79 pages, compared with 416 the previous year, which had maps and illustrations in addition.

The total railway expenditure for the year, including the Quebec Bridge, was \$41,895,886.53, of which \$14,737,326.70 was charged to capital, \$25,799,906.54 to revenue, and \$1,358,653.29 to income. The expenditure on capital account included \$4,490,472.56 for the Intercolonial Ry., \$609,751.71 for the Prince Edward Island Ry., \$3,916,586.20 for the National Transcontinental Ry., \$2,604,279.94 for the Hudson Bay Ry., \$2,733,677 for the Quebec Bridge, \$3,724.98 for the International Ry., \$46,579.38 for the New Brunswick & Prince Edward Island Ry., and \$332,254.93 for the Quebec & Saguenay Ry. The expenditure on income account included \$959,583.88 paid as subsidies on railways, \$215,947.14 for the Board of Railway Commissioners, \$46,630.53 for railway grade crossing fund, and \$44,149.09 for surveys and inspections. The total government expenditure on railways prior to and since Confederation to Mar. 31, 1917, on capital account was \$391,884,025.79, which includes the expenditure on Quebec Bridge account; \$25,000,000 granted to the C.P.R., and \$660,683.09 expended on the Annapolis & Digby Ry. In addition there has been expended out of the consolidated fund \$267,997,373.17, covering the operating expenses of the government lines, and \$75,117,415.47 on subsidies other than that for the C.P.R. main line. Of this amount there was expended prior to Confederation \$10,766,765.54 upon Intercolonial Ry., and \$3,144,735.11 on Prince Edward Island Ry. construction.

**Canadian Northern Ry. Headquarters.** In connection with the change in C.N.R. ownership, and the appointment of all the directors by the Dominion Government, the question of the location of the company's head office is being discussed, at least by press correspondents, some of whom predict a removal from Toronto to Montreal. Sir Robert Borden, in speaking in the House of Commons on May 15, said it might be desirable to bring the National Transcontinental, the Intercolonial and the Prince Edward Island Railways under the same corporate ownership as the Canadian Northern. The opinion prevails that should this be done it might be followed by the removal of the C.N.R. headquarters from Toronto and of the Canadian Government Railways headquarters from Moncton, N.B., and their concentration at Montreal, which would be more in the centre of the system.

**Canadian Government Railways Working Expenses.**—The following sums were voted at the Dominion Parliament's recent session under the supplementary estimate. For year ended Mar. 31, 1918, further amount required, \$8,500,000. For year ending Mar. 31, 1919, \$37,000,000.

## New Rules for Interswitching Freight Traffic.

The Board of Railway Commissioners passed general order 230, May, 17, as follows:—The board hereby rescinds order 4988 (general order 11), dated July 8, 1908, and orders as follows:

1. For the interpretation, application and operation of this order—

(a) "Interswitching" means the movement of freight in cars between the unloading or loading tracks of one carrier, hereinafter called the "terminal carrier," and the point of interchange with another carrier, by whom, singly or jointly with a further carrier, the said traffic has been carried from its point of shipment or is to be carried to its destination, hereinafter called, singly or jointly, the "line carrier," both the terminal carrier and the line carrier which interchanges with the terminal carrier being subject to the board's jurisdiction; the said movement being performed with or without the aid of an intermediate carrier, whether subject or not subject to the board's jurisdiction, hereinafter called the "intermediary."

(b) The "interchange" means the junction between the terminal carrier and the line carrier, or between the terminal carrier and the intermediary, nearest to the point of loading or unloading of the car.

2. This order does not apply—

(a) to tracks used by the terminal carrier for the transfer of freight between cars and its freight warehouse, or for the purpose of trans-shipment from car to car, nor to tracks otherwise set apart for its own working purposes, except team tracks;

(b) to joint movements which both begin and end in the same terminal or group of terminals or adjoining switching districts;

(c) to cars which, having been once properly interswitched for unloading, are reconsigned for unloading elsewhere within the same terminal or group of terminals.

3. Subject to the provisions of sec. 14, carriers shall at all times, according to their powers, furnish an interswitching service equal to the service accorded their own traffic, at all points where interswitching facilities are, or may hereafter be, provided, under the circumstances and at the tolls herein prescribed; provided that no terminal carrier or intermediary shall be obliged hereunder to make any movement exceeding the distances herein specified at the tolls herein prescribed, and that the said distances be irrespective of the location of the interchange and of yard limits or boundaries.

4. The toll of an intermediary subject to the board's jurisdiction shall not exceed, irrespective of weight, \$3 a car for any distance within and including three miles, or \$3.50 a car for any distance exceeding three miles to and including four miles.

5. If the traffic is loaded or unloaded upon private sidings connecting with the terminal carrier's railway, or directly from or into an industry, elevator or yard abutting upon its tracks (commonly known as industrial sidings), or in any public stock yard, the toll of the terminal carrier shall not exceed 1c per 100 lb. for the actual weight thereof, subject to the minimum weight of the line carrier's tariff, for any distance within and including four miles from the interchange; except that the terminal carrier shall be entitled to a minimum charge of \$3 a carload of traffic included in the 7th, 8th and 10th classes of Canadian Freight Classi-

fication, and \$5 a carload of all other traffic.

6. The toll of the terminal carrier upon all traffic other than that referred to in sec. 5, including traffic to or from team tracks, shall not exceed 2c per 100 lb. for the actual weight thereof, subject to the minimum weight of the line carrier's tariff, for any distance within and including four miles from the interchange, except that the terminal carrier shall be entitled to a minimum charge of \$6 a car.

7. Not less than the following proportions of the tolls herein prescribed shall be absorbed in the rate of the line carrier and the remainder shall be an addition thereto:—(a) One-half of the tolls charged by the terminal carrier under sec. 5, as qualified by sec. 5. (b) Of the tolls prescribed in sec. 6, one-half of the tolls permitted under sec. 5, as qualified by sec. 5, as if the movement were to or from private sidings. (c) One-half of the herein prescribed or lower tolls of each intermediary, if any, whether subject or not subject to the board's jurisdiction. Provided that the line carrier may, unless its tariff rate is lower, charge and collect \$12 a car for its haul between the interchange and the point of shipment, or destination, when by reason of such absorption its line charges would otherwise be less than that amount.

8. The appropriate tolls hereinbefore prescribed shall not be exceeded, for the distances herein specified, in each direction, for the movement from and the return to the line carrier of so-called off line transit traffic, and the line carrier shall be subject to the absorption provisions of sec. 7 only when its through rates are the sum of its published rates to and from the stop over point.

9. If an extra car, commonly known as an idler, is used solely to take care of an overhang of long articles loaded on an open car, it shall be charged by the terminal carrier not more than two-thirds of the herein prescribed appropriate toll for the minimum weight of the line carrier's tariff, except that the terminal carrier shall be entitled to a minimum charge of \$3 a car. If interposed between two cars in the same shipment to protect an overhang from each, the idler shall be charged for once only.

10. No charge shall be made for the accessory interswitching of the empty car. If the car is loaded in both directions, the interswitching toll shall be charged for each movement.

11. Subject to the provisions of sec. 14, nothing herein contained shall prevent the line carrier from absorbing the entire toll or tolls charged for interswitching competitive traffic, provided that the traffic and movements so treated are clearly defined in its tariffs.

12. Traffic to or from the United States shall be subject to the provisions of this order at the point of shipment or destination in Canada.

13. If an exceptional rate is published to apply to or from the tracks of the carrier line only, the ordinary rate, which includes the right of interswitching, shall be plainly indicated in the same schedule, and the latter rate shall not exceed the former by more than the appropriate toll herein prescribed for the interswitching service.

14. Except as hereinafter provided, the tolls herein prescribed shall not apply to deprive the initial carrier of the line haul by a reasonable route of traffic loaded or to be loaded on its railway, including sid-

ings connecting therewith, provided it furnishes at the destination, itself or through its connections or by interswitching, the same delivery and facilities as the competing carrier at no greater charge. If a car is expressly ordered by the shipper to be interswitched to another railway, notwithstanding that the initial carrier can furnish the services as above provided, the said initial carrier may, in lieu of the tolls otherwise prescribed herein, charge and collect its ordinary published tariff rate to the interchange, which rate shall be an additional charge against the shipment. Provided, however, that if the said initial carrier fail or neglect to furnish the shipper with a car within 48 hours after it has been requested, or should through movement by the route of the initial carrier be embargoed, the shipper may require the initial carrier to accept and place, and the said carrier shall so accept and place, an empty car of any other carrier, in which case the movement of the empty car in and the loaded car out shall be effected under the provisions of sec. 10 and 5 or 6, as the case may be.

The schedule to give effect to this order shall be published and filed to come into force on July 1, 1918.

### Railway Employees Voting at Ontario Municipal Elections.

Owing to the nature of their employment, a large number of railway employees are, because they are absent from home, precluded from voting at municipal elections. This has been remedied in Ontario by the passing of an act to enable employees, whose employment is such that they are absent from home from time to time, and who have reason to believe that they will be absent on the polling day, to cast their vote at municipal elections before the regular polling day. A polling place is to be kept open in the municipalities, whose councils have passed a bylaw bringing the act into force, for three days prior to the date of polling, exclusive of Sunday, between 9 a.m. and 5 p.m. The clerk of the municipality or his appointee is to be the special returning officer, and separate ballot boxes are to be provided where the municipality is divided into wards. Every person offering himself as a voter must be on the last revised voters' list for the municipality and must subscribe a declaration, showing the railway company by which he is employed, and that he expects to be absent in the course of his employment from the municipality on the regular polling day. The penalty for making a false statement is not less than \$25 nor more than \$100. The ballot box or boxes are to be sealed at the close of the poll, and are not to be opened until the close of the regular poll, when they will be opened and the ballots counted in the regular way.

**Jurisdiction over Taxicabs in Stations.** Outside taxicab drivers at Winnipeg laid a complaint before the Board of Railway Commissioners recently, that some of them were not allowed to enter the station there to do business, but that two or three of them were so allowed. The company operating the Fort Garry union station contended that arrangements for governing the interior of the building was in its hands, and this view was upheld by the commission and the complaint dismissed.

# Summary of Work Done by the Canadian Railway Association for National Defence.

Following is a summary showing the work done by Canadian railways under the direction of the Canadian Railway Association for National Defence (now called the Canadian Railway War Board) from its establishment on Oct. 23, 1917:

**Increases in freight traffic by diversion of cars from over-burdened routes.**—On orders issued by the association, and arrangements made with the railways interested, a total of 14,759 loaded cars have been diverted from congested routes to others which were comparatively free. These cars, many of which were loaded with grain and coal, contained approximately 516,563 tons of freight. Included in the diversions were 2,180 cars which were billed eastbound via the C.P.R. through Fort William for points in Ontario and Quebec and diverted via the "Soo" Line from Emerson to Sault Ste. Marie, being returned to the C.P.R. at the latter point, thus relieving the heavily taxed line east from Fort William.

Diversions of freight routed via C.P.R. from Fort William for Eastern Canada points and overseas were made to the Canadian Northern Ry. at Port Arthur, the cars being returned to the C.P.R. at Sudbury and Ottawa. These diversions via Port Arthur total up to date 403 cars and the arrangement calls for continued diversion as necessary up to 40 cars a day.

One result of these two switches in the movement of eastbound freight is an increase in the movement of grain by rail from the head of the lakes of approximately 3,500,000 bush., in addition to avoiding congestion at the terminals in that territory, and expediting the general movement of cars through that gateway.

The handling of traffic from the Niagara frontier to Ontario points during the winter, when the entire burden is thrown upon the railways operating between Buffalo and Toronto, owing to the suspension of ferry service across Lake Erie, up to this year caused a great deal of delay to freight and cars and interfered with the requisite coal deliveries for consumption in Ontario to such an extent as to have been partly responsible for the fuel shortage in that province during the winter of 1916-1917.

This year, at the first hint of trouble, the association's administrative committee, after going over the situation in detail, delegated one of its members F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry., as the association's representative to take full charge of operation of lines between the frontier and Toronto, with authority to switch traffic and locomotives from one line to another as the conditions day by day might demand. Under Mr. Backus' direction, cars were diverted from the over-burdened G.T.R. route to the joint line furnished by the M.C.R., T.H. & B.R. and C.P.R., to the number of 5,081, which means that the total movement of freight from the U.S. to Canada via the Niagara gateway was increased to that extent. These diversions extended over the period from Jan. 6 to Mar. 6, when conditions became practically normal and the necessity for further transfer of cars from the routing prescribed on the billing disappeared. About 60% of the 5,081 cars by which the movement from the frontier was increased as described above contained coal, so that the coal receipts in Ontario during the two months mentioned

were increased by approximately 150,000 tons.

Arrangements were made with the U.S. railway authorities at Washington whereby empty box cars ordered to Canada to assist in making up the number of cars due Canada on the interchange with U.S. lines were diverted to the Delaware and Hudson Co.'s railway, where they are loaded with coal, principally for points in the Province of Quebec, thus increasing the coal receipts in this province, as well as providing box cars for the movement of exports to the U.S. Under this arrangement 5,800 empty box cars were turned over to the Delaware and Hudson, and up to Mar. 20, 3,835 had been loaded with coal as above, containing approximately 135,000 tons of coal. It is the intention to continue this arrangement as long as empty cars are being sent to Canada as at present.

During the latter part of the winter the movement of shipments from points in Ontario to Quebec and Maritime Provinces was increased by the diversion of 1,641 carloads from the C.P.R. and Grand Trunk Ry. to the Canadian Northern at Toronto, in order to relieve the two former companies' lines between Toronto and Montreal and hasten recovery from conditions arising from the series of severe storms from which the railways suffered in Ontario during January and early February.

Another object sought by the association was the avoidance of a repetition of the shortage of foodstuffs which existed in the Maritime Provinces during the winter of 1916-1917, owing to the heavy movement of overseas supplies, which had to be given preference over the lines east of Montreal, and tended at times to crowd out domestic shipments. With this end in view, cars were transferred from the C.P.R. route from Montreal to St. John to the Canadian Government Railways at Quebec and Ste. Rosalie, the movement of freight to the Maritime Provinces being increased in this way by 1,565 carloads, or approximately 45,000 tons of freight.

Diversions of cars from one line to another similar to those given in detail above were made at Sudbury, Ottawa, North Bay, Winnipeg and Saskatoon.

**Handling of Grain, Flour and Coal.**—In Western Canada the activities of the association were directed chiefly to keeping up the deliveries of grain and flour to the east, both for domestic consumption and shipment overseas, and maintaining the requisite movement of cars from the Alberta mines. It is admitted that, in the face of a winter of operating conditions of almost unprecedented severity, when locomotives froze upon the road, water supplies disappeared overnight and at times the men remained on duty only at greatest hardship, the demands of the transports and eastern millers were met and coal was delivered to the prairie cities and towns with a regularity and promptness that could hardly have been expected by the uninitiated had they been able to foresee the obstacles which had to be overcome. Preparations which have been made in the for improvements during this summer, will, it is anticipated, permit of a still better service being provided next winter.

The arrangements made by the association's western committee included the distribution of grain and coal cars between lines as they were required regard-

less of ownership, and the same arrangement was taken in the case of water cars when water supplies failed on account of the severe weather, and water car locomotives had to be hauled long distances.

**Car Supply.**—When the association was formed in October, 1917, one of the first tasks with which it was confronted was the recovery from the U.S. railways of some 20,679 Canadian owned freight cars located in the U.S. in excess of the number of cars of U.S. ownership in this country, that is, the Canadian lines had less than 30% of the number of cars owned by them and required to handle traffic currently. The railways individually had been pressing their U.S. connections to return their cars, but had been unable to make satisfactory progress.

After numerous communications had taken place between the association and the headquarters of the U.S. railways at Washington without the desired result, a committee representing the association proceeded to New York and Washington in an endeavor to establish a working arrangement which would provide for a constant return movement of empty cars from the U.S. to Canada of sufficient magnitude to offset the Canadian losses which had taken place during the previous spring and summer and balance the southbound movement of loaded cars. A result of this conference was an immediate increase in the movement of cars to this country, which continued until the U.S. lines became involved in the aggravated traffic congestions resulting from the unusually severe winter difficulties. The movement was resumed for a time with the advent of more favorable weather and continued until the pressure from Western States, which had millions of bushels of potatoes, corn and grain awaiting cars, became so great that the U.S. Railroad Administration felt it necessary to issue a preference order for movement of empty cars to the lines west of Chicago, which again had the effect of curtailing the deliveries to Canada. Some progress continued to be made however as congestions at U.S. terminals were worked off and delayed cars with freight for Canada reached us. The association was advised by the Car Service Section of the U.S. Railroad Administration that it anticipated a general resumption of the movement of empty cars to Canada early in April.

Following is a table giving particulars of the adverse car balance against Canadian railways on interchange with the U.S. at various dates since Oct., 1917:

	Box cars.	Other cars.	Total cars.
Oct. 1, 1917.....	19,666	1,679	20,679
Dec. 15, 1917.....	19,872	2,247	22,119
Jan. 15, 1918.....	19,598	774	20,672
Feb. 15, 1918.....	16,681	108	16,789
Mar. 1, 1918.....	14,907	3,118*	11,789

\* Balance in favor of U.S. lines.

The balance of 3,118 other cars in favor of U.S. railways is accounted for by the heavy receipts of coal cars, principally via the Niagara frontier, many of which had accumulated on U.S. lines during the severe weather and were moved in abnormal numbers when weather conditions improved. These cars have not yet had time to be made empty and return to the U.S. in sufficient numbers to offset the heavy receipts.

As a result of the negotiations between the association and the U.S. railway authorities at Washington, 14,500 empty box cars were ordered to Canada up to

Mar. 20, in addition to empty cars received in the ordinary course of interchange and distributed principally in Eastern Canada, where the demand for equipment for loading to U.S. points is heaviest.

In addition to empty cars ordered and received, as described in the preceding paragraph, 5,800 empties were ordered to the Delaware and Hudson Co. to be loaded with coal for Canadian points, making the total number of extra cars ordered to Canada, 20,300. Of the 5,800 cars, 3,835 had been received to Mar. 20, the total number of the specially ordered cars received therefore, being 14,260.

Aside from the orders which have been issued by Washington to the U.S. railways covering the movement of empties to Canada as above, the association had requests placed at Washington for 11,770 cars which had not been confirmed to the U.S. railways by the Director General's staff when this was written, on Mar. 20, but which they expect to begin to place early in April.

The heavy demand placed upon Canadian railways during the past winter for transportation of foodstuffs and other supplies for overseas has made it extremely difficult to furnish shippers of hay, pulp, pulpwood, newsprint, lumber and other commodities for export to the U.S. with all the cars for which they have asked. The imperative demand for providing an adequate number of cars for war materials and the continued holding of Canadian cars in the U.S. made it necessary last autumn to prohibit the use of Canadian owned box cars for loading to points beyond the Canadian lines and for our U.S. shipments we are dependent upon what U.S. owned cars are obtainable. The situation as regards equipment for shipments going to the U.S. was further aggravated with the close of navigation on the St. Lawrence River and the Great Lakes on account of the larger number of cars required to handle war supplies the greater distance around Lake Superior and between Montreal and the Atlantic seaboard, which meant that a certain number of U.S. owned cars had to be placed in this traffic which prior to this time had been available for loading to the U.S. The opening of navigation this spring permitted the withdrawal of these cars from overseas business and they are now available for loading to U. S. points.

**Increased Car Efficiency.**—The car shortage with which shippers and railways alike were confronted last autumn, and up to the present time, inability to obtain sufficient additional cars, longer haul of freight during the winter season, increasing traffic, shortage of locomotives and men and necessity for saving coal, called for economy in the use of cars to the greatest possible extent. The association therefore immediately inaugurated a campaign amongst both the shipping public and the railways to ship goods in larger units and thereby reduce the number of cars, engines, men and amount of coal required to move a given amount of traffic. What has been accomplished in this department of the association's activities is outlined in the following figures, showing the average weight of contents per loaded car handled on Canadian railways:

Year 1916 .....	20.91 tons
October, 1917 .....	20.76 "
January, 1918 .....	23.71 "

Taking the Canadian Railway Statistics for the year 1916 as a basis, the increase of approximately three tons a car means that if the record is maintained during 1918, as we have every reason to expect

it will, if not improved upon, 260,663 less car trips will be required this year to handle the number of tons of freight loaded on Canadian railways equivalent to that loaded in 1916 than were required in the latter year. The haulage of that number of cars less to handle the same amount of freight means a saving of approximately 79,000 tons of coal, 13,271 less trains, the use of 122 locomotives and the time of 350 locomotive men and trainmen during the year. Further effects of reduction in the number of cars to be handled will be seen in more expeditious handling of traffic in terminals and a general improvement in transportation conditions in this country, which even now are admitted to be better than in any other country of size engaged in war work.

The campaign for increased loading of cars embraces not only carload traffic, which is controlled to a very great extent by shippers, but to less than carload shipments as well, the handling of which is performed by railway employees. A few months ago a revised plan of handling of this class of traffic was inaugurated with a view to not only reducing the number of cars required, but eliminating rehandling at intermediate points which took place under the old methods, and at the same time delivering the goods at destination in less time. Under this system it is anticipated that the average weight of contents of l.c.l. cars will be increased from about 11,000 lb., as it was formerly, to at least 14,000 lb. For January, when the new system was but partially adopted the record was 12,459 lb. This improvement in car service will mean a saving of approximately 10,000 cars a month.

The general use of interline billing of cars received attention. Under this system a car moving over two or more lines may travel through from shipping point to destination on the original billing, instead of having to be held at junction joints for the preparation of new papers. The adoption of the new system, while meaning radical changes in the accounting methods of some of the railways, is being placed in operation. It is estimated that the delay to cars at junction points which will be avoided is about 500,000 car days a year, and the elimination of this delay represents the service of 44,754 cars.

**Fuel Conservation.**—The efforts of the individual lines to economize in the use of coal were co-ordinated at the formation of the association, and advantageous methods which had existed on one line were circulated amongst others so that the saving in consumption might be increased. The greatest room for fuel conservation, however, was to be found in connection with passenger services, which, during a period years, had grown through competition, and to that phase of transportation special attention was directed. Frequent conferences of the association's committee on passenger transportation have been held, and this committee has painstakingly analyzed the services throughout the Dominion so that unnecessary or duplicate services might be dispensed with and trains on the various lines re-arranged so that reductions made would cause the minimum inconvenience to the travelling public.

Further savings in coal were made through the reduction of speed of both passenger and freight trains, discontinuance of the operation of special passenger travel by elimination of reduced rates and excursions, fully loading freight trains and cars. As a result of arrangements made up to this time, on a per an-

num basis, the reductions in passenger trains are equivalent to 8,000,000 passenger train miles, representing about 400,000 tons of coal, in addition to 100,000 tons additional through increased efficiency in the handling of freight.

**Summary.**—Following is a summary of what the association has accomplished:

Fuel conservation—Saving through reduced passenger services and heavy loading of cars and trains during this year under practices now in vogue (estimated), 500,000 tons.

Increased movement of freight by diversions during congestions arising from unusually severe winter weather, 516,565 tons.

Increase in delivery of empty box cars from United States to Canada under arrangements made by association, 14,260.

Estimated increase in car efficiency during this year through improved handling and heavier loading of cars equivalent to 300,000 car trips.

Freedom from serious congestion in both eastern and western Canada such as was experienced in the winter of 1916-1917, and in the U.S. during the winter of 1917-1918.

Prompt filling of requirements of overseas transports at ports served by Canadian railways.

Increase in coal deliveries to Canada from U.S., 285,000 tons.

## Canadian Government Railways Coal Supplies.

The Minister of Railways gave the following information to the House of Commons recently:—During the year ended Mar. 31, there were purchased in the U.S. for the Canadian Government Railways 568,971 net tons of coal, which were delivered at St. John., N.B.; Quebec, St. Hyacinthe, St. Lambert and Montreal, Que., and at Fort William, Ont. The prices paid per net ton at the points of delivery were:—At Montreal, St. Lambert and St. Hyacinthe, average price, \$6.90 a net ton, f.o.b. cars, all charges paid, including duty and war tax. At Quebec, average price a net ton, \$7.85, delivered f.o.b. cars, all charges paid. At Fort William, Ont., prices, \$5.35½ to \$5.50½ net ton, delivered f.o.b. cars, all charges paid. Special purchases made owing to coal shortages: At St. John, N.B., 9,352 tons at \$6.40 a net ton, delivered f.o.b. piers, Port Richmond or Greenwich, Pa. This coal was carried by boats owned by the department. For delivery at Fort William, 80,000 tons at \$4.75 a net ton, delivered f.o.b. mines, U.S. points—cost delivered f.o.b. cars at Fort William, average price \$7.44 a net ton, all charges paid.

Of the coal delivered at Montreal, 32,179 tons were transported to points east of that place, the furthest being Campbellton, N.B., 406 miles, at a cost of \$1.65 a ton; the average haul being 108 miles at an average cost of 45c a ton. The price per ton paid to Nova Scotia coal mines for coal during the same year were: \$3.79, \$4.13, \$4.25 and \$4.50 a net ton for run-of-mine coal, and 22.4c a ton additional for screened coal.

**Western Grain Routes.**—The Senate passed a resolution recently for copies of any representations that have been made to the Government as to the alleged diversion of two-thirds of Canada's western grain trade to Buffalo, New York and other United States seaports, for export, and showing the steps taken by the government to turn this traffic to Canadian seaports.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta & Great Waterways Ry.**—J. D. McArthur, president, on returning to Winnipeg, May 3, after a trip of inspection over the line, is reported to have said that the washed out section at Clearwater River had been temporarily repaired, and will be permanently put in order before August, by which time it is expected to complete track laying into McMurray, Alta. It is also hoped to have the line fully ballasted by the autumn. A. McGregor is the sub-contractor on the work. It is not intended to start any further construction at present. (June, pg. 240.)

**Algoma Central & Hudson Bay Ry.**—A press report, June 5, states that owing to heavy floods two bridges, a considerable piece of line, etc., have been carried away, and that traffic has been suspended pending temporary repairs.

**Burrard Inlet Tunnel & Bridge Co.**—The Dominion Parliament has granted an extension of time for two years for starting construction on this projected undertaking. The application for the extension of time was made by the municipalities forming the company in order to protect their interests in the project, upon which they have spent some \$200,000 upon plans for a bridge across the second narrows of Vancouver Inlet and certain preliminary work in connection therewith. (Jan., pg. 12.)

**Canadian Niagara Bridge Co.**—The Dominion Parliament has incorporated a company with this title to build a railway and general traffic bridge across the Niagara River with approaches and terminal facilities. The Canadian end of the bridge is to be located in Bertie or Welland Townships, between Chippewa and Fort Erie, Ont. The provisional directors are: Lord Shaughnessy, Montreal; J. N. Beckley, Rochester, N.Y.; E. S. Cahill, Hamilton, Ont.; W. P. Torrance, Toronto. (May, pg. 186.)

**Central Canada Ry.**—The steel for the superstructure of the bridge across the Peace River at Peace River Landing is being delivered and the preliminary work for its erection is well advanced. It is proposed at present to plank over the railway bridge so as to permit vehicles and foot passengers to cross it, and provision has been made so that when traffic warrants it brackets can be put into position to carry roadway and footpaths. It is expected to have the grading on the 15-mile extension from the further side of the bridge ready for track laying in the autumn. Tracks will not be laid until the completion of the bridge, some time in the spring of 1919. The Dominion Parliament at its recent session voted \$175,000 towards the construction of the bridge referred to above. (May, pg. 186.)

**Edmonton, Dunvegan & British Columbia Ry.**—No further new construction will be done this season, but it is expected to have the ballasting to Spirit River and to Grande Prairie City fully completed by the autumn. (June, pg. 240.)

**The International Bridge & Terminal Co.**, which was incorporated by the Dominion Parliament in 1905 to build a bridge across the Niagara River near Niagara Falls, Ont., and to lay out terminals there, in conjunction with a United States company, has now been given power by the Dominion Parliament to connect its bridge with any railway lines now built or hereafter to be built, and to build branch lines, not exceeding in any

one case 6 miles, and to issue bonds for \$40,000 a mile of such lines. (April, pg. 147.)

**Intercolonial Ry.**—Tenders are under consideration for the construction of a piece of railway 2.7 miles long from Moffatt station, on the I.C.R. main line, to a junction with the International Ry. of New Brunswick, near Christopher, about 7 miles from Campbellton, N.B.

**Kettle Valley Ry.**—The Dominion Parliament has extended for two years the time within which the company may start building a branch from Penticton to the International Boundary at Osogooos Lake; a line to the Copper Mountains and Voight Mining Camp, 15 miles southwest of Princeton; a line from Vernon to Kelowna and Penticton, a line from near Tulameen for 50 miles up the Tulameen River Valley, and a line from Otter Summit to Aspen Grove mineral district, 30 miles.

We are officially advised that the contract let to W. P. Tierney, Vancouver, for construction of the Copper Mountain Branch from Princeton, B.C., covers clearing the right-of-way and grading and building bridges. The contractor started work at the end of April. It was reported that some sub-contracts would be let. The track laying and ballasting will be done by the company by day labor.

A press report states that the company has purchased the buildings at East Princeton, formerly used as a cement plant, and will convert them into repair and machine shops, and that a spur line is to be built to connect them with the main line. (June, pg. 240.)

**Montreal, Joliette & Transcontinental Ry.**—The Dominion Parliament has incorporated a company with this title to build a railway from Montreal, northerly through the counties of Hochelaga, L'Assomption, and Montcalm to Joliette, thence northwesterly to St. Michel des Saints, Berthier County, and thence to a junction with the National Transcontinental Ry., 180 miles. The provisional directors are:—E. J. Walsh, T. F. Delaney, H. S. Short, C. W. Butler, L. J. Kehoe, Ottawa.

The Joliette & Lake Manuan Colonization Ry. Co., which had power to build through the same territory, went into liquidation some time ago, and its assets were offered for sale under a court order in Sept., 1917. (April, pg. 146.)

**Port Canada Docks Ry.**—The New Brunswick Legislature has extended until 1920 the time within which the company may build its projected railway from L'Etang Harbor to St. Croix, N.B. (April, pg. 146.)

**St. John & Quebec Ry.**—At a meeting of directors at Fredericton, N.B., June 6, dissatisfaction was expressed with the progress being made by the Nova Scotia Construction Co. on the section of the line in progress, and a resolution was passed calling upon the contractors to complete the work by Oct. 31. (April, pg. 147.)

**Toronto Terminals Ry.**—Work on the new union station on Front St., Toronto, is being gone on with rapidly. The exterior stone work was completed May 28, with the placing in position of the final stone of the coping, and the interior stone work was started in June. About 15,000 cubic ft. has to be put in position in the ticket lobby. Other work has been in progress continuously, and it is expected that the building will be ready

for occupancy to some extent in September. (Dec., 1917, pg. 471.)

**Van Buren Bridge Co.**—The Dominion Parliament has confirmed an agreement between the Railways Department and the company under which the department leases certain lands owned by the Bridge Co. lying between the International Ry. of New Brunswick and the National Transcontinental Ry. at St. Leonards, N.B., and the track thereon, to Aug. 1, 1934, for \$1,200 a year. The object is to rearrange traffic on the International and the National Transcontinental at St. Leonards by concentrating it at the National Transcontinental station. (June, pg. 248.)

## Rules for Wires Erected Along or Across Railways.

The Board of Railway Commissioners passed general order 231 May 6 as follows:—Upon the recommendation of the board's Electrical Engineer, it is ordered:

1. That the conditions and specifications set forth in the schedule hereto annexed, under the heading, "Rules for wires erected along or across railways," be adopted and confirmed as the conditions and specifications applicable to the erection, placing, or maintaining of electric lines, wires or cables along or across all railways, part 1 being applicable where the line or lines, wire or wires, cable or cables, is or are carried along or over the railway; part 2 being applicable where the line or lines, wire or wires, cable or cables, is or are carried under the railway.

2. That any order of the board granting leave to erect, place, or maintain any line or lines, wire or wires, cable or cables, along or across the railway and referring to "Rules for wires erected along or across railways," shall be deemed as intended to be a reference to the conditions and specifications set out in that part of the said schedule which is applicable to the mode of crossing authorized.

3. That any order of the board granting leave to erect, place, or maintain any line or lines, wire or wires, cable or cables, along or across any railway subject to the jurisdiction of the board, shall, unless otherwise expressed, be deemed to be an order for leave to erect, place and maintain the same according to the conditions and specifications set out in that part of the said schedule applicable thereto, which conditions and specifications shall be considered as embodied in any such order without specific reference thereto, subject, however, to such change or variation therein or thereof as shall be expressed in such order.

4. That general order 113, Nov. 5, 1913, approving of "Rules for wires crossing railways," and the conditions and specifications adopted thereby, be rescinded.

Want of space prevents the publication of the rules here. They can be obtained from the board, at Ottawa.

**U. S. Government Operation of Short Lines.**—The Director General of Railroads has requested Congress to extend the time for the Government to take over short lines, from July 1 to Jan. 1. He also informed the Senate recently that no agreements had been reached with any railway taken over by the government, as to the rate of compensation to be paid, and that no carrier had declined to execute contracts.

# Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

**Canadian Railway Troops' Work.**—A London, Eng., cablegram says: Canadian Railway troops working under machine gun fire, within 600 ft. of the Hun line, have removed nearly 20 miles of standard rail track which is being relaid for a new strategical spur in the fresh zone. Australians and Canadians worked together in accomplishing this. The Australians carried out successful raids which made it possible for the Canadian Railway Troops to get at this line, which previously had been for some time behind the front of the German posts, owing to the British line having been forced back. Each night the Canadians quietly hauled off hundreds of rails, the Australians meanwhile stalking out against the Hun machine gun post. The Canadian Railway Troops were in the heavy fighting in the northern sector, and gained special mention in French orders.

One of the most noted French generals issued the following order:—I wish to express my appreciation and admiration of the splendid way in which ammunition was brought to our guns, and the rapidity with which the old lines were repaired, and new ones constructed.

## PERSONAL NOTES.

**Lieut. F. X. Amoss**, Canadian Railway Troops, who was awarded the Military Cross recently, was in charge of a party engaged on railway work, which suffered severe casualties during an enemy bombardment. After bringing his wounded men back to a place of safety, he found that one man was missing. He went back through intense shell fire, found the man, who was unable to move, and conveyed him to safety. His good judgment and cool behavior saved many casualties.

**Wm. M. Armstrong**, formerly Locomotive Foreman, Canadian Northern Ry., Edmonton, Alta., and later at Port Mann, B.C., who enlisted with the Canadian Railway Troops, and left Canada early in 1917 for France, with the rank of sergeant, has been given a commission as a lieutenant, and is still in active service.

**Lieut. J. Bourke**, Canadian Railway Troops, who was decorated with the Military Cross recently, was engaged on urgent railway construction, and so encouraged his men by his splendid example, that the work was completed under heavy shell fire. On one occasion, during a heavy bombardment, after ordering his men back to a safer place, he found that two men were missing, and at once went back, through intense shell fire, found the men, who were suffering from shock, and brought them to safety, showing great coolness and resource.

**D. M. Brown**, at present on active service overseas, and who has been elected an associate member of the Engineering Institute of Canada, was, from 1906 to 1913, in Grand Trunk Pacific Ry. service, and from 1913 to 1916 with the Edmonton, Dunvegan & British Columbia Ry.

**Major Maurice Burbank**, Canadian Railway Troops, has been given the Distinguished

Service Order. He completed two bridges in 10 hours, under heavy shelling and bombing, and superintended the withdrawal of large quantities of railway material across a river, showing magnificent skill and dash in a most difficult situation.

**F. D. Burpee**, Superintendent, Ottawa Electric Ry., who was granted extended leave of absence, for military service, and went overseas towards the end of 1916, as Major in command of No. 1 Company, 207th Battalion, subsequently reverted in rank, in order to get to France, and was attached to the Canadian Railway Troops as a temporary lieutenant. He has now been gazetted as acting captain.

**Capt. Michael Chapman, M.C.**, reported recently as killed in action in France, was at one time President of Chapman and Walker, Ltd., electrical engineers, Toronto, and prior to that was in Canadian General Electric Co.'s service.

**Lieut. R. S. Richardson**, No. 13 Light Railway Company, R.E., British Expeditionary Force, formerly Superintendent, Canadian Government Railways, Fort William, Ont., placing a wreath on the grave of Lieut. Bruce H. A. Burrows, 12th Field Company, Canadian Engineers, in Bapaume Military Cemetery, Albert, France, Nov. 25, 1917, on the first anniversary of the latter's death.

**Norman P. Dalziel**, formerly Assistant Controller, Canadian Northern Ry., who has been with the Imperial Munitions Board at Ottawa, since early in the war, has been made an officer of the Order of the British Empire.

**D. N. Gill**, heretofore Purchasing Agent, Ottawa Electric Ry., Ottawa, Ont., is training at Niagara camp, Ont., preparatory to going overseas to join the Canadian Railway Troops.

**Lieut.-Col. J. A. Hutchison**, who has been appointed Consulting Surgeon, Canadian Army Medical Corps, in London, Eng., is Chief Medical Officer of the G.T.R. He has been overseas since 1916, and was, for some time, attached to No. 1 Canadian General Hospital at Etaples, France, as Consulting Surgeon. In the same year he was appointed acting Com-

manding Officer and Chief Surgeon of that hospital. After about a year of service in France, he was called to England as Chief Surgeon of the Moore Barracks Hospital, Shorncliffe, and Consulting Surgeon for the Folkestone area.

**H. A. Irving**, formerly chief clerk to Superintendent, Canadian Government Railways, Fort William, Ont., is serving in France with the Canadian Railway Construction Corps.

**F. E. Jackson**, formerly Chief Dispatcher, Canadian Government Railways, Graham, Ont., is serving in France, with the Canadian Railway Construction Corps.

**Lieut. H. Kennedy**, of the Canadian Engineers, was awarded the Military Cross recently for conspicuous gallantry and devotion to duty, in repairing a railway track in spite of very heavy barrage, which broke the track afresh in many places. The work took six hours to complete, during which he was twice blown up by shells and partially buried.

**Lt.-Col. W. B. Kingsmill**, of Saunders, Torrance and Kingsmill, Toronto, solicitors, Michigan Central Rd., who went overseas in command of the 123rd Battalion from Toronto, has been given the Distinguished Service Order.

**Lt.-Col. D. E. MacIntyre, D.S.O., M.C.**, reported wounded recently, is a son of the late D. F. MacIntyre, railway contractor, and prior to enlisting was in C.P.R. service, being engaged on construction on western lines. He went overseas with a Saskatchewan regiment in 1915, and was awarded the Distinguished Service Order in Mar., 1916, and the Military Cross in Nov., 1916. He was in command of a party, who, in the earlier stages of the war, went out on a wire cutting expedition with blackened faces, which is mentioned as one of the earliest uses of camouflage in the war.

**Capt. Clarence Marpole**, who left Canada with the 239th Railway Construction Corps in 1915, and was later transferred to the 3rd Canadian Railway Transport in France, returned to British Columbia early in June on a short furlough.

**Lt.-Col. L. T. Martin, D.S.O.**, who was mentioned in dispatches recently, commands the 7th Canadian Railway Troops. Prior to the war he was in with railway construction work, as a partner in O'Brien and Martin, and is a director of Great Lakes Dredging Co., Thunder Bay Contracting Co., Port Arthur, Ont., and Kennedy Construction Co., Montreal. He was born at Arnprior, Ont., June 11, 1884, and in 1901 was instrument man on the Timiskaming and Northern Ontario Ry., North Bay, Ont.; 1905, Resident Engineer, same road, Englehart, Ont.; 1906 to 1911 contracting on the National Transcontinental Ry.

**E. McDonald**, General Baggage Agent, Canadian Government Railways and Grand Trunk Pacific Ry., Winnipeg, has enlisted for overseas military service.

**Lt.-Col. C. H. Mitchell, C.M.G., D.S.O.**, of Toronto, who has won great distinction in the intelligence branch on the western front, and who was appointed to the British staff on the Italian front towards the end of 1917, has been made a Companion of the Bath, for services in Italy.

**Lieut. Bernard Moberly**, of the Canadian Railway Construction Corps, and son of Frank Moberly, M.Can.Soc.C.E., Barrie, Ont., is reported missing since Mar. 25.

**Major Leslie Mower**, Canadian Rail-

way Troops, has been awarded the Distinguished Service Order for showing great skill and judgment in handling his company amid intense fire, and keeping the lines open until being ordered to withdraw. He then brought back all the railway stock and stores.

W. R. Smith, who is, at present, at the Engineers' Training Depot, St. John's, Que., as a lieutenant, was formerly a resident engineer on the Edmonton, Dunvegan & British Columbia Ry.

W. H. Stewart, formerly Assistant Superintendent, C.P.R., Farnham, Que.,

who has been with the Imperial Munitions Board for two and a half years, first at Ottawa and latterly at Washington, has been appointed Assistant Director of War Supplies, British War Mission, at Washington, D.C.

Lieut. B. L. Reid, Canadian Railway Troops, was awarded the Military Cross recently, for conspicuous gallantry and devotion to duty when in charge of a repair party maintaining a railway track. The track was broken in 28 places, and he succeeded in repairing all the breaks under heavy shell fire.

## Steam Railway Statistics for Year Ended June 30, 1917.

Tables prepared by the Comptroller of Statistics, of the Railways Department at Ottawa, as to steam railway operations in Canada for the year ended June 30, 1917, give the following details:—

Operating Mileage.		
	1916-17.	1915-16.
Ontario . . . . .	11,049	11,320
Saskatchewan . . . . .	6,124	5,378
Quebec . . . . .	4,734	4,733
Alberta . . . . .	4,444	3,894
Manitoba . . . . .	4,194	4,310
British Columbia . . . . .	3,885	3,604
New Brunswick . . . . .	1,959	1,957
Nova Scotia . . . . .	1,422	1,436
Prince Edward Island . . . . .	278	275
Yukon . . . . .	102	102
United States . . . . .	413	426
Total . . . . .	38,604	37,434

An additional 37.98 miles of second track and of 828 miles of yard track and sidings were laid during 1916-17, against 186 miles of second track, and 828 miles of yard track and sidings in 1915-1916.

Capitalization.		
	June 30, 1917.	June 30, 1916.
Stocks . . . . .	\$ 872,829,993	\$ 848,269,488
Consolidated debenture stock . . . . .	216,284,882	176,284,882
Funded debt . . . . .	896,005,116	869,323,449
Total . . . . .	\$1,985,119,991	\$1,893,877,819

Cash subsidies paid during 1916-1917 amounted to \$774,285.68, against \$1,240,434.97 during 1915-1916. The total amount of guaranties authorized is \$497,092,664.

Passenger Traffic.		
	1916-1917.	1915-1916.
Passengers carried . . . . .	53,749,680	49,027,671
Passengers carried 1 mile . . . . .	3,150,127,428	2,727,122,618
Passengers carried 1 mile per mile of road . . . . .	79,829	72,611
Passengers per mile of line . . . . .	1,326	1,309
Receipts per passenger per mile (cents) . . . . .	1,946	1,954
No. of passengers per train . . . . .	59	53
No. of passengers per car . . . . .	16	14
No. of cars per passenger train . . . . .	5.7	5.5
Passenger journey (miles) . . . . .	59	54

Freight Traffic.		
	1916-1917.	1915-1916.
Products of agriculture . . . . .	25,127,453	27,105,711
Products of animals . . . . .	3,988,887	3,906,359
Products of mines . . . . .	42,534,637	37,850,084
Products of forest . . . . .	19,090,682	16,558,529
Manufactures . . . . .	21,921,309	16,867,782
Merchandise . . . . .	6,070,858	4,622,224
Miscellaneous . . . . .	3,151,203	2,748,399
Undistributed . . . . .	39,244	
Total freight carried . . . . .	121,916,272	109,659,088

Tons carried 1 mile.		
	1916-1917.	1915-1916.

**Canadian Northern Ry. Freight Clerks, Etc.**—A board of conciliation and investigation has been appointed to deal with a dispute between the company and its freight clerks, etc., the members being Chief Justice Mathers, Winnipeg, chairman; C. E. Dafoe, Winnipeg, representing the company; and F. Urry, Port Arthur, Ont., representing the employees.

The Board of Railway Commissioners concluded its western sittings at Winnipeg, June 17, and left the same evening for eastern points.

## Notes to Steam Railway Statistics.

(1) The Bedlington & Nelson Ry. was abandoned and the track removed in 1916.

(2) The Detroit River Tunnel is operated by the Michigan Central Rd., which controls the Canada Southern Ry.

(3) The Inverness Ry. & Coal Co. is operating its railway in Nova Scotia, but no particulars except mileage are given in the statistical table. The Klondike Mines Ry. in Yukon Territory; the North Shore Ry. (formerly the Beersville Coal & Ry. Co.), in New Brunswick, and the Northern New Brunswick & Seaboard Ry. are not being operated.

(4) The Magnetawan Ry. and the St. Clair Tunnel are operated by the Grand Trunk Ry. The earnings of the first named are included in those of the G.T.R., while those of the tunnel are reported in a separate table.

(5) The Nobonsing & Nipissing Ry., 5.50 miles, was taken up several years ago.

(6) The Wabash Ry., while operating in Canada, does not own any railway in the country, but runs over the G.T.R. from Windsor to the Niagara River under a lease. It does both a through and local business in Canada, the officials and agents acting jointly for the G.T.R. and Wabash Ry.

**International Railways:**—The Dominion railways statistics for the year ended June 30, 1917, contain a new table giving information as to the following companies, all of which are of an international character, operating across the International Boundary. The Detroit River Tunnel is owned by the Michigan Central Rd.; the International Bridge Co. and the St. Clair Tunnel are owned by the Grand Trunk Ry., and the Pullman Co. operates sleeping and parlor cars over several lines in Canada.

	Total revenue.	Total operating expenses.	Total operating revenue.
Detroit River Tunnel . . . . .	\$1,050,000		\$1,050,000
International Bridge Co. . . . .	447,908	\$52,855	395,052

Pullman Co. . . . .	865,668	487,589	378,078
Van Buren Bridge Co. . . . .	18,275	8,408	9,866

The Dominion Power Board has been constituted for the purpose of co-ordinating the activities of all the government departments in the investigation of fuel and power resources of the Dominion. It consists of Hon. A. Meighen, Minister of the Interior, chairman; A. St. Laurent, Assistant Deputy Minister of Public Works, vice chairman; C. N. Monsarrat, Consulting Engineer, Department of Railways and Canals; W. J. Stewart, Consulting Engineer, Department of External Affairs, regarding International Waterways; John Murphy, Electrical Engineer, Department of Railways and Canals and Board of Railway Commissioners; H. G. Acres, Chief Hydraulic Engineer, Hydro Electric Power Commission of Ontario; O. Higman, Chief Electrical Engineer, Department of Inland Revenue; D. B. Dowling, Geologist, B. F. Haanel, Chief Engineer, Fuel Testing Division, Department of Mines; and J. B. Challies, Chief Engineer and Superintendent Water Power Branch, Department of the Interior, who acts as Secretary.

The Grand Trunk Ry. has entered into an agreement with the Quebec, Montreal & Southern Ry. by which there will be a joint use of the G.T.R. tracks between Napierville and Noyan Jct., Que. The agreement, which is dated Sept. 26, 1917, has been deposited with the Secretary of State at Ottawa only recently.

# The Canadian Railway War Board's Work.

**Accidents to Employees Switching.**—The board does not think that the adoption of an additional rule, as suggested by the Board of Railway Commissioners recently, would be beneficial. Every endeavor is being made to enforce employee compliance with existing regulations. Safety first departments, and local officers of railways, have been directed to bring forcibly before the employees the fact that the latter must not be on the track unnecessarily and that when their work calls for their being so located a sharp look out for approaching trains must be maintained.

**Cars Owned in Canada.**—In the case of Canadian owned cars being received by a Canadian owned line, on car service section orders, for furtherance to another railway, the board considers that such cars, if belonging to the line receiving them should be retained, or if not belonging to the line receiving them should be forwarded to the owner without undue delay, in accordance with car service rules governing in Canada. Such diversions leaving a deficit in the orders as placed by the car service section, a report of the principal cars diverted, with full particulars of the order concerned, should be reported to the board so that the matter may be adjusted with Washington.

It having been reported that arrangements are in effect whereby Canadian owned cars are being placed for loading shipments to U.S. points, and that goods on arrival at boundary points are being transferred to foreign cars, it is the board's opinion that, in view of the present plentiful supply of U.S. cars, such arrangements should be cancelled.

As Canadian owned box cars are being loaded to U.S. points, contrary to instructions, by certain member lines, and the cars are accepted by the Canadian connections of such lines, the previous instructions have been amended to prohibit the acceptance by any member line of a Canadian owned car from a connection coming within the board's jurisdiction, loaded to a point in the U.S. in violation of existing regulations. The responsibility and expense of transferring the goods to a U.S. owned car will then devolve upon the railway at fault. This applies to cars offered in switching as well as road haul service.

**Cars owned in United States.**—The Canadian Fuel Administration has communicated with the board as to still further accelerating the return of coal cars to the U.S., and as some of the railways are still using these cars for return loading, which in many instances results in the equipment travelling long distances from coal mining territory, the board has again pointed out to lines at fault, the urgent necessity for expeditious return of cars to mines, and has notified the lines that their connections have been directed to refuse coal cars used for return loading in violation of the board's regulations. Steps have been taken to stop the practice of some industrial organizations, of using railway owned open top cars in intra-plant service, when such cars are needed for road haul movement of coal, ore, steel, etc.

**Custom Delays.**—Steps have been taken to have customs offices remain open on Saturday afternoons, Sundays and holidays, where necessary to avoid delay to traffic, and in the case of reputable firms for placing of customs cars for delivery on arrival at destination without waiting for clearance.

**Demurrage.**—In reference to the board's ruling on April 29 that demurrage is not properly assessable where shipper was unaware of embargo at time of commencement of loading of car, it has been learned that the practice on U.S. lines calls for assessment of demurrage where car is loaded or partly loaded in violation of embargo and bill of lading not signed by railway representative. It is felt that the adoption of a similar rule in Canada would greatly reduce delays to cars containing embargo shipments.

**Exemptions for Railway Employees.**—Reports having been made by a number of member lines, that there is danger of their operations being seriously impeded by the large number of employees drafted for military service, or who are enlisting voluntarily in anticipation of being drafted, the board decided to present the matter to the Dominion Government, and to seek exemption for railway employees to the extent necessary to ensure satisfactory handling of the country's commerce.

**Explosives on Passenger Trains.**—Application having been made that the regulations for movement of explosives by express in case of emergency remain as heretofore, the board feels that there is danger to passengers' lives when explosives are moved on passenger trains. If an emergency should arise, calling for express service in the movement of explosives, the shipment should be handled by special train.

**Extra charges on freight diverted on account of congestion of billed route.** Protests having been made against the charging of additional tolls for extra movement of diverted traffic, consignees contending that as the congestion which resulted in diversion was not due to any fault of theirs, the rate applicable via original or billed routing should govern, the board holds that when more freight is billed via a certain route than can be handled currently, action has to be taken to relieve congestion, either by embargo or diversion of overflow traffic to open route, and that as consignees undoubtedly benefit by having their goods delivered by some route other than that designated on the billing, rather than to have the movement shut off entirely by placement of embargo, a reasonable charge for extra services performed by the railways can be properly and justly assessed.

**Competition for Labor.**—Member lines have been requested to instruct superintendents and other officers to refrain from competing for employees, by offering increased rates of pay or shorter hours, in view of the interference with railway work and the unrest among labor that would be caused thereby.

**Returned Soldiers Rates.**—The Soldiers Employment Commission, having applied for reduced railway rates for returned soldiers travelling to take up farms, and for their effects, the board has declared itself in sympathy with any movement aiming to facilitate the settlement of returned soldiers on the land, and will deal with any properly established organization, recognized by the Dominion Government as such, on the question of reduced rates, etc.

**Special Trains.**—Several applications for running of special passenger trains for picnics, business excursions, etc., have been refused recently, it being felt that departure from the general policy of avoiding special passenger train movement, except in cases of extreme urgency, could not be made without creating a

precedent which would in all probability result in the operation of special trains for various other objects. The running of special trains to carry circuses has also been refused.

**Suspension of M.C.B. Rules.**—The U.S. Railroad Administration, having suspended the M.C.B. rules, governing interchange of cars, handling of repair bills, and similar matters, J. Coleman, Superintendent, Car Department, G.T.R.; C. W. Van Buren, General Master Car Builder, C.P.R., and G. E. Smart, Superintendent, Car Department, Canadian Government Railways, have been appointed a sub-committee to consider and recommend to the administrative committee what action should be taken to protect the interests of Canadian lines.

**Vestibule Doors, Platforms, Guard Rails, etc.**—The Canadian Railway War Board is not in favor of the Board of Railway Commissioners' proposed regulation, to require that on trains making frequent stops, vestibule doors and platforms are to remain open, and considers that, in the interest of safety of passengers, it is as necessary to have doors and platforms on local trains closed between stations as on through trains. Railway officials having practical knowledge in the matter do not consider the Board of Railway Commissioners' proposal feasible.

**Wages of Railway Employees.**—The negotiations between the railways, represented by a sub-committee of the board, of which S. J. Hungerford, General Manager, Eastern Lines, Canadian Northern Ry., is chairman, and representatives of car and locomotive shop employees, which was referred to in Canadian Railway and Marine World for June, page 238, were resumed at Montreal during June. No result had been announced up to the time of writing (June 22).

The board is prepared to give consideration to the establishment of equivalent working conditions and rates of pay in Canada, to those allowed in corresponding territory in the U.S., but arrangements to be made now with the Federation Trades Committee will refer only to war time conditions and during the war only. The board is willing for present yearly agreements to be amended to permit of cancellation upon 30 days notice by either party.

It is probable that in order to deal effectively with minor and local questions which may arise after the adoption of arrangements which may be made between the sub-committee on wage agreements and representatives of the railway employees' unions, an adjustment committee, somewhat similar to Railway Board of Adjustment No. 1, as described in the Director General of U.S. Railroads order of Mar. 22, will be appointed in Canada, to consist of four representatives of the railway companies and four employees' representatives, with an independent referee.

Geo. Hodge, Assistant to General Manager, Eastern Lines, C.P.R., and Robt. Patterson, representing the G.T.R. on the board's sub-committee on wage agreements, visited Washington recently to ascertain first hand the status of the U.S. wage situation.

The Toronto Transportation Club has decided not to hold its annual outing this year, on account of the abnormal conditions and the restrictions in many directions.

# Steam Railway Statistics for Year Ended June 30, 1917.

In the following table the column head gross earnings includes passenger and freight earnings, as well as miscellaneous earnings from operation; the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net operating earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus (—) mark before figures in the net columns shows that there was a deficit in the operation of the line to the extent of the figures given. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1914, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 231. May 6.—Confirming conditions and specifications of rules for wires erected along or across railways, and rescinding general order 113, Nov. 5, 1913.

General order 232. May 14.—Prescribing minimum carload weights of tan bark, in box or stock cars under special commodity tariffs, and rescinding general order 221.

General order 233. May 11.—Amending order 227, Apr. 12, 1918, to provide that prescribed time during which Daylight Saving Act, 1918, shall be in force shall be until 2 a.m. on Sunday, Oct. 27, the day fixed in the U.S. for returning to usual time.

General order 234. May 22.—Ruling re protection of old rates on grain shipped prior to Mar. 15, 1918, to interior mills and elevators with published transit privileges and reshipped after new rates came into effect.

General order 235. May 22.—Instructions to agents and conductors for receiving and delivering freight at flag stations.

General order 236. May 20.—Revising rules governing protection of railway employees. This order is given fully on another page.

General order 237. May 31.—Ordering railway companies to adopt, for protection of employees, the rule that where two main tracks parallel each other and are less than 20 ft. from center to center, whether double or single track operation, employees in every instance, when stepping out of way of approaching trains, must move to right of way and not to other track.

27219. May 17.—Authorizing British Columbia Public Works Department to make highway crossing over C.P.R. near Wardner.

27220. May 18.—Dismissing complaint of Nanaimo Board of Trade against withdrawal of Pacific Coast terminal rates to Nanaimo and substitution of an arbitrary over Vancouver rates, with leave to move for further consideration when traffic conditions warrant.

27221. May 18.—Approving proposed location of C.P.R. A2 standard station at Hayter, Alta.

27222. May 15.—Ordering C.P.R. to restore relationship between International rates on wood-pulp from Ottawa on one hand and Sturgeon Falls and Espanola on the other, by filing same rates from Sturgeon Falls and Espanola as concurrently in effect from Ottawa through same frontier gateways to destinations in Central Freight Association territory.

27223. May 18.—Authorizing C.P.R. to make highway over its track on part of Sec. 35, Tp. 8, Osyoos Division, Yale District, B.C.; cost to be paid by Spallumcheen Tp., B.C.

27224. May 20.—Authorizing Canadian Northern Ry. to build spur for Port Arthur Pulp & Paper Co., Port Arthur, Ont.

27225. May 15.—Ordering that storage yard at Current River, Port Arthur, Ont., consisting of 6 tracks connected with C.P.R. service track at west end and Canadian Northern Ry. track at east end, between points marked A and B on plan, of Dec. 6, 1917, hereby approved, be considered joint yard to be used by both companies for storing, switching and sorting in operation of elevator plants and tracks connected therewith; cost to be determined by board after hearing.

27226. May 21.—Approving Quebec Ry. Light & Power Co.'s Standard Passenger Tariff of Maximum Mileage Tolls, C.R.C. 34, effective June 2.

27227. May 20.—Authorizing C.P.R. to build extension to spur for B. Shragge Iron & Metal Co., and additional spur on Lot 1, Block 3, Parish Lot 35, St. John, Winnipeg.

27228. May 14.—Authorizing G.T.R. to build additional siding facilities for Dominion Steel Foundry Co., Hamilton, Ont.

27229. May 23.—Authorizing Mackenzie, Mann & Co. to build highway over Canadian Northern Ry. at First St. West, Canwood, Sask.; cost of construction to be paid by applicants and maintenance by Canwood municipality.

27230. May 21.—Approving revised location of Hull Electric Co.'s track at Montcalm St. and Chelsea Road, Hull, Que.; and authorizing it to build additional track on Montcalm St. and Chelsea Road and loop on Mountain Road, Fortier St. and Montclair Ave., Hull, and to cross C.P.R. at grade, at Montcalm St.

27231. May 21.—Authorizing Southern Canada Power Co. to erect wires along C.P.R. right of way at Eastman, Que.

27232. May 22.—Approving Crownsnest Southern Ry. bylaws, June 5, 1916, re tariffs of tolls.

27233. May 22.—Approving New Westminster Southern Ry. bylaw, June 2, 1916, re tariffs of tolls.

27234. May 16.—Ordering Canadian Northern Ry. to fence right of way on north side from mileage 62.5 to 65, west of Tollerton, Alta.; to erect cattle guard and return fencing from cattle guard to river on south side at end of fence, mileage 65; work to be completed by June 20, and re-

lieving it from fencing right of way on south side from mileage 62.5 to 65.

27235 to 27237. May 22.—Approving Manitoba Great Northern Ry. bylaw, May 5, 1916; Victoria Terminal Ry. & Ferry Co. bylaw, May 22, 1916, and Victoria & Sidney Ry. bylaws, dated May 22, 1916, re tariffs of tolls.

27236. May 21.—Ordering Michigan Central Rd. to install gates at crossing of Main St., Hagersville, Ont., to be operated by day and night watchmen; 20% of cost to be paid out of railway grade crossing fund; 75% by M.C.R. and balance by Hagersville village; maintenance to be paid, 85% by M.C.R. and balance by Hagersville; work to be completed within 90 days.

27239. May 18.—Amending index 68, p. 6 of proposed Supplement 11 to Canadian Freight Classification 16. This order is given fully on another page.

27240. May 14.—Ordering Kitchener & Northern Ry. to install half interlocking plant at crossing of G.T.R. spur on Lancaster St., Bridgeport, Ont., to be installed by Aug. 31, and rescinding orders 21780 and 22121, respectively May 7 and 26, 1914.

27241. May 21.—Ordering C.P.R. and Ottawa & New York Ry. to arrange train service for connection of certain trains at Finch, Ont., and rescinding orders 23657, May 4, 1915; 23738, May 25, 1915, and 26996, Feb. 16, 1918.

27242. May 23.—Approving Cumberland Ry. & Coal Co.'s Standard Freight Mileage Tariff C.R.C. 6. This order is given fully on another page.

27243. May 27.—Approving agreement, May 10, between Bell Telephone Co. and South Leeds & Pittsburgh Rural Telephone Co., Leeds and Frontenac Counties, Ont.

27244. May 22.—Ordering Kettle Valley Ry. to lay pipe culvert at least 12 in. diameter under its track on north side of public road, Lot 104, at Three Mile, B.C., as soon as Penticton municipality completes culverts under public road east and west of track; to lay similar culvert on north side Fairview Ave.; latter work to be completed by June 30, and rescinding order 26802, Dec. 6, 1917.

27245. May 28.—Authorizing London & Port Stanley Ry. to build siding for Beatty Bros., London, Ont.

27246. May 25.—Dismissing complaint Retail Merchants Association of Canada, Provincial Council Section of Ontario, against reconignment switching charges by C.P.R. This is quoted fully on another page.

27247. May 27.—Authorizing C.P.R. to build spur for Leaside Munitions Co., Leaside, Ont.

27248. May 27.—Authorizing C.P.R. to build spur for Imperial Oil, Ponoka, Alta.

27249. May 28.—Authorizing C.P.R. to build spur for Vancouver Machinery Depot, Ltd., Vancouver, B.C.

27250. May 28.—Authorizing Winnipeg Electric Ry. to build second track across Canadian Northern Ry. at Portage Ave., Assiniboia municipality, near Westside station, Man.

27251. May 29.—Ordering Esquimalt & Nanaimo Ry. to continue passage of pedestrians over bridge across portion of Victoria harbor, where sidewalks have been built and used for that purpose.

27252. May 20.—Ordering C.P.R. to build two spurs for Imperial Oil, Swift Current, Sask.

27253. May 28.—Recommending to Governor in Council for sanction, agreement between Essex County, Ont., and Michigan Central Rd., Dec. 31, 1917, and dispensing with consent of shareholders and publication as required by sec. 364 of Railway Act.

27254. May 28.—Ordering Quebec, Montreal & Southern Ry. to restore train service in effect prior to Jan., 1918, between Montreal and Sorel; effective June 10.

27255. May 28.—Authorizing C.P.R. to remove regular agent at Oxford, Sask., pending further order.

27256. May 29.—Extending to June 30, time within which G.T.R. shall install gates at Rectory St., London, Ont.

27257. May 28.—Extending for two months from date time within which G.T.R. shall lower road-way at subway at Main St., Komoka, Ont., 1 ft., and raise track 1½ ft.

27258. May 29.—Relieving G.T.R. from providing further protection at first crossing south of Tansley station, Ont.

27259, 27260. May 28.—Extending to July 1, time within which G.T.R. shall install gates at St. Philippe and St. Marguerite Sts., Montreal.

27261. May 30.—Prescribing Dominion Express Co.'s delivery limits in Trail, B.C.; and rescinding order 25954, Mar. 22, 1917.

27262. May 30.—Authorizing Henry Ray, March Tp., Ont., to withdraw from Bank of Toronto, \$500 with accrued interest, from date of deposit.

27263. May 29.—Extending to July 31 time within which Great Northern Ry. shall complete rebuilding and repairing of right of way fences and install cattle guards at highway crossings in use on Victoria & Sidney Ry. from northern boundary of Victoria to McKenzie Ave., and make necessary repairs between McKenzie Ave. North and Sidney, B.C.

27264. May 30.—Authorizing C.P.R. to rebuild bridge 77.6 over Little Magog Lake, Que., and

rescinding order 26443, Aug. 18, 1917.

27265. May 30.—Authorizing Canadian Northern Ry. to build across highway between Secs. 20-29, Tp. 50, Range 10, west 4th meridian, Alta.

27266. May 31.—Authorizing Canadian Northern Ry. to make highway crossing over road allowance on Secs. 28 and 33, Tp. 36, Range 27, west principal meridian; cost to be paid by Swan River rural municipality, Man.

27267. May 28.—Ordering Canadian Northern Ry. to make clean out, deepen and widen certain ditches along its right of way in Worthington Tp., Ont., by July 1.

27268. May 23.—Ordering Michigan Central Rd. to divert North Talbot Road, Maidstone Tp., Ont., to Naylor Side Road by diversion to north side of its tracks; 20% of cost to be paid out of railway grade crossing fund; 35% by Maidstone Tp., and balance by M.C.R., also within 60 days to install bell at Naylor Side Road, 20% of cost to be paid out of railway grade crossing fund.

27269. May 31.—Extending for six months from date time limited by order 26784, Nov. 29, 1917, during which Lake Erie & Northern Ry. was authorized to operate cars and trains over Toronto, Hamilton & Buffalo Ry. at Brantford, Ont., pending installation of interlocking plant; crossing to be protected by watchmen.

27270. May 30.—Authorizing Brantford & Hamilton Ry. (electric) to increase its freight rates, except on coal and coke, by 15%, and rates on coal and coke by 15c a ton; increases not effective until company complies with sec. 327 of Railway Act.

27271. May 21.—Authorizing Canadian Northern Ry. pending further order, to remove regular agent at Malvern station, Ont., caretaker to be appointed to see station is kept clean and heated for passengers on arrival and departure of trains, and care for L.C.L. freight and express matter.

27272. June 4.—Approving U.S. Government express bill of lading for shipments of munitions, war materials and supplies. This order is given fully on another page under "Among the Express Companies."

27273. June 4.—Authorizing G.T.R., for 90 days from date, to build temporary track across Alma and Simpson Sts., Campbellford, Ont.

27274. June 4.—Approving plan showing interchange between G.T.R. and Toronto & York Radial Ry. on Lot 76, Con. 1, Whitechurch Tp., Ont., and authorizing Town of Aurora, Ont., to build said track, a derail to be installed and semaphores placed on G.T.R., and rescinding order 25616, Nov. 3, 1916.

27275. June 4.—Approving changes in location of G.T.R. sidings for Goodyear Tire & Rubber Co. of Canada, New Toronto, Ont., as authorized by order 25418; authorizing G.T.R. to build extension siding on Ninth St., and rescinding order 27186, May 6.

27276. June 1.—Ordering Chatham, Wallaceburg & Lake Erie Ry. to move derrails 200 ft. from crossing at Cedar Springs, Ont., by July 15.

27277. June 1.—Authorizing Quebec & Lake St. John Ry. (C.N.R.) to use bridge over Ste. Anne River at St. Raymond, Que.

27278. June 1.—Extending for one month from date time within which G.T.R. shall install bell at Main St., Komoka, Ont., as required by order 26942, Jan. 28.

27279. June 4.—Approving changes in location of G.T.R. sidings and spurs for Dominion Shipbuilding Co., Toronto.

27280. June 5.—Authorizing Southern Canada Power Co. to erect wires along C.P.R. right of way near Delaire station, Que.

27281. June 5.—Authorizing C.P.R. to build spur for Peters Coal Co. in Lot 20, Con. 13, Medonte, Tp., Ont.

27282. June 1.—Extending for six months from date time limited by order 26758, Nov. 22, 1917, during which Lake Erie & Northern Ry., pending installation of interlocking plant, was authorized to operate cars over G.T.R. at Brantford, Ont., crossings to be protected by L.E. & N.R. watchmen.

27283. June 5.—Authorizing Canadian Northern Quebec Ry. to open its revised location from Lot 1017, St. Theophilus parish, to Lot 87, St. Flore Parish, 356 ft.; and use bridge over St. Maurice River at mileage 81.12; speed of trains not to exceed 8 miles an hour.

27284. June 6.—Approving location and plans of James Bay & Eastern Ry. (C.P.R.) station at St. Prime, Que.

27285. June 6.—Authorizing Grand Trunk Pacific Branch Lines Co. to divert road in s.w. ¼ Sec. 20 and s.e. ¼ Sec. 19, Tp. 22, Range 7, west 2nd meridian; and to build across highway, Yorkton District, Sask.

27286. June 7.—Authorizing Quebec, Montreal & Southern Ry. to discontinue Sunday trains, in effect prior to Jan. 1.

27287. June 6.—Ordering that speed of Grand Trunk Pacific Ry. trains operated over bridges at mileage 674.2, 675.0, 676.3, 680.2, 681.8, and 682.5 between Wainwright and Irma, Alta., shall not exceed 8 miles an hour.

27288. June 6.—Amending order 27269, May 31, re crossing of G.T.R. at Brantford, Ont., by Lake Erie & Northern Ry.

27289. June 7.—Relieving Chatham, Wallace-

burg & Lake Erie Ry. from providing further protection at Fourth Concession about 3 miles north of Chatham, Ont.

27290. June 5.—Ordering that clearance order for westbound trains from Stoney Creek, B.C., be not issued until agent there is advised by fan operator at west portal of tunnel that fans are actually, and have been for 10 minutes immediately prior thereto, in operation, order to provide that fans continue until arrival of train at Glacier.

27291. June 6.—Authorizing Canadian Northern Ry. to cross and divert highway in n.w.  $\frac{1}{4}$  Sec. 17, Tp. 43, Range 11, west 3rd meridian, near Speers, Sask.

27292. June 6.—Authorizing C.P.R. to operate trains over crossing at Delson Jct., without first stopping.

27293. June 7.—Authorizing C.P.R. to build spur for John Conaghan & Sons, Ltd., Vancouver, B.C.

27294. June 7.—Authorizing C.P.R. to carry highway over its track ordered at mileage 84.75, Three Rivers Subdivision, Quebec District, 20% of cost to be paid out of railway grade crossing fund.

27295. June 6.—Authorizing C.P.R. to build spur for John Lucas, Toronto.

27296. June 8.—Ordering Canadian Northern Ry. to stop train on flag at Camden East for passengers beyond Trenton, Ont.

27297. June 7.—Authorizing C.P.R. to build spur for Chisholm Milling Co., Toronto.

27298. June 7.—Approving clearances through warehouse doors on Dryden Timber & Power Co.'s siding at Dryden, Ont.

27299. June 10.—Approving Canadian Northern Ontario Ry. revised location at Achray, Ont.

27300. June 11.—Authorizing C.P.R. to build two additional tracks across road allowance connecting its terminals in Swift Current, Sask.

27301. June 11.—Authorizing Toronto, Hamilton & Buffalo Ry. to take lands in Saltfleet Tp., Ont., for second main track between Stoney Creek and Kinnear stations, and passing siding and other facilities, and for enlarging station grounds at Stoney Creek.

27302. June 12.—Approving agreement, May 15, between Bell Telephone Co. and Soulanges Rural Telephone Co., Soulanges and Vaudeville Counties, Que.

27303. June 12.—Authorizing G.T.R. to build spur for Imperial Oil, Ltd., Hamilton, Ont.

27304. June 6.—Relieving G.T.R. from providing further protection at Queen St., Mount Forest, Ont.

27305. June 8.—Dismissing Canadian Manufacturers Association applications for reduction in classification of stove putty in barrels, and for order requiring railway companies to carry asbestos cement at 4th class rate, l.c.l.

27306. June 14.—Approving Brantford & Hamilton Ry. (electric) Standard Freight Mileage Tariff C.R.C. 4, effective July 1.

27307. June 12.—Dismissing complaint of Beaver Stove & Machinery Co., Grandmere, Que., against C.P.R. rates on stoves from Grandmere to points on Quebec Central Ry.

27308. June 15.—Authorizing Windsor, Essex & Lake Shore Rapid Ry. to increase freight rates, except coal, by 15%, and coal rates by 15c a ton; rates not to become effective until requirements of sec. 327 of Railway Act have been complied with.

27309. June 15.—Authorizing Chatham, Wallaceburg & Lake Erie Ry. to increase freight rates, except coal, by 15%, and rates on coal by 15c a ton; also passenger rates by 15%; not to become effective until requirements of secs. 327 and 331 of Railway Act have been complied with.

27310. June 15.—Approving Toronto, Hamilton & Buffalo Ry. location of shelter at Gerrie's Crossing near Dundas, Ont.

27311. June 15.—Rescinding order 26911, Jan. 16, and ordering C.P.R. to limit trains over Sanche St. crossing, Ste. Therese, Que., to 10 miles an hour.

**T. & N.O. Railway Commission.**—The Ontario Legislature at its recent session, by sec. 9 of the Statute Law Amendment Act, added a subsection to sec. 2 of the Timiskaming & Northern Ontario Ry. Act, under which a member of the executive council without portfolio may be appointed as one of the commissioners managing the railway, and may be paid a salary therefor without having to vacate his seat in the Legislature or incurring any of the penalties imposed by the Legislative Assembly Act for sitting or voting as a member of the assembly.

The Board of Grain Commissioners applied to the Board of Railway Commissioners at Winnipeg, recently, for an order fixing a uniform allowance to cover invisible loss or natural shrinkage of grain in transit on railways, in respect of which railways will not be held liable for claims for shortage.

## The Necessity of Fuel Conservation.

By Thos. Britt, General Fuel Agent, Canadian Pacific Railway.

[Sir George Bury, Vice President, C.P.R., was invited to address the International Railway Fuel Association's annual convention in Chicago, May 23 and 24, under the auspices of the U.S. Railroad Administration and U.S. Fuel Administration, but being unable to go, sent the company's General Fuel Agent, who read a paper from which the following are extracts.—Editor.]

There is an apparent annual shortage of over 50,000,000 tons to be made up by elimination of wastage, and this is the main topic of my talk. What are we going to do, in other words, to conserve fuel and thus help to win the war? First of all, what are we doing? The most drastic feature of our programme has been the reduction in passenger service, with a simultaneous increase in freight traffic; this, of course, as a matter of sheer necessity to meet war requirements. In the handling of freight, we are seeking to apply the well established principle, that the greater the speed, the greater the consumption of coal. Hence fast freights are by no means a desideratum. In addition, we have endeavored to run our freights at full capacity tonnage, thus securing the maximum results with the minimum of fuel consumption. Another feature of fuel conservation is the elimination of needless delays by a careful arrangement of schedules and rapid dispatching.

To say that good engineering is an essential element in the process of conserving fuel is to mention a basic principle. Our locomotive and boiler house firemen cannot be too well instructed on this point; as with them, in the final analysis, rests the successful issue of our present campaign. Mechanical devices, such as superheaters, automatic fire doors, etc., may accomplish a great deal in the matter of avoiding unnecessary wastage, but certainly the human element is the dominant factor—we cannot get away from it. Give us a body of expert and conscientious firemen, and I dare say the problem is solved. You will understand me well. I would not for one moment impugn their motives. Our firemen are as loyal as any group in the service, but quite frequently they fail to grasp the seriousness of the situation that confronts us, as well as the importance of the occupation which is theirs.

Another tangible means of saving coal to win the war is to substitute wherever possible, utilizing gas house coke for heating stations, etc. A considerable amount of scrap wood can be utilized as fuel in shop boilers, old ties can be gathered up and burned for the same purpose. In many communities dead wood can be used to advantage instead of coal for domestic purposes, in this way affording economy both to the user and the country as a whole. In wooded districts the same suggestion may apply. If we stop to consider that one cord of hard wood is equivalent to a ton of coal, it is easily understood that for every cord of wood so substituted, a ton of coal is released for use in war work.

I might more earnestly ask in exchange for our share in this worthy enterprise that our railways be not overburdened any longer with a lot of foreign matter under the guise of coal. I have found it necessary to have whole carloads of this extraneous matter dumped into the ditch, it being absolutely worthless as fuel for any purpose. There is certainly no econ-

omy there. The situation is infinitely worse if such matter finds its way into ships' bunkers, transports especially, for then the lives of thousands are placed in needless jeopardy. A remedy must be found for all this, and I have no doubt that the government will insist upon the proper cleaning of coal at the mines.

The overloading of tenders has been the cause in the past of an incalculable waste. Thousands of tons have been lost by thus scattering coal along the line. Measures have been taken to avoid this frightful deficit, and yet observation along the right of way of our railways would indicate that there is still room for improvement. Ashpits also are frequently a source of wastage.

Now, looking at the question in a broad way, is it not quite evident that we are just beginning to wake up to the necessity of economy? Have we not been spoiled by a foolish idealism in relation to the resources of our respective countries? Moreover, have we not literally squandered our inheritance by failing to economize? Now that the times are critical, we are endeavoring to amend matters. The pinch of want, together with the soaring of prices, are making us all realize that our only salvation lies in saving.

There are two slogans, which we have all heard quite frequently. One is "Win the war" and the other "Business as usual." Permit me to suggest that one will have to be abandoned. To win the war, we cannot afford to have business as usual. Only a maximum of effort on our part can achieve the desired result. It is with that spirit that I appeal to all the people in the United States, as well as in Canada, to do their bit generously, wholeheartedly, fearlessly. To all those connected in any way with the railways in the United States and in Canada, I would say in closing: "Help Garfield to save fuel and thus bring victory to the allies," or "Keep the home fires burning" wisely.

**International Railway Fuel Association.** The annual convention was held at Chicago, Ill., May 23 and 24. The officers for this year are:—President, L. R. Pyle, Fuel Supervisor, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn.; Vice Presidents, C. M. Butler, Supervisor of Fuel, Atlantic Coast Line; J. B. Hurley, General Foreman of Locomotives, Wabash Ry.; H. B. MacFarland, Engineer of Tests, Atchafalaya, Topeka & Santa Fe Ry. Executive Committee, for two years: B. P. Phillippe, Pennsylvania Rd.; A. N. Willisie, Chicago, Burlington & Quincy Rd.; T. Duff Smith, Grand Trunk Pacific Ry.; R. R. Hibben, Missouri, Texas & Kansas Ry.; for one year, H. B. Brown, Lehigh Valley Rd.; L. J. Joffray, Illinois Central Rd., and H. Woods, Colorado & Southern Ry.

**The Association of American Railway Accounting Officers** held its annual convention at St. Louis, Mo., May 29 and 30. The officers for this year are:—President, R. E. Burger, Assistant Auditor, Wabash Ry.; Vice Presidents, A. D. McDonald, Vice President, Southern Pacific Co., and J. G. Drew, Vice President, Missouri Pacific Rd. J. Welch, Assistant General Auditor, Chicago, Milwaukee & St. Paul Ry., and John Leslie, Comptroller, C.P.R., Montreal, were elected to the executive committee in place of retiring members.

## Mainly About Railway People Throughout Canada.

Thomas Russell, who was for several years agent C.P.R. at Glasgow, Scotland, died there, June 16.

F. C. Salter, European Traffic Manager, G.T.R., London, Eng., arrived in Canada recently on a short visit.

Edward F. Fauquier, railway contractor, who died in Ottawa May 5, left an estate valued at \$862,924.

F. H. Crockard, President, Nova Scotia Steel & Coal Co., has been elected a member of the Engineering Institute of Canada.

Hon. Frank Cochrane, M.P., ex Minister of Railways and Canals, has rented Hayter Reed's house at St. Andrews, N.S., for the summer.

Mrs. Bassett, wife of W. J. Bassett, of the Bassett Steamship Co., Toronto, died there June 25, aged 59. She was buried at Collingwood, Ont.

Lady Mann, who has been staying in Montreal for some months with her son, has rented Lt.-Col. G. B. Winans' house on Cote St. Antoine Road there.

John Leslie, Comptroller, C.P.R., Montreal, has been elected a member of the Association of American Railway Accounting Officers' executive committee.

C. M. Odell, Chief Engineer, Sydney & Louisburg Ry., Glace Bay, N.S., addressed the Sydney Steel Works Engineering Society recently, on transportation.

J. H. Kerr, for 15 years Secretary of Canadian Westinghouse Co., Hamilton, Ont., died there June 24, after a short illness. He was buried at Pittsburg, Pa., his birthplace.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, has been elected a member of the International Railway Fuel Association's executive committee for two years.

R. H. Fish, Superintendent, Strafford Division, Ontario Lines, G.T.R., was presented with a silver cigarette case, by the Governor General, in appreciation of services rendered during a tour through that district recently.

G. R. Pratt, mechanical and fuel engineer, C.P.R., Winnipeg, has been elected an associate member of the Engineering Institute of Canada. He was formerly inspector and engineer on construction, C.P.R. Winnipeg shops.

J. G. McHattie, employed by the Imperial Munitions Board at Ottawa, who there, June 14, aged 28, after a short illness, was fourth son of T. McHattie, formerly Master Mechanic, Eastern Lines, G.T.R., Montreal.

G. B. Harris, Chairman of the Board, Chicago, Burlington & Quincy Rd., died at Chicago, Ill., June 10. He was born at Brookline, Mass., in 1848, and entered railway service in 1866. He was President of the road from 1901 to 1912, since when he was Chairman of the Board.

Stanley W. Crabbe, whose appointment as Superintendent, Schreiber Division, Ontario District, C.P.R., Schreiber, Ont., was announced in a recent issue, was born at Teeswater, Ont., Aug. 9, 1885, and entered C.P.R. service in 1903, since when he has been, to Mar. 11, 1918, section laborer, telegraph operator and agent, consecutively.

Acton Burrows, Managing Director, Canadian Railway and Marine World, and Honorary Secretary-Treasurer, Canadian Electric Railway Association, has been unanimously re-elected, for the

fourth successive year, as chairman of the Canadian Press Association's Trade and Class Paper Section, and as a director of the association.

H. B. Walkem, Assistant Engineer, C. P.R., Vancouver, B.C., was born at Montreal July 31, 1858, which should have been mentioned under "Birthdays of Transportation Men in July," on pg. 281 of this issue. He joined the C.P.R. engineering staff in British Columbia in 1881 and has been in that company's service continuously ever since.

F. M. Holland, General Manager of the Dominion Permanent Loan Co. up to the time of its assignment a short time ago, died at Toronto June 4. The company was concerned in the early construction of the Kettle Valley Ry., and made heavy investments in the Spokane & British Columbia Ry., which ultimately brought about the company's downfall. Mr. Holland was on bail at the time of his death

S. W. Crabbe,  
Superintendent, Schreiber Division, Ontario District, Canadian Pacific Railway.

charged with breaches of law in connection with the conduct of the business.

Charles Clarke, Assistant Commissioner of Industries, G.T.R. lines west of Detroit and St. Clair Rivers, Detroit, Mich., died there May 27. He was born at Clarkson, Mich., Apr. 17, 1848, and entered railway service with the Detroit & Milwaukee Rd., Apr. 1, 1872, since when he was, consecutively, Commercial Agent at Detroit, Mich., and at Buffalo, N.Y., and since Dec. 1, 1912, Assistant Commissioner of Industries at Detroit, for the G.T.R. and subsidiary companies.

J. Louis Santerre, whose appointment as acting Locomotive Foreman, Canadian Government Railways, Doucet, Que., was announced in our last issue, was born at St. Roch, Que., Oct. 10, 1891, and has been, from Feb. 22, 1913, to Aug. 13, 1915, fireman, C.P.R., Quebec, Que.; Aug. 13 to Dec., 1915, laborer Quebec Engineering Co., Quebec, Que.; Dec., 1915, to Jan. 14,

1916, in other service at Toronto; Jan. 14, 1916, to Feb., 1918, fireman, Canadian Government Railways, Parent, Que.; Feb. to May, 1918, hostler, C.G.R., Parent, Que.

Cesaire Senay, who has been appointed General Agent, C.P.R., Quebec, Que., was born at St. Cesaire, Que., Jan. 31, 1873, and entered C.P.R. service in Oct., 1894, since when he has been, to June, 1902, freight clerk and telegraph operator, Mile End, Que.; Mar., 1904, to July, 1912, agent, Atwater, Que.; July, 1912, to Jan., 1913, agent, St. Henry, Que.; Jan. to Dec., 1913, agent, Mile End, Que.; Dec., 1913, to May, 1916, General Agent, Quebec, Que.; May, 1916, to May, 1918, Assistant Superintendent, Laurentian Division, Quebec District, Montreal.

Maurice B. Helston, who has been appointed Superintendent, Division 3, Western District, Canadian Northern Ry., Edmonton, Alta., was born at Michigan City, Ind., Aug. 24, 1869, and entered railway service in 1885, since when he has been, to 1890, operator, Michigan Central Rd.; 1890 to 1898, dispatcher, same road; 1898 to 1909, dispatcher, and chief dispatcher, Northern Pacific Ry.; 1909 to 1914, chief dispatcher, Canadian Northern Ry.; 1914 to Feb. 1, 1917, Superintendent, Duluth, Winnipeg & Pacific Ry., Virginia, Minn.; Feb. 1, 1917, to June 1, 1918, Superintendent, Division 4, Western District, Canadian Northern Ry., Calgary, Alta.

Edward Greig Bowie, who has been appointed General Foreman, C.P.R., McAdam Jct., N.B., was born at Winnipeg, Aug. 20, 1892, and entered C.P.R. service in May, 1907, since when he has been, to Aug., 1912, machinist apprentice, Winnipeg; May, 1912, to Sept., 1914, machinist, Winnipeg and on Western Lines; Oct., 1914, to Apr., 1915, Master Mechanic's clerk, Calgary, Alta.; Apr. to July, 1915, machinist, Angus shops, Montreal; July to Oct., 1915, dynamometer car operator, Eastern Lines; Oct., 1915, to Apr., 1916, Assistant Locomotive Foreman, Ottawa; Apr. to Nov., 1916, Assistant Foreman and Locomotive Foreman, Outremont, Que.; Nov., 1916, to May, 1917, Locomotive Foreman, Sherbrooke, Que.; May, 1917, to June, 1918, Locomotive Foreman, Smiths Falls, Ont.

P. R. Todd, heretofore President, Bangor & Aroostook Rd., Bangor, Me., who has been appointed Assistant to District Director, U.S. Railroad Administration, and General Manager, Bangor & Aroostook Rd., Bangor, Me., was born at Toronto, Dec. 4, 1859, and educated at Ottawa. He commenced railway work as clerk and telegraph operator, St. Lawrence & Ottawa Ry., now part of the C.P.R., and from 1875 to 1882 was Canadian Agent, Ogdensburg & Champlain Ry.; to 1885, General Travelling Agent, National Dispatch Line, Chicago, Ill.; July to Dec., 1885, Commercial Agent, New York, West Shore & Buffalo Ry., Albany, N.Y.; to Oct., 1886, chief clerk, General Freight Department, same road, New York; Oct., 1886, to Dec., 1889, General Freight and Passenger Agent, Canada Atlantic Ry., now part of the G.T.R., Ottawa; Dec., 1889, to Feb., 1901, General Freight Agent, West Shore Rd.; Feb., 1901, to Nov., 1903, Second Vice President, New York, New Haven & Hartford Rd.; Nov., 1903, to 1905, First Vice President, same road; Jan., 1907, to Jan., 1913, Vice President, Bangor & Aroostook Rd., and subsequently President, same road, Bangor, Me.

# Canadian Northern Railway Construction, Betterments, Etc.

The Dominion Government has authorized the expenditure of \$7,185,300 for construction and betterment work on various parts of the C.N.R. system during this year. Following are details of the various works proposed to be done:—

**The Montreal Terminals** are reported to be over 90% completed, and it is expected that they will be ready for operation by the end of August. It is important that the small amount of work yet to be done be completed in order to make the terminal ready for use. The temporary station on LaGauchetiere St. was reported practically completed at the end of April, and the tunnel work was very nearly finished at the end of May. The principal work to be done consists of the final completion of the various sections and the linking together of the whole work.

**The Duncan-Toronto connecting line** which the C.N.R. has partially completed extends from the Duncan station, 11.1 miles from Toronto on the Toronto-Sudbury line to the east end of the C.P.R. bridge over the west Don River. Track has been laid, but before the line can be operated it requires to be ballasted and otherwise finished up, and the interlocking appliance with the C.P.R. tracks have to be installed. The C.P.R. tracks between Leaside Jct. and North Toronto and westerly for a short distance will be used by the C.N.R. as a joint section under an agreement. The completion of the line from Duncan to the C.P.R. line will enable the C.N.R. to operate its trains into North Toronto station, and to utilize its terminal yards at Leaside.

**The Leaside Terminal** adjoins the C.P.R. freight yard at Leaside Jct., Toronto, and the expenditure will provide for laying out the yards and building shops, etc., for taking care of the equipment on eastern lines.

The buildings to be erected will comprise a 10 stall locomotive house of solid brick on concrete foundation. Each stall will be 14 ft. wide in front, 30 ft. wide at the rear, and 100 ft. long, with drop-pits for drivers, tender trucks and locomotive trucks. It will be steam heated from the boiler room attached, which will also be built of solid brick on concrete foundation and will contain 4 locomotive type boilers. In connection with these buildings will be a turntable 80 ft. in diameter, built on concrete with air tractor. An office for the locomotive foreman, and store house for petty stores will be in close proximity. It will be of solid brick on concrete foundations, and will be one story high with basement. It will be 27 x 46 ft., and will contain locomotive foreman's private office, general office and booking office. The petty stores room will be equipped with an oil storage system. A 60,000 gall. water tank, of wood on concrete foundations, will adjoin. The last building of this group will be a bunkhouse for locomotive men, a one story frame building, 24 x 32 ft., on post foundations, and will contain washroom, with shower baths, lavatories, sitting and bedrooms.

The other terminal buildings will consist of a passenger car yard work shop, a one story frame structure on post foundations, 21 x 48 ft., for car cleaners, etc., and a 2,000 ton capacity frame ice house, 30 ft. wide, 176 ft. long and 24 ft. high at wall plate. It will be built of 7s in. outside t. and g. sheathing, insulation paper, 2 by 3 in. studs, and 7s in. t. and g. sheathing, 2 x 6 in. studs, 3s in. t. and g. sheathing, insula-

tion paper, 2 by 3 in. studs, and 7s in. t. and g. interior sheathing.

The office building will be a 2-story frame structure, 36 x 60 ft., on concrete foundation. The basement will contain a boiler room, coal room, vault, locker room and lavatories for train crews. On the first floor will be the yardmaster's office, agent's office, local office, supervisor's office, lunch room, officers' and men's lavatories, and on the upper floor will be offices for the superintendent, assistant superintendent, chief and other train dispatchers, general office, rest room and women's lavatories.

The stores and office building will be of brick on concrete foundations, 60 x 180 ft.; the stores section will be 2 stories high, and the offices section will be 3 stories high.

There will be three shops, a locomotive shop, 151 x 300 ft., of brick on concrete foundation, with 12 pits; a car shop, 140 x 283 ft., of brick on concrete foundation, and containing 12 tracks; a blacksmith shop, 70 x 100 ft., also of brick on concrete foundation. In connection with these buildings will be a transfer table, 80 x 372 ft., on concrete.

Construction was started early in February, and it is expected to have the whole work completed by the autumn. The yards, etc., have been planned under the direction of A. T. Stewart, Chief Engineer, Eastern Lines. The plans for the buildings were prepared by G. C. Briggs, Supervisor of Buildings, and they are being built direct by the company under his supervision. The site was graded by Franceschini & Co.

**Central District.**—On the Port Arthur-Winnipeg section of the line, the 129 miles between Twin City Jct. and Atikokan will be relaid with 85 lb. steel. The traffic on this section is very heavy. The present rails will be utilized on branch lines.

The Thunderhill branch extends from Swan River, Man., to Preeceville, Sask. An extension of 27 miles has been graded from Preeceville westerly, on which track is to be laid and the extension completed. This work has been delayed hitherto owing to inability to obtain rails.

From Avonlea, Sask., on the Moose Jaw-Radville line, a line is in operation westerly to Gravelbourg and it is proposed to complete the extension to mileage 93 this year, to give facilities to settlers.

A branch from the Saskatoon-Calgary line runs from Delisle, mileage 25.6 from Saskatoon, southerly to Elrose Jct., 50.7 miles from Delisle, and then another branch runs 8.9 miles easterly to Dunblane. The latter extension, known as the Luck Lake branch, is partly graded and it is expected to complete 14 miles this year. It is stated that the settlers have petitioned the company to have the whole of the branch completed, and that they have offered to purchase bonds for \$300,000 to enable this to be done.

A line from Elrose Jct. westerly is in operation to Eston, 84.4 miles, and it is intended to extend it 43 miles to Alask, where the Saskatoon-Calgary line crosses the Saskatchewan-Alberta boundary. There is a large settlement along the projected route, and some grading has been done. The difficulty of obtaining rails having been overcome, it is expected to have the extension completed in the autumn.

**Moose Jaw Station.**—The Minister of Railways for Saskatchewan is reported to have stated June 2 that an agreement

between the C.N.R. and the Grand Trunk Pacific Ry. for the erection of a union station at Moose Jaw had been approved and only awaited the Board of Railway Commissioners' formal approval. It is expected that the work of linking up the G.T.P.R. tracks with those of the C.N.R. will be taken in hand at once, and that the station will be located on Main St.

**Alberta District.**—Some grading has been done from Hanna, Alta., on the Saskatoon-Calgary line, southeasterly, the branch being intended ultimately to reach Medicine Hat, Sask. It will serve a considerable area of territory north of the Red Deer River, in which there has already been a large settlement. It is intended to complete the first section of 47 miles to the Red Deer River. We were officially further advised recently that tenders for construction have been asked. An Alberta Government official was reported subsequently to have stated that a contract has been let to W. A. Dutton, Winnipeg, for the grading on this branch, and that it is expected to have track laid this year.

On the Goose Lake line, which is another name for the Saskatoon-Calgary branch, it is proposed to lay heavy steel rails from Hanna westerly to Drumheller, 52.2 miles, with a double track from Wayne to Manson Jct., 20.1 miles, to properly service the Drumheller coal district, the mines in which 21,376 tons for the three months ended Mar. 31, and are capable of increasing their output considerably if adequate facilities are provided.

The line from Oliver, Alta., 8 miles east of Edmonton, northerly and easterly to St. Paul de Metis has been graded to mileage 100, and track has been laid on 44 miles, but owing to the difficulty of obtaining rails, nothing more could be done. It is intended to complete the track laying to mileage 100, and to provide a train service to the settlers. The ultimate aim is to extend the line easterly, in order to meet the branch from North Battleford, now running north westerly to Turtleford, 55.7 miles.

**Vancouver Terminals.**—It is proposed to complete the False Creek terminals at Vancouver at the earliest date possible. The funds accruing from the British Columbia bonds are lying at the credit of a trust account in a bank. Tenders are under consideration for additional filling to be done on this site.

**Entrance Into Vancouver.**—The Dominion Parliament has ratified an agreement dated Aug. 11, 1913, made between the Vancouver, Victoria & Eastern Ry. & Navigation Co. (a subsidiary of the Great Northern Ry., U.S.) and the Canadian Northern Pacific Ry. The V.V. & E.R. & N. Co. grants to the C.N.P.R. the equal joint possession and use of its line from the International Boundary at Sumas to the southerly approach of the Fraser River bridge at New Westminster, owned by the Province of British Columbia, and from the northerly approach of the bridge to Vancouver, at a rental of 2 1/4 % a year upon a capital value of \$3,985,448.75, to be increased by 2 1/4 % a year on any additional capital expenditure necessary and agreed upon, provided always that if similar facilities shall be granted to any other railway company, the rental shall be reduced to 2 % for the first additional company, and to 1 1/2 % for additional companies. The C.N.P.R. is also to pay on a mileage basis the cost of maintenance and operation of the property leased. Either company may connect branch lines with

the railway, but the C.N.P.R. is not to use the V.V. & E. Ry. spur tracks, or industrial sidings in New Westminster, except to reach its own station and team tracks. The agreement contains provisions as to the operation of trains, the settlement of differences by arbitration, and the declaration that the C.N.P.R. shall make its own agreement with the B.C. Government for the operation of its trains across the Fraser River Bridge.

**Dominion Legislation.**—The Dominion Parliament has extended the time within which the Toronto, Niagara & Western Ry. may build its projected railway from Toronto to Hamilton and thence to the International Boundary at Grand Island or Niagara Falls, Ont., and with the consent of the authorities, to a point in the State of New York, with a branch from St. Catharines through Thorold to Welland. The bill met with considerable opposition, but was passed on a statement by the Minister of Railways that the company is absolutely owned by the C.N.R., and that therefore all its property and rights will pass to the Dominion Government on the taking over of that company; and that all restrictions heretofore made with regard to the route of the line in Toronto still exist and will be observed by the government. No construction has been done on the line, but \$1,500,000 has been expended upon surveys and right of way.

The Dominion Parliament has authorized the company to build a line from near the head of Long Lake, near Longue-lac, by the shortest possible route northerly and westerly to a junction with the National Transcontinental Ry. east of Lake Nipigon, Ont.

**Expenditures Necessary for Completion.** In connection with the second reading of the bill supplementary to chap. 24 of the statutes of 1917, respecting the Canadian Northern Ry. and the Dominion Government relationship thereto, during the recent parliamentary session, Hon. A. K. Maclean, acting Minister of Finance, gave a great many details respecting the company's affairs. One of the tables gave estimates of the amounts necessary to complete lines and terminals in Western Canada which were under construction at Sept. 30, 1917. It is as follows:—

	Miles	Estimated cost.
<b>Manitoba—</b>		
Portage Jct.—Paddington.....	4.58	\$681,822
<b>Saskatchewan—</b>		
Swift Current .....	55.75	825,771
Elrose extension .....	50.00	383,673
Vonda north easterly .....	25.00	240,212
Thunderhill branch .....	47.27	452,772
Luck Lake Branch .....	35.00	473,626
N. Battleford—Turtleford ....	5.21	52,876
<b>Alberta—</b>		
Hanna—Medicine Hat .....	14.76	3,344,296
Calgary—MacLeod .....	103.28	1,609,392
Strathcona—Calgary .....	32.66	566,029
Peace River .....	42.52	571,178
Oliver northerly .....	115.00	911,978
MacLeod—Pincher Creek .....	34.00	463,836
<b>British Columbia—</b>		
Vancouver Island lines (ABC) ..	100.00	682,368
(D) .....	45.57	1,182,603
Okanagan branches .....	141.00	4,460,335
New Westminster to Steveston ..	13.35	138,049
<b>Total .....</b>	<b>994.95</b>	<b>\$17,040,236</b>

Following are the details as to terminals, etc.:—

	Miles	Estimated cost.
<b>Moose Jaw, Sask. ....</b>	<b>7.95</b>	<b>\$461,794</b>
<b>British Columbia—</b>		
Vancouver .....	2,162,309	
Car ferry .....	99,189	
Steveston .....	60,745	
Port Mann .....	54,679	
New Westminster .....	226,085	
Victoria .....	553,125	
<b>Total .....</b>	<b>\$3,917,906</b>	

The grand total of the estimated cost of the completion of the lines is therefore \$20,958,142.

## Freight and Passenger Traffic Notes.

The Canadian Northern Ry. is reported to have resumed its train service from Quebec to Valcartier Camp, Que.

The Reid Newfoundland Co. put an increased passenger fare schedule in operation on its railway June 1, by authority of an order-in-Council.

The C.P.R. has not, up to the time of writing, made any provision in its summer time-table for running a special boat train between Fort William and Winnipeg.

The C.P.R. in its summer schedule for the B.C. coast steamship service has provided for a stopover of an hour and a half at Victoria. The steamship continues to arrive at Victoria from Seattle at 1.15 p.m., but leave for Vancouver at 2.45 o'clock instead of 2 p.m. as formerly.

The Canadian Northern Ry. is giving up to Sept. 30, in conjunction with the Grand Trunk Pacific Ry., a special passenger rate from Calgary, Edmonton and intermediate points, under which a rail and steamship trip may be taken to Prince Rupert, Victoria, Seattle and Vancouver, the return journey to be completed by Oct. 31.

The United States Shipping Board held a sitting at Seattle, Wash., June 5, when the position of the Grand Trunk Pacific Steamship Co., in relation to the Alaska freight and passenger rate question was discussed. Members of the board started work on May 11, and visited every Alaskan port and the several ports in the State of Washington interested in the Alaskan traffic.

The Grand Trunk Pacific Ry. started, on June 1, to issue at Calgary, Edmonton and intermediate points round trip tickets to Vancouver, Victoria or Seattle, good to return to Oct. 31. The are available on G.T.P.R. to Prince Rupert, and on the G.T.P.R. steamships to Vancouver, etc., and from Vancouver back to starting point by Canadian Northern Ry. They will be issued to Sept. 30.

The railways starting from Edmonton,

Alta., of which J. D. McArthur is president, are running a series of settlers excursions to the Grande Prairie, Pouce Coupe and Peace River districts of Alberta. The first excursion, which left Edmonton June 4, consisted of about 50 men, representing groups of farmers in various parts of Canada and the United States desirous of investing money and settling in the new country.

A regular train service was put in operation for the first time for some months on the Pacific Great Eastern Ry.'s North Vancouver - Whytecliffe section, with Sergt.-Major Jas. Robinson, a returned soldier, in charge of traffic. The company, which is now owned by the British Columbia Government, also put in operation on June 2 a tri-weekly train service between Squamish and Clinton, B.C., connecting at Squamish with steamboat to Vancouver. The trains to Clinton leave Squamish on Tuesdays, Thursdays and Saturdays, and the return trains on Mondays, Wednesdays and Fridays.

The car ferry service between Tormentine, N.B., and Port Borden, P.E.I., was discontinued June 15, but it is expected it will be resumed early in August. Trains 13 and 14 running to and from St. John in connection with the car ferry, are discontinued as between Moncton and Tormentine. Through rail and steamer service between New Brunswick and Prince Edward Island, via Point du Chene and Summerside, was resumed June 24. The steamship leaves Summerside at 9.10 a.m. and arrives at Point du Chene about noon, connecting there with a train leaving for Moncton at 12.45 p.m., and connecting with the Ocean Limited for Montreal, and train 13 for St. John and Boston. The steamship leaves Point du Chene for the return trip to Summerside at 5.30 p.m.

**Coal Production in Alberta.**—During the three months ended Mar. 31, 810,972 tons of coal were mined in Alberta against 744,700 tons for the same period of 1917. The quantity shipped to Manitoba increased from 33,003 tons to 98,195; the quantity shipped to Saskatchewan and British Columbia is not given.

## Canadian Pacific Railway's Honor Roll 35.

Baumont, Harold Sykes	Cranesman	West Toronto	Gas poisoning
Bird, John	Storeman	Cranbrook	Gas poisoning
Breen, Joseph	Locomotive fireman	Kenora	Wounded
Brown, Joseph A.	Clerk	Winnipeg	Killed in action
Colyer, Walter	Freight carpenter	North Bay	Wounded
Cook, Daniel	Boiler maker	West Toronto	Shell shock
Currie, Walter A.	Cook	Montreal	Wounded
Daniel, George	Clerk	Winnipeg	Died of wounds
Davidson, Walter	Trainman	Schreiber	Killed in action
Donaldson, David	Clerk	Calgary	Killed in action
Elliott, Sidney	Checker	Toronto	Wounded
Favreau, Hector	Car carpenter	Angus	Gas poisoning
Gerhart, Albert Howard	Apprentice	Vancouver	Gassed
Gordon, Henry Hartley	Material delivery man	West Toronto	Killed in action
Greenwood, R. J. A.	Laborer	West Toronto	Gassed
Halliday, Wm. Charles	Fireman	Kenora	Killed in action
Harrison, Alfred G.	Bridgeman	Ontario District	Wounded
Harrison, Geo. Jerod	Boiler washer's helper	Moose Jaw	Wounded
James, William	Fireman	West Toronto	Killed in action
Johnson, Jas. Albert	Porter	Fort William	Died of wounds
Kelly, Benjamin	Sheeter	Winnipeg	Wounded
MacDonald, Angus Norman	Conductor	Moose Jaw	Wounded
McDonald, Hugh John	Fitter	Lambton	Wounded
McLardy, Frank Edgar	Night operator	Woodstock, N.B.	Killed in action
McLeod, John	Wiper	Regina	Wounded
Matthews, George	Locomotive fireman	Moose Jaw	Wounded
Murphy, James	Train clerk	Kenora	Killed in action
Murray, Jack Beattie	Brakeman	MacLeod	Gassed
Ogilvy, Ralph Wardlaw	Clerk	Vancouver	Wounded
Owen, William	Fitter's helper	Lambton	Killed in action
Reinstein, Louis Frederick	Clerk	Montreal	Wounded
Rothwell, John G.	Bill	Ottawa	Killed in action
Seaton, William	Messenger	Edmonton	Wounded
Stewart, Charles	Section foreman	Milverton	Wounded
Stewart, Robt. Henry	Fitter	Winnipeg	Wounded
Stiles, Bedford Allen	Locomotive fireman	British Columbia Dist.	Killed in action
Thorogood, T.	Ice man	Winnipeg	Wounded
Ward, John Charles	Brush hand	Winnipeg	Wounded
Watt, John	Car repairer	Vancouver	Wounded

Shown on Honor Lists to June 1: Killed 633; Wounded 1,478; Total 2,111.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Algoma Eastern Ry.**—W. H. FARRELL, heretofore Superintendent Toronto Terminals, G.T.R., has been appointed General Manager, A.E.R., vice A. L. Smith, resigned. Office, Sudbury, Ont.

**Boston & Maine Rd.**—WOODWARD HUDSON, General Counsel, has been elected President and director, B. & M.R. and its subsidiaries, vice J. H. Hustis, Temporary Receiver, resigned. Office, Boston, Mass.

**Canadian Government Railways.**—W. A. DUFF, heretofore Assistant Superintendent, District 2, Transcontinental Division, Grant, Ont., has been appointed Assistant Superintendent, District 1, Transcontinental Division, vice J. J. McManus, who has left the service. Office, Parent, Que.

W. G. WILSON has been appointed acting Assistant Superintendent, District 2, Transcontinental Division, vice W. A. Duff, transferred. Office, Grant, Ont.

W. A. HILL, heretofore dispatcher, Graham, Ont., has been appointed Chief Dispatcher there, vice S. A. Lawless, transferred to Quebec, Que.

W. F. CRESSALL, heretofore accountant, Cochrane, Ont., has been appointed chief clerk to Superintendent, Fort William, Ont., vice H. A. Irving, now in military service.

W. J. QUINLAN, District Passenger Agent, C.G.R. and Grand Trunk Pacific Ry., Winnipeg, has also been appointed acting General Baggage Agent, C.G.R. and G.T.P.R. there, vice E. McDonald, enlisted for military service.

See also Elgin & Havelock Ry., Moncton & Buctouche Ry., St. Martins Ry., Salisbury & Albert Ry., and York & Carleton Ry.

**Canadian Northern Ry.**—W. M. PUNTER, heretofore Manager, Saxby & Farmer, Ltd., Montreal, has been appointed Signal Engineer, lines east of Port Arthur, Ont., reporting to Chief Engineer. Office, Toronto.

P. K. HUNT, heretofore Manager, Prince Edward Hotel, Brandon, Man., has been appointed Manager, Prince Arthur Hotel, Port Arthur, Ont., vice G. A. Keeler, resigned.

J. VAN WYCK has been appointed Manager, Prince Edward Hotel, Brandon, Man., vice P. K. Hunt, transferred.

J. IRWIN, heretofore Superintendent, Division 3, Western District, Edmonton, Alta., has been appointed Superintendent, Division 4, Western District, vice M. B. Helston, transferred. Office, Calgary, Alta.

M. B. HELSTON, heretofore Superintendent, Division 4, Western District, Calgary, Alta., has been appointed Superintendent, Division 3, Western District, vice J. Irwin, transferred. Office, Edmonton, Alta.

**Canadian Pacific Ry.**—E. BOWIE, heretofore Locomotive Foreman, Smiths Falls, Ont., has been appointed General Foreman, McAdam Jct., N.B., vice L. A. Cleary, transferred.

W. W. NOYES has been appointed Roadmaster, McAdam Jct., N.B., vice P. Chicoine, transferred.

C. SENAY, heretofore Assistant Superintendent, Laurentian Division, Quebec District, Montreal, has been appointed General Agent, Quebec, Que., vice J. S. Lalonde, transferred.

J. S. LALONDE, heretofore General Agent, Quebec, Que., has been appointed Assistant Superintendent, Laurentian Division, Quebec District, vice C. Senay, transferred. Office, Montreal.

L. A. CLEARY, heretofore General Foreman, McAdam Jct., N.B., has been appointed Locomotive Foreman, Smiths Falls, Ont.

P. CHICOINE, heretofore Roadmaster, McAdam Jct., N.B., has been appointed Roadmaster, Winchester Subdivision, Smiths Falls, Ont.

E. E. THACKER, heretofore Assistant Passenger Car Yard Foreman, Winnipeg, has been appointed Car Foreman, Field, B.C., vice A. E. Chesterman, resigned.

J. W. MARSHALL, heretofore Assistant Car Foreman, Transcona, Man., has been appointed Freight Shop Foreman, Fort William, Ont., vice H. Dibley, transferred, and not Car Foreman there, as announced in our last issue, which position is held by T. E. Higgins.

G. A. DAVIDSON, heretofore Chief Dispatcher, Nelson, B.C., has been appointed Chief Dispatcher, Calgary, Alta., vice R. Douglas.

J. V. MURPHY, General Agent, Portland, Ore., having resigned, the work of that department is being carried on by B. E. CHACE, City Ticket Agent there.

**Central Vermont Ry.**—J. W. WARDLAW, heretofore Assistant to President, and Purchasing Agent, has been appointed General Manager, C.V.R., under the District Director, New England District, U.S. Railroad Administration. Office, St. Albans, Vt.

See also National Despatch — Great Eastern Line.

**Delaware & Hudson Co.**—F. P. GUTELIUS, heretofore Vice President and General Manager, has been appointed General Manager, D. & H. Co., under the Regional Director, Eastern Regional District, U.S. Railroad Administration. Office, Albany, N.Y.

**Elgin & Havelock Ry.**—The operation of this railway having been taken over by Canadian Government Railways, June 1, all employees now report to C.G.R. Eastern Lines officials.

**Grand Trunk Ry.**—L. G. COLEMAN, heretofore Superintendent, Ottawa Division, Eastern Lines, Ottawa, Ont., has been appointed General Manager, Grand Trunk Ry. in New England, under the District Director, New England District, U.S. Railroad Administration. Office, Portland, Me.

J. A. BURNETT, Electrical Engineer, has resigned, on appointment as technical assistant with the British War Mission at Washington, D.C.

F. L. LAMPLOUGH, heretofore Trainmaster, Ottawa, Ont., has been appointed Superintendent, Ottawa Division, Eastern Lines, vice L. G. Coleman, appointed General Manager, Grand Trunk Lines in New England under the District Director, New England District, U.S. Railroad Administration. Office, Ottawa.

W. E. WEEGAR, heretofore Passenger Trainmaster, Montreal has been appointed Trainmaster, Ottawa Division, Eastern Lines, vice F. L. Lamplough, promoted.

G. A. STOKES, heretofore Terminal Superintendent, Port Huron, Mich., has been appointed Terminal Superintendent, Toronto, vice W. H. Farrell, resigned to enter another company's service.

J. E. ELLIS, heretofore acting Locomotive Foreman, Hamilton, Ont., has been appointed Locomotive Foreman there.

JOHN VASS, heretofore Road Foreman of Locomotives, Nichols, Mich., has been appointed Assistant Master Mechanic, Ontario Lines. Office, Allandale.

H. E. WHITTENBERGER, heretofore General Superintendent, Western Lines, Chicago, Ill., has been appointed General Manager, Grand Trunk Western Lines, under the Regional Director, Eastern Regional District, U.S. Railroad Administration. Office, Chicago, Ill.

See also National Despatch — Great Eastern Line.

**Grand Trunk Pacific Ry.**—W. J. QUINLAN, District Passenger Agent, Canadian Government Railways, and G.T.P.R., Winnipeg, has also been appointed acting General Baggage Agent, C.G.R. and G.T.P.R. there, vice E. McDonald, enlisted for military service.

S. A. MILLER, heretofore conductor, has been appointed Assistant Superintendent, Edmonton, Alta.

W. E. SIMMONS, heretofore dispatcher, Biggar, Sask., has been appointed first trick dispatcher, Edmonton, Alta.

**Grand Trunk Pacific Coast Steamship Co.**—F. L. NORMAN, heretofore Commercial Agent, G.T.R., Seattle, Wash., has been appointed Commercial Agent, G.T.P.C.S. Co. there.

**Grand Valley Ry., Lake Erie & Northern Ry. (Electric).**—A. McL. CAMPBELL, heretofore Travelling Auditor, C.P.R., Montreal, has been appointed Chief Accountant, G.V.R. and L.E. & N.R., Galt, Ont.

**Hudson Bay Ry.**—ALEX. D. PORTER, Mechanical Engineer, having completed his work on the H.B.R., has been appointed to a position in the Imperial Munitions Board's service at Ottawa, under the Director of Shell Contracts. His position on the H.B.R. will not be filled for the present at least.

**Michigan Central Rd.**—E. D. BRONNER, heretofore Vice President, has been appointed Federal Manager, M.C.R. and Chicago, Kalamazoo & Saginaw Ry., under the Regional Director, Eastern Regional District, U.S. Railroad Administration. Office, Detroit, Mich.

**Moncton & Buctouche Ry.**—The operation of this railway having been taken over by Canadian Government Railways, June 1, employees now report to C.G.R. Eastern Lines officials.

The National Despatch-Great Eastern Line was abolished June 30. All matters affecting traffic waybilled over this line prior to June 1, have been dealt with by C. J. PIERCE, Manager, and all correspondence in respect to business transacted after June 1, is addressed to G.T.R. or the Central Vermont Ry. officers, as their interests appear.

**New York Central Lines.**—W. K. VANDERBILT, Jr., heretofore Vice President, has been elected President, vice A. H. Smith, resigned on account of his appointment as Regional Director, Eastern Regional District, under the U.S. Railroad Administration.

**Pere Marquette Ry.**—F. H. ALFRED, heretofore President and General Manager, has been appointed Federal Manager, P.M.R., under the Regional Director, Eastern Regional District, U.S. Railroad Administration. Office, Detroit, Mich.

**Rutland Rd.**—G. T. JARVIS, heretofore Vice President and General Manager, has been appointed General Manager, under the District Director, New England District, U.S. Railroad Administration. Office, Rutland, Vt.

**St. Martins Ry.**—The operation of this railway has been taken over by Canadian Government Railways, June 1; all employees report to C.G.R. Eastern Lines officials.

**Salisbury & Albert Ry.**—The operation of this railway having been taken over by Canadian Government Railways, July 1, all employees now report to C.G.R. Eastern Lines officials.

**York & Carleton Ry.**—The operation of this railway having been taken over by Canadian Government Railways, June 1, all employees now report to C.G.R. Eastern Lines officials.

### The Traveling Engineers' Association Convention.

The Railroad Administration has authorized the Traveling Engineers' Association to hold its next convention at Chicago, Ill., commencing Sept. 10. Following are the subjects to be discussed:—

**Fuel economy.** under the following heads: Value of present draft appliances; can they be improved to effect fuel economy. Best practice for handling locomotives at terminals to reduce coal consumption. How can locomotive men and firemen effect the greatest saving of fuel when locomotives are in their charge? Whether it is more economical to buy cheap fuel, at a low heat value or a higher price fuel at a greater heat value. The most economical method of weighing fuel when delivered to locomotives, in order that individual records of coal used by engineers and firemen may be kept. Superheat applied to locomotives as effecting coal consumption.

**Locomotive failures, causes and remedies,** best methods of investigating same, and placing responsibility.

**The use of superheat steam in slide valve locomotives.** Drifting, relief, and by-pass valves, or the absence of any one or all, on superheated locomotives equipped with piston valves.

**Cab and cab fittings on modern locomotives,** from the viewpoint of the locomotive man.

**How can the traveling engineer and general air brake inspector best co-operate to improve and maintain the air brake service.**

Such other matters as may be considered of interest to the association and railways under the changed conditions.

### New York Central Railroad Report for 1917.

The New York Central Rd. directors' report for the calendar year 1917 shows a total of 5,685.43 miles of railway operated, of which 3,702.75 are main line and branches owned, 1,527.02 are leased lines and 455.66 are operated under trackage rights. The leased lines include the following in Canada:—St. Lawrence & Adirondack Ry., International Boundary to Valleyfield, Que., 20.17 miles, and Beauharnois to Adirondack Jct., Que., 13.27 miles, total 33.34 miles; Grand Trunk Ry., Valleyfield to Beauharnois, 12.70 miles; Ottawa & New York Ry., International Boundary to Ottawa, 56.90 miles. The lines operated under trackage rights in Canada are:—Canadian Pacific Ry., Adirondack Jct. to Montreal, 8.80 miles, South Junction to Outremont, Que., 5.46 miles, in Ottawa 1.09 miles, total 15.35 miles; Grand Trunk Ry., in Ottawa, 0.81 mile.

The report does not give details of the operations of Canadian railways, but includes them in the general statement.

Information as to the Ottawa & New York Ry. and the St. Lawrence & Adirondack Ry. for the year ended June 30, 1917, is given in the steam railways statistical table on another page. The financial statements, however, contain the following items:—Expenditures for improvements to property, \$31,795.37 on Ottawa & New York Ry., and \$45,706.29 on St. Lawrence & Adirondack Ry., the work on both lines being classified as bridge strengthening and track improvements.

The company's investments include:—Ottawa & New York Ry., \$64,362.67; St. Lawrence & Adirondack Ry., \$54,407.38, on account of improvements; Ottawa & New York Ry., \$1,000,000, par value shares of common stock; St. Lawrence & Adirondack Ry., \$1,615,000, par value of common stock, being in each case the entire share capital; Michigan Central Rd., \$16,819,300, out of \$18,738,000 par value common stock outstanding; Toronto, Hamilton & Buffalo Ry., \$1,676,600, par value out of \$4,512,500 common stock outstanding; Ottawa & New York Ry., \$8825,000 1st and \$275,000 2nd mortgage bonds; Toronto, Hamilton & Buffalo Ry., \$500,000 bonds. The rental paid to the St. Lawrence & Adirondack Ry. was \$64,000, being interest on 1st and 2nd mortgage bonds, and the rental paid to the G.T.R. was \$10,000.

### Railway Maintenance Cost Increased by Fast Trains.

That speed of trains affects the cost of maintenance of way and structures to the extent that the higher the proportion of passenger traffic, which may be assumed as high speed traffic, the greater the cost of maintenance, is the conclusion arrived

at in a preliminary report presented by the track committee at the American Railway Engineering Association's recent annual meeting.

In the accompanying diagram, the curved lines represent traffic of which the passenger-car miles constitute 7.5, 12.5 and 20.3% of the total car mileage. The vertical ordinates represent the annual cost of maintenance per mile of road; the horizontal lines represent the density of traffic in 1,000 car-miles per mile of road.

It is recognized by the committee that the assumption of high speed and low speed traffic, as synchronous with passenger and freight traffic, is not entirely correct, but this, the committee says, offers the only opportunity for classifying expenses in accordance with differences of speed. The car-mile was taken as the unit for comparison on the ground that it gives the best measure of the facilities required by each class of traffic.

The Grand Trunk Ry. car ferry will give a freight and passenger service between Cobourg, Ont., and Rochester, N. Y., daily except Sunday, from July 1 to Sept. 2, inclusive, and on Mondays, Thursdays and Saturdays from Sept. 5 to Sept. 30.

### Patronage on Canadian Government Railways.

J. H. Sinclair, M.P. for Antigonish and Guysboro, complained in the House of Commons recently of political patronage still being exercised in connection with employment on the Canadian Government Railways, and read a letter sent on April 22 by W. N. Ingram, Master Mechanic at Stellarton, to the Secretary of the Returned Soldiers' Employment Committee at Halifax, as follows:—"You letter of the 16th inst. to hand, in regard to the employment of returned soldiers. If you have two machinists, I could place them at Sydney. In regard to wipers and cleaners employed at the roundhouses, I would refer them to A. McGregor, M.P., New Glasgow, for a recommendation, as this has always been the practice when taking on employes on the railway."

The Minister of Railways said in reply: "I stated in the House a few days ago that I had informed the General Manager of the Intercolonial Ry., Mr. Hayes, that in operating the road he could employ any one he saw fit without regard to the political party to which the applicant belonged. I am sorry the party mentioned in that letter should take the stand he does as far as returned soldiers are concerned. The only recommendation any returned soldier wants to get a position on the Intercolonial or in any department of this government is himself. The returned soldier will be given preference over everybody else. With reference to patronage outside of returned soldiers, I gave instructions to Mr. Hayes that he was to employ people on their merits, and those instructions, I suppose, he would circulate among all the officials serving under him who had authority to employ help. I gave him instructions by letter only today, for I have received a copy of the letter my hon. friend has read, and I will expect those instructions to be carried out. I do not think the member for New Glasgow, hon. member for Guysboro, or any other member, wants to be bothered with patronage if he can get out of it; that is the way I feel about it, and I have not been bothered with patronage either on the railway or anywhere else since civil service reform was brought about. Neither Mr. McGregor nor any other member has recommended me to employ any person on the Intercolonial."

**Canadian Northern Rolling Stock Ltd.**, has been incorporated under the Dominion Companies Act, with authorized capital of \$100,000, and office at Toronto, to manufacture, own and deal in engines and locomotives, rolling stock of every description, rails, ties, machinery, tools, etc., for the building, operation, maintenance and renewal of railways, steamships and vessels of every description, and for other purposes. The incorporators are: D. B. Hanna, G. Ruel, A. J. Reid, R. H. M. Temple, R. P. Ormsby, all associated with the Canadian Northern Ry., Toronto. This company will be under Dominion Government control and will perform the same services for the C.N.R. in future as the Imperial Rolling Stock Co., a Mackenzie & Mann Company, has heretofore.

**St. John & Quebec Ry. Financing.**—The New Brunswick Legislature has passed an act providing for the initiation of legal proceedings against certain directors and others to secure the return of the company's funds which a royal commission found recently to have been improperly applied. The total amount particularly referred to is \$153,000.

## Railway Rolling Stock Orders and Deliveries.

The Canadian Copper Co. has ordered 12 special steel transfer cars, 200,000 lb. capacity for quick delivery, from Canadian Car & Foundry Co.

The C.P.R., between May 14 and June 15, received the following additions to rolling stock, from its Angus Shops: 12 express refrigerator cars, 80 steel under-frame coal cars, 1 snow plough, and 1 decapod locomotive.

The G.T.R. received between May 7 and June 12, the following additions to rolling stock:—10 mikado locomotives from American Locomotive Co.; 300 box cars, 80,000 lb. capacity, from American Car & Foundry Co., and 2 snow ploughs from Russell Snow Plow Co.

The G.T.R. has received 35 mikado locomotives ordered by the Dominion Government last year from Canadian Locomotive Co., and will get two more out of that order. Of the 60 mikado locomotives ordered by the government, 40 will go to the G.T.R. and 10 to the G.T.P.R.

The Dominion Government has ordered, for the Canadian Northern Ry., one rotary snow plough, from Montreal Locomotive Works, for \$48,500, f.o.b. Montreal, subject to an additional payment of \$7,500 for a locomotive tender for the plough, should one be required. Delivery is to be made in December. We have since been advised that a tender is not to be provided for this plough.

The Canadian Copper Co. has purchased from Hart-Otis Car Co., 125 improved ore and general service, all steel cars, 50 tons capacity. Following are the chief particulars:—

Length over end sills ..... 24 ft. 4½ in.  
Length inside ..... 22 ft. 5 in.  
Width over all ..... 9 ft. 11¼ in.  
Width inside ..... 9 ft. 6 in.  
Height ..... 5 ft.  
Height from rail ..... 9 ft. 4 13/16 in.  
Number of doors on each side ..... 4

The Dominion Government's rolling stock orders placed during the last few months, for the Canadian Government, Canadian Northern and Grand Trunk Railways, amount to \$35,490,665, as follows:—

Cars and locomotives as detailed in Canadian Railway and Marine World for July .....	\$33,620,665
Further orders.	
Montreal Locomotive Works—	
15 Pacific locomotives at \$60,000....	900,000
20 switching locomotives at \$40,500..	810,000
1 rotary snow plough .....	48,500
Canadian Car & Foundry Co.—	
24 snow ploughs at \$5,000 .....	12,000
	\$35,491,165

In reference to the additional order given by the Dominion Government to Montreal Locomotive Works for 15 Pacific type locomotives, and 20 switching locomotives, as mentioned in Canadian Railway and Marine World for June, we are officially advised that the 15 Pacific locomotives and 10 of the switching locomotives are for the G.T.R. and the other 10 switching locomotives are for the G.T.P.R. They are all of the same types as the locomotives ordered recently for the Canadian Government Railways, except that the specifications for a number of parts have been changed to conform to G.T.R. standards, with a view to effecting economy and interchangeability of parts. The prices are the same as for those ordered for Canadian Government Railways, viz., \$60,000 each for the Pacifics and \$40,500 each for the switchers.

The Dominion Government has ordered 24 snow ploughs at \$8,000 each, f.o.b. Montreal, from Canadian Car & Foundry Co., subject to certain conditions as to price of steel plates over certain sizes,

and also to the furnishing to the car company, by the railways, of certain parts free of charge. They will be all steel ploughs, with drop point, and wings operated by compressed air, the type being similar to those ordered last year for Canadian Government Railways, with an improvement made on the wing of the plough to elevate snow, also a hand attachment for raising point, in case of air failure. They will be equipped with electric headlights and an improved form of ice cutter. The weight of each plough will be approximately 65,000 lb. Delivery is to be made in November, subject to reasonably prompt delivery of material. Fifteen of the ploughs are for Canadian Government Railways, Eastern and Western Lines, and 9 for Canadian Northern Ry., Eastern and Western Lines.

The Toronto, Hamilton & Buffalo Ry. has received 6 six wheel switching locomotives from Canadian Locomotive Co. Following are the chief details:—

Weight in working order, drivers.....	166,000 lbs.
Wheel base, rigid .....	11½ ft.
Wheel base, engine and tender .....	45 ft. 4½ in.
Heating surface, firebox and arch tubes.....	142 sq. ft.
Heating surface, tubes .....	1879 sq. ft.
Heating surface, total .....	2021 sq. ft.
Driving wheels, diam. ....	51 in.
Driving wheel centres .....	Cast steel
Driving journals .....	9 by 12 in.
Cylinders, diam. and stroke .....	21 by 28 in.
Boiler, type .....	Radial stayed
Boiler pressure .....	180 lbs.
Tubes, no. and diam. ....	165-2 in.; 22-5½ in.
Tubes, length .....	16 ft.
Brakes .....	Westinghouse American
Packing .....	King metallic
Superheater, Locomotive Superheater Co.'s Type A	
Fire door .....	Franklin butterfly type
Brick arch .....	American Arch Co.
Valve gear .....	Walschaert
Reverse gear .....	Casey-Cavin power type
Weight of tender, loaded .....	110,000 lbs.
Water capacity .....	5,500 galls.
Coal capacity .....	8 tons
Tank, type .....	U shape, steel coal gate
Truck type .....	Arch bar
Wheels .....	Solid steel 33 in.
Journals .....	5 by 9 in.
Brake beams .....	Buffalo
Axle boxes .....	McCord

Rules for wires erected along or across railways.—The Board of Railway Commissioners having received inquiries in regard to the scope of General Order 231, May 6, 1918, containing rules for wires erected along or across railways, and as there appears to be some misunderstanding as to whether an order is necessary where construction is along the railway, it is announced officially that the amending provision, sec. 7, chap. 22, Statutes of 1911, dispensing with the necessity of an order where the railway company consents, as set forth in General Order 231, on page 2, as printed, applies only to construction across the railway. Where the wires or other conductors are to be erected along the railway an order of the board is therefore necessary.

## Fuel Consumption on Railways in 1916-1917.

The consumption of fuel of all kinds by locomotives on Canadian railways increased from 8,995,123 tons in the year ended June 30, 1916, to 10,130,799 tons

## Grand Trunk Pacific Railway Betterments.

We have been officially advised that the G.T.P.R. proposes to make the following betterments, etc., during this year:

Light ballasting on certain sections of the main line divisions and on branch lines.

Eight temporary bridges to be filled and permanent roadbed provided, including a diversion of the line over Pine and Mule Creeks, Man.

Water supplies to be developed at 14 points.

Seven new station buildings to be built, one of which will be Prince Rupert, B.C. In regard to Prince Rupert we were advised by another officer that other terminal buildings were projected there, but that no arrangements for their immediate construction had been made.

Additions are to be made to 5 locomotive houses; 20 bunk houses and section houses, and 12 portable bunk houses are to be built. Four coaling plants are to be installed; 2 store houses are to be built and an addition is to be made to another.

Additional yard tracks are to be laid at Biggar, Tofield, Edmonton and Calgary, Alta.; and Prince Rupert, B.C.

An entrance will be provided into Saskatoon, Sask., over the C.P.R.

A coal mixing plant will be installed at Edson, Alta., together with a yard.

A locomotive house and a freight shed is to be built at Calgary.

On the Mountain Division there will be a general cleaning of mud cuts, and rip-rap and crib protection will be provided.

A press report states that work has started completing the ballasting and finishing up of the line from Talmage, on the Regina-International Boundary line, into Weyburn, Sask., and that the work is estimated to cost about \$45,000. (June, pg. 240.)

Deputy Minister of Railways.—Graham Airdrie Bell, C.M.G., heretofore Assistant to the Minister, and Financial Comptroller, Department of Railways and Canals, has been appointed Deputy Minister of Railways and Canals, as well as Assistant to the Minister, the positions having been amalgamated. A. W. Campbell, heretofore Deputy Minister, will, it is said, be appointed to another another position. Mr. Bell was born Aug. 13, 1874, and his first temporary appointment in Government service was dated Dec. 1, 1890, his first permanent appointment July 6, 1893. He was appointed Financial Comptroller Sept. 1, 1908, and Assistant to Minister June 1, 1917. He is also a Government director of the Canadian Northern Ry. He is a captain, Corps Reserve, 2nd Battalion, 43rd Regiment, Duke of Cornwall's Own Rifles.

Class of locomotive.	Coal.		Hard.	Wood.		Other fuel.		Total.	Miles run.
	Anthracite.	Bituminous.		Soft.	Oil.	Charcoal.	Tons.

in the year ended June 30, 1917. The average cost per tons for the latter year was \$3.63 a ton, against \$3.11 for the previous year. Following are the figures:

## Widening Cuts Through Snow Drifts with a Spreader.

After heavy snow storms last winter, a Jordan spreader was used most successfully in widening cuts through drifts on the C.P.R. main line between Toronto and London. The prevailing wind, throughout the storm, was from the south, and at times attained a velocity of 60 miles an hour. The snow was sandy, and packed in heavy drifts, which were amazingly hard, as at no time during the storm was the temperature above zero. The snow ploughs kept the line open with fair success. The ploughs would go through the drifts, but the hard snow on the south side of the cuttings would force the wing on that side of the plough shut. Thus when the storm was over and normal traffic could be resumed, there were many drifts on the south side of the track with a vertical face, that barely cleared the sides of the passenger cars. These walls of snow were from 4 to 10 ft. high, and in many cases over half a mile long. In almost every case, the wing of the plough on the north side remained open, making a fairly wide cut.

The spreader served a double purpose in widening the narrow cuts through the snow, first by cutting back the side of the drift with the end of the main wing, by pulling the spreader backward through the cut with the wing partially open, and second, by pushing the spreader forward through the cutting and using the extension on the nose, all the snow cut from the bank was thrown to the wide side of the cut.

In widening a cut, the spreader was

ened snow to the wide side of the cutting, where it could later be winged out by the plough. This extension nose is supplied with the spreader, and can be attached in 10 minutes. After it is attached to the nose proper, it is raised and lowered with the nose, by compressed air, while running, without delay. Figs. 3 and 4 show the spreader being pushed forward,

Fig. 1. Spreader with wing chained for final widening of 6 ft. 4 in. from rail.

Fig. 2. Spreader with extension nose attached. Figs. 3 and 4. Backing through cut, throwing loosened snow away from drift with extension nose.

operated as follows: The main wing of the spreader was opened slightly, and held securely by a chain passed around the wing and frame of the car, the edge of the wing projecting about 6 in. wider than the cut through the snow. The spreader was then drawn backward through the drift, the end of the wing becoming a cutting edge and chiselling off about 6 in. of snow, which was forced to the track by the wing and passed out beneath the wing and nose of the spreader. The amount the wing was allowed to project, depended upon the height of the cutting, but more snow should not be cut loose at one time than will pass out beneath the nose of the spreader (about 6 in. above the rail) without clogging. Fig. 1 shows the wing open and chained for the final cut of 6 ft. 4 in. from the rail.

To clear the track of the snow cut down, the locomotive was reversed and the spreader pushed through the cut in the opposite direction with the nose down, cutting a full flange, while the plate attached to the nose (fig. 2) extended 3½ ft. outside the rail and threw all the loos-

throwing all the snow that has been cut, clear of the track, preparatory to the next widening.

The train undertaking this work was made up as follows: A snow plough ahead, followed by the locomotive, then the van with the spreader behind, the nose of the spreader to the rear of the train. The plough was operated as usual, until a heavy drift was encountered which the wings would not throw back. The wing of the spreader was opened slightly and secured by a chain, and the train run through the cut at the rate of 20 or 25 miles an hour, cutting off about 6 in. from the bank of snow. The locomotive was reversed, the nose lowered and the train backed through the cut at about the same speed. This was repeated three or four times, the wing being allowed to open about 6 in. further on each cut, until the snow had been cut back to over 6 ft. from the rail. The train was then backed up a quarter of a mile, and a run made through the cut, the wings of the plough throwing all the loose snow well back from the track. By this method a very

heavy cut half a mile long could be completely cleared in 30 minutes, with only four men, beside the train crew.

The photographs from which the accompanying illustrations were made were taken while working in light drifts. When the snow wall was over 6 ft. high, it was necessary to break down the overhang with shovels, although this difficulty can be overcome by bolting a bar of steel to the end of the spreader wing, in an upright position, projecting 4 or 5 ft. above the top of the wing. This will cut off snow projecting inside of the end of the wing in the deeper drifts.

This method of cutting snow with the spreader was devised and carried out, with complete success, by J. M. Silliman, who was, at the time, acting Roadmaster Resident Engineer, C.P.R., London, Ont., on the Galt Subdivision.

## The Quebec and Saguenay Railway Purchase.

A press report from Quebec, on June 13, stated that all legal details in connection with the transfer of this line to the Dominion Government had been settled, and that the purchase price would be paid over by the end of the month.

The Dominion Parliament at its recent session appropriated \$3,489,313.53 to acquire, free and clear of all charges, encumbrances or claims at any public sale, the Q. & S. Ry., extending from its junction with the Quebec, Montmorency & Charlevoix Ry. to Naim Falls, Que., 62.3 miles. Sir James Lougheed stated in the Senate that the value placed upon the line by the judge of the Exchequer Court,

according to the terms of the reference to him, was \$2,886,939.06, to which has to be added interest amounting to \$228,519.63, and interest from July 1, 1916, to July 30, 1918, when the Government expected to take the line over, making altogether the amount appropriated.

Canadian Government Railways have received the following rolling stock since Mar. 1:—804 box cars from Eastern Car Co.; 5889 box cars from National Steel Car Co., completing contract; 1380 box cars from Canadian Car & Foundry Co., Fort William, Ont.; 508 stock cars from Canadian Car and Foundry Co., Amherst, N.S.; 1,797 box cars from Canadian Car & Foundry Co., Montreal; 22 mikado locomotives from Canadian Locomotive Co., and 1 Santa Fe locomotive from Montreal Locomotive Works.

The Dominion Ex. Co. service has been withdrawn from the Canada & Gulf Terminal Ry., running between Mont Joli and Matane, Que., the railway company now operating its own express service at points along the line.

## The Railway Gateways Between Canada and the United States.

Newspaper comment on a shipment of Chinese eggs received at Ogdensburg, N.Y., recalls to the student of railway work in Canada the fact that many of the most important gateways between this country and the U.S. are practically unknown to the general public, and even many railway men are not familiar with all of them. The observant reader, not knowing that Ogdensburg is one of these important gateways, wonders why Chinese eggs should be reported from that point instead of from New York or San Francisco, or some other well-known port of entry to the U.S. As a matter of fact, they land in Vancouver from China. Ogdensburg (opposite Prescott, Ont.) merely happens to be the end of their journey through Canada.

There are 34 railway gateways between Canada and the U.S. That does not mean mere points at which the boundary line is intersected by the railway lines, but points of exchange or clearance between Canadian and U.S. carriers. Out of these 34 gateways, 14 may be said to be main entrances and the balance of slightly less importance. The 14 main entrances are: Vanceboro, Me.; Island Pond, Vt.; Newport, Vt.; Rouse's Point, N.Y.; Malone, N.Y.; Niagara Falls, Windsor, Sarnia and Sault Ste. Marie, Ont.; Emerson, Man.; Portal, N.D.; Kingsgate, Huntingdon and Vancouver, B.C.

Vanceboro exchanges chiefly Canadian potatoes and pulpwood, for U.S. coal and general merchandise. It links the Canadian Government Railways, C.P.R., and Maine Central.

Island Pond, Vt., is a G.T.R. point, for general export—chiefly grain and munitions just now, and imports of general merchandise. U.S. interstate traffic passing over Canadian lines also crosses here.

Newport, Vt., is a very heavy focus of traffic, exports chiefly of flour and livestock and imports of general merchandise. This is an important l.c.l. handling point, where the cars of l.c.l. are made up.

Rouse's Point, N.Y. (G.T.R., Q.M. & S. and D. & H.) exchanges Canadian forest products for U.S. coal.

Niagara Falls (including of course Black Rock, Victoria Park, Bridgeburg and Niagara Falls) is common to G.T.R. and C.P.R. and handles all classes of traffic. The same is true of the Windsor-Detroit and Sarnia-Port Huron connection.

Sault Ste. Marie is noteworthy for the heavy paper, lumber, steel and ore, grain and flour traffic. One of the features of the gateway before the war was the danger of congestion due to speculation in flour. So long as flour prices remained high, the flour cars were kept moving east, but if the market dropped or looked weak, the shippers made Sault Ste. Marie a holding point—detaining the cars there so as to be able to divert them at a moment's notice to the most favorable market. This port, like Detroit, is also affected by U.S. interstate traffic crossing to Newport, Vt.

Portal, N.D., opposite North Portal, Sask., may never have been heard of in London or Berlin, but in the days of heavy export from Canada and the U.S. to Russia, it was the place where the Canadian railways accepted cars destined for the piers at Vancouver. In one day there have been as many as 800 cars of freight at Portal for Canadian roads to forward to Russia. This has always been a key posi-

tion in the handling of trade between Russia, China and Japan on the one hand and the U.S. on the other. Incoming trains of silks, lily bulbs, rattan, curios, antiques, from the celestial republic, and gunnies and sheepskins from Australia—all stop at this point. Fifteen cars of Chinese lily bulbs in one train passing through Portal, are on record. In addition to this trans-Pacific traffic there is also an important exchange of cattle, forest products and general merchandise.

Kingsgate, B.C., opposite Eastport, Idaho, is the western end of another short cut across Canada for U.S. interstate traffic. The eastern ends of this connection (so far as Canada is concerned) are Coutts, Alta., and North Portal, Sask. Much westbound traffic from Chicago for points on the U.S. west coast crosses at Coutts and North Portal and traverses Canadian territory as far as Kingsgate, and vice versa. Otherwise the traffic there consists of coal, ores and forest products southbound, and imports of general merchandise.

Vancouver and Huntingdon, B.C., like Windsor and Sarnia, Ont., are ports of general import and export.

Of the remaining 20 lesser gateways, several on the St. Lawrence River and Lakes Ontario and Erie are served by railway ferries, similar to the ferries on the Detroit and St. Clair rivers. These ferry points are Prescott-Ogdensburg; Cobourg-Charlotte; Port Maitland-Cleveland; Port Dover-Cleveland; Port Burwell-Ashtabula; and Port Stanley-Cleveland. The remaining 14 gateways are: Sherbrooke, Que.; Fort Frances on the C. N.R. opposite International Falls, Minn.; Coutts, Alta. (already mentioned) opposite Sweet Grass, Mont.; New Gate, B.C.; Creston, B.C.; Bonita, B.C. (opposite Boundary, Wash.); Peterson, Grand Forks, Midway, and Chopaka, B.C.

## Railway Finance, Meetings, Etc.

**Guelph Junction Ry.**—The directors, on May 27, declared a quarterly dividend at the rate of 6% per annum, after allocating \$1,700 of the quarter's revenue for taxes. The line is owned by the city and leased to the C.P.R.

**Minneapolis, St. Paul & Sault Ste. Marie Ry.**—This C.P.R. subsidiary shows the following results for the calendar year 1917:—

Gross earnings .....	\$34,540,491.39
Operating expenses .....	22,964,793.67
Net earnings .....	11,575,697.72
Income from other sources .....	1,652,231.40
Total income .....	12,227,929.12
Fixed charges, taxes, etc. ....	8,789,490.15
Surplus income .....	4,428,438.97

**Timiskaming & Northern Ontario Ry.** Passenger receipts for April, \$55,547.60; freight receipts, \$238,616.16; total receipts, \$294,163.76, against \$56,651.73 passenger receipts; \$142,236.20 freight receipts; \$198,977.93 total receipts for Apr., 1917. Aggregate receipts for four months ended Apr. 30, \$869,346.15, against \$658,493.91 for same period 1917.

**Toronto, Hamilton & Buffalo Ry.**—The annual meeting of shareholders was held at Hamilton, Ont., June 4. The directors elected for the current year are:—E. W. Beatty, K.C., J. N. Beckley, Sir George Bury, H. B. Ledyard, W. H. Newman, D. W. Saunders, W. L. Scott, Lord Shaughnessy, A. H. Smith, W. P. Torrance and W. K. Vanderbilt, Jr.

## Traffic Orders by Board of Railway Commissioners.

### Cumberland Railway and Coal Co.'s Tariffs.

27242. May 23. Re application of Cumberland Railway and Coal Co., under secs. 327 and 331 of the Railway Act, for approval of a standard passenger tariff to supersede its Standard Passenger Tariff C.R.C. 3, and for approval of Standard Freight Mileage Tariff C.R.C. 6 to supersede its Standard Mileage Freight Tariff C.R.C. 1, it is ordered that the Standard Freight Mileage Tariff C.R.C. 6, be approved subject to and upon the condition that the company publish and file carload mileage commodity rates on the following articles at the rates authorized by the board in the Eastern Rates Case as increased under the board's general order 212, Jan. 15, 1916, in the Fifteen Per Cent. Case; scale A to apply to all grains, also to grain products as enumerated in the proposed schedule filed by the company's General Traffic and Transportation Manager May 8, 1918; scale B to apply to lumber, lath and shingles; scale C to building sand, gravel and rubble, cobble and field stone; and scale D on other rough or partly dressed building stone, common brick and lime; the said rates to be as follows in cents per 100 lb.:—

Distances	Scale A Scale B Scale C Scale D				
	C.L.	L.C.L.	C.L.	C.L.	C.L.
To 5 miles	3	4½	3½	2½	3½
" 10 "	3½	6	4	2¾	3½
" 15 "	4	7	4½	3¼	4
" 20 "	4	7	4½	3¼	4
" 25 "	5	8	6	3¾	4½
" 30 "	5	8	6	3¾	4½
" 35 "	5	9	6½	4¼	5

It is further ordered that the company be permitted to file for the board's approval a standard maximum passenger tariff of one-way fares on the basis of 3.45c a mile. And it is further ordered that the Standard Freight Mileage Tariff herein approved may be made effective after it has been published, with a notice of this approval, in at least two consecutive weekly issues of the Canada Gazette, as required by sec. 327 of the Railway Act.

### Reconsignment Switching Charges.

27246. May 25. Re complaint of Retail Merchants Association of Canada, Provincial Coal Section of Ontario, against reconsignment switching charges assessed by C.P.R. for the replacement of cars loaded with coal from the United States, which is not consigned in the first instance direct to the unloading point, and the consideration of further submissions of Canadian Manufacturers' Association and Toronto Board of Trade, also of Robin Boyle, representing shippers of crushed stone under similar circumstances. Upon hearing the matter at Toronto, April 13, 1917, and at Ottawa, July 5, 1917, the Canadian Manufacturers' Association, the Montreal and Toronto Boards of Trade, the Coal Dealers' Association, the Dominion Millers Association, and the shippers of crushed stone, being represented at the hearing, and upon reading the further submissions filed, it is ordered that the complaint be dismissed.

### Stove Putty and Asbestos Cement.

27305. June 8. Re application of Canadian Manufacturers' Association for reduction in classification of stove putty, shipped in barrels; and for an order requiring railway companies to carry asbestos cement shipped by G. F. Sterne & Sons, Brantford, Ont., at 4th class rates in less than carloads: Upon hearing the application at Ottawa, April 16, 1918, the

complainant, the Canadian Freight Association, and the G.T.R. being represented, and upon reading the further submissions filed; and upon the report of the board's Chief Traffic Clerk, concurred in by its Chief Traffic Officer, it is ordered that the applications be dismissed.

### Rate on Stoves.

27307. June 12. Re complaint of Beaver Stove & Machinery Co., Grandmere, Que., against rates charged by C. P.R. on stoves from Grandmere to points on the Quebec Central Ry.: Upon hearing the complaint at Montreal, June 10, in the presence of counsel for the railway company, no one appearing for the complainant; and its appearing that the Quebec Central Ry. Company is not under the board's jurisdiction, it is ordered that the complaint be dismissed.

### Wooden Snow Shovels' Classification.

27321. June 15. Re application of Rugg-Ball Manufacturing Co., Ayers Cliff, Que., for reduction of classification of wooden snow shovels: Upon hearing the application at Montreal, June 10, 1918, the Canadian Freight Association and the Toronto Board of Trade being represented, and no one appearing for applicant, it is ordered that the application be dismissed, without prejudice to a renewal of the application at a later date if so desired.

### Interswitching of Freight Traffic.

General order 239, June 19. Re general order 230, May 17, 1918, in matter of interswitching of freight traffic (as published in full on page 282 of this issue): Upon reading what is filed on behalf of the Canadian Manufacturers' Association, it is ordered that the effective date of the schedules to give effect to general order 230 be postponed from July 1, 1918, to Aug. 1, 1918.

### Freight Facilities at Flag Stations.

General order 255, May 22, as amended by general order 283, May 31.—Re complaint of Ontario Associated Boards of Trade, alleging insufficient and inadequate facilities furnished by railway companies for receiving and delivering freight at flag stations: Upon hearing the complaint at Hamilton, Oct. 22, 1917, it is ordered that every railway company be directed to provide its agents with rubber stamps reading as follows:—

UNLOADED WITHOUT EXCEPTION  
EXCEPT AS NOTED

Conductor.

Date.....

and to issue a bulletin requiring agents issuing waybills for shipments of less than carload freight destined to flag stations to place the above stamp thereon; requiring conductors in charge to unload such freight on the platform at the flag station after the train has been brought to a full stop, and wherever shelters have been provided, to place therein all such freight as would be liable to damage from the weather or exposure, and to certify, as above, on the waybill; requiring conductors who have unloaded freight at flag stations to deliver the waybill therefor at the first agency station reached by the train after the unloading of such freight; notifying such conductors that they will be held responsible for the proper carrying out of the requirements set forth in this order and as covered by the said bulletin, and requiring the agent at the first agency station reached by the train after the unloading of the freight, as in this order provided, to notify the

consignee of the arrival of such freight by postal notice mailed within 24 hours after receiving the waybill from the conductor.

## Canadian Pacific Railway Construction, Betterments, Etc.

**New Brunswick District.**—A press report states that work will be started at an early date on the rebuilding of the conveyor at the St. John, N.B., elevator. The material was reported to have been ordered at the beginning of June, and it was stated, June 12, that it was expected to have the conveyor ready for use at the opening of the winter navigation season.

C.P.R. officials have been discussing with the St. John, N.B., city authorities the agreement as to the removal of the tracks on Germain St. west. The agreement called for the removal of these tracks by May 1 in connection with plans for the development of the port. The reclamation of the area between Fort Dufferin and Sand Point was held up, consequently the company was not able to carry out the proposal. It is not possible to do so at present because the new lay out would be unsatisfactory and would have to be shifted when the dock work is taken in hand. It is suggested that the work be postponed until after the war.

**Algoma District.**—C.P.R. officials have been in Fort William, Ont., discussing with the city authorities the closing up of street ends and the opening of other streets in connection with necessary improvements of the company's terminal facilities there.

**Alberta District.**—Tenders are under consideration for the erection of farm buildings on two farms for returned soldiers, one near Chancellor, Alta., and the other near Coaldale, Alta. The buildings on each farm will consist of a house 38 x 26 ft.; a barn, 52 x 28 ft.; implement shed, dairy and bunk house.

**British Columbia District.**—The company has been directed to remove and replace the Kitsilano bridge span over False Creek, Vancouver, B.C., when necessary for ship launching, and the question of liability as between the Dominion Government and the company is to be settled later. The question at issue is whether the bridge was erected legally by the company. The draw span is not wide enough to let large vessels through, consequently a fixed span 100 ft. wide has to be removed to let through the vessels being built at the Coughlan yards and then replaced to permit of the operation of the C.P.R. Lulu Island Branch, which is leased to the British Columbia Electric Ry. (June, page 239.)

**Railway Employees Statistics.**—The total number of railway employees of all grades in Canada, classified under 65 groups, was 146,175, at June 30, 1917, against 144,770 at June 30, 1916. The total salaries and wages paid were \$129,626,187, against \$104,300,647 for 1915-16. The employees were on duty altogether 449,278,533 hours, the wages paid running from 11.7c an hour for messengers and attendants in the offices to 68.8c an hour for passenger locomotive men. The Railways Department report for June 30, 1917, for the first time uses the hour as the unit of compensation instead of the day, as formerly; the general classification is also changed. These two changes make it impossible to compare with previous years.

# Electric Railway Department

## Electric Railway Statistics for Year Ended June 30, 1917.

The figures in the following table are reproduced from statistics issued by the Railways Department at Ottawa. The following abbreviations are used in the names of railways:—E, electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given.

Name of Railway	1st Main track mileage	Gross earnings from operation	Miscellaneous income	Operating expenses	Taxes funded debt, etc.	Net income or loss	Total car mileage	Fare passengers carried	Freight carried tons
Berlin and Waterloo S.R. (1).....	3.28	\$ 55,673		\$ 39,489	\$ 7,832	\$ 8,351	199,303	1,229,753

## Snow Clearing on Ottawa Electric Railway.

During the last two winters the Ottawa Electric Ry. had considerable trouble about snow removal, teamsters demanding more pay whenever a specially heavy snowfall occurred. Early in February last the teamsters struck for 10c a load increase, and the management decided it was time to try some other method. A Ford truck, with a capacity of 1½ tons, was put into operation, and tests showed that it could dispose of twice as many loads in a day as the ordinary team of horses and a sleigh. The work of the truck was facilitated by the city authorities allowing the snow to be dumped through manholes into the sewers, and providing a list of manholes that could be so used at points where a very strong current of water was passing. The company followed this up by putting on 14 more trucks, which, with the help of its own teams, enabled it to get through the winter. It was intended to have 30 trucks ready for the first snowfall next winter. One advantage of the trucks will be that at the close of the day new drivers and a fresh gang of men can be put on to work

## Proposed Purchase of Ottawa Electric Railway by the City.

The Ottawa City Council has for some time past had under consideration the question of the Ottawa Electric Ry.'s franchise, and the conditions under which it might be extended, or under which the city might acquire the property. The question was taken up by a committee and suggestions were made to the council on Feb. 18 passed a resolution stating that the company's franchise would expire Aug. 13, 1923; that the directors had announced that they did not propose to make any extensive alterations or improvements to the system until the expiration of the franchise, and that under such a policy the street railway service might deteriorate during the next five years. The board of control was asked to consider the appointment of a committee of three or more selected from the board, from the council or from outside to investigate the question of the street railway service and to open negotiations with the company for the purchase of the railway, for the further extension of the franchise or any alternative plan, with a view to submitting whatever was decid-

the opinion that the present is not an opportune time to take over the property owing to war conditions, but that it is not too soon to prepare for the taking over of the line in 1923, and recommends that a question on the matter be submitted to the ratepayers at the next municipal elections.

Other sections of the report deal with the future proceedings. It is recommended that in the event of the line being taken over its management should be entrusted to a commission of three, one of whom should be the mayor, and that they should hold office for say three years. Then a form of question for the plebiscite is given with a recommendation that each elector should have one vote to be cast where the elector is entitled to vote for mayor. The board recommends that if the question is settled in the affirmative the council shall then draft and obtain the necessary legislation. It may be possible to appoint a commission under existing legislation, but it might be advisable to secure special powers; it also might be desirable to secure power to enable the portions of the line in Ontario outside the city, as well as the portions in Quebec; the rights of the city and company in regard to the part of the railway in the former village of Hintonburg should be considered and provided for; the method of arbitration should be provided for; the waterpower rights should be looked into, and council should have power to acquire such powers either in Quebec or Ontario; and finally the board suggests that the commission should be in office well in advance of the period when the line should be taken over, and that the commissioners should carry on the negotiations with the company.

The report was taken into consideration at a special meeting of the council June 24.

Ottawa Electric Railway Motor Truck for Snow Removal.

throughout the night, as the trucks will not tire out as horses do. In the meantime the teamsters' strike was broken, and the men feel they made a mistake in acting as they did.

The accompanying illustration shows a snow box body, as mounted on a Ford 1-ton truck by the Ottawa Car Mfg. Co. Following are the dimensions of the box inside:—

Length .....	8 ft. 5 in.
Width .....	5 ft. 4 in.
Height .....	3 ft.
Thickness of material in sides and ends.....	1½ in.
Thickness of material in bottom.....	1½ in.
Thickness of material in bolsters.....	1½ x 3 in.
Thickness of material in sub-sills.....	1½ x 5 in.

The bodies are built in sections, and are held together by tie rods, battons and strap bolts. The sides are constructed with a door 2 ft. 2 in. wide, extending full length of body and attached to the top boards by 4 hinges, permitting the snow to be loaded and unloaded in a speedy manner; hooks are provided at the rear end to hold the door open when unloading. The bottom is constructed of 1½ in. pine, securely screwed to the hardwood bolsters, which are divided along the body, giving sufficient wheel clearance. The bolsters are bolted to the subsills, which are securely clipped to the chassis frame.

ed upon to a vote of the electors at the next municipal elections. While the matter has been mentioned at different meetings of the board of control and of the council since February, no committee was appointed, and on June 4 the council again referred the resolution of Feb. 18 to the board of control. We are officially advised that up to June 14 the company had not been approached in any way upon the matter.

The board of control considered the council's resolution on June 20, when a report was prepared. It deals with the franchise agreement entered into between the city and the company on June 28, 1893, to run for 30 years from Aug. 13, 1893, and giving the council the right, after giving 6 months notice to acquire so much of the system as is situated in Ontario, during the currency of the agreement, and it also sets out the property to be acquired in connection therewith, and the method by which its value is to be arrived at. At the expiration of the agreement the city can take over the line as a matter of course, but if it does not do so at that time it has the right, upon giving a year notice, to take over the system at the end of any fifth year thereafter. The board in its report expresses

**The Toronto Railway and Women Conductors.**—As mentioned in our last issue, the Toronto Ry. Co. has decided to engage women conductors for service on its cars. This decision was strongly opposed by the members of the Toronto Ry. Employees Union in a resolution passed at a meeting of members called to discuss the matter, which was mentioned in the same issue. The General Manager of the company stated recently that it was the intention to place women conductors in charge of the cars, which are to be altered and provided with prepayment platforms and doors. In preparation for this, suitable dressing and rest rooms are being prepared at the sheds, and these will be in charge of a matron.

**Public Utilities Commission for Brantford.**—As the result of a conference between representatives of the Brantford, Ont., City Council and members of the Brantford Municipal Ry. Commission, the Mayor stated, June 20, that he would take steps to have a public utilities commission organized to take over the control of the municipal railway, the waterworks, and the other public utilities.

**The American Electric Railway Association's Convention** will be held at Atlantic City, N.J., Oct. 8, 9 and 10. Owing to war conditions, the convention meeting period has been somewhat curtailed, and there will be no exhibits in connection with it.

The Calgary, Alta., City Council's finance committee decided June 13 to recommend that a tax of 5¢ on the gross receipts of the municipal railway and other public utilities be levied towards general municipal purposes.

## Notes to Electric Railway Statistics.

(1) The Berlin & Waterloo S.R. is now called the Kitchener & Waterloo S.R.

(2) The Calais S.R. is the line reported in previous years as the St. Stephen S.R. of New Brunswick, Calais being the contiguous town in Maine, where the line is owned and from which it is operated. The mileage given is not in Canada.

(3) The only additional companies in the list for the year ended June 30, 1917, are the Lake Erie & Northern Ry., 51 miles, and the Shawinigan Terminal Ry., 3.75 miles. The former is a new line, the latter has been operating for a number of years.

(4) The figures given for the Montreal Tramways Co.'s first main track mileage, 124.26, are those used in the 1915 statistical tables, in which they were stated to be the figures used in 1911 report. The actual first main track mileage at June 30, 1917, was 131.91 miles, the difference between which and the figures given by the Department we have added at the bottom of the column in the table showing mileage. The earnings, expenses and passengers carried are apparently taken from the company's report for the year ended June 30, 1917, as given in Canadian Railway and Marine World for Oct., 1917., pg. 404.

(5) The Railways Department does not receive returns from the New Brunswick Power Co. and the Pictou County Electric Co. The latest figures we have of those companies' first main track mileage 18.15 and 9.10 miles respectively have been added by us at the bottom of the table to show the total mileage in Canada, viz.:—1,778.34, against 1,743.54 shown by the Railways Department.

(6) The Toronto Ry. first main track was reported at June 30, 1916, to be 116.44 miles, with second track of 2.51 miles, while this year the track is described as: First main track, 60.69 miles, second main track, 58.36 miles.

The Edmonton Interurban Ry., which has 8.19 miles of track, is omitted from the table. It was not operated during the year.

The New Brunswick Power Co.'s line, formerly the St. John Ry., is also omitted from the table. It does not make returns to the Dominion Railways Department.

## Assessment of Municipally Owned Street Railways in Ontario.

The Ontario Legislature, at its recent session, by sec. 39 of the Statute Law Amendment Act, added a section and a subsection to the Assessment Act relative to the assessment of land used by municipal public utilities. The section no. 45a, provides that land owned by or vested in any body acting for or on behalf of a municipal corporation and used for public purposes "or for the purpose of a railway, electric railway, street railway or tramway," shall be liable to assessment and taxation for municipal and school taxes in the municipality in which it is situate, at its actual value, according to the average value of land in the locality." The subsection excepts buildings, machinery, works, structures, substructures, superstructures, rails, ties, pipes, poles and other properties, and easements, etc., and declares that all these "shall continue to be exempt from assessment and taxation as heretofore."

The Regina, Sask., city council is considering a proposal for carrying returned wounded soldiers free on the municipal railway.

## Answers to Questions on Electric Railway Topics.

In response to questions addressed to the American Electric Railway Association's question box, answers have been sent, as follows, by W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C.

**Car Record Forms.**—Does any company make use of a car record form on which appears an outline picture of a car and on which defects are shown by reference to the picture; if so, will you kindly furnish a sample?

We have recently considered the advisability of using such a form, and while we have not yet put it into practice, herewith is a copy of the form we contemplate using.

**Extra Fare Collection.**—What system of fare collection would you recommend under the following circumstances,—a 5c fare is charged within the city limits,

In British Columbia no licenses such as mentioned are required. A motorman is required to pass an oral examination in connection with the operation of his car. He is given considerable instruction in connection with the electrical apparatus, which he has to become acquainted with before he is permitted to take out a car. In addition to this examination he is required, of course, to pass eyesight and hearing tests.

## Ontario Railway Act Amendments.

An Act amending the Ontario Railway Act was passed at the Ontario Legislature last session. A new section, 260a, referring to penalties for neglect or refusal to obey any order of the Ontario Railway and Municipal Board, by any company operating a railway or street railway, to supply additional cars, given in full in Canadian Railway and Marine World for May. The act deals with devia-

END

CAR Moving Forward, Backward, End in Front, Fender Down Up, Exit Step Down Up, No. of Windows along One Side of Body

REMARKS:

INSPECTED BY: AT: CAR HOUSE TIME: DATE: 5/18

Suggested car and record form, British Columbia Electric Railway.

and if the trip is continued an additional cent is collected, p.a.y.e. cars used. The passenger cannot be expected to come to the rear platform to deposit his extra fare; how then should the extra fare be collected?

It all depends on the type of farebox used. We have similar conditions on our lines in the city, where a second fare is collected at the city limits when cars are about to enter the suburban districts, or vice versa. We use the Coleman portable farebox and p.a.y.e. cars. When the cars reach the city limits the conductor goes through the car and collects the additional fares. In the case of payment of settlers' tickets, a passenger is handed a transfer when boarding the car, which indicates that a settler's ticket has been paid, and this transfer is collected at the city limits. We do not use registers on our city cars.

**Licensing of Motormen.**—Are the motormen of any member companies compelled to secure state or municipal licenses before they can operate a car; if so, under what provisions of law; are they licensed as electricians or do you know of any place where an electrician's license is required; what form of examination is required, if any?

tions of lines, and the operation of cars by a motorman-conductor.

The first matter is dealt with by the addition of a subsec. to sec. 79, providing that any deviation, change or alteration made in the railway or any portion thereof shall not impair, abridge or affect the company's right to operate the balance of the railway along any public street or highway of any municipality through which the railway runs under the terms of its agreement with the municipality, provided notice of the application to the Ontario Railway and Municipal Board for approval of the deviation plans shall have been given to the municipalities affected. A subsection, similar in principle, although not in language, has been added to sec. 243 of the act, and it is provided that these additional subsections shall not take effect as to any company until the Lieutenant-Governor-in-Council shall so order.

The enactment as to one-man cars is contained in a new section, 256a, and provides that no street or electric railway car, when carrying passengers, shall be operated with one man performing the duties of both motorman and conductor without the approval of the Ontario Railway and Municipal Board.

## Remodelled and New Cars for Winnipeg Electric Railway.

The remodelling of the Winnipeg Electric Ry.'s rolling stock, which has been under way for some time in accordance with an agreement entered into with the city in the latter part of April and published in Canadian Railway and Marine World for June, is being proceeded with rapidly in the company's shops at Fort Rouge, under the supervision of T. L.

with swinging door on left side, full panelling and sash in center, arranged to care for sliding door to be installed on right hand side, swing door arranged to swing in and towards side of car, sliding door at exit to close toward body post, center double dash arranged to allow conductor to make announcements without opening doors.

steps will be favored and 6 shaded lights in the body and 2 in each vestibule will be installed. The route signs will be of same pattern as on the remodelled cars.

The 15 open cars for summer use, with the side running boards, are also slated for treatment. The running boards will be eliminated and a center aisle cut through.

Remodelled Car, Winnipeg Electric Railway.

Robinson, mechanical engineer, and the remodelled cars are being turned out at the rate of six a month. While the remodelled cars are those that have been in service for some time, the extent of the changes and modifications is such that when finished they present almost a new appearance. The agreement referred to provides that the company must make the cars modern in every respect. Front exits, improved lighting and route signs, removal of running boards and installation of folding steps, are among the innovations called for.

The new front exits are on the same scale as the rear ones, only on a smaller plan. One 2-leaf folding door, to fold out and back, to be controlled by the motor-man, is being installed, with which are

The changes in the rear platform consist of the installation of two 2-leaf folding doors in vestibule opening, rear set to fold out and back, and front set to fold out and towards body. The rear half of vestibule opening is used for entrance and the folding step works in conjunction with the folding door. The first half of the vestibule opening is used for an exit and each door is separately controlled, the controlling handles being mounted on rail near conductor. A protective compartment for the conductor is provided for, with heater, raised floor and a seat.

A new fender type has been adopted and the present trucks and motors are being removed, new or rebuilt ones taking their places. The new type of truck is provided with 26 in. wheels, with axles

## Proposed Sale of the London and Lake Erie Ry. and Transportation Co's Property.

After a number of ineffectual endeavors to sell this undertaking to the City of London, or to other municipalities through which it passes, the company advertised the property for sale by tender, the same to be submitted by June 29. Tenders were asked for the whole of the railway and undertakings as a going concern, or in the alternative, for the purchase, in separate parcels, of the right of way, lands, buildings, materials, equipment and rolling stock thereof, as follows:—

The company's railway and undertaking as now built and in operation from

**Remodelled Car, Winnipeg Electric Railway.**

operated a folding step, provided with anti-slip tread and kick plate. In the right hand vestibule window an illuminated keystone sign box is being placed. There is removable winter proof partition for the motorman, between the bulkhead exit and the vestibule door, glazed to allow the motorman full view of exit door and step and provided with door for motorman. The interior lighting arrangements include five shaded lights in the center of monitor deck, through selector switch on rear platform, the sixth light to be on rear platform over conductor's position. Keystone illuminated side window signs are being installed in each rear window.

The rear bulkhead is being installed

for G.E. 258 C motor or equivalent and having 3 $\frac{3}{4}$  in. x 7 in. journals. The present brake equipment and rigging is being modified to work efficiently with the new truck and motor equipment. The bolster is being modified to allow the use of roller side bearings which are being installed. The remaining present electrical equipment is being modified to meet requirements of new motor equipment.

Twenty-five end entrance p.a.y.e. double truck trailer cars will be built. They will be 41 ft. long and have a seating capacity of 48. They will be patterned after the same style as the remodelled cars and will be equipped with 2 baby motors and straight air brake equipment with emergency feature. Folding doors and

the City of London to the Village of Port Stanley, including power stations at Lambeth, St. Thomas and Union, the London terminal passenger and freight station, the London paint shop, substation and car barns at St. Thomas, and substations at Lambeth and Union; also all cars, locomotives, tenders, tools, machinery and supplies now owned and used by the company, together with the company's franchise.

The right of way, lands, buildings, materials, equipment and rolling stock belonging to the railway are briefly described as follows:

About 2,820 gross tons of 60 lb. steel rails. About 218 kegs of bolts and 1,200 kegs of spikes. Other iron and steel, con-

sisting of frogs, switches, broken rails, motor casings; snowploughs and worn shop material and the bridges at or near London, Lambeth, and St. Thomas. About 75,000 ties and 2,200 cedar poles, some 40 ft. long and none under 30 ft. Copper wire and bonds, consisting of 40 miles of no. 9 copper wire; 60 miles of no. 2, 30 miles of no. 0 (trolley), and 30 miles of no. 0000 feeder copper wire, and 10,560 copper bonds, the total weight of the copper herein mentioned being approximately 223,500 lb.

Equipment: 6 passenger cars, 2 combination passenger and baggage cars, 1 passenger car body without trucks, 3 passenger cars for summer use only, 2 baggage and express cars, 1 locomotive with 4 motors, 1 snowplough with 4 motors, 3 box and 6 flat cars and 8 spare motors. The cars are equipped with Westinghouse 93-2 60 h.p. motors, 2 to each car, and all equipment is standard and interchangeable.

Power stations at Lambeth, St. Thomas and Union. About 14 miles of privately owned right of way 33 ft. wide. Gravel pit, near Lambeth, containing about 12 acres. Stores, consisting of stationery, office supplies and fixtures, tools, line ma-

terial and various miscellaneous articles. Other real estate and buildings: London, terminal passenger and freight station, and lands used in connection therewith. London, paint shop, steam-heated and fully equipped for 4 cars. Lambeth, sub-station and lands used in connection therewith. St. Thomas, sub-station and car barns and lands used in connection therewith. Union, sub-station and lands used in connection therewith.

Deliveries of material and supplies to be made at St. Thomas.

While the property was thus offered for sale, negotiations with London, St. Thomas and adjoining municipalities for the sale of the line either as a complete whole or in sections had not been finally broken off. At a meeting of representatives of several of the municipalities through which the line passes, held at Lambeth, Ont., June 18, a committee was appointed to meet the directors, and to arrange for holding public meetings with a view of having bylaws passed to provide for the operation of the line. The immediate suggestion is apparently to secure the continued operation of either a part or the whole line, the municipalities guaranteeing the expense.

## Regina Municipal Railway Investigation.

The Regina, Sask., City Council favors the holding of a judicial investigation into a number of matters affecting the Regina Municipal Ry., which have given considerable trouble for some months past. A sub committee has had the matter of the reference under consideration for some time, and approved of its terms on June 13. The committee's report is as follows: "As directed, the street railway sub committee has had under consideration the question of the matters to be investigated by a judge in connection with the administration of the street railway department. The committee have conferred with the City Solicitor and attaches hereto a memorandum containing some nine questions. The sub committee consider that questions 1, 2, 3, 4, 6, 7, 8 cover the matters which should be referred to the judge for investigation. It would seem that the matters mentioned in questions 5 and 9 can only be properly enquired into by a street railway expert.

"The opinion having been expressed that a judicial investigation should be held, the sub committee suggests that the City Solicitor be instructed to take whatever steps may be necessary to request a judge to hold such investigation in accordance with sec. 53 of the city act at the earliest possible date.

"The sub committee further suggests that the City Solicitor be instructed to write Wilford Phillips or Wilson Phillips of Winnipeg, requesting one of them to arrange to enquire into and report upon the matters mentioned in questions 5 and 9 of the attached memo, so as to be in a position to submit his report thereon at the same time as that of the judge. (Note.—Since this recommendation was made, Wilford Phillips has died.)

"The sub committee further suggests that the City Solicitor be appointed to represent the city's interests during the investigation."

The Regina Leader gives the following as the questions upon which the judicial investigation, which will be held by Judge Hannon, will be made:—

Have street railway tickets been im-

properly used? If so, by whom and in what manner?

Has there been gross carelessness in the handling of street railway tickets, cash fares, or in checking same with conductor's returns? If so, by whom, and in what did the negligence consist?

Was the system of accounting in this department put into effect by the Treasurer's department? If so, when and to what extent has it been departed from, and who is responsible?

Has there been any change in the methods of accounting, care and destruction of used tickets, or in operating methods since the beginning of 1918, and if so, what are those changes, and by whom were they made, and when?

Is the efficient operation of the system lessened to any appreciable extent by the attitude of the management to the men; a want of co-operation among the employees; a spirit of disloyalty on the part of the men engendered by lack of confidence on the part of the council, the public or any other body towards said management? If the efficient operation of the road is lessened by reason of the matters referred to above, what is the remedy?

Has any officer, servant or employee of the street railway, or connected in any way therewith been guilty of dishonesty, negligence or incompetency in the discharge of his duties, or otherwise, and if so, in what particular?

Have the mechanical and traffic conditions in connection with the operation of the Regina street railway system been satisfactory? If not, in what way can they be improved, having particular reference to the following: Breakdown of cars en route; prompt arrival of relief cars; proper spacing of cars.

Taking the system as handed over to the present management, has the equipment been maintained and used to the best advantage in order to get the largest revenue consistent with satisfactory service? If not, is the failure to get these results attributable to the management or to other causes?

## The Winnipeg Sympathetic Strike.

Street railway transportation in Winnipeg was tied up for three days during the week which began on May 18, owing to 1,000 employees of the Winnipeg Electric Ry. striking, in sympathy with civic employees who struck for advances in wages. The strike, which involved 15,000 workers, in over a dozen unions, was the most disastrous in the history of the city and from the time that the first civic employees walked out until a settlement was effected was over a month.

The city was without street car service on one of the most important holidays of the year, viz., May 24, being the first summer holiday, and the tie up, while it only lasted three days, caused inconvenience to thousands of workers, who, living in the outlying districts, had to walk in many cases as much as six miles to get to their places of employment. Hundreds of owners of motor cars co-operated, at the request of the civic authorities, and at the rush hours a continuous string of cars could be seen passing up and down the busy thoroughfares.

The street car men went out on the morning of May 22, and a settlement was reached at noon on May 25, as a result of the visit of Senator Gideon Robertson, who acted as a mediator, and who, at the time the street car men struck, was on his way west. The street car men were called out as a last resort by the striking committee and this action was considered the trump card.

A magnificent spirit of co-operation was manifested throughout the city in a desire to keep the public utilities running. Society women, who did not know the meaning of work, manned the telephone switchboards and helped to maintain a service for a week that the operators were out. Girls in railway offices dropped their pens, donned overalls and hustled trucks when the freight handlers joined the striking unions, and private motor car owners acted as jitney drivers in their desire to assist to their work those who had long distances to travel.

The underlying motive of the strike was not based entirely upon the refusal of the city to grant increases in the different departments, but rather on a point of principle. The city maintained that employees should arbitrate matters of this kind in war time. Labor spokesmen asserted that the life of unionism rested solely upon the right of labor to strike to procure their demands. The thorn in the flesh, in so far as the city was concerned, was due to the fact that about three-quarters of the firemen, who had lately formed a union, were the first to go out in sympathy, leaving the city without adequate fire protection. The basis of the agreement finally reached was that all matters affecting increases in wages should be arbitrated, with a strike as the last resort.

The Winnipeg Electric Ry. suffered the loss of thousands of dollars in revenue as a result of the rolling stock being tied up over the holiday. May 24 came on a Friday and preparations had been made on a large scale for entertaining the public at the various parks. Up until noon of the holiday hopes were held out that an agreement would be reached that day, and crews were at the various barns waiting to take their cars out. The walkout, from a street railway standpoint, was very regrettable, owing to the fact that only a short time before a new schedule had been drawn up for the street car men, providing for increases in all branches, and the best of relations exist between the company and its employees.

# Increases in Electric Railway Freight and Passenger Rates.

The Board of Railways Commissioners has passed the following orders, in addition to those given in Canadian Railway and Marine World for May and June:—

**Brantford & Hamilton Electric Ry.**—27,270, May 30. Authorizing B. & H.E. R. to increase its freight rates, except on coal and coke, by 15%, and its rates on coal and coke by 15c a ton, the increased rates to become effective on the company complying with requirements of sec. 327 of the Railway Act.

27306, June 14. Approving B. & H.E. R. standard mileage freight tariff C.R.C. 4, to become effective July 1, same having been filed with board on basis permitted by order 27,270.

**Chatham, Walaceburg & Lake Erie Ry.** 27,309, June 15. Authorizing C.W. & L.E. R. to increase its freight rates, except on coal, by 15%, its rates on coal by 15c a ton, and its passenger rates by 15%; the increases to become effective on the company complying with secs. 327 and 351 of the Railway Act.

27312, June 18. Approving C.W. & L. E.R. Standard Freight Mileage Tariff C.R.C. 430, and Standard Passenger Tariff C.R.C. 37, which have been filed on the basis permitted by the board in order 27309, June 15, 1918, the tariffs to become effective July 1.

## OTHER APPLICATIONS AND INCREASES.

**Edmonton Radial Ry.**—Canadian Railway and Marine World for June contained some particulars of increased fares put in effect on the municipal railway in Edmonton, Alta., on May 1. We have since received the following official information: The cash fare, heretofore 5c at all hours, has been increased to 7c up to 11 p.m., after which it is 10c. Tickets are sold on the cars at 4 for 25c and at ticket selling stations at 5 for 25c. Two tickets are required for night fares.

Workmen's tickets have been abolished. Heretofore they were sold 8 for 25c, good in the early morning to 8 a.m. Up to July, 1914, they were also good between 5 and 6.30 p.m.

Children under 6 years of age are carried free. Children over 6 and under 15, including high school pupils carrying certificates, are sold 10 tickets for 25c, against 12 for 25c as heretofore. After 11 p.m. children pay half fare.

No change has been made regarding transfers. Between 5 and 6.30 p.m., baby carriages and large parcels are charged for at 5c each. The Superintendent, J. H. Moir, advises us that the ticket system is of great benefit on the one man cars, saving considerable time in collecting fares and making change.

**Fort William Municipal Ry.**—The Fort William, Ont., City Council on June 14, amended the fare schedule for the municipal railway, subject to the Ontario Railway and Municipal Board's approval, as follows:—Adults, 5c cash; tickets, 5 for 25c; children, 5 to 12 years, 5c or one ticket; children's tickets, 8 for 25c. Double fares will be charged on cars running between 12 midnight and 5.30 a.m. The privilege of riding free heretofore granted to Dominion policemen has been abolished.

The London St. Ry. put into operation a straight 10c cash fare for the round trip on its Springbank line, June 20, and discontinued the issuance of transfers to and from the city lines. The new fare is at the rate of a cent a mile.

The Hamilton Radial Electric Ry.'s ap-

plication to the Board of Railway Commissioners, for permission to file tariffs providing for a general advance in passenger fares to a maximum of 27c a mile, and a general advance in freight rates of 15%, as was permitted by the board in the case of steam railways, was heard by the board at Toronto, June 24.

The Montreal & Southern Counties Ry.'s application to the Board of Railway Commissioners, for authority to file tariffs providing for a general advance in freight and passenger rates, to the same extent as the board has permitted in the case of steam railways, was heard at Montreal June 10, when decision was reserved.

**Montreal Tramways Co.**—The question of increased passenger fares in Montreal has been under consideration for some time, and was to a certain extent mixed up with the question of the increase of employes wages. Towards the end of May there was a conference at the Montreal City Hall of representatives of the municipalities within which the M. T. Co. operates, upon the wages question. There was a general agreement that the men were entitled to some increase of wages, but their demands were considered excessive. The effect of increased wages upon the fares to be charged was discussed and a resolution was passed favoring an increase. While it was felt that an increase of fares was justifiable, the conference did not pass any resolution favoring it.

Another conference was held June 20, at which the commissioners submitted figures showing the following estimated increases in cost of operation:

Estimated increase in wages.....	\$ 750,000
Deficit since contract put into force...	400,000
Estimated increased cost of material..	1,000,000
Additional fixed charges .....	280,000
Total .....	\$2,430,000

The commissioners are also reported to have pointed out that these figures were not the fares they would fix, that there was the question of free transfers or transfers to be paid for, and probably other changes in the general traffics which would bring the general city fare down below the actual cost per car mile based on the estimate of the revenue and the number of car miles covered. It was stated that the cost per mile for operating last year was 18.67c and for maintenance 7.22c, making a total cost per car mile of 25.89c. The estimate for the ensuing year was placed at 30.505c per car mile, meaning an increase in the cost per car mile of 4.61c, and of this amount 2.74c represented the increased cost of operating, and 1.87c the increased cost of material.

On June 22 the commissioners announced the changes they had decided on, to be put into effect about the middle of July. An official copy of the new schedule has not been received and the following figures are taken from press reports and are subject to correction.

Cash fares, heretofore 5c; new rate 6c. Midnight to 5 a.m., heretofore 10c; new rate, 15c.

Unlimited tickets, heretofore 6 for 25c; new rate, 5 for 25c.

Workmen's limited tickets, heretofore 8 for 25c; apparently abolished.

School children's tickets, no information as to old rate; new rate, ages 5 to 16, week days only, from 8 a.m. to 6 p.m., 7 for 25c.

Transfers heretofore free, in future free to all passengers between 5 and 8 a.m. At other hours 1c extra.

Representatives of the City of Montreal and of other interested municipalities stated at once that the commissioners' decision would be appealed against to the Quebec Public Utilities Commission.

**Windsor, Essex & Lake Shore Rapid Ry.**—27,308, June 15. Authorizing W.E. & L.S.R. Ry. to increase its freight rates, except on coal, by 15%, and its rates on coal by 15c a ton; the increases to become effective on the company complying with sec. 327 of the Railway Act.

**Quebec Railway, Light & Power Co.**—Full particulars of this company's application to the Quebec City Council, for authority to increase its passenger fares on its city division, also its gas rates, were given in Canadian Railway and Marine World for April, pg. 161. The city council, on May 31, approved of the proposed increase in gas rates and favored granting the request for increased passenger fares in part only, but at a meeting on June 14 a compromise was arrived at. Following are particulars of the fares heretofore in force, of the increases asked and of what the city council has agreed to:

Cash fare 5c, no change asked. Tickets, former rates, unlimited tickets 6 for 25c and 25 for \$1. The company's request to change to 5 tickets for 25c and 21 for \$1 was approved by the council.

Workmen's tickets, heretofore sold 8 for 25c, and were good between 6 and 8 a.m. and 5 and 7 p.m., for either males or females. The company wishes to abolish these tickets altogether, but the council would not consent, and it was finally agreed to sell 7 tickets for 25c to be limited for workmen and good between the same hours as formerly. These tickets will not be honored if presented by females, in connection with which it may be mentioned that the Civil Code, article 2013A, as amended by 7 George V, chap. 52, provides that: "The word 'workmen' includes the artisan, the laborer and generally everyone who makes his living by manual labor."

School children's tickets, old rate 10 for 25c. No change was asked. Children under 7 years of age, when accompanied by parents or guardians, were carried free. The company asked that all children under 7 years, except those in arms, pay 3c cash fare or buy 10 tickets for 25c. The council agreed to this.

Transfers have been issued free, and permission was asked to charge 1c each for them, or to sell 5 transfer tickets for 5c, which the council did not agree to.

The company asked to be relieved of its obligation to pay the city 4% of its gross earnings, but the council would not consent.

A Quebec press dispatch of June 19 said many citizens were preparing for the higher street car fares about to go into effect, by buying tickets wholesale at the old rate of 6 for 25c.

**British Tramway Fares.**—At the request of Sir Albert Stanley, President of the British Board of Trade, the House of Commons has appointed a select committee to investigate the need of increasing tramway fares in Great Britain. A deputation from the tramway associations, both municipal and company, appealed to him recently for financial assistance, which they maintained had been made imperative by the enormous rise in wages and the heavy increase in charges for material.

## The Winnipeg Electric Railway's Motor Omnibusses.

The Winnipeg Electric Ry. Company is operating 4 motor busses, in a section of the city that is not served by the electric railway lines, in accordance with the agreement entered into with the city recently that the street car service in outlying districts be supplemented by motor busses until the trolley lines are extended into that area. The service is very satisfactory from the public standpoint and as only three busses are in operation at one time, one is kept for emergency use should a breakdown occur. They are standard one ton, 16 passenger type. The busses are finished in gun metal with an ivory stripe, weigh 3,700 lb. and cost \$2,295 f.o.b. Walkerville, Ont.

The specifications of the busses are as follows: Wheel base, 125 in.; frame of pressed steel channel section 5 x 3 x 3/16 in., width 36 in., length overall 186 in.;

shifting clutch. Pedal adjustable. Brakes, emergency expanding band type. Service, contracting band type. Brake bands faced with woven wire asbestos material 2 in. wide acting on 15 in. brake drum. Brake rods equipped with equalizer beams. Brake pedal adjustable. Hand control, centre control. Lamps, electric dash lamp, tail lamp and head lamps (the latter provided with dimmer switch).

## Complaints Against Halifax Electric Railway Service Disposed of.

The Nova Scotia Board of Public Utilities had before it recently a complaint against the Nova Scotia Tramways & Power Co. The Halifax Chronicle reports the board as having given judgment as follows:—

The complaint filed against the tramway company was divided into these particulars: 1. Irregularity of service. 2. Failure to stop at street intersections to take passengers. 3. Failure to operate

be necessary. Whether snow banks should be permitted to remain on the business streets of a city the size of Halifax, tramway or no tramway, in view of the very considerable additional cost thereby thrown on merchants, truckmen, teamsters and others engaged in transportation, as well as the inconvenience experienced by pedestrians at times of rains and thaws, is a matter of policy which must be determined by the civic authorities, and with which this board has nothing to do. For some years the city and the company jointly removed the snow under an alleged agreement, which was not produced. If satisfactory service is to be furnished, the snow must be removed and the gutters and catch-pits kept open, and it is not enough to remove merely the snow thrown up by the ploughs. The company and the city should be jointly responsible, and each should bear the cost of removal, the one doing the work, and the other bearing a proportion of the cost.

The traffic conditions—the slowly mov-

Winnipeg Electric Railway's Motor Omnibusses.

transmission, selective type mounted on rear axle, 3 speeds forward and reverse; gear ratios, 1st, 18.2:1; 2nd, 10.1; 3rd, 5.1; reverse, 23.7-8.1. Equipped with roller bearings, aluminum transmission case. Propeller shaft, equipped at either end with universal joints, tubular 1 3/8 x 3/16 in. wall. Axles, front, forged L-beam section; rear, full floating, equipped with roller bearings. Cast steel housing. Axle shafts, 1 3/8 in. in diameter. Chrome nickel steel, radius rods. Drive is through radius rods. Torque arm, pressed steel channel section, firmly bolted to transmission case and secured in axle housing by forged braces. Springs, semi-elliptic in front, semi-elliptic in rear. Spring centers, front, 37 11/16 in., 2 in. wide; rear, 51 in., 2 1/2 in. wide. Steering gear, left hand drive, 18 in. steering wheel, irreversible worm and gear. Spark and throttle control, hand control on steering wheel, carburetor accelerator operated by foot. Wheels, wood, artillery type, 12 spokes. Heavily constructed for truck purposes. Brake drums securely bolted to spokes. Tires, plain tread tires in front, 35 x 5 pneumatic. Safety tread tires in rear, 35 x 5 pneumatic. Clutch, cone type faced, with woven wire asbestos material. Clutch pedal mechanism connected to ball thrust bearing on propeller shaft for

the so-called Gottingen street extension. 4. Failure to operate the line from North street to Richmond. 5. Failure to operate the Armdale line.

As to the first ground of complaint, the company admitted that the service was not as satisfactory as could be reasonably desired, but this was owing to the following conditions which the company could not control: 1. Severe weather. 2. Failure of city authorities to remove snow shovelled off sidewalks. 3. Failure of city authorities to open catchpits and clear gutters, or cause same to be cleared. 4. Difficulty on the part of the company of obtaining necessary labor to promptly remove snow thrown up by company's sweepers. 5. Traffic conditions.

The board states that weather conditions threw a heavier burden on the company than usual, and from the facts brought out at the investigation, and always bearing in mind the labor available, it would seem that the company bent all its energies to meet the weather conditions and to keep its tracks open.

The city authorities, during the past winter, removed no snow from the streets on which the car tracks are placed, taking the position that were it not for the tram service the removal of such snow as is shovelled from the sidewalks would not

ing heavily laden auto trucks travelling in the tramway and disregarding the motorman's signals, and the practice of leaving autos and other vehicles close to the tracks—was largely responsible for the many delays and bunching of cars which occurred during the past winter. The older motormen on the tramway testified that conditions were never so bad as during the past year, and, given the track free from obstructions, they would be able to give a reasonably satisfactory service.

As to the complaint that cars had failed to stop at street intersections for passengers, the board found that in many instances the cars were running "express" in order to recover lost time. It was in the interest of passengers farther on who were waiting for cars that the foremost cars of a bunch should not stop at every corner. It is not in the company's interests to run empty cars.

As to the Gottingen St. line, it was found that it was blocked on account of the blizzard following the explosion and the scarcity of labor, but it had been opened as speedily as possible, and to the mayor's satisfaction. The operation of the Richmond section was impossible on account of the damage to overhead construction. The Armdale line has been in

operation continuously, and there was no evidence to the contrary.

The board made the following certain recommendations: 1. The city and the company should reach an agreement for the joint removal of snow. 2. The city authorities should see that all catchpits and gutters on streets draining toward tram tracks are open. 3. Traffic ordinances should be passed to give the right of way to tram cars, and to prevent ob-

struction. 4. If Militia and Defence Department motor trucks are operating without numbers, as alleged, they should be required to conform to the rules. 5. To separate cars that are bunched, the company may run the leading cars "express," that is, without stopping, but should indicate the fact by a sign. 6. As to whether the staff of inspectors is adequate, this is a matter of management with which the board will not interfere.

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—The new sub-station at King Edward Ave., on the Lulu Island line, was expected to be completed by June 30. It is of reinforced concrete, 100 x 60 ft., and is equipped with 2 rotary converters of 1,000 k.w. each and 1 motor generator of 1,500 k.w. with the necessary fixtures. (June, pg. 255.)

**Calgary Municipal Ry.**—The Calgary, Alta., City Council is considering a plan for straightening and shortening the Ogden line in the interests of efficiency of service and economy of working. If the plan is approved, some time will be taken up in negotiating for right of way, etc. (May, pg. 211.)

**Edmonton Radial Ry.**—The car line on Twenty-seventh St., Edmonton, Alta., has been rebalasted, and is reported to be in good condition. (Mar., pg. 117.)

**Fort William Electric Ry.**—Application has been made to the commission operating this railway by the Mount McKay & Kakabeka Falls Ry. to grant it running rights over the city lines to the vicinity of the market. C. H. Jackson and W. F. Hegarth, directors, attended a recent meeting of the commission and presented their case, but up to the time of writing no decision has been announced.

**The Hull Electric Co.**, according to a press report, proposes shortly to build an extension of its line. G. Gordon Gale, Hull, Que., is Vice President and General Manager.

We are officially advised that the extension referred to in recent press reports is the work on the Chelsea Road, of which mention was made in our April issue, pg. 164. The company does not contemplate any other extensions at present.

**The Levis County Ry.**, we are officially advised, proposes to undertake the reconstruction of 10 miles of track with stone ballast, and to build two miles of new line, using new ties on the whole. The work is to extend over practically the whole system in the municipalities of Levis, St. Joseph, Bienville and St. Romuald as far as the southern approach of the Quebec bridge. A contract has been let for 200 tons of 60 lb. steel rails, and the company is in the market for 16,000 ties, 70 kegs track bolts, 300 kegs track spikes and 2,500 continuous rail joints. H. E. Weyman, Levis, Que., is Manager.

**Nipissing Central Ry.**—The Dominion Parliament has granted an extension of time within which the company may make a number of extensions on branch lines, details of which were given in our May issue. (May, pg. 211.)

**Ottawa Electric Ry.**—The Ottawa City Council, on June 4, discussed the question of a proposed extension to Ottawa East and to the cemeteries, and a suggestion was made that in the event of the company refusing to make the extensions,

the council enter into an agreement with the Hydro Electric Power Commission to build them. It was stated that the extensions would probably cost \$800,000 at the present price of labor and materials. The route of the suggested extension to Ottawa East is from Sparks and O'Connor Sts. south on O'Connor St. to Argyle St., thence to Elgin St. across the Pretoria Ave. bridge to Hawthorn Ave., Ottawa East, to Main St., northerly to Echo Drive and through the G.T.R. subway to Nicholas St., thence to Laurier Ave E., and on to O'Connor St., thus making a complete loop. The proposed extension to the cemeteries would start at the corner of Beechwood Ave. and Creighton St., running along Beechwood Ave., Oakville Road and Hemlock Road. (May, pg. 211.)

**Port Arthur Civic Ry.**—The city council has decided to reconstruct the line on Arthur St. between Court and Cumberland Sts. The 80 lb. steel rails at present on Hodder Ave. will be removed for placing on Arthur St., and will be replaced with lighter rails. (Sept., 1917, pg. 368.)

**Quebec Ry., Light & Power Co.**—Plans for some small extensions in the city have been approved and the Quebec City Council was advised June 1, that work on these would be commenced as soon as the rails and other materials necessary were available. We are officially advised that in Sept., 1916, amongst other arrangements with the city, the company undertook to build its line on the Beauport Road, extending to the city limits, 1.5 miles. This should have been completed by Dec. 31, 1917, but owing to the high cost of labor and materials and the practically isolated section of country through which the main part of the line would operate, the company decided to defer construction to a later period. A number of the residents of Beauport district have petitioned the council to insist upon the construction being carried out, which, under existing conditions, the company considers unreasonable. However, the company is having a survey made, with a view of building at least a part of the line. (Jan., pg. 22.)

**Regina Municipal Ry.**—Plans are under consideration by the city council for the extension of the line into the North Annex. The Regina Leader, on June 12, questioned the wisdom of constructing any extension whatever and added: "With taxation mounting year by year and no prospect of it lessening, the citizens might expect their representatives in council to better defend them from schemes that will benefit a few people, at a cost that is really unnecessary." (July, 1917, pg. 286.)

**The Western Power Co. of Canada** has been authorized by the Dominion Parliament to own and operate a railway built by its predecessor, the Western Canada Power Co. This consists of a line built originally during the construction of the

company's power plant, which it was proposed to incorporate into a lengthy electric railway. The company also owns the Burrard, Westminster & Boundary Ry. (May, pg. 211.)

**Winnipeg Electric Ry.**—A press report of June 12, states that the company will instal a Y at the western terminus of the Logan Ave. West line on Keewatin St., so that the new type of cars may be operated on the line. (June, pg. 255.)

## Electric Railway Finance, Meetings, Etc.

**Edmonton Radial Ry. results for April:**

Earnings .....	\$42,206
Expenses .....	32,477
Net earnings .....	\$ 9,729

Capital charges .....

Depreciation .....

Deficit .....

In April, 1917, the gross earnings were \$42,015.

Passengers carried .....

Average receipts .....

**British Columbia Electric Ry. and subsidiary companies.**

	Mar. 1918	Mar. 1917	3 months to Mar. 1918	3 months to Mar. 1917
Gross	\$510,892	\$456,626	\$4,495,271	\$4,067,005
Expenses	381,234	356,178	3,462,714	3,194,692

Expenses .....	723,974	643,083
Net earnings .....	216,856	250,673

**The Guelph Radial Ry.** is managed by a board of directors nominated by the Guelph, Ont., City Council. Under an act passed at the Ontario Legislature's last session, the present constitution of the board will be discontinued, and the members of the city council to be elected for 1919, and thereafter, will be the directors of the G.R. Ry. under the acts relating to the company.

**The Ottawa & Montreal Transmission Co.** has been granted an extension of time for three years within which it may construct its power transmission lines, authorized to be built by the statutes of 1910, chap. 142, and confirmed by the statutes of 1913, chap. 169,

**The Vancouver Transportation Club** June 4 discussed the transportation of explosives, the opening speech being by D. W. McNab, of the Bureau of Explosives.

## Increases in Electric Railway's Employees' Wages.

The Brantford Municipal Ry. conductors and motormen asked early in May for increases ranging from 9c to 10c an hour, according to length of service. The commission granted advances which are shown below, together with the rates paid formerly per hour:—

	New rate.	Old rate.
First year .....	29c	23c
Second year .....	31c	25c
Third year .....	32c	26c

**British Columbia Electric Ry.**—The Minister of Railways has appointed a board of conciliation and investigation, to deal with the dispute between this company and its employees; F. Buscome, Vancouver, representing the company, and T. J. Coughlin, Vancouver, representing the men.

**Calgary Municipal Ry.**—In the particulars of increases in wages on this line given in Canadian Railway and Marine World for June, pg. 259, mention was made of conductors and motormen and also of motor conductors. As we could not understand the reference to conductors and motormen, in view of the fact that the entire system is operated with one-man cars, we communicated with Superintendent T. H. McCauley, who advises us that conductors and motormen are only used on sight seeing, trailer and freight cars, and street sprinklers, and that all other cars are each operated by one man. The railway does a large freight business to Sarcee camp, and, in addition, runs a combination freight and passenger car to Ogden, Sarcee, and Bowness. This car is operated by one man, and operated on regular schedule. The two-man freight cars carry wood, lumber, and supplies, and require two men, as also do sprinklers.

The Cape Breton Electric Co. is reported to have put in force a new wage schedule on June 1, which gave increases to conductors and motormen varying from 2 to 3½c an hour. The maximum wage for the senior men is now 36c an hour.

**Dominion Power & Transmission Co.'s Wages.**—Canadian Railway and Marine World for June gave particulars of conductors' and motormen's wages on the Hamilton St. Ry., as agreed upon, following a board of conciliation's recommendations. Particulars were also given of new rates put in force voluntarily on the company's interurban lines, viz., Brantford & Hamilton, Hamilton & Dundas, Hamilton, Grimsby & Beamsville, and Hamilton Radial. We are officially advised that there was a slight error in the figures furnished us by the company for the interurban lines, which stated the wages for the second year as 34c an hour, for the 3rd and 4th years as 34c, and for the 5th year and thereafter as 37c. The correct figures are given below, showing both the new and old rates.

	New rate.	Old rate.
First 6 months .....	25c	22c
Second 6 months .....	30c	24c
Second year .....	32c	25c
Third, fourth and fifth years .....	34c	26c
Sixth year and thereafter..	37c	30c

**Guelph Radial Ry.**—Conductors' and motormen's wages on this municipally owned railway were advanced in April 1c an hour, but as it was found impossible to get new men at the rates offered, a further advance was made in May, for the duration of the war only. The following table gives: 1, the old rate prior to April; 2, the April rate; 3 the present rate:

	Old rate.	1st advance.	2nd advance.
1st year .....	24½c	25½c	27c
2nd year .....	25½c	26½c	28c
3rd year .....	26½c	27½c	28½c

The company supplies one uniform suit a year free and uniform caps as required.

**Hull Electric Co.**—Two members of the board of conciliation appointed by the Minister of Labor to investigate the dispute between this company and its employees as to wages, viz., Judge Gunn, chairman, and Fred. Bancroft, of Toronto, representing the men, made a majority report on May 25 recommending increases. The report was not concurred in by the company's representative, G. D. Kelly, barrister, Ottawa, but the management decided subsequently to accept the majority report. Following is a comparison of the new and old rates, as far as information in regard to the latter is available:—

	New rate.	Old rate.
Aylmer station agent, per mo. \$100		
Conductors and motormen—		
1st six months, per hr. ....	29c	22c
2nd six months, per hr. ....	31c	22c
Second year .....	34c	23c
Third year .....	36c	24c
Fourth year .....	36c	25c
Snow plow and sweeper work, per hr. ....	39c	
Freight crew, per month—		
Conductor and motorman....	\$105	
Brakeman .....	80	
Trolleyman .....	75	
Power plant employees, per mo.—		
Flagmen or switchmen, per day 2.25		
Runners or operators .....	80.00	62.50
Oilers .....	65.00	62.50
Substation employees .....	80.00	
Trackmen, per hr. ....	31c	20c
Laborers, per hr. ....	30c	
Linemen, per hr. ....	36c	24c
Trolley linemen .....	33c	

Car barn and shop men, among whom are truck repairers, carpenters, cleaners, blacksmiths, helpers, machinists, troublemen, air inspectors, apprentices, and motormen, got a general increase of 19c an hour.

The company employs about 140 men, who demanded increases averaging about 60%, which the company refused to make, and then arbitration was suggested. The new rates apply from May 1.

**London St. Ry.**—The conciliation board appointed to consider the dispute between this company and its employees, consisting of Judge Livingstone, chairman; F. H. McGuigan, Toronto, representing the company, and C. C. Ferguson, London, representing the men, waited upon the London City Council on May 29, and laid the then position before that body. The chairman of the board stated that the company showed that its financial condition did not warrant granting higher wages, and that by the agreement with the city precluded the company from charging increased fares. After hearing from representatives of the company and the men, the council decided not to interfere between the company and its employees. On May 31 the conciliation board made a unanimous report, following which increased rates of pay were put in force from May 1. Following is a comparison of the old and new rates per hour for conductors and motormen:—

	New rate.	Old rate.
On spare list .....		23c
Rest of first year .....		25c
First year .....	30	
Second year .....	33c	26c
Third year .....	35c	27c
Fourth year and after .....	35c	28c

Regular conductors and motormen to be paid 10c an hour in addition to regular rates for working after scheduled working hours.

Barnmen's and linemen's wages were increased 3½c an hour, and trackmen's wages 2c.

Regular conductors and motormen to be paid 10c an hour, in addition to regular rates, for working after scheduled working hours.

Barnmen's and linemen's wages were increased 3½c an hour, and trackmen's wages 2c.

**Montreal Tramways Co.**—After somewhat protracted negotiations, the company's offer of wage increases was accepted by the men on June 11 and was made to date from June 1. Following is a comparison of the old and new rates per hour:—

	New rate.	Old rate.
First and second year .....	31c	25c
Third year .....	33c	26c
Fourth year .....	35c	26c
Fifth year .....	35c	29c
Sixth year and after .....	37c	29c

Overtime is to be paid as time and a half, and motormen teaching learners, also men employed on snow sweepers, ploughs, milk cars and interswitching, get 2½c an hour extra. Increases have also been granted the other employees; but up to the time of writing (June 22) we have no official information in regard to them. J. E. Hutcheson, General Manager, is reported to have stated that the increases will add \$600,000 a year to the company's operating expenses.

**Port Arthur Civic Ry.**—The Port Arthur, Ont., Public Utility Commission has fixed the wages for employees at barns and maintenance of way department as follows:—Master Mechanic, \$140 a month; machinists, 44c an hour; painters, 44c an hour; 1st class pitmen, 42½c an hour; general handyman, 37½c an hour; other pitmen and laborers, 32½c an hour; apprentices, 20 to 25c an hour. Maintenance of way department—Traffic Manager, \$100 a month; Assistant Manager, \$105 a month; Roadmaster, \$110 a month; boundaryman, \$100 a month; laborers, 32½c an hour.

**Toronto Ry.**—A board of conciliation consisting of Judge Ruddy, of Whitby, Ont., chairman; H. H. Dewart, K.C., representing the company, and Fred Bancroft, representing the men, has been appointed to consider Toronto Ry. machinists' demand that they be given the rates of pay and conditions as other machinists in the city have. They ask for a 9-hour day instead of 10 as at present; that tool-makers be given 60c an hour for day work, and 65c for night work; machinists 55c for day work and 60c for night work, and specialists 45 and 50c an hour for day and night work respectively.

**Winnipeg Electric Ry.** has entered into a new agreement with its conductors and motormen, for a year, from May 1, 1918, to May 1, 1919. Following are the new and old rates per hour:—

	New rates.	Old rates.
1st 6 months .....	30c	28c
2nd 6 months .....	32c	30c
2nd year .....	33c	31c
3rd year .....	35c	33c
4th year and after .....	39c	36c

Overtime work on public holidays, exhibition and other similarly busy days to be paid at rate of time and a half. Sunday work to be paid at rate of 10 hours for 8½ hours work. Conductors and motormen training students to get 5c an hour extra while so engaged. Extra conductors and motormen reporting regularly every day during week, and ready and able to work, to be paid a minimum wage of \$12 a week.

**Increased Street Car Fares in England.** Members of the London County Council have been asked not only to raise the fares on the municipal street cars, but to abolish transfers on certain routes. The reasons given are the increased cost of coal, war allowances, and the recent increase in wages allowed when tramway workers were brought into line with railway workers.

## Mainly About Electric Railway People.

F. H. Williams has been appointed Publicity Agent, Winnipeg Electric Ry., succeeding H. C. Howard.

Mrs. James Gunn, wife of the Superintendent, Toronto Ry., died in Toronto, June 23, after a long illness.

D. N. Gill, heretofore Purchasing Agent, Ottawa Electric Ry., is training at Niagara camp, Ont., preparatory to going overseas to join the Canadian Railway Troops.

J. M. Ahearn, Assistant Superintendent, Ottawa Electric Ry., Ottawa, Ont., has also been appointed Purchasing Agent, vice D. N. Gill, who has entered military service.

Frederick E. Hayes has been appointed General Superintendent, Sandwich, Windsor & Amherstburg Ry. and Windsor & Tecumseh Electric Ry., Windsor, Ont.

M. W. Kirkwood, General Manager, and C. J. Whitney, G.F. & P.A., Grand River Ry., have been authorized by the Board of Railway Commissioners to prepare and issue freight and passenger tariffs for the company.

J. J. Ahearn has been appointed Inspector of Rolling Stock, Ottawa Electric Ry., succeeding R. A. Baldwin, promoted.

R. A. Baldwin, heretofore Inspector of Rolling Stock, Ottawa Electric Ry., has been appointed Master Mechanic.

C. A. Lee, of the British Columbia Electric Ry. engineering staff, has enlisted with the U.S. Navy Civil Engineering Corps. While in the company's service, he was engaged on work on the Coquitlam dam, and the hydro electric installation at Jordan River, near Victoria.

E. L. Tait, heretofore Assistant Engineer, Maintenance of Way, British Columbia Electric Ry., has been appointed Engineer, Maintenance of Way, succeeding A. C. Eddy, who has been granted extended leave of absence for military duty, having joined the U.S. Army, and been appointed a captain in the 55th Engineers.

A. W. Ormsby, Superintendent, Light and Power Department, City of Edmonton, Alta., has been appointed acting Utilities Commissioner by the city council in succession to Commissioner Harrison. Mr. Ormsby will retain his position with the light and power department and will perform his new duties for the present without salary.

Angus McLeod Campbell, who has been appointed Chief Accountant, Grand Valley Ry. and Lake Erie & Northern Ry., Galt, Ont., was born at Embro, Ont., July 4, 1874, and entered C.P.R. service, Nov. 3, 1890, since when he has been, to May, 1893, junior freight clerk, Woodstock, Ont.; May, 1893, to May, 1898, abstract clerk, London, Ont.; May, 1898, to June, 1902, chief clerk at Galt, Windsor and London, consecutively; June 1, 1902, to May 15, 1918, Travelling Auditor, Montreal.

Wilford Phillips, formerly General Manager, Winnipeg Electric Ry., died June 12, at Rochester, Minn., where he went for treatment after a comparatively lengthy illness. He was born in Prince Edward County, Ont., Oct. 8, 1858, and commenced electric railway work on the Metropolitan Ry., North Toronto, Ont., now the Toronto & York Radial Ry.'s Metropolitan Division, in Mar., 1890, in which service he remained until July, 1892, since when he was to Mar., 1893, Engineer and Superintendent, North Toronto Water Works and Electric Light; Mar., 1893, to 1896, Mechanical and Elec-

trical Engineer, Niagara Falls Park & River Ry.; 1896 to June, 1900, Manager, same railway; Aug., 1900, to Oct. 1, 1917, General Manager, Winnipeg Electric Ry. At the last mentioned date he retired on account of ill health, and was elected a director. In speaking of his retirement, Sir Augustus Nanton, Vice President, said: "Everybody connected with the company will regret Mr. Phillips' retirement. He remains in office at the board's request, and will stay with the company in an advisory capacity. He came to Winnipeg about 17 years ago, from the Niagara Falls Park & River Ry., which he managed with success, and to him is very largely due the past great successes of the Winnipeg Electric Ry. in all its branches. He extended the railway lines, completed its power plant, built substa-

Wilford Phillips.  
Formerly General Manager, Winnipeg Electric Railway.

tions, built a suburban line, extended its gas mains, in fact, the company's properties when he arrived were of a minor character, and have all been developed under his management." On leaving Winnipeg for a trip to the south, he was presented with a gold watch and chain by the company's employees, and he spent considerable time in California subsequently. He was buried at Toronto, June 15.

Sandwich, Windsor & Amherstburg Ry. employes struck June 19, following the refusal of the General Manager to order the reinstatement of conductor Saunderson, who was dismissed by Superintendent Hayes. It appears that the Superintendent being without his pass book, was ordered by the conductor to pay his fare or get off the car; the next day the conductor received his dismissal. The employes went to S. S. Anderson, General Manager, who backed up the Superintendent in his determination not to reinstate the conductor without an apology. The men demanded an immediate reinstatement without an apology. The matter was subsequently arranged and the men returned to work.

## Electric Railway Notes.

The Nipissing Central Ry. is reported to be in the market for a snow plough.

The Regina Municipal Ry. has contracted to pay for employes' uniforms for this year \$19.85 each, against \$17.75 for 1917.

The Fort William Electric Ry. Commission favors a general increase of passenger fares, and is negotiating with the Port Arthur Civic Ry. commissioners about it.

The Toronto Railway Men's Union has unanimously re-elected City Controller W. D. Robbins as Financial Secretary, and Alderman Jos. Gibbons as business agent and treasurer.

The Winnipeg Electric Ry. has ordered 10 double truck car bodies, 33 ft. long, semi steel construction with folding doors and steps, for single end operation, from Ottawa Car Manufacturing Co.

The city of Hamilton, Ont., is said to have protested to the Board of Railway Commissioners against granting the Hamilton Radial Electric Ry.'s application for increased freight and passenger fares.

The Nipissing Central Ry., which is operated by the Timiskaming & Northern Ontario Ry. Commission, for the Province of Ontario, has ordered two interurban car bodies from Preston Car & Coach Co.

The Calgary, Alta., City Council on June 18, by a vote of 6 to 4, decided to put a tax of 4% upon the gross earnings of the electric railway and the electric light plant, instead of 5% as recommended by the finance committee.

The hearing of the Toronto Ry.'s appeal against the fine of \$24,000 for alleged non-compliance with an order of the Ontario Railway and Municipal Board, as to the building of additional cars, is not expected to come on until the autumn.

The Calgary, Alta., City Council having proposed to assess the Calgary Municipal Ry. for municipal taxes, the commissioners are considering the question of increasing fares. Superintendent McCauley has suggested that the sale of special workmen's tickets be stopped.

The Grand River Ry.'s operations are liable to serious restriction, as a result of the reduction in the allotment of power by the Hydro Electric Power Commission of Ontario. A considerable quantity of traffic moved over this line is required in connection with munitions manufacture.

The Port Arthur, Ont., City Council is considering the matter of advertising in the civic railway cars. The present contract is expiring, and the contractor is asking for a renewal for 10 years at \$600 a year. The same contractor has the advertising privileges on the Fort William Electric Ry. at \$600 a year.

The Ontario Railway and Municipal Board has approved the sample prepayment car which the Toronto Ry. proposes to place in service on its lines, and which was described in our last issue. It is probable that sufficient cars will be remodelled on this plan, for service on one selected route, to test the feeling of the public on the matter.

The Quebec Ry., Light & Power Co. informed the Quebec City Council's public works committee, June 12, that if there was any possibility of the company being able to undertake the work of snow removal in the city, as well as to successfully operate the street cars, it would not hesitate to tender. The chief difficulty in the way is lack of equipment, which cannot very well be procured at present.

# Marine Department

## General Shipbuilding Notes Throughout Canada.

**B. Belliveau & Co., Belliveau Cove, N.S.**—Work is reported in progress on the construction of a three masted schooner of about 250 tons, similar to the company's recently launched schooner Emma Belliveau, now on her maiden voyage to the West Indies.

**Canadian Car & Foundry Co., Fort William, Ont.**—Work is proceeding on the 12 mine sweepers under construction for the French Government. The shipbuilding sheds are practically completed, and electrical cranes have been installed.

**Cape Breton Shipbuilding Co., Johnstown, N.S.**—This company, which was incorporated recently with capital of \$45,000, to build wooden ships, is building a schooner with carrying capacity of 350 tons. N. A. MacMillan, K.C., North Sydney, is Secretary.

**Ernst Shipbuilding Co., Mahone Bay, N.S.**—launched the schooner William Duff June 6, for the William Duff Shipping Co., Lunenburg, N.S., for the West Indies trade. Her dimensions are, length 127 ft., breadth 32½ ft., depth of hold 12½ ft.; tonnage, 450 gross, 400 register.

**Fauquier & Porter, Hantsport, N.S.**—Two schooners are under construction at this yard, where, it is said, that four-masted schooners of approximately 1,000 tons will be built. J. B. North & Sons shipbuilding yard was acquired towards the end of 1917, and some adjoining lands were taken in and woodworking mills with compressed air plant erected. The partners are, G. E. Fauquier and J. P. Porter, railway and general contractors. G. E. Fauquier, who lives in Ottawa, had contracts on the National Transcontinental Ry. and is a member of the firm of Foley Bros., Welch, Stewart & Fauquier, who are carrying out work on the Canadian Government Railways ocean terminals at Halifax, N.S. J. P. Porter has had some railway contracts in the U.S., including one on the Spokane, Portland & Seattle Ry., in partnership with P. Welch. He is Manager of Construction, under Foley Bros., Welch, Stewart & Fauquier, on the Halifax ocean terminals.

**Grand Trunk Pacific Ry. Dry Dock at Prince Rupert, B.C.**—A press report from Vancouver, B.C., credits W. P. Hinton, Vice President and General Manager, with the statement that arrangements are being made for the leasing of the dry dock and shipbuilding plant at Prince Rupert, to a U.S. company, and that work will be commenced shortly on the building of 8 steel steamships of 8,500 tons each.

**Grant & Horne, St. John, N.B.**—A wooden steamship of 2,800 tons capacity, which has been under construction at this yard for some time, is expected to be ready for launching very shortly.

**O. Ham, Mahone Bay, N.S.**—The schooner The Dazzle was launched here recently, and was expected to be ready for her maiden voyage to the West Indies during June. She is owned by Jos. Conrad, Upper La Have. Her dimensions are, length 122 ft., breadth 26 ft., depth of hold 11½ ft. The keel of another schooner for the same owner has been laid.

**International Shipbuilding Co., Newcastle, N.B.**, has practically completed a

4-masted schooner, and expects to proceed at once with two more of a similar type. These are to be arranged for the accommodation of auxiliary power, which can be added at any time if desired.

**W. C. McKay & Sons, Shelburne, N.S.**—The schooner Selma Creaser, which was launched at this yard, fully rigged, left Halifax recently for the banks, on her first fishing trip. Her dimensions are: length 124 ft., beam 26.6 ft., depth of hold 11 ft.; tonnage, 99 register.

**Marine Construction Co., St. John, N.B.**, launched the four masted schooner Dornfontein June 11. The keel was laid at the end of Oct., 1917. Her dimensions are, length 185 ft., beam 40 ft., depth moulder 14¼ ft.; 1,400 tons deadweight capacity. This is stated to be the first sailing vessel to be launched at St. John since 1890, and the launch was broadside one, the customary way on all Canadian inland waters, but apparently new to St. John, an old-timer saying that it was the first he had heard of there. The vessel is being loaded for Durban, South Africa, by J. T. Knight & Co. She was designed by J. M. Watts, Philadelphia, Pa. D. H. Saker is President of the company, and J. M. Densmore is Superintendent of the yard.

**B. W. Melanson, Gilberts Cove, N.S.**—The small wooden steamship M. Sigogne, owned by the builder, underwent her trial trips recently and successfully maintained a speed of nearly 10 knots an hour. The machinery was supplied by the Union Foundry & Machine Works, West St. John, N.B., and the boiler by J. Matheson & Co., New Glasgow, N.S. The vessel has about 400 tons deadweight capacity. The builder has now a 250 ton schooner in the framing.

**New Liverpool, Quebec.**—W. H. Hutchinson, of Baldry, Yerburch & Hutchinson, contractors, St. Catharines, Ont., and President of National Shipbuilding Co., Goderich, Ont., and H. Dussault, President, General Public Enterprises Co., Levis, Que., are among the promoters of a company to establish a shipbuilding plant at Benson's Cove, New Liverpool, in St. Romuald Parish, on the south side of the St. Lawrence River, near the Quebec Bridge.

**The National Shipbuilding Co., Ltd.**, Goderich, Ont., incorporated under the Dominion Companies Act, has been licensed to carry on business in Ontario, the amount of capital used within the province being limited to \$42,000. W. B. Wadsworth, Toronto, has been appointed attorney. At present the company appears to be confining itself to building marine engines.

**Pacific Construction Co., Port Coquitlam, B.C.**—Canadian Railway and Marine World was officially advised from Ottawa recently that the company had applied to the Marine Department for licenses to build five steamships for French interests, but that no decision had been reached.

**Quinlan & Robertson, Ltd., Quebec, Que.**—It is announced that this company, which received an order for four wooden steamship hulls from the Imperial Munitions Board, has prospects of further orders for wooden vessels from private sources, but nothing definite has as yet

been arranged. The discontinuance of the policy of ordering any further wooden vessels, by the British Government, leaves companies equipped for wooden shipbuilding at liberty to take contracts for such from other buyers.

**Reinhardt & Conrad, Lunenburg, N.S.**—The ship under construction at this yard for Capt. Chas. Conrad was expected to be ready for launching by the end of June.

**St. John Drydock & Shipbuilding Co.** Referring to the particulars published in Canadian Railway and Marine World for June, on pg. 264, an Ottawa press dispatch of June 6 stated that an amended order in council had been passed respecting the continuation of the harbor works at Courtenay Bay, St. John, N.B., by this company, which is taking over the Norton Griffiths Co.'s contract, and that provision is made only for the expenditures necessary to meet the harbor requirements of the dry dock and shipbuilding plant to be established by the company. We are officially advised that not more than \$500,000 will be expended by the Dominion Government during this year, and that the rate of prosecution of the work will depend largely upon financial conditions. The government will grant the usual subsidy for a drydock of the first class, which the company has arranged to build as speedily as possible.

We are advised from New Brunswick that the company has asked that province and the City of St. John, to give subsidies of \$250,000 each to aid in the establishment of a shipbuilding plant.

In giving in our last issue the names of the persons particularly interested in the St. John Drydock & Shipbuilding Co., we mentioned Senator H. W. Richardson and Jas. Playfair as being President and Vice President respectively of the Great Lakes Transportation Co. Mr. Playfair is President and General Manager of that company and Mr. Richardson is Vice President. It was also stated that the harbor work would "probably be carried out by the Great Lakes Dredging Co., in which Jas. Playfair and some of the others mentioned are interested." Mr. Playfair is interested in the Canadian Dredging Co., not the Great Lakes Dredging Co.

**St. John Shipbuilding Co., St. John, N.B.**—T. Nagle, promoter of this project, is reported to have stated on his return from Ottawa, recently, that he was going right ahead with plans for the establishment of a steel shipbuilding plant in or near St. John, that the company had received an order from the government for two steel steamships of 8,000 tons, and that he was endeavoring to have the order increased to four. He added that it was expected that a shipyard would be laid out in Courtenay Bay at an early date, and that the project of the St. John Dry Dock & Shipbuilding Co. in the same district would not affect the St. John Shipbuilding Co.'s plans. Up to the time of writing, Canadian Railway and Marine World has received no confirmation that the government has placed any order with this company for two steel steamships. When Sir Robert Borden made his announcement regarding the government's policy regarding steamship build-

ing, in the Commons recently he said, "The intention is to confine at present the awarding of contracts for the construction of steel steamships to yards already established and actually engaged in constructing steel ships." It is therefore not likely that the company has an order from the government for building steel steamships, though some negotiations may have taken place regarding the possibility of orders after the plant is established.

Victoria, B.C.—Representations were made to the British Columbia Premier,

## Steel Shipbuilding Plant for Halifax, N.S.

In consequence of the increased shipbuilding activity in Canada, opportunities are continually being sought for points of vantage for the establishment of shipbuilding plants. When the demand was urgent for wooden steamships, it was desirable that such plants should be located as conveniently as possible to the source of supply of the requisite building material, and in most cases this was done. So far as immediate war purposes are concerned, it is considered that wooden steamships are not equal to steel vessels, so following on the same line, it is desirable to erect steel steamship building plants at points where the supply of building material is easily accessible.

Concurrent with the rehabilitation of the port of Halifax after the disastrous explosion of last December, it is natural to assume that considerable attention will be paid in carrying out the schemes to any proposal involving the creation of a shipbuilding plant, and the extension of drydock and other similar facilities there. On this reasoning, and following on the declaration of the Dominion Government's policy as to shipbuilding and as to its method of dealing with the ship plate question, it has been thought desirable to establish a large shipbuilding plant at Halifax, and for this purpose, Halifax Shipyards, Limited, has been incorporated under the Dominion Companies Act, with \$6,000,000 authorized capital stock, to build, own and deal in steam and other vessels of every description, steamship and railway terminals, and all other facilities incidental to the operation of such business. We are advised officially that the plant will consist of complete berths for the construction of 10,000-ton steel steamships, with dry docks, repair plants and workshops in connection therewith. It is said that the company is assured of orders for several vessels, immediately the plant is ready to assume the work of construction, and it is semi-officially stated that a number of the vessels which the Dominion Government intends to build, as outlined in the Commons by the Minister of Marine recently, and dealt with in Canadian Railway and Marine World for May, will be built at this plant. The officers of the company had not been decided on at the time of writing, but it is known that Jas. Carruthers and J. W. Norcross, President and Vice President and Managing Director respectively of Canada Steamship Lines, and R. M. Wolvin, President Montreal Transportation Co., are the chief movers in the project.

It is reported that the site occupied formerly by the Acadia Sugar Refinery, alongside the existing dry dock, has been acquired, and that three shipbuilding berths are to be built at once. It is also stated that an immediate outlay of from \$3,000,000 to \$4,000,000 is to be made on pushing on the construction of the plant and its equipment, so that vessels may be launched within 15 months.

June 11, regarding the possibility of leasing a site for a shipbuilding yard on the Songhees Reserve. After hearing the proposals, the Premier is reported to have said that a satisfaction of bona fides, and an agreement as to ordinary business conditions were the only obstacles in the way of further expansion in the district.

Windsor, N.S.—It is planned to lay the keel of a reinforced concrete vessel here, July 1, making it an item in the Dominion Day celebration programme, which is being carried out for the benefit of the Navy League.

Messrs. Carruthers and Norcross visited Halifax June 19 and 20, accompanied by M. J. Haney, of Toronto, Vice President Canada Steamship Lines, and H. W. Brown, of the Canada West Coast Navigation Co., Vancouver, and looked over the existing dock yard and the proposed site of the new plant. Mr. Norcross is reported to have said that work on the new plant would be commenced before the end of June and that the keels of three 10,000 steel cargo steamships would be laid within three months. The Halifax City Council has granted the company exemption from taxation.

A Halifax press dispatch credits Mr. Norcross with saying: "When our plant is completed, we will have established at Halifax one of the finest shipyards on the American continent. We have chosen the best site available, and which is admirably suited for the purpose. Halifax harbor possesses natural advantages which make the general location an ideal one, and adequate arrangements for procuring the steel plates necessary to ship construction have been made. Our first step, of course, will be to start building the three 10,000-ton steamships for which we have a contract with the Dominion Government, but our building berths will not be limited to that capacity. They will be of sufficient dimensions to admit of the construction thereon of ships of the same size and type as the Allan Line passenger steamers Alsatian and Calgarian. The general arrangements will also permit the construction of other berths, so that the company will be able to undertake the building of more than three ships at one time. We want to use all the local labor that is available in Halifax. We will employ some 3,500 men at our plant. We want good men, and we believe Halifax has them. We can provide employment for the shipwrights at work here, including those engaged in steamer repair work at the dry dock, and for the men at work on the dock. Then, too, there are in this province a large number of men proficient in wooden shipbuilding. As we hope to educate men having this knowledge to the somewhat different work of steel ship construction, there will be further opportunity for Nova Scotians with us."

The same dispatch says that the site for the company's plant extends from the Halifax graving dock, which has been purchased by the company, to pier 6, a water frontage of 2,500 ft. After the debris occasioned by the explosion has been cleared away, the work of constructing the building berths will be commenced at once. Arrangements have been made for equipment, which will be shipped immediately, and will be installed as soon as the ground has been cleared. All of the machinery and other apparatus will be new.

Asked as whether the graving dock would be enlarged, Mr. Norcross is re-

ported to have said that they intended first of all to devote all their energies to ship construction. The drydock with its present capacity will serve immediate needs, and the first call is for ships, so that they will proceed at once with the building of those for which they have contracted with the government.

The dispatch adds that the Halifax Shipyards, Ltd., officers include the following: Chairman of Board of Directors, Jas. Carruthers; President, J. W. Norcross; Vice President and Managing Director, R. W. Wolvin; Vice President, M. J. Haney.

S. M. Brookfield, who was connected with the Halifax Graving Dock Co., which owned the dry dock the new company has acquired, is said to have been retained in an advisory capacity.

Tenders have been invited to July 3, for the supply of material and the performance of the necessary work in connection with the construction of a shipyard at Halifax, by Halifax Shipyards, Ltd. The immediate construction to be undertaken covers the piling and grading of three shipways, each 530 ft. long; the excavating, filling and grading of the shipyard for buildings, tracks and storage; excavation for Canadian Government Railways relocation and grading, track laying and ballasting same, equal to about a mile of double track railway; construction of 580 ft. of concrete sea wall and back filling same; construction of reinforced concrete retaining wall along the right of way of the railway relocation, and the extensions to sewers, water mains, etc. The work will require approximately 270,000 cu. yds. of earth and rock, dry excavation, and 20,000 cu. yds. of concrete. The tenders must cover the entire work, and plans may be seen at the office of the engineers, Picking & Roland, Tramways Bldg., Halifax, N.S.

**War Risk Concessions to Seamen.**—The British Board of Trade have informed the shipping associations that it is extending concessions to crews of ships lost by enemy action. By recent arrangement the master and men became entitled to a full month's pay after the time of the loss of the vessel, and this arrangement is now to apply to men whose vessels have been damaged through war risks, but not sunk, provided that the damage necessitates the discharge of the crew. It has also been decided to provide for the payment of one month's extra wages to any master, officer or seaman who has been captured by the enemy and interned after his ship has been sunk or damaged through war risks; the payment to be made on his ultimate release and return to England.

**The International Mercantile Marine Co.** is stated to have concluded negotiations with a British syndicate for the transfer for all of the company's vessels now on the British register, for approximately \$125,000,000, considered to be considerably below the present market price of the vessels, which aggregate 960,000 tons. Included in those composing the syndicate, are mentioned, Lord Pirrie and Sir Owen Phillips, both of whom have been active during the war in consolidating several of the larger steamship companies under a central management.

**St. Marys River Traffic.**—It has been proposed by the Lake Carriers' Association, that double courses be provided for upbound and downbound vessels in St. Marys River, between Sweets Point and Watsons Reef. The proposal has the approval of the Dominion Marine Association, but it will not be put into operation until the Dominion Government approves.

# Steamship Building in Canada for British Government.

**B. C. Marine Railway, Vancouver, B.C.**—The installation of the machinery in the hull of the War Puget, built by Wm. Lyall Shipbuilding Co., Vancouver, and launched Feb. 16, is being rushed at this company's yards.

**Cameron-Genoa Mills Shipbuilders Ltd., Victoria, B.C.**—The wooden hull War Haida, which was launched Apr. 25, left the builders' hands, June 5, and was hauled to the Ogden Point assembly plant, where she took aboard her machinery, and was later taken to the Victoria Machinery Depot's plant, where the machinery will be installed.

**Canadian Vickers, Ltd., Montreal.**—The steel cargo steamship War Earl was launched June 8. She has been built under order from the Imperial Munitions Board on behalf of the British Government, under the direct supervision of a Lloyd's representative. Immediately after the launch, the keel of a sister vessel was laid in the vacant berth, and the vessel is expected to be launched early in

engines were converted from compound to surface condensing, a complete wireless telegraph equipment has been installed, and the crew's accommodation has been thoroughly overhauled. The average speed of the vessel since reconstruction is 12 knots an hour, but during her trials she attained 15½ with the tide and 14½ against it. The work was carried out under the supervision of Major D. H. Oliver, R.E., on behalf of the British Government, and the vessel has been manned by a crew attached to the Royal Engineers.

**New Westminster Construction & Engineering Co., New Westminster, B.C.**—The launch of the second wooden hull, under order from the Imperial Munitions Board, was arranged for June 8, the name chosen for the vessel being War Edenshaw. Unfortunately, owing to a series of accidents, the vessel stuck on the ways, and the launch was postponed.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—Some details were given in

is being equipped at the Louise docks, and is named War Quebec.

**Quinlan & Robertson Ltd., Quebec, Que.**—The second of the 4 wooden hulls under order from the Imperial Munitions Board for the British Government was launched June 14, and named War Seneca. The installation of the machinery in the War Mohawk, launched by the company May 11, is proceeding satisfactorily, notwithstanding the trouble experienced obtaining the help of sufficient experienced machinists.

**Yarrows, Ltd., Victoria, B.C.**—The installation of the machinery in the hull of the s.s. War Masset, built by the Foundation Co., Victoria, is proceeding as rapidly as possible, so that she may be ready for sea at an early date.

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to June 15, giving in each case the date of the launching, the name

Steel cargo steamship War Earl, for British Government, immediately after launching by Canadian Vickers, Ltd., at Montreal, June 8, 1918. The floating drydock Connaught is shown at the left of the illustration.

October. Three similar vessels are under construction at the plant, all of which are expected to be launched during July. The illustration given on this page shows the War Earl being towed alongside after the launch. This vessel, which, with the others of the same order, are being built completely, hull, engines and boilers, by the company, all according to Lloyd's requirements, is equipped with vertical, direct acting, triple expansion, surface condensing engine, with cylinders 27, 44 and 73 in. diam. by 48 in. stroke, for a speed of 11 knots an hour, and supplied with steam by three Scotch marine boilers, each 14¼ by 11¾ ft., under forced draft. Her dimensions are, length between perpendiculars 380 ft., beam moulded 49 ft., depth moulded 30 ft. She is of the single screw, single deck type of cargo vessel, with deadweight carrying capacity of 7,000 tons.

The s.s. Porsanger, a vessel of similar type to the foregoing, and which was launched Nov. 29, has been completed and handed over to Furness, Withy & Co., on the British Government's behalf.

**Davie Shipbuilding & Repairing Co., Lauzon, Que.**—The steam tug Gray, which was acquired by the British Government recently, has been practically rebuilt at this yard. Her dimensions are, length 135 ft., breadth 28 ft., draft 15 ft. The

Canadian Railway and Marine World for June of the company's programme and work on vessels under construction for the British Government, and illustrations were given of the launching of the s.s. War Isis, with the s.s. War Osiris and a trawler in the background. The War Osiris was launched May 25, and on June 5, two trawlers, TR-31 and TR-32, were launched. These trawlers are similar to the Castle class N.D. trawler, and are for the Dominion Naval Service Department. They have 2 masts, full wireless telegraph equipment, and are schooner rigged. The propelling machinery consists of triple expansion engine, with cylinders 12¾, 21½ and 35 in. diam. by 24 in. stroke, supplied with steam by a single ended Scotch boiler 13½ by 10½ ft., and have approximately 500 i.h.p. The principal dimensions are, length over all 135 ft., length between perpendiculars 125 ft., beam 23.4 ft., moulded depth 15.1 ft.; tonnage, 295 gross, 117 net.

The s.s. War Osiris is of the same type as the War Isis, full details of which have already been given.

**Quebec Shipbuilding & Repairing Co., Quebec, Que.**—The rudder and tail shafts for the first of the two wooden steamships under construction for the Imperial Munitions Board, were received June 9, and the propeller shortly after. The hull

of the steamship, the name of the builder and the deadweight tonnage:—

Steel Steamships.		Tonnage.

Total, 17 wooden steamships ..... 52,360  
Total deadweight tonnage 11 steel and 17 wooden steamships launched, 98,860.

An Ottawa press despatch of June 24 said:—"It is anticipated that before the close of the year the greater number of the 46 vessels now being built by the

## Atlantic and Pacific Ocean Marine.

The Cunard Line s.s. *Ascania*, while bound from Liverpool, Eng., to Montreal, ran on the rocks near Rose Blanche, Nfld., during a fog, June 14, and is said to be a total loss. The few passengers and the crew were removed in safety. She was built at Newcastle upon Tyne, Eng., in 1911, for the Canadian trade, and was of the 2-class type of vessel. Her dimensions are, length 466 ft., breadth 56 ft., depth 29½ ft.; gross tonnage, 9,121.

The Cunard Co.'s s.s. *Ausonia* was reported recently as sunk by a German torpedo in mid Atlantic. She was reported to have sailed from a British port on May 25. Just about a year ago she was attacked by a submarine and was damaged, but reached port, where she was repaired. She was built in 1911, at Newcastle upon Tyne, Eng., for service between London, Southampton and Canada, and was of the 2-class type, with a speed of about 14 knots an hour.

Canadian Railway and Marine World for June mentioned a report that Canadian Pacific Ocean Services had arranged for chartering the steamships *Tjikembang* and *Tjison*, two of the Holland steamships which were taken over by the

## Maritime Provinces and Newfoundland.

The s.s. *Lake Houghton*, built at one of the U.S. yards on the Great Lakes, was reported ashore near Canso, N.S., June 14.

The Reid Newfoundland Co. is reported to have chartered the sealing steamship *Neptune* for a few trips in its Labrador service.

The Dominion Public Works Department will receive tenders to July 9, for improvements to the harbor at Inverness, N.S.

The St. John, N.B., City Council is receiving tenders to July 2 for the rebuilding of a part of the ferry wharf at West St. John.

The Dominion Public Works Department received tenders, June 25, for repairs to the department's s.s. *Tyrian*, lying at Halifax, N.S.

The s.s. *Alvor*, a steamship of 3,500 tons, owned in Holland, now operating under the U.S. flag, was reported ashore on the Devil's Ridge, off Yarmouth, N.B., June 14.

The Dominion Steel Corporation's s.s. *Hochelaga* was reported ashore near Port au Port, Nfld., June 5, and the Reid Newfoundland Co.'s s.s. *Kyle* was sent from St. John's to her assistance.

The Dominion Iron & Steel Co. is suing the Corono Joint Stock Steamship Association, in Philadelphia, Pa., for \$1,302,000, for breach of contract relative to the chartering of the Norwegian steamship *Sandefjord*. The vessel, which was loaded recently at Philadelphia, with a cargo for Rotterdam, was released on a bond for \$1,000,000.

The small coasting steamship *La Have*, which was wrecked at Southern Head, near Tanook, N.S., during May, is expected to prove a total loss. She was built at Pocomoke, Md., in 1888, and was formerly named *Isaac N.* She was screw driven by engine of 18 n.h.p., and her dimensions were: length 96 ft., breadth 17.4 ft., depth 7.6 ft.; tonnage, 89 gross, 60 register. She was operated between *La Have* and *Halifax*.

The small steamboats *J. C. Miller*, owned by W. B. Snowball, Chatham, N.B., and *J. W. Brankley*, owned by the Miramichi Lumber Co., have been requisitioned by the Dominion Government for overseas service. It is stated that they have been taken to Montreal, where they are to be taken aboard other vessels for transportation across the ocean. The *J. C. Miller* was built at Douglastown, N.B., in 1910, and is screw driven by engine of 12 n.h.p., her dimensions being, length 54 ft., breadth 14.9 ft., depth 5 ft.; tonnage, 33 gross, 15 register. The *J. W. Brankley* was built at Chatham, N.B., in 1914, and is screw driven by engine of 16 n.h.p., her dimensions being, length 64 ft., breadth 16 ft., depth 7 ft.; tonnage, 61 gross, 19 register.

**Military Service and Navigation Interests.**—A consultation took place recently between the Dominion Marine Association and the Chief Public Representative (military), to whom representations were made as to the urgent need of leniency in the enforcement of the Military Service Act, in view of the great difficulty experienced in procuring certificated officers and crews.

The Montreal Harbor Commissioners have announced an increase in rates on grain in the harbor elevators, to stop the practice of using elevators for storage purposes.

The s.s. *War Osiris*, launched by the Port Arthur Shipbuilding Co., May 25.

Imperial Munitions Board on the Pacific and Atlantic will be ready for launching. The first will have her trial trip at Vancouver, and the whole fleet will be practically completed by September. On the Pacific, 27 are being built, and on the Atlantic, 19. They are of 3,100 tons each. The manufacture of machinery for the vessels is being speeded up, and it is expected that the greater part of it will be installed by the year end. At the completion of these contracts the Imperial Munitions Board will go out of the shipbuilding business, and the Dominion Government will thereafter carry on the industry as a national enterprise."

This dispatch evidently refers only to the 46 wooden steamships which the Imperial Munitions Board has ordered for the British Government, in addition to which the board has ordered 41 steel steamships.

The s.s. *War Yukon*.—This vessel's trials were conducted in the early days of June, in the direction of Albert Head, out of Victoria, B.C. It was reported that everything was satisfactory, a speed of 12 knots an hour having been maintained for three consecutive hours. The contract speed was 10 knots.

allies under arrangement. At the time the item was inserted it was impossible to obtain confirmation or denial of the report, but we have since been officially advised that the company has not chartered the vessels named.

The *Troja Steamship Co., Ltd.*, has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital stock, and office at Montreal, to own and operate steam and other vessels, and to carry on a general transportation business within and without Canada. The incorporators are connected with a legal firm in Montreal, and apparently the company has been formed for the purpose of owning and operating the s.s. *Troja*, launched recently at the Thor Iron Works, Toronto, an illustration of which is given on another page in this issue.

**U. S. Control of New York State Barge Canal.**—In order to remove an incorrect impression relative to the operation of the canal by the federal authorities, it is pointed out that the U.S. Government has merely assumed control of the traffic on the canal, the State of New York being concerned only with the physical features. All officials are working in close harmony.

## Province of Quebec Marine.

The Public Works Department received tenders June 21 for dredging in the east channel of the St. Maurice River, at Three Rivers.

Canada Steamship Lines' s.s. Rochester is announced for service during the summer, between Montreal and Murray Bay, in connection with the company's s.s. Saguenay, to summer resorts on the Lower St. Lawrence. Capt. Legendre, of the s.s. Quebec, has been appointed master of the Rochester, and is succeeded by Capt. J. Dugal, of the s.s. Ste. Irene.

## Ontario and the Great Lakes.

The Detroit & Wallaceburg Steamship Line, under the management of H. B. Smith, Wallaceburg, Ont., has chartered the s.s. Thousand Islander from Canada Steamship Lines, for service on that route.

James R. Lawrence, at one time paymaster on the Welland Canal, was arrested at St. Catharines, Ont., June 16, on a charge of theft of \$16,000 from the Railways and Canals Department. The defalcations are stated to date back to 1892.

The s.s. Tonto, which was launched at Polson Iron Works, Toronto, Oct. 22, 1917, under Dominion Government license, for Norwegian owners, and subsequently requisitioned by the British Government, and stated recently to be in Dominion Government survey service, was docked at Kingston, June 6, some leaks having developed in the bottom plates.

The Pioneer Steamship Co.'s s.s. Australia was rammed and sunk by the s.s. B. F. Jones in the St. Clair River, June 15. The master of the B. F. Jones, immediately after the casualty, is said to have ordered the wheelman to be locked in his cabin, and subsequently handed him over to the Dominion authorities, charging that he made a deliberate attempt to block the Canadian channel.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for May, as follows:—Superior, 601.74; Michigan and Huron, 581.64; St. Clair, 575.11; Erie, 572.20; Ontario, 247.13. Compared with the average May levels for the past ten years, Superior was 0.19 ft. below; Michigan and Huron, 1.15 ft. above; Erie, 0.59 ft. below; and Ontario, 0.31 ft. above.

The Lake Carriers' Association has received complaints recently that masters of some lake steamships are subjecting their own and other vessels to danger by anchoring in foggy weather in mid channel just below the entrance from Lake Huron into the St. Clair River. This practice should be discontinued, as several vessels have been reported to have had narrow escapes of collisions during the past few weeks.

The Port Huron & Sarnia Ferry Co.'s ferry James Beard ran into the Northern Navigation Co.'s dock at Sarnia, May 31, during a fog, doing considerable damage to her bow and port side, finally sinking in about 20 ft. of water. She was subsequently floated and taken to Port Huron. The vessel was built of wood in 1873, and is stated to have been run without a license since 1912, when the Sarnia council refused one on account of her condition.

The steam tug Salvor, which was purchased recently by the Reid Wrecking & Towing Co., Port Huron, Mich., foundered in Lake Huron, June 11, near South

Bay, the crew being saved. The tug was formerly owned by the Great Lakes Dredging Co., Port Arthur, and was built at Bay City, Mich., in 1898, and was screw driven by engine of 56 n.h.p. Her dimensions were, length 105.8 ft., breadth 21 ft., depth 12 ft.; tonnage, 126 gross, 72 register.

The wreck of the whaleback s.s. Henry Cort, near Colchester reef lighthouse at the western end of Lake Erie, has been marked by two striped spar buoys, one at the bow and one at the stern, and also by a gas buoy showing a green light occulting at intervals of 3 seconds, moored abreast the middle of the wreck. The wreck lies north and south, about 800 ft. south of the charted course for down-bound vessels, and is entirely submerged with about 8 ft. of water over the deck.

## British Columbia and Pacific Coast.

The small steamboat Ravalli, owned in Seattle, Wash., was burned at Low Inlet, June 14. There was no loss of life.

The s.s. Birdswell, recently acquired by Wallace Fisheries, Ltd., Vancouver, has had her name changed to P.W.

The Grand Trunk Pacific Coast Steamship Co.'s Queen Charlotte Islands service, by the steamships Prince John and Prince Albert, has been changed from a weekly sailing by each vessel alternately, to a sailing every ten days.

The Coastwise Steamship & Barge Co. is reported to have acquired the s.s. Marmion, owned formerly by the Vancouver Portland Cement Co., for the ore carrying trade between Alaska, British Columbia and Puget Sound ports.

The motor ship Malahat, owned by Canada West Coast Navigation Co., was overhauled and re-caulked at the Cameron-Genoa Mills Shipbuilders' yard at Victoria, during June, after completing her first journey to Australia. She has also had her auxiliary machinery of the Boller type installed, and is expected to commence loading lumber for South America, about July 1.

The Canadian Merchant Service Guild has applied for the appointment of a board of conciliation under the Industrial Disputes Investigation Act, to determine a new scale of wages for officers of coastwise vessels plying in and out of British Columbia ports. The men are asking for a general increase of 15%, and there have been considerable negotiations without anything definite having been arrived at.

The C.P.R. has, as reported in our last issue, purchased the s.s. Daily, from M. MacDowell, Seattle, Wash., and has had her name changed to Island Princess. She was placed on the Gulf Island route June 1. Before being placed in this service, she was thoroughly overhauled and some changes were made in the passenger accommodation, all the work being done by the company's own staff. Her dimensions are: length 116 ft., breadth 23 ft., depth 8.5 ft., and she is equipped with single screw, triple expansion engine with cylinders 11, 18 and 29 in. diam. by 18 in. stroke, supplied with steam by a water tube boiler equipped with burning oil fuel.

The steam tugs Point Ellice and Point Grey, owned by the Dominion Public Works Department, and generally operated on the Pacific coast, are reported to have been leased to the Imperial Munitions Board, which, it is said, will call for tenders shortly for lengthening each by about 20 ft. The Point Ellice was built at North Vancouver, B.C., in 1911, and is

screw driven by engine of 47 n.h.p. Her dimensions are: length 79.6 ft., breadth 20 ft., depth 11.6 ft.; tonnage, 163 gross, 69 register. The Point Grey was built at North Vancouver, B.C., in 1912. She is screw driven by engine of 62 n.h.p., and her dimensions are: length 93.4 ft., breadth 22 ft. 3 in., depth 14.5 ft.; tonnage, 238 gross, 162 register.

## Mainly About Marine People.

Capt. Elias Casey, master on Great Lakes vessels for about 50 years, died at Cobourg, Ont., June 3, aged 91.

Commander John Forester, Canadian Pacific Ocean Services, has been made an officer of the Order of the British Empire.

Hon. J. D. Hazen, Chief Justice of New Brunswick, and ex Minister of Marine and Fisheries, has been made a Knight Commander of St. Michael and St. George.

Capt. Norman McKay, of Owen Sound, Ont., who has been appointed master of the Canadian Northern Ry. car ferry Canora, which was launched at Lauzon, Que., June 10, was formerly master of Canada Steamship Lines s.s. Hamiltonian, and prior to that had been master of the steamships Canadian, J. H. Plummer and H. M. Pellatt, operating largely on the Great Lakes and in the Gulf of St. Lawrence to Anticosti and to Sydney, N.S.

William Byers, who has been appointed chief engineer of the Canadian Northern Ry. car ferry Canora, which was launched at Lauzon, Que., June 10, was formerly chief engineer on the s.s. H. M. Pellatt, and has been engaged in a similar capacity on a number of other vessels owned or operated by Canada Steamship Lines. In Jan., 1917, he was chief engineer on the s.s. Empress of Midland, when she was sunk by torpedo or mine in the English Channel.

W. S. Roberts, chief officer of the s.s. Lord Erne, was the recipient of presentations by Lloyd's and by the former master of the s.s. Percepsien, in connection with his conduct in saving the crew of the Percepsien, when she foundered in mid-Atlantic recently. The Admiralty authorities, in expressing appreciation of the fine seamanship and courage of all concerned, stated that their actions were worthy of the best traditions of the British mercantile marine. The s.s. Percepsien was owned formerly by the Gaspe & Baie des Chaleurs Steamship Co., Quebec.

Capt. Archibald Reid, Port Warden, Montreal, died there, June 19, aged 72. A native of Liverpool, Eng., the greater part of his life was spent at Montreal, or at sea. He was, for many years, Superintendent, Dominion Steamship Co., at Montreal, and for the past 25 years was port warden there, and also acted as Lloyd's surveyor. He frequently acted as nautical assessor on investigations into marine casualties, and his intimate knowledge of navigation problems in connection with Canadian waters, was exceptionally valuable. While in Portland, Me., recently, he fell and displaced some ribs. A few days before his death, he was reported to be progressing satisfactorily.

T. E. Higgins, Car Foreman, C.P.R., Fort William, Ont., writes:—"Canadian Railway and Marine World's Transportation Appointments Department is very widely read and is always looked for, as a person is always interested in reading as to where the associates and partners of earlier years are stationed."

## Government Shipbuilding in the United States.

The U.S. Shipping Board announced early in June that the delivery of steel steamships under the Emergency Fleet Corporation programme had reached and passed 1,000,000 dead-weight tons. With 8 requisitioned ships completed and accepted by the Shipping Board during the week ended May 25, an aggregate tonnage of 51,136, and 2 contract ships with a total tonnage of 12,350, the d.w. tonnage of all of the vessels completed to that date amounted to 1,010,093 tons.

The completion of a million tons, of course, marks only a milestone in the long route U.S. shipbuilders have to travel. A million tons of shipping in one year is an output that would have been called extravagant if predicted a few years back. It represents a total of 153 vessels, ranging from 3,000 to 12,000 tons d.w., which have been completed and turned over to the U.S. Government.

The high-water mark in U.S. shipbuilding was attained in May. There were completed and delivered to the Shipping Board 44 steel and wood steamships, totalling 263,571 tons. The greatest production in any previous month was in March, 1918, when 21 steel ships, totalling 172,611 tons were delivered to the Shipping Board. Thus, over March, the advance was 23 ships, or 90,960 tons; over April the advance was 14 ships, or 103,285 tons. The output of May was three times that of January. The May output brings the total deliveries since September, 1917, up to 170 ships, aggregating 1,112,897 tons. The record prewar year in U.S. shipbuilding was 1901. The output (exclusive of the Great Lakes) was 402,136 tons, or a monthly average of 33,511 tons.

Following is the ship production to date this year in the two leading shipbuilding nations of the world (given in dead-weight tons):

	United States.	United Kingdom.
January . . . . .	88,507	87,852
February . . . . .	123,625	150,057
March . . . . .	172,611	252,511
April . . . . .	160,286	169,000
May . . . . .	263,571	*

\*Figure not yet at hand.

The greatest year in the history of shipbuilding in the United Kingdom was 1913, when the output was 2,898,229 d.w. tons, or a monthly average of 241,519 d.w. tons. Last year, the United Kingdom produced 1,741,500 d.w. tons, or a monthly average of 145,125. The best month was March, with 238,239 d.w. tons.

During the first two weeks of June there were completed and delivered to the Shipping Board 16 steel vessels of a total d.w. tonnage of 89,162. The output of contract steel vessels was one-third of the total of that class to date. Of contract steel vessels there were 5 deliveries, totalling 33,500 tons; of requisitioned steel vessels, 11 deliveries, totalling 55,662 tons. The output, geographically, was as follows: Atlantic coast shipyards, 3 vessels, totalling 17,100 tons; Great Lakes shipyards, 8 vessels, totalling 26,362 tons; Pacific coast shipyards, 5 vessels, totalling 45,700 tons.

The U.S. Shipping Board's Emergency Fleet Corporation has ordered from the Submarine Boat Corporation, Newark Bay, 150 ocean going steel steamships, of the fabricated type, with a displacement of about 7,800 tons when loaded to the Plimsoll mark. The deadweight carrying capacity will be 5,500 tons. The vessels will have a length of 343 ft., a beam of 46, and a speed of 10½ knots an hour. As every vessel to be built at this shipyard will be of the same size and

type, the time required for construction and completion will be much less than has heretofore been required for such work, and it will be possible to launch hulls on an average of at least two and possibly three every week. The main machinery will consist of a Westinghouse steam turbine operating at 3,600 r.p.m., driving the single screw propeller at 90 revolutions per minute through a Westinghouse balanced floating type reduction gear.

Five new yards for the building of concrete ships and the construction of a total of 42 new concrete steamships have been authorized by the U.S. Shipping Board. Of these 42 concrete ships, contracts for 18 have already been given by the Emergency Fleet Corporation. Contracts for the building of the remainder will shortly be let. The 42 ships will nearly all be tankers of 7,500 tons each, with a capacity of 50,000 barrels of oil. Each of the 7,500-ton ships will have 2,800 h.p. and a speed of 10½ knots an hour. Others will be cargo ships of 3,000 and 3,500 tons. The 42 ships will have a total of 298,500 d.w. tonnage.

The five Government yards for the building of concrete ships are to be located at various points on the coasts. The construction of one of these yards at Wilmington, N. C., is already under way. Other yards are to be at Jacksonville, Fla., Mobile, Ala., and San Diego, Cal. The fifth yard is that at San Francisco of the San Francisco Shipbuilding Co., which built the Faith, the first U.S. concrete vessel. This company has been given a contract for 8 concrete ships. There are also two private concrete shipbuilding yards, one at Brunswick, Ga., the other at New York City.

The estimated cost of building a wooden ship in the U.S. is about \$165 a ton complete and that of a steel ship about \$180 to \$220 a ton complete. The estimated cost of concrete ships is between \$100 and \$110 a ton complete.

Concrete barges are to be built as soon as possible for use on the New York State Barge Canal, which is now under the direction of the committee on inland waterways of the U.S. Railroad Administration's Committee on Inland Waterways. The committee has asked bids for the construction of 21 reinforced concrete barges, of approximately 500-tons carrying capacity each.

**Steamboats in the Far Northwest.**—The Peace River Development Co.'s steamboats are the only ones trading from Peace River Landing to Herschel Island, 2,000 miles, this season. The route is not a continuous one. The steamers connect with the Edmonton, Dunvegan & British Columbia Ry., and the first piece of navigation extends to Vermillion Chutes, whence a motor road is being completed to Lower Peace River, where there is steamboat connection to Chipeyan on Athabaska Lake. From this point there is a steamboat route to McMurray on Athabaska River, which is the terminat point of the Alberta & Great Waterways Ry., extending to Edmonton. The tourist possibilities of this area are being developed by the railway company.

The outturns of grain cargoes are being adjusted on the same basis as during 1917, pending a decision by the Board of Grain Commissioners. At the time of writing (June 22), no settlements had taken place on new cargoes, but vessels were carrying on, on the understanding mentioned.

## Cargo Steamship Building for Dominion Government.

**Orders for Steamships.**—As stated in Canadian Railway and Marine World for April, the Dominion Marine Department had then ordered 4 steel cargo steamships, 2 from Canadian Vickers, Ltd., Montreal, of 4,300 and 8,100 tons dead weight respectively; 1 from Collingwood Shipbuilding Co., 3,750 tons d.w., and 1 from Wallace Shipyards, Ltd., North Vancouver, B.C., 4,300 tons d.w. No further orders were placed for some weeks, but we are now advised officially that the following have been given:

Collingwood Shipbuilding Co., Collingwood, Ont.—1 steel steamship, 3,750 tons d.w., making 2 of similar size from that company.

Tidewater Shipbuilding Co., Three Rivers, Que.—2 steel steamships, each 5,100 tons d.w. This is a company organized recently, and in which Canada Steamship Lines is interested. Its yard is at Cap de la Magdalene, near Three Rivers. J. W. Norcross is President, the other directors being H. W. Cowan, F. S. Isard, F. P. Smith and A. A. Wright.

Wallace Shipyards, Ltd., North Vancouver, B.C.—1 steel steamship, 4,300 tons d.w., making 2 of similar size ordered from that company. Provisional arrangements have also been made for building 4 steel cargo steamships, each 5,100 tons d.w., by this company.

A press report stated recently that the Dominion Government had taken an option on 6 steamships to be built by the Dominion Shipbuilding Co., Toronto. We are advised officially that this is not the case; also that no order has been given the St. John Shipbuilding Co., St. John, N.B.

**The Collingwood Shipbuilding Co., Collingwood, Ont.,** immediately after launching the s.s. War Wizard on May 8, for the British Government, laid the keel of an ocean going cargo steamship of 3,800 tons d.w. for the Dominion Marine Department.

**Patrol Service at Sault Ste. Marie Canal.**—The Dominion Marine Association has agreed to join with the Lake Carriers' Association to maintain a patrol service at the canal locks at Sault Ste. Marie, to govern vessel traffic there, on the same basis as applies to U. S. vessels. A suggestion that the service be developed to include the delivery of mail is being considered.

**Locking Vessels at Sault Ste. Marie.**—Arrangements have been made for placing a man on the south lower pier of the Canadian lock at Sault Ste. Marie, to take the lines from upbound vessels.

**Ferry Licenses.**—Following the amalgamation of the Dominion Customs and Inland Revenue Departments, the licensing of ferries has been transferred to the Public Works Department.

Canada West Coast Navigation Co., Ltd., has changed the number of its directors from 10 to 5, and has passed a bylaw taking power to change the number to not more than 15 and not less than 3, should occasion warrant, such changes to be approved by two-thirds of the stock represented at a meeting to be called for such purpose or at a general meeting of shareholders. The company's head office is in Montreal, and the home port of its vessels is Vancouver.

The C.P.R. s.s. Tees, which struck a rock off Vancouver Island, near Sidney, Apr. 4, was replaced on her route to the west coast of the island, during June.

## Welland Canal Accidents.

While upbound, June 5, without cargo, the Ontario Transportation & Pulp Co.'s s.s. Linden struck the two upper gates of lock 4 on the Welland Canal, and unmitigated them. The water released from the reach above, which is a comparatively short one, carried out the two gates, the tow path foot gate and the vessel all passing into the level below. The vessel was jammed between the banks crosswise, and a tug had to be requisitioned to release her. It was necessary to place four spare gates in position, as a bad leak developed between the gate that remained and the miter sill. Navigation was resumed during the evening of June 6, after traffic had been interrupted for about 25 hours. The canal banks on the heel path side at the foot of lock 3, and at the head of lock 2, were washed out to some extent, but not seriously. The s.s. Linden received minor injuries to her stem and rudder, and was docked at Port Dalhousie for repairs. The damage to the canal was about \$7,000.

In connection with these lock gate acci-

inconvenience. For pedestrian traffic, a ferry was operated, a round trip being made every 10 minutes. Vehicular traffic had to cross at the feeder junction highway bridge, about 1¼ miles to the south. As the damaged bridge is operated by electricity, it is surmised that the severe electrical storm of the previous night cut off the current, and the bridge was being operated by hand. In doing this, it stuck and could not be moved. The usual signal that the bridge could not be operated, was given to the vessel, and the bridge tenders claim that this was given in sufficient time to stop the to the strong current at this point, it was not seen, or not heeded until the barge was very close to the bridge, and owing to the strong current at this point, it was too late to avert an accident. The barge struck the long arm, swinging it in a contrary direction to that in which it opens, until the short arm stopped against some concrete steps on the easterly side of the canal, when both bridge and barge came to a stop. The bridge was bent badly out of line, the chief damage being to the bottom chords and the top and bottom laterals. The operating machinery

## Fabricated Shipbuilding in the United States.

Intensive production of ships reached a new stage in the United States recently when the Agawam was launched at New-ark Bay. The event marks an epoch. The Emergency Fleet Corporation's great bulk order yards have started to produce ships. Quantity production of ships as developed by these yards means the application of factory methods, standardization and division of functions; it means the fabricated ship. A year ago this was nothing more than a dream, but on the dream were founded the agency yards. It has become a reality, a tangible fact.

As the mere addition of one more vessel to the U.S. supply fleet the Agawam's entrance into the water is of only momentary interest. But it is memorable as an event signaling the success of a new conception: that of using existing shops, though far inland, to take the place of shipyard shops that are lacking. This simple idea created the fabricated ship, which the shipbuilding art is encumbered, a new design—for the design, apart from

Five wooden cargo steamships for British Government, under construction by William Lyall Shipbuilding Co., North Vancouver, B.C.

dents, which have been rather numerous during the past few years, it is noticed that in practically the whole of them, the cause given is mistaken signals between the bridge and the engine room. The case mentioned above is another added to the list, the engines being put ahead, when the master signalled a reverse.

An accident of a different nature occurred June 7, when the Montreal Transportation Co.'s barge Brookdale, in tow of the tug Escort, while down bound and loaded, collided with the steel swing highway bridge in Welland, damaging it somewhat and rendering it unsafe for operation until repaired. Much cutting of concrete on the face of the westerly abutment had to be done before the bridge could be swung to the open position, after navigation had been interrupted for about 13 hours. About 12 vessels were delayed for varying periods. The bridge was left open until repairs could be effected, and as it carries the heaviest highway traffic of any of the bridges over the canal, the city suffered considerable

was not damaged nor was the bridge shifted on the pivot. The damage and expense incidental thereto is estimated at \$7,500. Temporary repairs were rushed by the Hamilton Bridge Co., and highway traffic was resumed June.

We are indebted to L. D. Hara, Superintending Engineer, Welland Canal, for the details of both accidents.

Carter, Wood Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with \$40,000 authorized capital, and office at Montreal, to build, own and operate steam and other vessels of every description, and to carry on a general shipbuilding, navigation and carrying business.

Quadra Steamship Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 authorized capital, and office at Britannia Beach, B. C., to own and operate steam and other vessels and to carry on a general navigation business.

modifications in detail that sweep away many of the traditional peculiarities with which the shipbuilding art is encumbered, is that of the conventional ship—but the result of a new method of production.

The simple idea has had a remarkably far reaching effect. Through it the entire bridge building industry has been drafted into shipyard service. Well over a hundred steel fabricating shops scattered over the U.S. are working on ships, a noteworthy contribution to the great war problem of using every pair of hands in the country far behind the lines work. The great labor and equipment resources of these shops have brought into action a virtually limitless reserve of shipbuilding capacity. Today shipbuilding is the occupation of inland cities as well as of coast towns.

It was a civil engineering industry that supplied the great reserve of labor, technical ability and equipment needed for emergency shipbuilding. Of this the profession may justly feel proud. For, had that industry been less thoroughly de-

veloped, less highly organized, it would not have been ready to take up the new service. There is cause for equal gratification in the excellence of the results. Predictions have been made that endless trouble would be experienced from the failure of parts to fit at the ways, due to inherent unsuitability of bridge fabricating and erecting methods to the highly specialized ship work. It was asserted that the processes of making straight members for bridges and buildings would be found inadequate for shaping and fitting the intricately curved and beveled pieces of which a ship is built. No doubt there was opportunity for such troubles

## Canadian Northern Car Ferry Canora Launched at Lauzon, Que.

The Canadian Northern Ry. car ferry steamship Canora, which has been built to carry passenger and freight cars between Port Mann, on the south side of the Fraser River, opposite New Westminster, and Patricia Bay, Vancouver Island, B.C., where the company has rail connection with Victoria, was launched at Lauzon, Que., June 10. The christening ceremony was performed by Mrs. R. C. Vaughan, wife of the Assistant to the

It is anticipated that the voyage will take about 40 days. Capt. Norman McKay, Owen Sound, Ont., and formerly master of the s.s. Hamiltonian, has been appointed master, and William Byers, formerly chief engineer of the s.s. H. M. Pellatt, has been appointed chief engineer.

A full description of the vessel was given in Canadian Railway and Marine World for June, page 273, and illustrations are given herewith.

Launching of Canadian Northern Railway Car Ferry Steamship Canora at Lauzon, Que., June 10, 1918.

to develop; but the facts show that they have been avoided. The ships are going together well. Structural designers and shop men have proved equal to solving the new problems put before them. Faith in the possibilities of bridge shop fabrication and shipyard assembly is vindicated.

Half a million tons cargo capacity is now on the ways of the Fleet Corporation's agency yards, and altogether probably a million tons of fabricated steel vessels are under construction. The enormous shipbuilding machine which has been created is already in successful operation. In a few months this vast fleet will be on the ocean, its place on the ways taken by steel for more ships. Daily launchings soon will signalize the final realization of quantity production.—Engineering News-Record.

The Mathews Steamship Co., Toronto, bought the s.s. Saxona recently, formerly owned by G. A. Tomlinson, Duluth, Minn., and has changed her name to Laketon. She was built at Cleveland, Ohio, in 1902, of steel, on the channel system, with steel tank top, 3 watertight and 2 non watertight bulkheads, steel boiler house, steam pump wells, and hatches 24 ft. centers. She is equipped with triple expansion engines with cylinders 20, 33½ and 55 in. diam. by 40 in. stroke, 1,200 i.h.p. at 90 r.p.m., and supplied with steam by 2 Scotch boilers, 13 ft. 2 in. by 11½ ft., at 170 lb. under induced draft. Her dimensions are: length 316 ft., breadth 50 ft., depth 28 ft.; tonnage, 4,716 gross, 3,441 register.

Hugh Cann & Sons, Ltd., Yarmouth, N.S., are reported to have sold the s.s. John L. Cann to a company for operation between Shelburne, N.S., and Gloucester, N.B. The John L. Cann was built at Yarmouth, N.S., in 1891, and is screw driven by engine of 34 n.h.p. Her dimensions are, length 97.8 ft., breadth 19.8 ft., depth 9 ft.; tonnage, 166 gross, 77 register.

Third Vice President, C.N.R. Among others present at the launching, were.—R. C. Vaughan, and Capt. J. E. Foote, Manager, Marine Department, Toronto Insurance and Vessel Agency, representing the owners; G. D. Davie, General Manager, Neil Baker, General Superintendent, and A. C. Campbell, Naval Architect, Davie Shipbuilding & Repairing

### Ship Charter Rates in United States.

The U.S. Shipping Board announced on June 1 that the charter rate for requisitioned ships operating on a "bare-boat" basis will be reduced by 50c. The new rate is \$3.65 per deadweight ton for cargo ships (including tankers) under 11 knots speed, with an addition of 50c a ton for every knot or part of knot over 11 knots. For passenger ships the new rate will be \$5.25 per gross ton for ships under 11 knots speed, with an addition of 50c a gross ton for every knot or part of knot over 11 knots. The new scale of rates affects vessels operating under a form of charter in which the expenses of operation are borne by the U.S. Rates for ships operating under the "time form" of charter, in which certain expenses of operation are borne by the owners, are not affected by the new ruling.

The Pacific Construction Co., Port Coquitlam, B.C., is reported to be in negotiation with representatives of French interests relative to the construction of five steel steamships of 8,800 gross tons each, and to be endeavoring to obtain the consent of the Dominion Government to the acceptance of the order. It is said that the price offered for the vessels is at the rate of \$215 a ton. The company has two

Canadian Northern Railway Car Ferry Steamship Canora, on the ways, showing rolling gate at stern to close in space between decks.

Co.

We are advised that as soon as the vessel is ready for sea, she will probably bunker at Quebec, and then proceed to Vancouver, by way of the Panama Canal. The route to be taken, and the distances between the various points are as follows:

	Miles.
Quebec to Newport News	1,498
Newport News to Colon	1,907
Panama Canal	50
Panama Canal to San Francisco	3,245
San Francisco to Port Townsend	770
Port Townsend to Vancouver	80
Total	7,550

wooden steamships under construction for the Imperial Munitions Board, one of which, the War Tyee, was launched in April.

The Miami Navigation Co., Ltd., the incorporation of which was announced in our last issue, has arranged for the operation, under contract, of the steamboat Miami. The President of the company is J. J. Stockwell, master mariner; Vice President, W. Harrington; Secretary, T. Scullard; Treasurer, T. King; other directors, F. Granville and T. Donovan. The head office is at Chatham, Ont.

# The Trent Valley Canal Opened from Lake Ontario to Lake Simcoe.

The stretch of inland navigation known as the Trent Canal, extending from Lake Ontario at Trenton, to Rice Lake, was opened for navigation June 3. There was no formal ceremony at Trenton, where the Minister of Railways and Canals, accompanied by a party of members of Parliament, officials of the department

as possible.

The Minister and his party left Peterborough on June 5 and continued the trip through the various stretches of the canal to Lake Simcoe.

The stretch of the Trent Canal opened for navigation on June 3 is the Ontario-Rice Lake division, and is 56½ miles long.

Steel Cargo Steamship Troja, built for Norwegian interests, by Thor Iron Works, Toronto, just prior to launching, May 13, 1918.

and local public men, embarked on a steamer for Peterborough, stopping at a number of points on the route. At Peterborough the party was given a banquet, at which the Minister was the principal speaker. He said the trip from Trenton to Peterborough had convinced him of the Government's wisdom in undertaking the construction of the waterway. The government had nothing to regret, and he trusted that the people would benefit to the full extent of the canal's capacity. For the first time he realized something of the possibilities of the development of the country which would follow the opening of the canal. The mineral deposits which are contiguous to the northern sections of the waterway would find a cheaper outlet than has been possible at present, consequently an extensive development of mining might be expected. It was estimated that along the route of the canal 75,000 h.p. could be developed by using water powers to generate electricity, which could be distributed for manufacturing purposes. The power possibilities of the waterway would be brought to the notice of the Ontario authorities by the department. The total cost of the work to date had been approximately \$16,000,000. The country opened up by the canal is remarkable for its scenery, and offers unequalled advantages for tourist travel. The opening of the new section of the canal will give opportunity for motor and other vessels of considerable size, carrying tourists, to spend a considerable time in the country. The business possibilities of the canal are of considerable importance from all points of view. The final section of the undertaking is intended to give an outlet from Lake Simcoe, via Lake Couchiching and the Severn River, to Georgian Bay. The Minister added that he would do all he possibly could to urge the completion of this section at as early a date

and the normal navigation level at Rice Lake is 369 ft., which is overcome by 18 locks. The river level is controlled by 14 concrete dams and the section of waterway is crossed by 16 bridges, of which 6 carry railway lines. With one exception the bridges are of the swing or bascule type of span. The locks are of concrete, 175 ft. long, 33 ft. wide, and having 8 ft. 4 in. of water on the sills. They are capable of accommodating barges 150 ft. long and 30 ft. wide, drawing 8 ft. of water and having a capacity of 1,000 tons. The work done included the excavation of about 1,500,000 cubic yd. of earth, 1,250,000 cu. yd. of loose and solid rock and the building of about 400,000 cu. yd. of concrete. The estimated cost of the entire work was \$6,750,000. For convenience of construction the work was divided into seven sections, the contracts for which were let as follows:—Sec. 1, Trenton to Glen Millar, 4½ miles, Larkin & Sangster; sec. 2, Glen Millar to Frankfort, 4½ miles, Dennon & Rogers; sec. 3, Frankfort to 3 miles beyond Glen Rose, 7½ miles, Canadian General Development Co.; sec. 4, Adams Landing to Campbellford, 14 miles, Haney, Quinlan & Robertson; sec. 5, Campbellford to Crow Bay, about 3 miles, Brown and Aylmer; sec. 6, Crow Bay to Heely Falls, about 3 miles, Haney, Quinlan & Robertson; sec. 7, Heely Falls to Rice Lake, about 19¾ miles, Randolph Macdonald Co. Sec. 4 was the last to be put under contract in 1916.

The Trent Canal now extends from Lake Ontario at Trenton to Lake Simcoe,

Launching of s.s. War Puget, by William Lyall Shipbuilding Co., at North Vancouver, B.C.

extending from Trenton, on Lake Ontario, to Rice Lake. It follows the Trent River, and comprises 34 miles of deep river, 13 miles of subaqueous channel, and 9½ miles of canal proper. The total rise between low water at Lake Ontario

178.70 miles, with a branch from Sturgeon Lake to Lindsay, and via Lake Seugog to Port Perry, 174 miles from Trenton. The route is via the Trent River to Rice Lake, the two most important places on the route being Campbellford and

Hastings. This section is 56½ miles long. On Rice Lake is the one time important lumbering and ore exporting point of Harwood, the terminus of an abandoned branch of the G.T.R. from Cobourg, which branch was formerly carried across the

## Fabricated Shipbuilding in Great Britain.

One of the most interesting but least known developments of the present ship-

component parts are transported to shipbuilding yards, assembled there, and put together as complete ships.

It is pointed out that when the state undertook the reorganization of the United Kingdom's shipbuilding industry, the principle of standardization was naturally adopted because in mass production of a specific object the highest possible speed of output is obtainable. A series of standard ships were designed and contracts to build them were given out to the private yards of the country. As supplies of steel and labor increased and promised a margin over and above the requirements of the existing controlled shipyards, the idea was carried a stage further. The fabrication of ships was decided on and the necessary provision made. The aim of the Admiralty Deputy Controller's Department was still further to increase speed of production. As matters stood, all the shipbuilding yards, engine factories and boiler shops were largely occupied with standard ship work. There were, however, many other industrial establishments in the country doing work closely resembling shipbuilding and marine engineering. Among them were bridge building yards and land engine factories. The majority of them were in inland centers and remote from launching water; but, taken altogether, their resources were so great that it was felt that they ought to be used.

Fabrication solved the problem, and a ship was designed the material of which could be satisfactorily fabricated in the bridge yards. It is a bigger vessel than most of the standard ships, and there is not a curved frame in it. Size and weight of unit of construction are limited, so that transport is easy and powerful gear for placing it in position is unnecessary. To avoid the same difficulties as regards machinery supply, geared turbines have been adopted instead of reciprocating en-

lake by a bridge, long since entirely swept away. From this lake the canal turns into the Otonabee River, which is followed through to Peterborough, where there is a large double lift lock. This stretch of lake and river navigation has a length of 32 miles. Following the course of the Otonabee River from Peterborough to Lakefield, 10 miles, the canal enters upon the series of lakes known as the Kawartha Lakes, terminating with Balsam Lake, which is the summit of the navigation. This stretch has a total length of 62 miles, and touches Bobcaygeon, Lindsay and Fenelon Falls. At Balsam Lake is the second of the large lift locks. From Balsam Lake the canal descends to Lake Simcoe, which is reached in 18.20 miles, near Groomsbridge. The canal gives an 8 ft. navigation throughout, but it is stated by some authorities that it will not be possible to maintain this throughout the season of navigation owing to possible lack of water at Bobcaygeon. The government plans are to complete the system of navigation through to Georgian Bay, by connecting Lake Simcoe with Lake Couchiching and the stretches of navigable water in the Severn River.

The project for the construction of a canal from Georgian Bay to Lake Ontario was conceived in the early days of the settlement of Ontario, and work was actually started on the canal in 1817. A report was made about 1848 by W. H. Baird, an engineer attached to the office of the commissioner of the projected waterway at Cobourg. He advocated the completion of the locks at Fenelon or Cameron's Falls, and the lock or dam at the outlet of Balsam Lake, at an estimated cost of \$27,000.

Launching of s.s. War Tye, for British Government, at Port Coquitlam, B.C.

building effort in which Great Britain has led the way is that of fabricated ships. A fabricated ship is a vessel, the component parts of which are manufactured in other than shipbuilding yards. These

gines. Every part of the complete ship can, in fact, be fabricated in inland establishments selected near the steel mills which have never done ship or marine engine work, and can be transported by or-

dinary means to the seaboard. With all the slips in private yards filled it was necessary to look elsewhere for sites for assembling yards. The national shipyards on the Bristol Channel were laid out for the purpose, and private undertakings of the same character exist or are projected with the Admiralty's concurrence elsewhere. The bulk of the labor is unskilled, but is, however, being trained in the use of pneumatic riveters and caulking tools, and will be (already it is in a large number of instances) sufficiently expert to put the assembled fabricated ships together.

The fabrication of material for ships and engines has been organized over a considerable area, local committees being responsible in certain districts for definite deliveries of a ship, or a number of ships, in specified periods. Moreover, fabricated ships are taking shape in several assembling yards. Before long, vessels of the type should represent a very considerable addition to the tonnage output.

### Additional Votes for Navigation, Etc.

In addition to the sums voted in the main estimates at the Dominion Parliament's recent session, as detailed in Canadian Railway and Marine World for May, the following amount was voted in the supplementary estimates for the year ended Mar. 31, 1918:—

#### Public Works, chargeable to Income.

Harbors and rivers—Laprair, Que., protection works, Governor General's warrant, Dec. 17, 1917 ..... \$68,750.54

The following amounts were voted for the year ending Mar. 31, 1917:—

#### Railways and Canals, chargeable to Income.

St. Peter's Canal, improvements, further amount required ..... \$3,000.00  
Welland Canal, to rebuild bridge at Dunnville, washed out by floods ..... 50,000.00  
Arbitrations and awards, further amount required ..... 110,000.00

#### Public Works, chargeable to Capital.

Quebec harbor, River St. Charles, improvements to navigation, further amount required, revote ..... 386,000.00  
St. John harbor, improvements, further amount required ..... 250,000.00  
Toronto harbor, improvements, further amount required ..... 152,000.00

#### Harbors and Rivers.

##### Nova Scotia.

Generally, construction and repairs ... \$55,000.00  
Fort Dufferin, reconstruction of breastwork, further amount required ..... 14,000.00  
St. Andrews, repairs to wharf ..... 1,200.00  
Tynemouth creek, to repair and reconstruct breakwater, revote ..... 4,000.00  
Welchpool, repairs to wharf, revote \$800 ..... 950.00

##### Prince Edward Island.

Mink River, repairs to wharf ..... 1,500.00

##### Quebec.

Anse a Beaufils, repairs to breakwater and jetty ..... 2,400.00  
Anse aux Gascons, repairs to wharf, further amount required ..... 2,000.00  
Barachois de Malbaie, to repair approach to training jetty ..... 2,400.00  
Beloeil, repairs to protection piers ..... 1,900.00  
Chicoutimi, repairs to wharf, further amount required ..... 500.00  
Grindstone, M.I., repairs to wharf, revote ..... 1,000.00  
Lanorie, repairs to wharf ..... 1,775.00  
Lavaltrie, repairs to wharf ..... 550.00  
Les Escoumains, rebuilding outer end of wharf ..... 3,500.00  
L'Islet, repairs to wharf ..... 1,500.00  
Malbaie, in final settlement of all claims of John Burns in connection with contract for construction of pier... 2,907.63  
Matane, repairs to wharf ..... 600.00  
Mille Vaches, repairs to wharf ..... 650.00  
Ste. Anne des Monts, repairs to pier ..... 600.00  
Ste. Anne de Chicoutimi, pontoon .... 3,000.00  
Sorel, repairs to wharf ..... 2,500.00  
Vaudreuil, wharf repairs and improvements ..... 845.00  
Vercheres, wharf ..... 10,300.00  
Ville Marie, repairs and improvements to wharf ..... 4,000.00

\$42,927.63

#### Ontario.

Belleville harbor, improvements to wharf and warehouse, revote \$2,800. \$3,000.00  
Brookville, in final settlement of claims of W. M. Leacy in connection with contract for wharf improvements... 1,219.63  
Burlington channel, repairs to pier, further amount required ..... 7,500.00  
Cobourg, repairs to east pier ..... 4,600.00  
Haileybury, repairs to wharf, revote ..... 600.00  
Kingston dry dock, renewal or revetment wall, revote ..... 12,500.00  
North Bay, in settlement of claims of C. McGuire in connection with contract for construction of breakwater ..... 658.62  
Port Dover, repairs to piers, revote... 6,000.00  
Portsmouth, repairs to pier ..... 3,100.00  
Wheatley, repairs to pier ..... 1,400.00

\$40,578.25

#### British Columbia.

Fraser River, improvements, revote... \$100,000.00  
Hardy Bay, landing float ..... 1,250.00  
Ladysmith, reconstruction of wharf ... 7,100.00

\$108,350.00

#### Dredging.

Ontario and Quebec, further amount required ..... \$70,000.00  
Yarmouth harbor ..... 50,000.00

#### Mail and Steamship Subventions.

Schooner service between Pictou, New Glasgow, Antigonish County Ports and Mulgrave ..... 1,000.00  
Steam service between St. John and St. Andrews, N.B., calling at intermediate points ..... 4,000.00  
Steam service between Pictou, N.S., and Montague, P.E.I., calling at Murray Harbor and Georgetown, P.E.I. .... 5,000.00  
Steam service from opening to closing of navigation in 1918, between Port Mulgrave, St. Peter's, Irish Cove and Marble Mountain, and other ports on Bras d'Or Lakes ..... 2,000.00

#### Light House and Coast Service.

Salaries and allowances to lightkeepers, further amount required ..... 55,000.00  
Administration of pilotage, and maintenance and repairs to vessels, further amount required ..... 120,000.00  
Further amount required to pay pension of \$300 each per annum to retired pilots ..... 1,993.55

The Cape Breton Shipbuilding Co., incorporated recently in Nova Scotia, is reported to have secured a shipbuilding yard at Johnstown, Richmond County, N. S., and to have leased certain areas. Amongst those forming the company are: F. L. Kelly, Mayor of North Sydney, President; D. H. McDougall, General Manager, Dominion Steel Corporation, Vice President; William Hackett, ship broker, Treasurer; N. A. McMillan, K.C., Secretary; R. T. Sainthill, Manager, Nova Scotia Marine Railway Co.; R. Musgrave, contractor; C. McKenzie, R. Hickey and A. Finlayson, railway contractor.

#### Wheatless Meals on Lake Steamships.

The United States Food Administrator has issued the following:—"The wheat-saving campaign has been given a substantial boost by the announcement that all passenger steamship lines operating on the Great Lakes have decided to eliminate wheat from their menus until the next harvest. There are 54 of these lines, and the saving will be considerable. This is voluntary co-operation with the Food Administration. A number of railways took similar action several months ago."

The Webster Steamship Co., Ltd., Quebec, Que., is operating the steamships Colin W., Eric W., Howard W., Marian W., Muriel W., Richard W., and Stuart W., each of which is owned by a separately incorporated company bearing the name of the particular vessel, and all of which, including the operating company, are subsidiary companies of the Canadian Import Co., coal importers, of Quebec, Que.

The St. Lawrence Shipping & Trading Co. is announced to have been organized with a capital of \$1,500,000, to operate a passenger and freight line from Montreal to Quebec and intermediate ports, and to Gaspe, Sydney and Magdalen Islands. The s.s. Guide is reported to have been purchased. Capt. J. E. Bernier and J. deS. Bosse, are mentioned as those chiefly interested in the company.

Power Development in the St. Lawrence River.—The New York & Ontario Power Co. has applied to the International Joint Waterways Commission for approval of its plans for further power development in the little river channel of the St. Lawrence River south of Ogden Island, at Waddington, N.Y. The application is being opposed by St. Lawrence navigation interests.

Electric Welding & Shipbuilding Co. of Canada, Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital stock, and office at Montreal, to carry on shipbuilding and general contracting business, and to use electric and other welding processes.

The White Pass & Yukon Route's sailings commenced June 10, when the steamboats Casca and Yukon sailed from Whitehorse for Dawson, the latter connecting with the s.s. Tanana for St. Michaels.

### Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie canals during May, 1918.

# Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held recently into the following casualties, and judgments delivered:—

## Loss of the s.s. Louisburg.

Held at Sydney, N.S., before Capt. L. A. Demers, Dominion Wreck Commissioner, with Lieut.-Commander J. H. Knight, R.C.N., and Lieut. H. C. Owen, R.N.R., as nautical assessors. The s.s. Louisburg was owned by the Dominion Coal Co., and was wrecked in St. Mary's Bay, near Cape English, Nfld., May 4, when bound from Sydney, N.S., to St. John's, Nfld., with coal. The court found Capt. Kemp, master of the s.s. Louisburg, in default, for not insisting, or demanding, that the patent sounding lead be repaired, it having been out of order for nine months, and no steps were taken to call the owner's attention to it, so that it could have been remedied. The master's statement that he preferred the hand lead, or rather a marked line, is not rational. Either he does not understand the manipulation of the patent sounding machine, or he felt that having it in working order he would be expected to use it frequently. He is also considered in default for trusting too implicitly on his course, without making allowances based on actual calculations, instead of on supposition and assumption. It is well known that currents vary as to their direction and velocity in Cabot Straits and in the vicinity of Newfoundland. Because a course by compass had carried him safely in former trips, it is no reason to surmise that such a condition would always exist. He admitted the deviation of his compass had varied since he had been master of the vessel during the last two years. His education in navigation problems being very limited, there was very little left for him but the frequent use of the lead, to discover the erratic movements of his compass. His course and bearings were plotted on a blue black chart, and the court concluded that it was not of a late edition. It was not shown that he had applied himself to become acquainted with the vagaries of the currents by reference to any book on the subject. On the whole, the court considered that necessary care and precaution were not exercised by the master, under such foggy conditions as existed during the trip.

Regarding the total loss of the vessel, the court considered that poor judgment was shown, in view of the calm state of the seas which practically existed, to have insisted on going astern when it was found that water was entering the engine room. From the evidence it was gathered that there would have been greater wisdom demonstrated in beaching the vessel, by reversing the order and going ahead, thus leaving the possibility of saving her, but it is a point that the court did not desire to press.

Capt. Kemp has been in the company's service for some 30 years, which undoubtedly speaks in his favor. His straightforward evidence, coupled with the precarious conditions existing, are points which cause the court to deal leniently with him, though it considered the loss of the vessel under such conditions and at such time of stress, a very great offence indeed. It therefore suspended his certificate no. 3203, as master, for six months, but recommended during such suspension, a lower grade certificate be granted to him, that of mate, so as to permit him to improve himself in navigation matters.

## Stranding of the s.s. Lyacon.

Held at Montreal, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapierre, as nautical assessors. The court found that from the evidence adduced, it could not arrive at any other conclusion than that the pilot alone was at fault. From the master's testimony it was evident that the compasses had not been deviating from their former errors and the deviation given to the pilot, from the time he left Rimouski to the time of stranding. The pilot did not allow sufficiently for the spring tides which were beginning to form on that flood tide, and did not allow sufficient for the strength of the current, and enough on the course to obviate this, especially as at Red Island lightship he had to alter his course, due to the current. From this, it seemed to the court that it would have been rational to take extra care and be a little suspicious of the working of the current, or the effect on the vessel, especially one of the speed of the Lyacon. That he had ordered slow, and half speed, and gave an order for soundings, was quite proper, but before the sounding was reported the vessel touched. It did not appear to the court that there was any culpable negligence in the navigation of the vessel, but that there was miscalculation, or lack of calculation, is evident, and also a lack of judgment.

The court expressed its opinion that while it had been severe in dealing with pilots when conditions were different, it felt, that seeing they were exempt from military duties on account of their need, it would be wrong to suspend the pilot's license for any term short or long. Therefore to meet conditions as they exist, the pilot was severely reprimanded and fined the maximum amount, \$400, payable at \$50 a month, and was warned that should he appear before the court again, severe measures would have to be adopted. The officers' evidence showed that all precautions were taken, and as they are absolute strangers in these waters, they relied more or less on the pilot's knowledge and experience for guidance, although it is evident that the master suspected that something was wrong, but before he realized the exact conditions, the vessel grounded.

## Stranding of s.s. Lake Como.

Held at Montreal before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapierre, as nautical assessors. After weighing the evidence the court found that Capt. John H. Dizer, master, was in default for careless navigation. His evidence as to courses and the behavior of the vessel was contradicted by other witnesses. He stated that the compasses were but casually and incompletely compensated, owing to lack of facilities to obtain solar observations. Such being the case, continuing on a doubtful course, at full speed, with uncertainty as to errors of compasses, was unjustified, and there did not seem to be any serious attempts to obtain soundings. Much of the evidence of the officers went to show that there had been considerable drinking, but that while the master could not be said to be intoxicated during the morning of the casualty, it was felt that after effects of days of hard drinking existed, and prevented proper judgment being exercised. The master was requested by the court to remain and hear his crew's evidence,

but he chose to absent himself, therefore whatever was said as to his intemperate habits was uncontradicted. The court felt that had proper measures been taken, the vessel would have floated off at the next tide, and considered that the use of a small kedge placed astern with a view to pulling the vessel off, was a farcical attempt to protect property. Altogether the court felt that the master did not take elementary measures of precaution, and as it has no jurisdiction over his license, a copy of the finding was forwarded to the U.S. Consul at Montreal, for the information of his government.

The court announced that the evidence showed that the Pointe des Monts light and the fog horn were in working order, and that the casualty was not due to any defects in the operation of the lighthouse system.

## Government Operation of Erie Canal.

The Director General of U.S. Railroads, acting upon the recommendations of the committee on inland waterways of the Railroad Administration, has decided to construct as quickly as possible and put into operation a line of barges to be operated by the government on the Erie Canal. The barges will be of the most approved type and will be operated in conjunction with and as a part of the general railway and waterways transportation system of the country under the control of the Director General of Railroads. This will ensure the complete co-ordination of the Erie Canal facilities with the railway facilities, and it is hoped will greatly enlarge the available transportation facilities throughout eastern territory. G. A. Tomlinson, of Duluth, Minn., has, as stated in Canadian Railway and Marine World for May, been appointed General Manager of the Erie Canal operations, including the construction of the barges and general equipment. Under government control of the railways and the canal there will be diverted to the canal all of the traffic that can be handled to the best advantage by water, and the canal will be made in the highest degree serviceable in the present situation.

## Combination of United States Express Companies under Government Control.

The Director General of U. S. Railroads has announced that, with a view to handling the express business in the most efficient and economical manner, he has sanctioned the plan of the four principal express companies (Adams, American, Wells Fargo, and Southern) forming a new express company, with which he will make a contract for the carrying on of the express business for all of the railways under federal control. Under this arrangement the new express company will be the Director General's agent for carrying on the express business. The character of the service and the character of the rates will be under the Director General's control and subject to initiation by him.

An important feature of the arrangement is that the new company is to be capitalized only to the extent of actual property and cash put into the business, and the government will share on a progressively increasing scale in any profits

derived from the business. The general method of determining the compensation is that the Director General will receive 50¼% of the operating revenues (or gross earnings), and out of the balance the express company will pay operating expenses and taxes and a dividend of 5% on its capital stock. Out of the next 2% available for distribution the express company will receive 1% and the government 1%; out of the next 3% available for distribution the express company will receive 1% and the government 2%; any further amounts available for distribution will be divided, one-quarter to the express company and three-quarters to the government.

The new express company will put into the business physical properties of the actual value of \$30,000,000, for which capital stock to that amount will be issued. No other capital stock will be issued, except at par for cash.

While the new express company is permitted, upon arranging therefor with the Director General, to use railway employees in express service, the entire compensation of all such employees, both for railway and express services, will be fixed and paid by the Director General; and the new company should remunerate the Director General for services rendered by such employees to the express company.

It is announced that the combination outlined above is for the continuance of the war only, and that the companies will then revert to their original status.

### Among the Express Companies.

W. J. Wilson has been appointed Assistant Treasurer, Dominion Ex. Co., Toronto, vice P. A. Keeler, promoted.

P. A. Keeler, heretofore Assistant Treasurer, has been appointed Treasurer, Dominion Ex. Co., vice G. A. Newman, deceased. Office, Toronto.

The Dominion Ex. Co. service has been withdrawn from the Canada & Gulf Terminal Ry., running between Mont Joli and Matane, Que., the railway company now operating its own express service at points along the line.

The Express Traffic Association of Canada has issued a notice advising that in the next supplement to classification which will be submitted to the Board of Railway Commissioners for approval, it is proposed to include a rule to the effect that express companies shall not be required to pick up or deliver shipments above the ground floor in any building or residence, when such shipments are of such size or weight as not to permit of them being handled by one man, and where elevator facilities are not available.

The Board of Railway Commissioners passed order 27272, June 4, on the application of the Express Traffic Association of Canada, on behalf of express companies, under sec. 340 of the Railway Act, providing that the form of bill of lading issued by the U. S. Government for use in respect of all shipments of munitions, war materials and supplies by or on behalf of that government or any of its contractors, copies of which are on file with

the board, be approved, and that notwithstanding the provisions of order 12953, Feb. 10, 1911, the form approved may be used by all such express companies in respect of said shipments of munitions, war materials and supplies.

### Telegraph, Telephone and Cable Matters.

Girls are being employed on the Western Union Telegraph Co.'s cable service, for the first time in the company's history.

H. Hulatt, Manager of Telegraphs, G.T.R. and Grand Trunk Pacific Ry., made a trip of inspection over the companies' lines during June, spending the greater portion of the month in the west.

Two operators employed by the Great North Western Telegraph Co., who were charged recently with using the company's wires fraudulently in connection with the transmission of betting news, were acquitted at Toronto, May 18. It is stated that the prosecution was undertaken at the company's instance, and employees have made a demand that the men be reinstated, or a strike will be called.

The Great North Western Telegraph Co. has opened offices at Kiskisink Club House and Valcartier Camp, Que.; Helderleigh, Petewawa Camp and Waubamie station, Ont.; East Selkirk, Grand Beach and Scantbury, Man.; Haynes and Victoria Beach, Alta.; and has closed its offices at Batiscan and New Richmond, Que.; Beachburg and Salem, Ont.; Dropmore, Man.; Chandler, Sask.; and Dodds, Alta.

### Telegraph and Telephone Lines Votes.

The Dominion Parliament, at its recent session, voted the following additional amounts for the Public Works Department for the year ending Mar. 31, 1919:

<b>New Brunswick.</b>	
Chatham-Escominac and Point Sapin telephone line—extension to Kouchibouguac, revote . . . . .	\$3,000.00
<b>British Columbia.</b>	
Mainland telegraph and telephone lines, general repairs and improvements . . .	29,400.00
Mainland telegraph and telephone lines, extensions in Kootenay district, further amount required, revote, \$1,000	2,000.00
Vancouver Island lines, repairs and renewals, revote . . . . .	6,500.00

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

L'Air Liquide Society, Toronto, has issued a 50 page catalogue describing and illustrating its oxy-acetylene welding and

cutting apparatus and supplies. It contains a comprehensive outline of the oxy-acetylene process and its many applications.

Canadian-Ingersoll Rand Co., Limited, Montreal, has issued a 32 page catalogue, describing and illustrating Ingersoll-Rogler air compressors. It gives a sketch of the development of the Ingersoll-Rogler valve, particularly the application of the valve to large air compressors having direct synchronous motor drive. Other special features of the compressors described are the rolling mill engine type frames, special intercooler design, and clearance controller with automatic maximum load stop.

Locomotive Superheater Co., New York, N.Y., has issued bulletin 3, "Superheater Dampers," dealing with them under the following headings:—Construction and operation of damper; effects of improper installation or maintenance; prevention of freezing; switch locomotive dampers; what to do in installing dampers; what to do and what not to do in maintaining dampers. The bulletin has an illustration showing arrangement of superheater damper mechanism when a locomotive is working, and also several plans.

Department of the Naval Service.

### TENDERS FOR WHARF.

Sealed tenders, addressed to the undersigned, and endorsed "Tender for Coaling Jetty," will be received up to noon on the 15th July, 1918, for the reconstruction of the Coaling Wharf at H. M.C. Dockyard, Esquimalt, B.C.

Tenders should be accompanied by certified cheque for Ten Per Cent. of the amount of the tender.

Plans, specifications and permission to view the site may be obtained from the undersigned or from the Captain Superintendent, H.M.C. Dockyard, Esquimalt.

G. J. DESBARATS,  
Deputy Minister of the Naval Service.  
Department Naval Service,  
Ottawa, May 31, 1918.

Unauthorized publication of this advertisement will not be paid for.

### Large Transformers For Sale

3—125 K.V.A.O.I.S.C. Single Phase 25 cycle.

Primary Voltage 24000/12000 V.  
Secondary Voltages 2400/1200/600 V.

With taps for 5%—10%—15% variation.

First Class Condition. Immediate shipment.

Also—

3—T.P.S.T. 300 Amp. 25000 Volt Automatic Oil Switches.

TORONTO & YORK RADIAL RAILWAY CO.

84 King St. East, Toronto.

### CHASE "GOAT BRAND" CAR PLUSH

The standard upholstery for over a third of a century—grades for all uses.

315 Fourth Ave., New York

### CHASE LEATHER WOVE

The long-wearing, rich-appearing upholstery material—inexpensive and distinctive.

## Light Railways Along the British Front at Close Range.

By Robert K. Tomlin, Jr., War Correspondent of Engineering News-Record.

The primary function of the light railway is to deliver ammunition, troops, rations and supplies from standard gauge railheads to points near the front, and by so doing relieve the highways of the enormous burden of traffic which they used to carry. The accompanying sketch plan, fig. 1, which is purely theoretical and does not convey information as to any actual location on the ground, will show the general relation to one another of the parts of a light railway system for the battle-front, and the area in the rear.

In the extreme forward section, rope-

munition, ordnance and supplies.

Fig. 1 shows also the loop system and cross connections which are characteristic of British light-railway practice. The idea is to have the loaded cars move forward on only one side of the loop, and the empties return on the other. Even where turnouts are built, the British endeavor to prevent even short haul train movements in opposite directions on the same side of a loop, and during my trip over the lines a non-commissioned officer in charge of a gang building dug-outs was called to account for running a light push car for-

ward on the track over which our train was making the inbound journey.

of track were recorded, while during the Cambrai "show"—every big engagement is called a "show" over here—a Canadian lieutenant colonel and his men laid 6 miles of track in 60 hours.

Repair work for all British armies at the time of my visit was involving the replacement each week of from 1,500 to 2,000 ft. of track broken by shell fire. This is an almost insignificant percentage of the total. In one army, however, 95 breaks in one day, due to shelling, were recorded, but this army has a greater track mileage than any other.

British Official Photograph

Fig. 1. Light railway construction at the British Front.

ways or push trolleys may be provided, although many situations demand the packing of ammunition and supplies on the backs of animals or men. Where possible, spurs are run out to artillery batteries, to which ammunition is delivered, one carload at a time. Further to the rear will be noted the various dumps for ammunition and stores. The designation R. E. on the sketch means Royal Engineers, and when used in connection with supplies refers to such material as timber, sand bags, wire mesh trench revetment, barbed wire, corrugated iron covering for dugouts and huts, duckboards, etc. At the extreme left the letters C. C. S. signify Casualty Clearing Station, to which the wounded are brought back, on light railway cars.

The layout at the railhead, fig. 2, provides for the transshipment of material from the standard gauge railway to the light railway, for the assembly of cars into trains, and for the storage of am-

munition, ordnance and supplies.

Although I saw some short sections of double track, the general practice here is to construct single track only, thus offering a smaller target for shell fire and cutting down the time needed for repair work if the track should be hit.

The mileage of light railway track per mile of battlefront varies within wide limits. In a quiet sector it may be as little as five miles, while in territory where there is much activity there may be a mileage of 10, 12 or even more per mile of front. A single track light railway weighs about 72 tons a mile for rail, connections and ties, while, as a rough average, 800 tons of ballast a mile is necessary, unless the ground is unusually bad. I was told that the grading, laying and ballasting of one mile of finished track requires, normally, about 2,400 man-days of labor. On some speedier work 1,760 man-days of labor per mile

At the head of the organization which is assigned to light railways is the Director of Light Railways (D. L. R.) who reports to the Director General of Transportation (D. G. T.). A mere listing of the various rungs in the organization ladder, however, would fail to convey an adequate idea of its real character. It is only when you circulate through the headquarters offices, go out on the line among the men, and see the splendid work they are doing, that you obtain a true appreciation of the light railway forces. Both British and United States officers are all railway specialists, hailing from every corner of the world—men who have built and operated railroads in Great Britain, the U.S., Brazil, Canada, the Argentine, India, Mexico and elsewhere. The U.S. force on one section of the line, for example, had been recruited, whole companies at a time, from such roads as the Boston & Albany, Maine Central, New York, New Haven & Hartford, and Boston

& Maine. The commissioned officers in these various companies, as a rule, came from the same railways as the enlisted men.

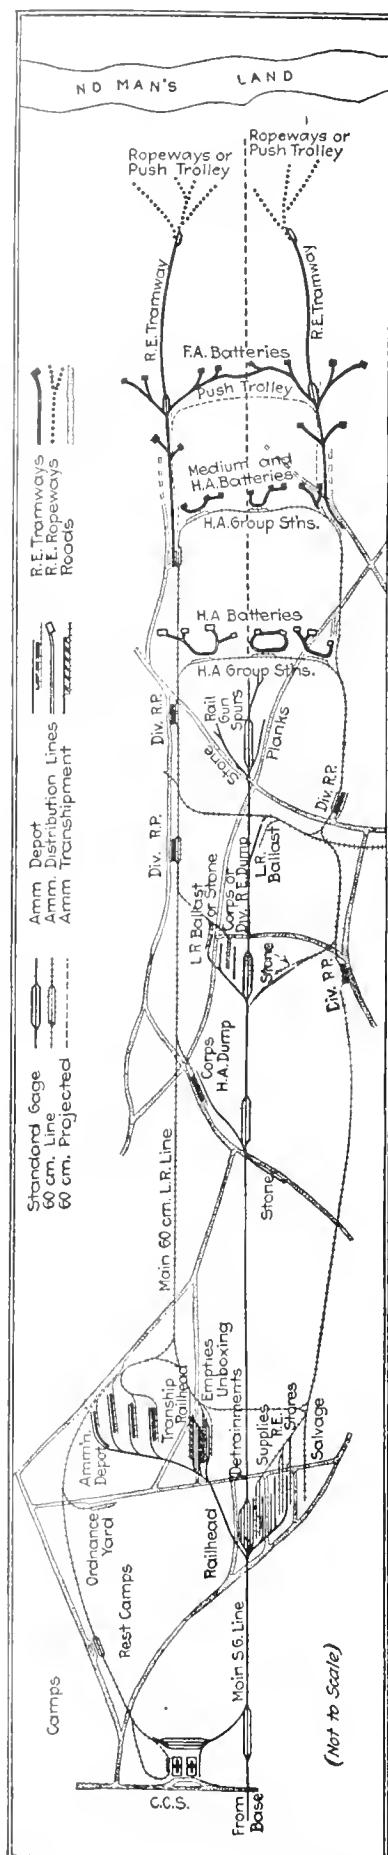

Having spent most of my time among officers and observed the splendid esprit de corps which prevails over the whole front, I was interested in getting the enlisted man's point of view, and during a stop at a siding I went up forward for a chat with the locomotive man and the brakeman of our train. One, I found, had served on the B. & A., and the other on the N.Y., N.H. & H. "Quite a difference between this job and the one back home on the B. & A.," I said to the locomotive man. "What gives you the most trouble in running one of these tractors?" He didn't hesitate a minute. "She's off the iron a little more than I like." Here was a man, who, by night or by day, nosed his trainloads of ammunition or supplies up into the danger zone, where high explosive shells, gas attacks and bombs from airplanes were all part of the day's work, and his chief concern was not of these things, but of locomotive derailments, of being "off the iron," of delays which would slow up deliveries. In answering my question, he had, unconsciously, given me something for which I had been blindly groping—a crystallization in words of the spirit which animates the light railway organization.

In the location of light railways no hard and fast rules can be laid down. The basic principle is that the line must follow the contour of the ground as closely as possible, although sometimes a trestle is built (fig. 3). Heavy cuts or fills must be avoided. It follows, therefore, that a light railway line, particularly near the front, contains a good many curves; the sharpest are of 30m. radius. An effort is made to keep the ruling grade below 2½%, but in some places 4% grades are required by local conditions.

As to proximity to the front, practice varies considerably also. In very quiet sectors, however, the lines may run as far forward as the reserve trenches. In others, single track known as "trench tramways" are used. Location depends upon the ground and the conditions with regard to observation by the enemy.

Fig. 4 gives a good idea of how a light railway line is constructed. Rail connections are made by fish-plates and bolts, four bolts a joint. A radical change in practice has gone into effect recently, involving the substitution of wood for steel ties. I traveled over a great many miles of line in the Flanders area, and close contact with the all prevailing mud of that region indicated quickly the reason for providing as large a bearing area as possible for the track. The wood ties are about 4½ ft. long, 7 in. wide and 4½ in. thick. When steel ties were used, the track sections, built up complete with ties, were delivered and laid in lengths of 5 m. The change to wooden ties, however, makes it necessary to spike down the rails in the field. I passed over long sections of old construction when wooden ties had been inserted under the rails between pairs of the steel ties.

Much of the ground in the northern areas occupied by the British armies is a regular morass, so that the drainage of the light railway roadbed is an extremely important part of the construction. Ditches on one or both sides of the line are universal. In looking over the weekly reports in a U.S. captain's quarters, I found a record of a 17-ton locomotive which had toppled over on its side when standing still, due to settlement of the saturated ground on which the track was laid.

The relation of various parts of a light railway system.

The construction and maintenance problems are further complicated by the scarcity of good ballast. The most easily obtainable material is the chalk which is characteristic of this region, and large quantities of it are employed for track ballast if nothing better can be had (fig. 5b). The chalk, fairly satisfactory in dry weather, "turns to cream when it rains"—to use the phrase of one of the officers who was discussing its properties with me. Another objection to chalk ballast is that it shows up prominently in aerial photographs and offers a good target for artillery fire or bombing. Back of one of the U.S. railway camps is a pit from which sand is being taken for track ballast, and it is proving very satisfactory. In this area the old chalk ballast is either being removed and replaced by sand, or else covered with sand. Another material for ballast is what is called "mine earth," but this is to be had only in places near the coal mining regions. It is a waste product, looks like shale, and serves fairly well as ballast. Traveling over certain sections in northern France and Belgium, I looked down between the rails and read there the tragedy of cities that are no more, for brick and stone, all that remains of the buildings in what used to be towns near the front, are used to a limited extent near destroyed villages for ballasting light railway tracks. A government permit is required for the removal of this debris.

In spite of all the difficulties of construction and scarcity of materials, the track, in all of the regions where I traveled, is in very good condition. Derailments occur, of course, but with the comparatively light rolling stock used it is not much of a job to get an engine or tractor back on the rails. Rounding a curve at Ypres, where the track makes sharp turns to dodge the ruins of buildings, our petrol tractor, a 20 h.p. machine, was derailed. With a few wood blocks and steel bars, carried by every train, we got it quickly on the rails. Another time, when our tractor became unruly and jumped the track, it was lifted bodily and replaced by a working crew which happened to be near—just a case of "Off agin, on agin, gone agin—Finnegan."

Maintenance is consolidated with construction in the extreme forward areas, while farther to the rear separate gangs are assigned to these two duties. The chief task is the relining and reballasting of track—for some of the very muddy areas are great ballast eaters—and the repair of breaks due to shelling. The maintenance crew must also keep the drainage ditches and culverts clear. During periods of frost and thaw a great deal of resurfacing is called for, and at such times the chalk ballast is particularly troublesome. Repair of track broken by shell fire falls to the lot of the maintenance or construction gang, according to whether the damage is at the front or rear. I was told at headquarters that for all the British armies the maintenance work requires about 14 men a mile of track. Breakage due to shelling at the time of my visit varied between 1,500 and 2,000 ft. of track a week for the entire front.

The hauling of light railway trains is done by several types of locomotives. In the rear area three makes of coal burning steam locomotives predominate. Near the front, where smoke and steam would draw enemy artillery fire, petrol-electric and plain petrol tractors do the work. Two of the types of steam locomotives weigh about 14 tons each and the third 17 tons. The 40 to 45 h.p. petrol-electric, or P. E., as it is called, weighs 6 tons. The light

petrol tractor, 20 h.p., weighs somewhat less than 2 tons. There is, in addition, a tractor weighing about one ton, which consists of a small auto engine on a special truck; it is used for inspection trips or for hauling single carloads near the front. The table printed elsewhere in this article gives the load test on different grades for the several types of machine.

The steam locomotives, on account of their visibility, as before noted, and also

lighter and more bulky material, such as R. E. stores, the load per car may be only 5 or 6 tons. With troops the load per car will average about 3 tons. For perishable rations covered box cars are available. Then, too, there are small 4-wheeled wagons, 8 ft. long, for loads of 3½ tons each. For the hauling of heavy ordnance special trucks have been developed.

Hospital cars (fig. 7), fitted up with

8 and 9), for lifting derailed locomotives and tractors, and special groups of four or more cars, each 20 ft. long and 5 ft. 4 in. wide, constituting machine shops on wheels (fig. 10). The equipment in the latter includes drills, grinders, hack-saws, lathes and planers. These tools are operated by power from one of the standard petrol-electric tractors, which, if the occasion should demand, can haul the machine shop forward or backward. The shop on wheels remains in one location, however, unless it is decided to change the light railway base. The sides of these machine shop cars are hinged at the bottom and open outward, forming a platform extension on each side. Where the repair work is too heavy or complicated to be handled readily in the field, the rolling stock is shipped to a large central repair plant, thoroughly equipped with machine tools, spare parts and appliances of every sort for rehabilitating engines or cars suffering from shell shock or other ailments incident to light railway operation. We had intended to make a detour in our route for a visit to this central

British Official Photographs

Fig. 2. Layout at standard gauge railhead providing for trans-shipment to light railway cars.

the desirability of running them on track which is fairly well aligned, are reserved principally for the rear area haulage, while the petrol-electrics, and particularly the lighter petrol tractors, are for use close to the front lines. The petrol-electrics are equipped with internal combustion engines and generators, the motors being mounted directly on the axles. As indicated in the table, they are for heavier work than the plain petrol machines.

I asked one locomotive man about the relative operating difficulties with the light and heavy rolling stock. He replied, in substance, that the P. E.'s and steam

British Official Photographs

Fig. 6. Gondola cars of the flat-bottom and well-bottom types are used in large numbers.

locomotives, if derailed, dug down into the roadbed, and, on account of their weight, came to a quick stop. The lighter machines, while easier to handle in case of accidents, generally ran farther off the rails.

On the petrol-tractor trains the crew consists of two men, driver and brakeman. With steam haulage, a third man, the fireman, is required. The maximum speed allowed is about 8 miles an hour, with a limit of 3 miles an hour at grade crossings.

A great many types of cars are used in light railway operation, depending on the kind of material to be hauled. The bulk of the freight handled comes under the following classifications: Ammunition, timber, coal and coke, rations, ballast, R. E. stores, salvage, stone for highway maintenance, with troops going to or returning from the front. In one army which I visited about a dozen different kinds of car were in service. The prevailing car (fig. 6) is a gondola about 20 ft. long and 5 ft. wide, made in both the flat and the well types. These cars can carry about 10 tons of ammunition, but with

plant, but our schedule was so full that time did not permit an inspection of this very important feature of light railway work.

The information concerning light railways which I had picked up in scraps of conversation here and there before my visit to the front had led me to believe that these systems were operated to some extent on the go-as-you-please plan. An inspection of the field control posts and central train despatching offices in every army on the British front quickly dispelled this impression. Traffic is closely regulated, and the system in force allows the A. D. L. R. or his assistants to know at every hour of the day where each loco-

Fig. 7. The wounded are transported by light railways in special cars. British official photograph.

banks of herths for carrying the wounded, are included in the rolling stock. I was told by the Assistant Director of Light Railways in one army zone that under normal operating conditions he considered 75 tons a 10-ton car a week a fair working average.

In addition to the car types enumerated, there are wrecking cars and cranes (figs.

motive, tractor or car is, whether it is loaded or empty, what kind of freight is being hauled, and scores of similar details. In fact, one of our U.S. railway operating detachments has gone to the length of preparing a timetable for its section. The operating scheme in all of its main features is standardized along the whole front. From the nature of

things: operation in the forward zone is largely at night.

In every army zone there are a central control station near A. D. L. R. headquarters and district control posts at various

with the approximate time of arrival at the latter, and no train is allowed to pass a district post unless the attendant has been so authorized. On one wall of every central control post is a long board with

lettered on the board. Clips, with hooks which fit into grooves representing the track, are hung up for each train and moved forward or backward in accordance with reports on movements. A glance at

For heavy repair work and general overhauling, equipment is sent to a central repair plant.

points on the line, in direct telephonic communication with the main station. The time of departure of a train from the yards is telephoned to the district posts,

slotted wooden strips corresponding to every section of main track and siding in the system. Code numbers are given to each "station" on the line, and these are

the chart with its clips—red for loaded and green for empty—shows the position of every train in operation.

When a train is made up a form (fig.

U.S., and is kept up to date as a piece of extra work.

A very necessary part of the control system is the telephone lines, and to each A. D. L. R. headquarters are assigned a signal officer and men whose job is to keep the wires, switchboards and instruments in working order.

The number of cars per train varies widely. In the rear area one steam locomotive may haul on fairly level track nine 10-ton cars of ammunition or 12 cars of R. E. stores. These loads must be reduced in wet weather. As for the performance of light railways in carrying troops, one British officer told me that in his army zone alone as many as 160,000 had been carried in one day. As an indication of the relative amounts of the various materials which the light railways haul, the following figures, representing a month's traffic on a certain section of line operated by U.S. troops, is of interest, although I do not know whether these figures could be considered typical, for they are now several months old: Ammunition, 4,522 tons; rations, 6,284 tons; personnel, 3,281 tons; light railway ballast, 7,277 tons; salvage, 4,144 tons; miscellaneous, 6,992; total, 32,500 tons.

I am, of course, not at liberty to state the tonnage carried by the British light railway system, the figures for which I saw, among other records, at the headquarters of the Director General of Transportation, but in lieu of something specific this observation is pertinent: During the course of my trip over a good many hundreds of miles of highway, the routes were unobstructed and I noted scores of empty motor trucks, parked and idle, along the roadsides and in adjoining fields, both by day and by night. They told a silent, though none the less convincing, story of the work the light railways have done in the relief of traffic congestion behind the British front.

The foregoing is reproduced from Engineering News-Record, New York, to the editor of which we are indebted for most of the illustrations.

troops has been working unceasingly at the task, some units acting as pioneers in the construction of the great defence line that causes the Huns to hesitate on this sector. Little French villages, that never hoped for steel links with the larger cities, have now become, as if by the rubbing of some magic Aladdin's lamp, great junctions where trainloads of supplies come and go every part of an hour. The new lines run through the fertile fields of growing crops, and careful building has saved the Frenchman his harvest, but for the necessity strip of permanent way. There are alternate routes around towns

needed. The latest German thrust gave us the first test of the system, and divisions were shifted with a speed that must have surprised the Huns.

"In the same way some of the Canadian auxiliary troops have been working untiringly in the gun spurs behind the new front, off which the big howitzers pound the enemy positions. One battery from the middle west has the record of construction, 12 of these in a week and each one cleverly camouflaged from the prying eyes of Hun airmen.

"From the new railheads, many of which have been christened with Cana-

### Canadian Light Railway Building at the British Front.

Roland Hill wrote from the war correspondents' headquarters in France to the Militia Department, Ottawa, recently as follows:—

"Behind the new fighting line since the Huns' advance in April there has grown up a network of strategic railways, making a formidable system which more than compensates us for the loss of the lines we had to abandon and destroy in our retirement. Almost from the day the enemy crossed the Nord Canal practically every battalion of Canadian railway

which the Hun might shell, and day by day stores of carefully concealed ammunition dumps grow up which are fed by the strip of steel.

"Speaking from a strategical point of view," said a railway staff officer, "we are in a better position today than we were on the Somme. The hundreds of miles of new track have been built specially for military use and conform with the fighting front. All possibilities have been considered. Where, previously we had to rely on civilian built lines, which wound tediously round the country by indirect routes, we now have a military system which takes out supplies in the quickest and most direct way to where they are

dian names, there start fully constructed light railway systems that wind their way through little valleys, still screened from the enemy, to the fine new reserve trenches which have not yet had to be used, and perhaps never will be. You cannot run trains over a line drawn in blue pencil on an ordnance map, and the railway engineers have to build scores of miles that might be used. They must be there for an emergency.

"The construction of the new British defences—railways play a prominent part—have been marvellously complete, and have been so rapid that before the Huns could take breath for another stage of attacks on this northern section the fabric of a fortress faced them and grew into such menacing shape that he hesitated. Now if he takes another fling at the middle road to the coast he will have to pay the same great price in blood. The 'army behind the army' has done its duty and built well—even better than it destroyed in the sombre days at the end of March."

The Canadian Northern Rolling Stock Co. is reported to have obtained permission from the American Capital Issues Committee to issue \$5,000,000 of 6% equipment trust certificates. The company is a new one, incorporated for the purpose of providing rolling stock for the C.N.R. The certificates will be issued through a trust company and will be placed through a banking syndicate. The rolling stock is to be leased to the C.N.R. for an annual rental.

# Steam Railway Statistics for Year Ended June 30, 1917.

Canadian Railway and Marine World for July contained a table giving the mileage of all steam railways in Canada, with details of the freight and passenger earnings and of the operating expenses and net operating earnings or deficits. In the following table the 1st column shows the net revenue or deficit on the railway operations of the several companies; the 2nd the profit or loss from operations outside railways, and the 3rd the income from all other sources. The 4th column shows the taxes paid, the 5th gives the gross corporate income, from which is deducted rents, interest on funded debt, sinking fund, etc.; the final column showing the net corporate income available for special appropriations, dividends on common and preferred stock, or held in profit and loss account. This is the first year in which we have published this table, but we consider it necessary, to supplement the table given in our June issue and to show the final results of the year's operation for each railway.

Name of Railway	Net operating revenue or deficit	Profit or loss from outside operations	Other income from all sources	Taxes deduction	Gross corporate income or loss	Rents, interest, sinking funds, etc.	Net corporate income or loss

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1914, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 239. June 19.—Extending to Aug. 1, effective date general order 239, May 17, 1918, re inter-switching to freight traffic.

General order 240. June 21.—Amending general order 94, July 24, 1912, re eyesight tests and protection of railway employees.

General order 241. June 29.—Authorizing railway companies engaged in westbound transcontinental traffic to increase commodity rates from Eastern Canada to place them on at least an equality with rates in effect from neighbouring points in U.S., rates so increased to become effective not earlier than Aug. 1, upon not less than 5 days notice to board and shipping public by filing in manner prescribed in Railway Act.

General order 242. June 28.—Authorizing change in rule 1 (c) of Canadian Freight Classification 16, to provide minimum weight for first car in series carrying articles too long for one car. This order is given in full on another page.

27378. June 28.—Dismissing complaint of Crushed Stone, Ltd., Toronto, and Henderson Farmers' Line & Phosphate Co., Woodstock, Ont., against increased G.T.R. rates on agricultural limestone and stone dust from Kirkfield, Ont., to various points.

27312. June 18.—Approving Chatham, Wallaceburg & Lake Erie Ry. standard freight mileage tariff C.R.C. 530, and standard passenger tariff C.R.C. 37, effective July 1.

27313. June 17.—Approving agreement between Bell Telephone Co. and Mud Lake Rural Telephone Co., Renfrew County, Ont., May 31.

27314. June 15.—Authorizing G.T.R. to build two spurs for Holden-Morgan Thread Miller, Ltd., Toronto.

27315. June 18.—Approving G.T.R. location and detail plan of proposed station at Campbellford, Ont.

27316. June 15.—Approving Canadian Northern Ontario Ry. revised location as built from Lot 123, Con. A, to Lot 8, Con. 3, Foley Tp., Ont., mileage 139.7 from Toronto; and authorizing C.N.O.R. to cross Blackstone Road by subway.

27317. June 18.—Approving Grand River Ry. bylaw authorizing M. W. Kirkwood, General Manager, and C. J. Whitney, General Freight and Passenger Agent, to prepare and issue tariffs of tolls.

27318. June 18.—Extending to Aug. 31 time within which Algoma Eastern Ry. shall complete fencing of right of way on east side of track between mileage 51.5 and 52.5, Merritt Tp., Ont.

27319. June 19.—Extending for two months from date time within which G.T.R. shall provide farm crossings in Balstrode Tp., Que.

27320. June 18.—Authorizing C.P.R. to build spur for Christian Community of Universal Brotherhood at Trail, B.C.

27321. June 15.—Dismissing application of Rugg-Ball Manufacturing Co., Avers Cliff, Que., for reduction in classification of wooden snow shovels, without prejudice to renewal of application.

27322. June 18.—Extending for three months from date, time within which G.T.R. shall complete siding for Palmolive Co. of Canada, Ltd., Toronto.

27323. June 6.—Amending order 26347, Dec. 19, 1917, re St. Maurice Valley Ry. (C.P.R.) crossing of highway in Three Rivers Parish, Que.

27324. June 19.—Authorizing London & Port Stanley Ry. to build spur on Bathurst St., between Waterloo & Wellington Sts., London, Ont., without prejudice to G.T.R. rights, if any, in respect of its track on Bathurst St., which has been removed under city authority.

27325. June 20.—Authorizing G.T.R. to build extension of siding, and spur therefrom, for Dupont Fabrikoid Co., New Toronto, Ont.

27326. June 20.—Extending to June 1, time within which City of Fort William, Ont., shall complete installation of half-interlocking plants at intersection of Victoria Ave. and Vickers St., and at intersection of Franklin St., as required under order 19319, May 15.

27327. June 20.—Ordering Bell Telephone Co. to amend its tariff C.R.C. 3100 to provide rate for local messages from coin-box public telephones, or from attended public telephones on two-number basis inside base areas, at 5c each, and from coin-box public telephones outside base areas at 10c each, effective within 14 days from date.

27328. June 21.—Ordering Esquimalt & Nanaimo Ry. to erect shelter and platform at Bowser, B.C.; to be completed by Aug. 15.

27329. June 21.—Dismissing complaint of A. McKinnon, Cumberland, B.C., that Wellington Colliery Ry. refuses to note damages on freight bills when charges are prepaid.

27330. June 22.—Dismissing complaint of taxi-cab drivers in Winnipeg against treatment received from railway companies at Union station, Winnipeg.

27331. June 24.—Ordering Canadian Northern Ry. to erect platform for shipping milk at Rottluff Road crossing, Matsqui, B.C., to be completed within 30 days.

27332. June 24.—Dismissing complaint of Mac-Cosham Storage & Distributing Co., Edmonton, Alta., that Grand Trunk Pacific Ry. refuses to bill forward complainant's cartage charges in same manner as is done for Western Cartage Co.

27333. June 22.—Dismissing Canadian Northern Ry. application for authority to close station at Dropmore, Man.

27334. June 24.—Refusing application of council of St. Louis rural municipality 431, et al., for order directing Grand Trunk Pacific Ry. to erect station at St. Louis, Sask.

27335. June 22.—Refusing application of City of Moose Jaw, Sask., for order directing Grand Trunk Pacific Branch Lines Co. to install electric alarm bell at crossing of 16th Ave. and Toronto St.

27336. June 24.—Refusing application of W. R. Fansher, Govan, Sask., for order directing Grand Trunk Pacific Ry. and C.P.R. to provide inter-switching facilities at Nokomis, Sask.

27337. June 24.—Ordering Canadian Northern Ry. to appoint grain agent at Hodgson, Man., Sept. 1, for grain shipping season.

27338. June 24.—Authorizing Miami Corporation to build across C.P.R. main line overhead at mileage 101.75, Cascade Subdivision, near Port Haney, B.C.; if any dispute, same to be settled by an engineer of the board.

27339. June 24.—Refusing application residents of Vantage, Sask., for order directing C.P.R. to erect new station building there.

27340. June 24.—Dismissing Vancouver Harbor Commissioners' complaint that C.P.R. will not allow foreign cars for Vancouver with export freight to be taken over line leased by British Columbia Electric Ry., to Vancouver wharves.

27341. June 24.—Amending order 26683, Oct. 25, 1917, re highway crossing over Grand Trunk Pacific Ry. at New Hazelton, B.C.

27342. June 25.—Ordering Canadian Northern Ry. to build stock yards at Haight, Alta., to be completed by Aug. 1.

27343. June 25.—Refusing application of residents of Buchanan, Sask., for order directing Canadian Northern Ry. to build siding for elevator site.

27344. June 25.—Ordering Canadian Northern Ry. to appoint station agent at Mecheche, Alta., by Sept. 1.

27345. June 24.—Refusing application of L. R. Barrett Lumber Co., Swift Creek, B.C., for order directing Canadian Northern Ry. to appoint agent there.

27346. June 24.—Refusing application of Purcell Coal Co., Maple Creek, Sask., for order directing C.P.R. to install scale at Taber, Alta.

27347. June 25.—Ordering Edmonton, Dunvegan & British Columbia Ry. to erect portable cattle loading chute at Prest, Alta., by Sept. 1.

27348. June 25.—Ordering Canadian Northern Ry. to provide well and an extra yard for pigs at Kuroki, Sask., by Aug. 1.

27349. June 24.—Extending to July 31, time within which G.T.R. shall complete station at Lyster, Que., as per order 26668, Oct. 18, 1917.

27350. June 25.—Ordering Edmonton, Dunvegan & British Columbia Ry. to install portable station and temporary loading platform at Prest, Alta., by Sept. 1.

27351. June 26.—Refusing application of residents of Buttress, Sask., for order directing C.P.R. to appoint station agent there.

27352. June 25.—Authorizing Grand Trunk Pacific Branch Lines Co. to build station at Hoey, Sask.

27353. June 26.—Ordering Canadian Northern Pacific Ry. to build 43 crossings over its tracks between mileage 54 and 96, Vancouver Island line, for Cowichan Lumber Co., Mossom Boyd Co., and W. T. C. Boyd Co.

27354. June 25.—Authorizing C.P.R. to divert road allowance on western boundary of Secs. 33 and 28, Tp. 40, Range 24, west 4th meridian, and to carry same across tracks at grade at mileage 14.8, Lacombe Subdivision, Alta.

27355. June 24.—Authorizing G.T.R. to rebuild bridge 143 over White River, Acton Tn., Que.

27356. June 21.—Authorizing G.T.R. to build spur for E. J. Jones, Brampton, Ont.

27357. June 21.—Authorizing C.P.R. to build temporary extension to Canada Iron Corporation siding for Morrow & Beatty, crossing Heriot and Forges Sts., Drummondville, Que.

27358. June 24.—Authorizing Toronto, Hamilton & Buffalo Ry. to build, at grade, across 4 highways in Saltfleet Tp., Ont.

27359. June 21.—Approving Toronto, Hamilton & Buffalo Ry. plans of culvert under its tracks at Albion Stream, between Stoney Creek & Kinnear, Ont.

27360. June 21.—Ordering Michigan Central Rd. to stop train 14 on flag at Woodsee to let off passengers from Windsor and points west.

27361. 27362. June 21.—Authorizing Halifax & South Western Ry. (C.N.R.) to remove regular agents at Barrington and Woods Harbor stations, N.S., caretakers to see stations are kept clean and heated for passengers on arrival and departure of trains, and to care for l.c.l. freight and express.

27363. June 25.—Authorizing C.P.R. to divert road allowance on western boundary of Sec. 34, Tn. 40, Range 24, west 4th meridian, and build

same at grade across its tracks at mileage 15.8 Lacombe Subdivision, Alta.

27364. June 25.—Authorizing Laval Electric Co. to erect wires along C.P.R. at mileage 17, Lachute Subdivision, Que.; and rescinding order 27080, Mar. 20.

27365. June 26.—Authorizing D. Bushby, Keddleton, Sask., to cross under C.P.R. on his property in Tp. 21, Range 23, west 2nd meridian; to repair or fix crossing in any way he desires, providing safety of C.P.R. bridge and track be not interfered with, and permission and rights granted not to be interfered with by C.P.R. without reasonable notice first being given. This without prejudice to rights of either party.

27366. June 27.—Authorizing Toronto, Hamilton & Buffalo Ry. to build branch in Hamilton, Ont., from its belt line near Beach Road, through certain lands named in book of reference, across Ottawa St., to G.T.R. lands, in lieu of present Grasselli connection, and to occupy certain G.T.R. lands.

27367. June 26.—Approving agreement June 14, between Bell Telephone Co. and North Bonhecher Telephone Association, Ltd., Renfrew County, Ont.

27368. June 27.—Authorizing Algoma Eastern Ry. to carry highway over its tracks between Lots 4 and 5, Concession 6, Merritt Tp., Ont.

27369. June 25.—Approving Toronto, Hamilton & Buffalo Ry. plans of rebuilding of Thompson Road subway, Bridgeburg, Ont.

27370. June 27.—Authorizing C.P.R. to divert road allowance in north boundary of n.e. ¼ Sec. 22, Tp. 27, Range 6, west 2nd meridian, Sask.

27371. June 27.—Authorizing Canadian Northern Ry. to build highway crossings between Secs. 34 and 35; and Sec. 34, Tp. 22, and Sec. 2, Tp. 23, Range 27, west 2nd meridian, Sask.

27372. June 25.—Extending to May 1, 1919, time within which Edmonton, Dunvegan & British Columbia Ry. shall complete siding and station facilities at junction of its line with its Grande Prairie Branch, as required under order 25961, Mar. 22, 1917.

27373. June 25.—Ordering Edmonton, Dunvegan & British Columbia Ry. to put entire station building at Donnelly, Alta., to public use; partition same to make passenger waiting room 9 ft. by 15 ft. 8 in., and freight shed 9 ft. by 16 ft. 4 in., appoint caretaker to keep station waiting room clean, heated and lighted, to see that package freight and express matter are properly housed, keep freight shed locked, with notice posted for information of residents, advising where caretaker can be found at convenient point, and make delivery of l.c.l. and express shipments between 8 a.m. and 6 p.m.; to extend station platform at least 100 ft.; all by Sept. 1.

27374. June 28.—Dismissing application of United Farmers of Alberta, Blackie, Alta., for order directing C.P.R. to install telephone at Blackie station.

27375. June 28.—Ordering Canadian Northern Ry. to erect fence on each side of spur for H. E. Carvey, Stettler, Alta.

27376. 27377. June 28.—Authorizing C.P.R. to build at grade its Regina, Saskatoon & North Saskatchewan Branch across East Second St., Regina, and across South St., Holdfast, Sask.

27379. July 3.—Authorizing Hull Electric Co. to file tariffs increasing freight rates, except on coal and coke, by 15%, rates on coal and coke by 15c a ton; and passenger rates so as not to exceed 2.875c a mile; tariffs be effective after compliance with secs. 327 and 331 of Railway Act.

27380. July 3.—Extending to Aug. 31 time within which C.P.R. may remove old piles and abutments from bed of Big Creek, Tilbury North Top., Ont., as required by order 27110, Apr. 4.

27381. June 28.—Ordering Grand Trunk Pacific Ry. to move station at Three Hills, Alta., from west to east side of track about 300 ft. north of north switch, subject to condition that board of trade and citizens contribute \$300 toward cost; if cost is less, surplus to be returned to contributors; if in excess difference to be paid by company; work to be completed by Sept. 1.

27382. July 4.—Approving Windsor, Essex & Lake Shore Rapid Ry. standard mileage freight tariff C.R.C. 236, effective July 20.

27383. June 28.—Dismissing application of Sidney, B.C., Board of Trade for order to apply B.C. coast terminal rates to Sidney.

27384. July 4.—Authorizing C.P.R. to build spur for Canadian Rolling Mill Co. in Lot 3607, Emard Ward, Montreal Parish, Que.

27385. July 4.—Authorizing Saskatchewan Government to build highway crossing over Grand Trunk Pacific Branch Lines Co.'s track between Regina and Melville on surveyed road north of n.e. ¼ Sec. 26, Tp. 19, Range 15, west 2nd meridian.

27386. June 29.—Dismissing Esquimalt & Nanaimo Ry. application for order exempting it from complying with circular 81, and ordering it to comply with its provisions, and to display night signals on main track switches from sunset to sunrise; when weather or other conditions obscure day signals, night signals to be used in addition.

27387 to 27389. July 5.—Dismissing application of City of Galt, Ont., for order directing C.P.R. to provide bell or other appliance at crossing at Bev-

erley St. and Dundas and Waterloo Road, and ordering C.P.R. to flag trains over crossing, also dismissing applications of city that C.P.R. provide gates at crossing of Dundas and Waterloo Road and bell at Beverley St., the first crossing to be protected by watchman during shunting between 7 a.m. and 6 p.m., and trains to be flagged over latter crossing.

27390. July 4.—Authorizing C.P.R. to build extension to spur for D. Auckland & Son, East Kildonan, Man.

27391. July 3.—Approving agreement, June 19, between Bell Telephone Co. and Rydal Bank-Plummer Telephone Co., Algoma District, Ont.

27392. July 2.—Amending order 27241, May 21, re C.P.R. and Ottawa & New York Ry. train service at Finch, Ont.

27393. July 4.—Authorizing Essex Terminal Ry. to build across Sandwich, Windsor & Amherstburg Ry. at grade on Main St., near Langlois Road, Sandwich West Tp., and to cross on Main St. near Chappus St.

27394. July 5.—Authorizing G.T.R. to build two sidings for National Iron Corporation, Toronto.

27395. June 29.—Amending order 15015, Sept. 8, 1911, re G.T.R. connection with Timiskaming & Northern Ontario Ry. at Nipissing Jct., Ont.

27396. June 29.—Authorizing Canadian Northern Quebec Ry. to build branch for Silica Products, in St. Canute Parish.

27397, 27398. July 2.—Approving agreements between Bell Telephone Co. and Osprey Tp., Ont., June 15, and Rose Telephone Co., Algoma District, Ont., June 19.

27399. July 6.—Approving supplement F to Express Classification for Canada 3, to be filed as supplement 12.

27400. July 6.—Relieving Canadian Northern Ry. from providing further protection at crossing 2 miles east of Odessa, Sask.

27401. July 8.—Approving agreement, June 28, between Bell Telephone Co. and Montreal Light, Heat & Power Co., Soulanges County, Que.

27402. July 6.—Re charge by Canadian Northern Ry. for delivery in New Westminster of carload of barley from Clyde, Alta. This order is given in full on another page.

27403. July 6.—Dismissing application of municipalities of Burnaby and Coquitlam, B.C., for order requiring Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to complete work required under order 25260, Aug. 10, 1916, with leave to apply to board re any matters arising out of temporary timber abutments supporting southerly end of bridge near Sapperton, B.C.

27404. July 8.—Dismissing application of W. S. Henderson, Drumbeller, Alta., for order directing C.P.R. to build spur near high level bridge at Lethbridge, Alta.

27405. July 9.—Dismissing application of John Abrey, Souris, Man., for ruling re fencing by C.P.R. across Souris River.

27406. July 5.—Dismissing application of G. H. Furnival, Edmonton, Alta., for order directing Grand Trunk Pacific Ry. to pay for damages to his property.

27407. July 5.—Dismissing application of South Alberta Wool Growers Association for order requiring railway companies to establish minimum earload weight of 12,000 lbs. on sheep in single deck cars.

27408. July 6.—Ordering Grand Trunk Pacific Ry. to complete fencing of right of way between Houston and Knockholt, B.C., by Oct. 1.

27409. July 5.—Dismissing United Farmers' Association's application for order requiring C.P.R. to appoint agent at Cairns, Alta., and ordering C.P.R. to appoint caretaker to keep station clean, and when necessary heated and lighted for arrival of passenger trains, and to see package freight and express shipments properly housed; C.P.R. to remove coal from freight shed and repair planking of platform; work to be completed by Aug. 1.

27410. July 6.—Dismissing Fort Frances Pulp & Paper Co.'s application for order directing Canadian Northern Ry. to furnish 60 cars daily for transportation of mill refuse for fuel from Beaudette, Minn., to Fort Frances, Ont.

27411. July 10.—Approving Hull Electric Co.'s standard maximum passenger tariff C.R.C. no. P-9, and standard maximum freight tariff C.R.C. no. F-2, effective July 22.

27412. July 8.—Authorizing Grand Trunk Pacific Saskatchewan Ry. to connect with C.P.R. Southernland Subdivision at mileage 7.45; and with C.P.R. Lanigan Subdivision at mileage 105.2; also connect with G.T.P.R. at mileage 471.5; and at mileage 460.7; protection to be determined by board's engineer.

27413. July 4.—Authorizing Shawinigan Lake Lumber Co. to build level crossing for logging railway over Canadian Northern Pacific Ry. right of way at Hunter Creek, Shawinigan Lake, B.C.

27414. July 5.—Authorizing Timber & Logging Co.'s logging railway crossing under Esquimalt & Nanaimo Ry. near Ladysmith, B.C.

27415. July 8.—Authorizing G.T.R. to rebuild bridge 107, near Agincourt, Ont.

27416. July 8.—Ordering Canadian Northern Ry. to erect 3rd class station at Lanfane, Alta.; to be completed by Sept. 1.

27417. July 9.—Approving Minto Tp., Ont., plan and specifications of work to be done on drain under G.T.R. near Harrington station, Ont.

27418. July 9.—Authorizing C.P.R. to build spurs for Consolidated Mining & Smelting Co. of

Canada, at mileage 75.9, Boundary Subdivision, B.C.

27419. July 9.—Extending for two months from date time within which Canadian Northern Ry. shall complete work required under order 27267, May 28, in Worthington Tp., Ont.

27420. July 9.—Amending order 27228, May 14, re G.T.R. sidings for Dominion Steel Foundry Co., Hamilton, Ont.

27421. July 10.—Approving London & Lake Erie Ry. & Transportation Co.'s standard mileage freight tariff C.R.C. 6.

27422. July 10.—Approving agreement, June 20, between Bell Telephone Co. and Renfrew & Shamrock Telephone Association, Renfrew County, Ont.

27423. July 11.—Authorizing Saskatchewan Government to make public highway over Grand Trunk Pacific Ry. between Secs. 5 and 6, Tp. 32, Range 27, west 2nd meridian.

27424. July 5.—Dismissing application of City of Victoria, B.C., for order apportioning cost of maintaining pedestrian traffic over Esquimalt & Nanaimo Ry. bridge.

27425. July 10.—Approving agreement, July 1, between Bell Telephone Co. & Timiskaming & Northern Ontario Ry. Commission, in Nipissing District, Ont.

27426. July 11.—Dismissing complaint of E. A. McKenzie of Arden, Man., against refusal of railway companies to supply him with car doors for sand and gravel shipments or pay him for doors supplied by himself.

27427. July 10.—Ordering C.P.R. to build spur for Siminoton Co., Calgary, Alta.

27428. July 10.—Authorizing Toronto, Hamilton & Buffalo Ry. to build at grade across highway at Ottawa St., Hamilton, Ont.

27429. July 12.—Dismissing application of Freight & Express Underwriters of Toronto, for same rating for zam-buk as provided in Canadian Freight Classification for vaseline.

27430. July 11.—Authorizing G.T.R. to remove shelter from Ballsville to Willow Grove, Ont., and to discontinue stopping trains on flag at Ballsville.

27431. July 12.—Authorizing New Brunswick (C.P.R.) to expropriate certain lands for additional main line at West St. John and Fairville, N.B.; to build main line at grade across New Brunswick Power Co.'s railway on Main St., Fairville; and to build at grade across North St., Union Point Road, Main St., Raynes Ave., Sherbrooke St., and Sand Cove Road, Fairville, N.B.

27432. July 12.—Authorizing G.T.R. to use highway bridge over its main line at mileage 223.22 near Belleville, Ont.

27433. July 13.—Authorizing Alberta Public Works Department to carry highway over Grand Trunk Pacific Ry. at Thornton, Alta.

27434. July 5.—Dismissing application of W. Harvey and C. C. Hale, Mazana, B.C., for order, directing Kettle Valley Ry. to build spur and shelter for freight and passengers at mileage 41, and ordering K.V.R. to erect shelter platform equal to board's standard 1-A at east end of Osprey Lake station grounds on north side of main line between water tank and east switch; to build spur for at least 2 cars to be spotted; and grade team track to enable cars to be driven along side and loaded from the ground.

27435. July 11.—Authorizing Grand Trunk Pacific Ry. to build over highway at Rosevear Station, Alta.; cost of construction and maintenance to be paid by Alberta Public Works Department.

27436. July 11.—Ordering Grand Trunk Pacific Ry. to build interchange track with C.P.R. near Forrest, Man.; and to file detail plans; work to be completed within 60 days from approval, and expense to be borne by G.T.P.R.

27437. July 15.—Ordering G.T.R. to stop train 103 at Oakville, Ont., when there are passengers for that point from Toronto; this order to remain in effect until Sept. 15.

27438, 27439. July 17.—Suspending, pending hearing on date to be fixed, C.P.R. Supplement 77 to Tariff C.R.C. no. E3210, effective July 25, and G.T.R. Supplement 73 to Tariff C.R.C. no. E3426, effective July 25, cancelling present commodity rates on glass bottles in carloads from Hamilton, Toronto and Montreal; also Supplement 7 to Toronto, Hamilton & Buffalo Ry. Tariff C.R.C. 502; Supplement 20 to G.T.R. Tariff no. E2619, and Supplement 9 to C.P.R. Tariff C.R.C. no. E2641.

27440. July 16.—Approving Minto Tp., Ont., plan of work to be done on municipal drain 10 under G.T.R.

27441. July 16.—Authorizing agreement between Canadian Northern Ry. and C.P.R. re C.N.R. bridge over C.P.R. and Moose Jaw Creek (third crossing) at mileage 86.1, Sask.

27442. July 16.—Authorizing Union Bank of Canada, Estevan Branch, to pay C.P.R. from amount deposited by Bénéficiaire Commercial Co. to board's credit, \$3,445.31 allowed for spur at mileage 148.9, Estevan Subdivision, Sask., balance with accrued interest to be repaid to Bénéficiaire Commercial Co.

27443, 27444. July 11.—Extending to Aug. 31, time within which G.T.R. shall install gates at St. Philippe and St. Marguerite Sts., Montreal, provided crossing be protected by watchmen.

27445. July 18.—Authorizing C.P.R. to build spur for Standard Paint Co. of Canada, in Lot 954, Lachine Parish, Que.; and approving clearances at tank house door.

27446. July 18.—Authorizing Essex Terminal Ry. to open for freight traffic the portion of its railway from north side of Titcombe Road, Ojib-

way, to Amble side rd., Ont., 10.5 miles; speed of trains limited to 15 miles an hour.

27447. July 18.—Authorizing Canadian Northern Ry. to build highway over its tracks between Secs. 9 and 16, Tp. 15, Range 17, west 3rd meridian, Sask.

## Training Women as Railway Ticket Sellers.

Because of the need for skilled ticket sellers and the difficulty of obtaining enough trained men, the United States Railroad Administration has opened schools in several sections of the country for training women to fill these positions. The present force of trained men ticket sellers will be retained whenever possible because of the expert character of their work, but it has been found necessary to supplement their activities with women. This is due partially to the increase of traffic and partially to the loss of men to the army and navy. When thoroughly trained, women ticket sellers will be paid the same salaries as men doing the same work. Already enough applications have been made to fill the schools for the present. After preliminary training of from one to two months, the women who show aptitude will be given work of actual selling the simpler form of tickets and gradually will be worked into the sale of more complicated forms.

## Coal Supplies for the Northwest.

The United States Fuel Administration and the U.S. Railroad Administration have arranged for shipments of coal by the Great Lakes to take care of the Northwestern states and that portion of Canada dependent upon coal shipments on the lakes. A total of 28,000,000 tons of bituminous coal will be moved by the Lake Erie ports to the Northwest. Approximately 24,000,000 tons will go to the Northwestern States and the remainder to Canada. The movement of the coal will be forced during the summer months, so that if possible the movement of the coal can be completed by the end of October. This arrangement will avoid a repetition of the trouble last autumn, when Ohio and Michigan were unable to obtain coal in the early fall months because of the lake movement. This year, therefore, it will be possible for these states to lay in their supply before winter, although they will have to wait until autumn to obtain the major portion of their supplies.

## Live Stock Freight Rates in the West.

J. D. McGregor, Food Controller for Western Canada, is reported to have said, July 13, that the railway companies had agreed on a reduction of 50% in the rate for moving live stock and feed from all points in Manitoba, Saskatchewan and Alberta east of Cochrane and Lundbrook, south of a line on the C.P.R., running from Red Deer to Lacombe, to Kerrobert, to Wilkie, to Saskatoon, and by G.T.P., east of Saskatoon to the eastern boundary, about 100 miles west of Winnipeg. Cattle and sheep will be moved to the north at half rate, subject to minimum rate of 5c per 100 lb. on cattle and 6½c per 100 lb. on sheep up to Nov. 15, 1918; shipment returning, half rate in reverse direction prior to Oct. 1, 1919, provided returned by original owner to original point of shipment.

Newfoundland Railway Rates.—The Reid Newfoundland Co., on June 1, increased its railway passenger fares per mile as follows: 1st class, from 3c to 4c; 2nd class, from 2c to 3c. Freight rates have not been increased.

## Birthdays of Transportation Men in August.

Many happy returns of the day to:

V. T. Bartram, ex-Purchasing Agent, Timiskaming & Northern Ontario Ry., now of General Contracting & Dredging Co., Toronto, born at Ottawa, Aug. 2, 1880.

J. C. Beckwith, Engineer of Construction, Canadian Government Railways, Moncton, N.B., born at Fredericton, N.B., Aug. 1, 1875.

C. B. Brown, Assistant General Manager, Eastern Lines, and Chief Engineer, Canadian Government Railways, Moncton, N.B., born at Ithaca, N.Y., Aug. 27, 1879.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 14, 1864.

A. E. H. Chesley, General Accountant, Dominion Atlantic Ry., Kentville, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, Travelling Passenger Agent, G.T.R., Pittsburg, Pa., born at Belleville, Ont., Aug. 4, 1887.

G. T. Coleman, Car Service Agent, Ontario District, C.P.R., Toronto, born at Carleton Place, Ont., Aug. 25, 1875.

C. H. N. Connell, Engineer Maintenance of Way, Quebec District, Canadian Northern Ry., Montreal, born at Woodstock, N.B., Aug. 26, 1876.

H. W. Crawford, General Agent, Canada Steamship Lines, Ltd., Cleveland, Ohio, born at Bowmanville, Ont., Aug. 24, 1887.

E. L. Desjardins, Acting Superintendent, District 5, Intercolonial Division, Canadian Government Railways, Edmundston, N.B., born at St. Jean Port Joli, Que., Aug. 1, 1859.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., and Vice President, Canadian Electric Railway Association, born in Bosanquet Tp., Ont., Aug. 24, 1870.

L. C. Fritch, ex-General Manager, Eastern Lines, Canadian Northern Ry., now General Manager, Seaboard Air Line Ry., Norfolk, Va., born at Springfield, Ill., Aug. 11, 1869.

J. V. Foy, General Passenger Agent, Canada Steamship Lines, Ltd., Toronto, born there Aug. 27, 1882.

G. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. B. Harper, Resident Engineer, Laurentian Division, Quebec District, C.P.R., Montreal, born at Baie Verte, N.B., Aug. 15, 1882.

M. B. Helston, Superintendent, Division 3, Western District, Canadian Northern Ry., Edmonton, Alta., born at Michigan, Ind., Aug. 24, 1869.

W. P. Hinton, Vice President and General Manager, Grand Trunk Pacific Ry., Grand Trunk Pacific Coast Steamship Co., and Western Traffic Manager, Canadian Government Railways, Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

F. S. Isard, Comptroller, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Aug. 14, 1888.

J. D. McDonald, Assistant General Passenger Agent, G.T.R., Chicago, Ill., born at Toronto, Aug. 27, 1855.

T. McHattie, ex-Master Mechanic, Eastern Lines, G.T.R., Montreal, born at Dufftown, Banffshire, Scotland, Aug. 8, 1854.

M. K. McQuarrie, Engineer, Dominion Atlantic Ry., Kentville, N.S., born at Sault Ste. Marie, Ont., Aug. 17, 1884.

A. H. Mahon, District Locomotive Foreman, Grand Trunk Pacific Ry., Ed-

son, Alta., born north of Ottawa, Ont., Aug. 27, 1874.

W. J. Meakin, Locomotive and Car Foreman, C.P.R., Wetaskiwin, Alta., born Toronto, Aug. 22, 1872.

C. Montgomery, Master Mechanic, Pere Marquette Ry., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. E. Mullins, General Manager (Freight), United Fruit Co., New York, born at Stratford, Ont., Aug. 13, 1870.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., Vancouver, B.C., born at Greenwich, Eng., Aug. 27, 1875.

F. H. Phippen, K.C., General Counsel, C.N.R., Toronto, born at Belleville, Ont., Aug. 26, 1862.

W. M. Porteous, District Freight Agent, C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

W. G. Ross, President, Montreal Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. LeB. Ross, Local Treasurer, G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

W. H. Sample, Superintendent of

Motive Power, Grand Trunk Ry., Montreal, born at Altona, N.Y., Aug. 20, 1864.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

S. A. Simpson, Superintendent, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Winnipeg, born at Toronto, Aug. 22, 1880.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Calgary, Alta., born at Worthing, Eng., Aug. 20, 1872.

W. J. Sturges, acting Assistant Purchasing Agent, Grand Trunk Pacific Ry., Winnipeg, born at Fairfield, Vt., Aug. 28, 1877.

L. Tait, Secretary-Treasurer, London St. Ry., London, Ont., born at Hamilton, Ont., Aug. 9, 1882.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, District 2, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

H. E. Weyman, Manager, Levis County Ry., Levis, Que., born at Guildford, Eng., Aug. 27, 1883.

**Rail Deliveries.**—Up to July 5, the Dominion Iron & Steel Co. had delivered 43,615 tons, out of the 100,000 tons of steel rails ordered by the Dominion Government for various railways.

## Canadian Pacific Railway's Honor Roll 36.

Adair, Wilbert	Laborer	Lamton	Killed in action
Adam, Charles	Stower	Calgary	Killed in action
Anger, Ralph	Clerk	Winnipeg	Killed in action
Anderson, John Alexander	Assistant agent	Newdale	Killed in action
Arnold, John Henry	Clerk	Parkdale	Wounded

Wiseman, Stanley W. E.	Storeman	Winnipeg	Wounded

Shown on honor lists to date:—Killed, 666; wounded, 1,506. Total, 2,172.

# Freight Rates Advanced by Order in Council.

The following semi official statement for the press was given out in Ottawa, July 25:—Acting on a report prepared by the Board of Railway Commissioners, an order in council has been passed increasing freight rates to an amount sufficient to meet the increased operating cost imposed on the railways by the new wage schedule. The increase will average about 20%. The freight rate increases are the direct outcome of the acceptance in Canada of the McAdoo award, which applies to both government railways and railways owned by private companies.

The railway companies, confronted with demands for increased wages, stated that they were willing to grant the increases allowed by Director-General McAdoo in dealing with the wages of railway employees in the U.S. They recognized the general similarity of operating conditions in Canada and the U.S., and admitted that in general wage scales of railway employees in this country were similar to those in force on the other side. The railway employees are taken in their daily work from one side of the line to the other, and the brotherhoods are identical in their scope. Recognizing these facts and conditions, the Dominion Government made effective in Canada the so-called McAdoo scale of wages. As a corollary the Canadian railways insisted that the McAdoo scale of freight rates, which were deemed necessary in order to carry the increased cost of railway operation in the U.S., should be adopted here.

The condition of the Canadian railways made this result all the more certain. The earnings of the Grand Trunk in 1916 of £1,200,000 dropped in 1917 to such an extent that there were practically no net earnings, and no dividends on any of the preferred stock could be or were declared. There was also a drop in the first six months of this year in the C.P.R. net earnings of \$6,500,000 compared with the first six months of 1917. The deficit on the Canadian Northern was increasing and there was no other way in which money for meeting the increased scale of wages which the men demanded could be raised.

By order in council passed under the War Measures Act the government, after considering a report prepared by the Board of Railway Commissioners on the rate situation in Canada, has practically adopted the McAdoo increases. There are certain exceptions made in cases where it was found that the adoption of the scale would unduly limit or interfere with Canadian commerce. The export and import rates system in Canadian territory where rates were not increased, continue to stand, and can only be increased subject to a maximum of the lowest rate or rates in U.S. territory to or from the seaboard ports. In like manner the low value ore in the Kootenay district, which could not well stand the U.S. increase, is held down to the stone and rubber commodity basis.

The effect of the application of the U.S. increases brings about a different increase in Canadian territory in the East and West. In the U.S. eastern territory advances were made by the Interstate Commerce Commission, in the so-called 15% case. Advances were also made in Canadian territory by the Board of Railway Commissioners in both Eastern and Western Canada, but no advances were granted in U.S. territory on the lines of the Northern Pacific and Great Northern Railways in territory immediately con-

tiguous to the Canadian West. In applying the increases, therefore, in eastern territory the McAdoo increases are calculated upon the rates advanced by the board following the action which has been taken in U.S. eastern territory, while in western territory the advances granted by the Board of Railway Commissioners are struck out and the McAdoo increases calculated upon the former rates.

This percentage of increased rate will not, however, be actually effective. On the short hauls, where the total freight bill does not constitute a large percentage of the value of the article carried, somewhat higher increases would be instanced, but on the longer hauls on most of the important commodities rates are held down to a maximum increase, and in other cases by flat increases, which cannot be exceeded, no matter how long the haul may be. It is impossible to tell what the exact percentages of increase will be that the railways will obtain under the McAdoo order. In all probability it will not exceed 20%.

The increase granted cannot add anything to the net revenues of the companies. It may fall short of meeting their increased expenses. The increased operating cost entailed by applying the McAdoo award is some \$53,000,000, and in 1917, when the Canadian railways probably earned the highest rates in their history, the gross freight earnings amounted to but some \$215,000,000. The government has ordered the Board of Railway Commissioners to check each month the operations of Canada's three main roads—the Canadian Pacific, Grand Trunk and Canadian Northern—so that if it is found that any increase is unnecessary it may be promptly reduced to the proper figure. The board is also ordered to make a monthly report to the cabinet covering the operation of the new tariff.

One important effect of the order will be to bring the western and eastern scale of rates more in line and remove the grounds for complaint by the westerner that he is more heavily taxed for the operation of Canada's railways than is the easterner. In this connection it may be noted that one of the first judgments of the present Chairman of the Board of Railway Commissioners was to reduce the express companies' tariffs in western territory 20%, leaving the rates in the eastern territory as they were. This reduction was followed by the general reduction in freight rates in western territory, which was brought about by the board's judgment in the western rate case, and the board in 1916 increased the freight rates in eastern Canada again, bringing the scales nearer a parity.

## The Order in Council.

Following is the order in council passed by the Dominion Government, July 27, on the Minister of Railways' recommendation:—

Notwithstanding the provisions of any legislation heretofore passed, or of any rate-limiting agreement heretofore made, the charges for the carriage of freight on all railways owned, operated or controlled by the Government of Canada, and all other railways subject to the jurisdiction of the Parliament of Canada, shall be increased to the extent and in the manner hereinafter set out, that is to say:

### Territory East of Ft. William.

Section 1—Class Rates.—All class rates in eastern territory shall be increased 25%.

Section 2—Commodity Rates.—(a) Commodity rates on the following articles in carloads shall be increased by the amounts set opposite each:—

**Coal**—Where rate is 0 to 49c a ton—15c a net ton of 2,000 lb.

Where rate is 50 to 99c a ton—20c a net ton of 2,000 lb.

Where rate is \$1 to 1.99 a ton—30c a net ton of 2,000 lb.

Where rate is \$2 to \$2.99 a ton—49c a net ton of 2,000 lb.

Where rate is \$3 or higher per ton—50c a net ton of 2,000 lb.

**Coke**—Where rate is 0 to 49c a ton—15c a net ton of 2,000 lb.

Where rate is 50 to 99c a ton—25c a net ton of 2,000 lb.

Where rate is \$1 to \$1.99 a ton—40c a net ton of 2,000 lb.

Where rate is \$2 to \$2.99 a ton—60c a net ton of 2,000 lb.

Where rate is \$3 or higher a ton—75c a net ton of 2,000 lb.

**Ores, Iron**—30c a net ton of 2,000 lb., except that no increases shall be made in rates on ex-lake ore that has paid increased all-rail rate before reaching lake vessels. The increase of 30c shall be added to tariffs in force prior to Mar. 15, 1918, and the increase since allowed by the Board of Railway Commissioners is struck out.

**Stone, artificial and natural, building and monumental, except carved, lettered, polished or traced**—2c per 100 lb.

**Stone, broken, crushed and ground**—1c per 100 lb.

**Sand and gravel**—1c per 100 lb.

**Brick, except enamelled or glazed**—2c per 100 lb.

**Cement**—2c per 100 lb.

**Lime and plasters**—1½c per 100 lb.

**Lumber and other forest products** not otherwise herein specifically dealt with—a flat rate of 1c per 100 lb. to be added to the tariffs in force prior to Mar. 15, 1918, and the rate so obtained to be then increased by 25%, but not exceeding 5c per 100 lb., the increase since granted by the Board of Railway Commissioners to be disallowed.

**Pulpwood**—25c%, but not exceeding an increase of 5c per 100 lb.

**Cordwood, slabs and mill refuse, for fuel purposes**—1c per 100 lb.

**Wheat**—Strike out limitation imposed of 2c per 100 lb. in increase allowed by Board of Railway Commissioners, effective Mar. 15, 1918, and add 25% increase, but not exceeding 6c per 100 lb.

**Other grains, flour, and other milled products**—To be increased to new wheat rates.

**Live stock**—25%, but not exceeding an increase of 7c per 100 lb. where rates are published per 100 lb., or \$15 a standard 36 ft. car, where rates are published per car.

**Packing-house products and fresh meats**—25%.

**Bullion, base (copper or lead), pig or slab and other smelter products**—25%.

**Sugar, syrup and molasses, by cancelling existing commodity rates and applying 5th class rate as increased hereunder.**

**Ice**—25%, calculated on tariffs in effect prior to Mar. 15, 1918. Increases since allowed by Board of Railway Commissioners to be disallowed.

(b) Commodity rates not included in foregoing list increased 25%.

(c) In applying increases prescribed in this section, the increased class rates applicable to like commodity descriptions

and minimum weights between the same points are not to be exceeded.

#### Territory West of Fort William.

(a) All class rates increased 25%, calculated on tariffs in force prior to Mar. 15, 1918; increases since allowed by Board of Railway Commissioners to be disallowed.

**Coal and coke**—Rates to be increased as rates on these commodities are increased hereunder in eastern territory.

**Ores, iron**—Rates to be increased same as rates on these commodities increased hereunder in eastern territory.

**Ores, other**—On ores not exceeding in value \$25 a net ton, 1c per 100 lb.; on ores valued over \$25 to \$50, 2c per 100 lb.; on ores valued over \$50 to \$100, the 10th class rates of the merchandise distributing scale as increased hereunder shall apply; on ores over \$100 in value, the 10th class rates of the merchandise standard scale as increased hereunder shall apply.

**Stone** (artificial and natural), building and monumental, except carved, lettered, polished or traced—by the addition of 2c per 100 lb. to the tariff in force prior to Mar. 15, 1918; increases subsequently granted by Board of Railway Commissioners to be disallowed.

**Stone, broken, crushed and ground, also sand and gravel**—by the addition of 1c per 100 lb. to tariffs in force prior to Mar. 15, 1918; increases since allowed by Board of Railway Commissioners to be disallowed.

**Brick, except enamelled or glazed**—by the addition of 2c per 100 lb. to tariffs in force prior to Mar. 15, 1918; increases since granted by Board of Railway Commissioners to be disallowed.

**Cement**—2c per 100 lb.

**Lime**—1½c per 100 lb. on tariffs in force prior to Mar. 15, 1918; increases since allowed by Board of Railway Commissioners to be disallowed.

**Lumber**—25%, but not exceeding an increase of 5c per 100 lb.

**Grain and grain products to Fort William and Port Arthur**—By addition of increases granted under the McAdoo order for similar mileages in adjacent U.S. territory, to rates in effect prior to Mar. 15, 1918. Where more than one tariff of a U.S. carrier in an adjacent state exists, the rate increase shall be that allowed on the lowest normal rate for the same or similar mileages in such contiguous territory under the McAdoo order; increases since granted by Board of Railway Commissioners to be disallowed. Provided that rates on said products shall not be greater from Edmonton than from Calgary.

**Grain and grain products between local points and to the Pacific coast**—By the addition of 25%, but not exceeding an increase of 6c per 100 lb. to tariffs in effect prior to Mar. 15, 1918, and by disallowing increases since made by the Board of Railway Commissioners.

**Livestock**—By the addition of 25%, but not exceeding an increase of 7c per 100 lb. where rates are published per 100 lb., or \$15 a standard 36 ft. car where rates are published per car; increases to be based on tariffs in effect prior to Mar. 15, 1918; increases since allowed by Board of Railway Commissioners to be disallowed.

**Packing-house products and fresh meats**—By the addition of 25% to tariffs in effect prior to Mar. 15, 1918; increases since allowed by Board of Railway Commissioners to be disallowed.

**Bullion, base (copper or lead), pig or slab, and other smelter products**—Rates from British Columbia smelters to Toronto and Hamilton to take rates from con-

tiguous U.S. smelting and shipping point, viz.: Northport, Wash., to Buffalo, N.Y., viz., 71½c per 100 lb.; Montreal to take the New York rate of 81½c per 100 lb. Rates to Canadian points, other than points in Eastern Canadian territory, to be advanced 25%. Rates on zinc for domestic consumption to be the same as on copper and lead.

**Sugar, syrup and molasses**—To be made on the basis and principle adopted hereunder for eastern territory.

(b) Commodity rates not included in foregoing list shall be increased 25%, calculated on tariffs in force prior to Mar. 15, 1918; increases since authorized by Board of Railway Commissioners to be cancelled.

(c) In applying the increases prescribed in this section, the increased class rates applicable to like commodity descriptions and minimum weights between the same points are not to be exceeded.

#### Territories Both East and West.

**Minimum Charges**—(a) After the increases hereunder made in class rates, no rates shall be applied on any traffic moving under class rates lower than the amounts in cents per 100 lb. for the respective classes as follows:

Classes	1	2	3	4	5	6	7	8	9	10
Rates	24	21	18	15	12	11	9	10	10	7½

(b) The minimum charge on less than carload shipments shall be as provided in Canadian Freight Classification, but in no cases shall the charge on a single shipment be less than 50c.

(c) **Class Rates** between eastern and western points—The portion of the rate applicable to eastern territory to be increased 25%, and the portion applicable to western territory, 25%, based on rate in effect prior to Mar. 15, 1918; advances subsequently allowed by board in western territory to be disallowed.

**Commodity rates** between eastern and western points—On that portion of the rate applicable to eastern territory, the appropriate increase granted hereunder for the commodity for local movements in eastern territory; and on the western portion, the appropriate increase granted hereunder for the commodity for local movement in western territory. Advances allowed by Board of Railway Commissioners in western territory, effective Mar. 15, 1918, to be disallowed.

(d) **Import rates**—To be increased, subject, as a maximum, to lowest rates obtaining from Baltimore or any North Atlantic seaport in the U.S. to the same destinations, except that the rates from Halifax, N.S., shall be increased so as to continue on the present relative basis.

(e) **Disposition of fractions**—In applying rates, fractions shall be disposed of as follows:

(1) Rates in cents, or in dollars and cents, per 100 lb. or per package. Fractions of less than ¼ or 0.25 to be omitted. Fractions of ¼ or 0.25 or greater, but less than ¾ or 0.75, to be shown as ½. Fractions of ¾ or 0.75 or greater, to be increased to the next whole figure.

(2) Rates per ton—Amounts of less than 5c to be omitted. Amounts of 5c or greater, but less than 10c, to be increased to 10c.

(3) Rates per car—Amounts of less than 25c to be omitted. Amounts of 25c or greater, but less than 75c, to be shown as 50c. Amounts of 75c or greater, but less than \$1, to be increased to \$1.

(f) **Observance of differentials**—In establishing the freight rates herein ordered, while established rate groupings and fixed differentials are not required to be used, their use is desirable, if found practicable, even though certain rates

may result which are lower or higher than would otherwise obtain.

(g) All schedules, viz., tariffs and supplements, published under the provisions of this order, shall bear on the title page the following, in bold-face type: "This schedule is published and filed on one day's notice with the Board of Railway Commissioners for Canada, pursuant to order in council No. 1863."

The Board of Railway Commissioners shall obtain from the three larger railway systems, the Grand Trunk, Canadian Pacific and Canadian Northern, the results of railway operation per month, and report on the same monthly to the Governor in council, through the Minister of Railways and Canals, to the end that, should the earnings of the said companies under this order be greater than the sum required to meet increased costs and permit transportation to be properly and efficiently carried on, the appropriate reduction in the rates fixed shall be made. The said reports and the books, accounts and records upon which the same are based, shall be open to examination and audit by the Government of Canada, under such regulations as may be hereafter prescribed by the Governor in council.

The provision herein, and the rates herein prescribed, shall be effective, if filed with the Board of Railway Commissioners, as and from Aug. 1, and shall remain in force for the duration of the present war, and until further orders, subject to the provisions of the section next preceding. Increase of rates may become effective after Aug. 12, 1918, and as and when filed.

### Grand Trunk Pacific Railway Betterments.

The company's traffic will, we are officially advised, enter Saskatoon, Sask., by a connection with the C.P.R. tracks east and west, the C.P.R. tracks, yards and facilities between the two points of connection being joint between the two companies. On the east the connecting line will start from the G.T.P.R. at Duro, connecting with the C.P.R. east of Engen, 3.23 miles. The western connecting line was parallel the joint spur to the government elevator, 0.945 of a mile.

The coal mixing plant at Edson, Alta., is, we are officially advised, being erected to utilize western Canadian coals. The products of three mines will be combined and mixed in this plant to give a fuel which, it is believed, will be entirely satisfactory for railway purposes. It will also enable full use being made of coal offering. The plant will have a reinforced concrete foundation and hoppers. The coal will be carried from the hoppers by conveying machinery to a discharging bin, from which it will either be loaded by car loaders into box cars or directly from the bin into gondola cars. The conveying plant will be in duplicate, and will have a capacity of 150 an hour. It will be operated by electric power.

The station to be built at Prince Rupert, B.C., will, we are officially advised, be a brick or tile and stucco structure, with the usual waiting-rooms, offices, etc., and an umbrella train shed. (July, pg. 297.)

The Canadian Government Railways, on July 22, put an embargo on the transfer of automobiles between the Nova Scotia and New Brunswick mainland and Prince Edward Island, and vice versa, so as not to interfere with freight traffic, which has been very heavy lately.

## Canadian Northern Railway Construction, Betterments, Etc.

**Eastern Lines Track Renewals.**—We are advised that it had been arranged that the C.N.R. should receive 67 lb. rails sufficient to lay 75 miles of track, out of the rails ordered by the Russian Government and lying at Vancouver, B.C. These rails were to be used to replace 55 miles of 56 and 60 lb. rails on the Quebec & Lake St. John Ry., and 20 miles to replace rails of similar light weight on the Halifax & South Western Ry. There appears to be some difficulty, temporary at least, in obtaining the release of these rails from Vancouver.

**Quebec Union Station.**—S. J. Hungerford, General Manager, Eastern Lines, was in Quebec, July 10, looking into the company's terminal facilities there. According to a press report, it is intended to build a passenger and freight station on St. Andrew St., on the site occupied formerly by the old Quebec & Lake St. John Ry. station, the new building to be used jointly by the C.N.R. and the Quebec & Saguenay Ry., which is a part of the Canadian Government Railways system. The new building will be larger than the one which has been demolished, as it will be laid out to meet the requirements of the lines mentioned for some years to come.

**Leaside Terminal Yards.**—The new terminal yard near Toronto lies immediately north of the C.P.R. right of way, and extends from opposite Leaside Jct. station easterly. The work at present in hand is the construction of a freight yard for about 600 cars; a passenger car yard for about 140 cars; a circle track for turning trains, and the buildings which were described in Canadian Railway and Marine World for July. The yards are planned so that additions may be made as required without interference with the work now being done. The grading of the yards is, we are officially advised, approximately 50% completed; the locomotive house and store, and the ice house, are nearly completed; the walls of the passenger car shop are practically completed; the foundations of the general store are in; the water tank is erected, and the foundations for the coaling plant and the turntable are nearly finished. The whole of the buildings are being erected by the company's own forces under the direction of G. C. Briggs, Supervisor of Buildings, and the company's own gangs will lay the rails and ballast the track. The cranes will be supplied by Northern Crane Works, Walkerville, Ont., and the coaling plant by Canadian Fairbanks-Morse Co.

**Ontario District.**—We are officially advised that a contract has been let to Chambers, McQuigge & McCallrey for building a deviation on the Toronto-Sudbury line, about 1.25 miles, between mileage 139 and 141 on the Muskoka Sub-division. The purpose of the diversion is to avoid three trestles, the filling of which would be an expensive process. The diversion will reduce the gradient slightly and give a better alignment. The greater part of the grading will be through rock, and it is not expected to have the work completed until April, 1919.

**Central District.**—Application was made to the Regina, Sask., City Council, Jan. 11, for permission to build a spur track through Block 80, in order to supply trackage facilities to the T. Eaton Co. M. H. MacLeod, General Manager, was advised that formal permission would be granted at the council's next meeting. (July 16.)

**Western District.**—We are officially advised that a contract has been let to W. A. Dutton, Winnipeg, for grading on the line between Hanna and Medicine Hat, Alta. Some grading had been done previously and it is said that the present contract covers the section of the line to the proposed point of crossing of the Red Deer River.

With reference to track laying on the Oliver-St. Paul de Metis line, we are officially advised that everything depends upon when delivery of the rails can be made. The same condition, we are advised, applies to all other western lines upon which it is proposed to lay rails, details of which were given in our July issue, pg. 293.

In respect to a press report from Edmonton, Alta., that the company proposed to take up the rails on its line from Alberta Beach to Lobstick, 36 miles, and to run its trains over the approximately parallel Grand Trunk Pacific Ry., we are officially advised that the approval of the Railways Department would have to be obtained before this could be done.

**Vancouver Terminals.**—Tenders are reported to have been called for shifting of a further 2,000,000 cubic yards of filling in connection with the reclaiming of the False Creek area for railway purposes by the C.N. Pacific Ry.

**False Creek Wharf Litigation.**—The Dominion Department of Public Works has decided that the Champion and White wharf in the False Creek area of Vancouver, B.C., was erected without the department's sanction and must be removed, unless terms be arranged with the Canadian Northern Ry. and the city for its remaining. The owners of the wharf secured an injunction against the C.N.R., preventing it going ahead with part of its seawall construction because it interfered with access to the wharf. The injunction was upheld on appeal. The Department of Public Works' action will enable the railway to proceed with its development work.

**Vancouver Island Lines.**—In speaking at Victoria, the British Columbia Premier gave some details of his late negotiations with the Dominion Government upon the C.N.P. Ry. situation as affecting the B.C. Government since the company's system had been taken over by the Dominion. The principal portion of his speech, however, was directed to efforts made to get sufficient steel rails from those bought for Russia and lying at Vancouver, in order to lay track on the C.N.P.R. on Vancouver Island from Victoria to Sooke, 40 miles, and from Nitinat to Cowichan, 30 miles, in order to aid in getting out spruce for aeroplane work and logs for ship construction. If this could have been arranged for, the Imperial Munitions Board would have undertaken to build a logging railway through the timber limits to connect with the line. The Dominion Minister of Railways advised the B.C. Government, June 24, that the laying of additional track on the C.N.P.R. lines on Vancouver Island was bound up with the question of the province selling additional land on the Songhees reserve in Victoria for terminal purposes, and asked that a price be fixed for the land required. If this were done, the Dominion Government would accept rails to lay 140 miles of track, which the B.C. Government had offered to loan out of what it had purchased for the Pacific Great Eastern Ry., such rails to be returned from the Rus-

sian rails or from elsewhere. Seventy miles of the rails so loaned would be used on the lines mentioned on Vancouver Island, and the other 70 miles would be delivered in Alberta. On behalf of the B.C. Government, the B.C. Premier denied that there had been any difficulty about Songhees Reserve land, and added that the price would be fixed and the rails supplied.

The Premier is also reported to have stated in an interview on July 4 that consent to action in respect to further construction on Vancouver Island must be obtained from C.N.P.R. officials, and that the company objected to paying any higher price for terminal lands on the Songhees Reserve than the price paid by the C.P.R. (July, pg. 293.)

An Ottawa dispatch of July 19 stated that an agreement had been reached between the Dominion Railways Department and the British Columbia Government under which the Pacific Great Eastern Ry. rails offered by the B.C. Government will be used to lay 70 miles of track on C.N.R. lines on Vancouver Island, as soon as they can be delivered. The condition upon which the C.N.R. will do the work is said to be that the B.C. Government will grant it an additional 40 acres of the Songhees Reserve lands at Victoria for terminal purposes.

We were officially advised, July 25, that an arrangement has been made between the Dominion Minister of Railways, the Premier of British Columbia, and the C.N.R., subject to approval by the Dominion Government, by which the C.N.R. is to immediately undertake the completion of 70 miles of railways northward from Victoria. The rails are to be taken from a quantity which the province has on hand, in connection with the Pacific Great Eastern Ry., and are to be loaned for the present, pending an adjustment after the war. The province has also agreed to convey for railway terminal purposes at Victoria, about 30 acres of the old Songhees reserve, at \$8,000 an acre. (July, pg. 293.)

**Universal Mileage Scrip in United States.**—The U.S. Railroad Administration has announced that there will be placed on sale on or about Aug. 1 a universal mileage scrip at the basic rate of 3c a mile. Each coupon of the ticket will represent the value of 3c and can be used for the payment of sleeping and dining car charges and transportation of excess baggage, as well as transportation charges on all trains on railways under government control. The advantages of this simple form of ticket are obvious, and the change is expected to relieve the pressure on ticket agencies at busy centers. The war tax will be collected by conductors at the time of the presentation of the mileage scrip.

**Deputy Minister of Railways.**—With reference to the announcement in our last issue that Major Graham Airdrie Bell, C.M.G., heretofore Assistant to the Minister, and Financial Comptroller, Railways and Canals Department, had been appointed Deputy Minister, as well as Assistant to the Minister, the positions being amalgamated, we are advised that he has been appointed acting Deputy Minister, A. W. Campbell, Deputy Minister, having been granted a year's leave of absence, on the expiration of which, Major Bell will automatically take the title of Deputy Minister.

# Canadian Transportation Men, Engineers, Etc. in the War.

Timiskaming & Northern Ontario Railwaymen's Patriotic Association.—Up to Mar. 31, \$88,397.45 had been contributed to the Red Cross and Patriotic funds, exclusive of contributions by members of the commission.

## PERSONAL NOTES.

**Lieut. H. D. Brydone-Jack**, Vancouver, B.C., who has been awarded the Military Cross, was formerly on survey work on C.P.R. western lines.

**Lieut. A. G. Bonn**, Canadian Railway Troops, has been awarded the Military Cross. When the enemy had penetrated the line, he rallied his men and led them forward again to the original line, which, despite the intense shell and machine gun fire, the company maintained, although both its flanks were exposed. When the order to withdraw had been given, he assisted in carrying away a wounded non-commissioned officer under extremely heavy fire. His marked courage and gallantry, and his untiring devotion to duty, contributed greatly in holding up the enemy's advance.

**E. W. Camp**, son of W. J. Camp, Assistant Manager of Telegraphs, C.P.R., Montreal, has been given a commission as lieutenant in the Canadian Engineers, and assigned to overseas service. **Lieut. F. E. Camp**, another son, is an instructor in an Engineers' camp in England.

**Lt.-Col. F. F. Clarke**, commanding the 2nd Canadian Railway Troops, who, prior to entering the army was Chief Surveyor, Canadian Northern Ry., at Toronto, is referred to in a London, Eng., cablegram of July 27, as follows:—"Singular testimony as to how Canadian railway troops can fight as well as build railways is given in a story regarding the conferment of a bar to the Distinguished Service Order, possessed by **Lt.-Col. Frederick Fieldhouse Clarke**, of Toronto. In an attack lasting four days, he organized 16 Lewis guns from his battalion, making all arrangements for munitions to be brought on his own lorries. This unit was entirely self-contained. It is officially stated that 'The promptitude and alacrity with which they responded to the call for volunteers, and the splendid manner in which the defence was organized, and the coolness and enthusiasm displayed by all ranks, were largely due to the courage and inspiring example of the fine leadership of the commanding officer.'"

**Lieut. E. W. DuVal**, who has been reported as killed in action, was born at Toledo, Ohio, June 5, 1885, and entered railway service, July 1, 1902, since when he has been, to June 1, 1905, in Superintendent's office, Canadian Northern Ry., Winnipeg, and at Port Arthur, Ont.; June 1, 1905, to Jan. 2, 1911, successively, secretary to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to Superintendent, District 2, Central Division, C.P.R., Winnipeg; assistant chief clerk to General Superintendent, Central Division, C.P.R., Winnipeg; chief clerk to General Superintendent, Western Division, C.P.R., Calgary, Alta.; chief clerk to Assistant General Manager, and, later, to General Manager, Western Lines, C.P.R., Winnipeg; Trainmaster, C.P.R. Terminals, Calgary, Alta.; Jan. 2, 1911, to Apr. 6, 1912, Superintendent, District 1, Saskatchewan Division, C.P.R., Moose Jaw; Apr. 6, 1912, to May, 1913, Superintendent, District 4, Manitoba Division, C.P.R., Souris; May, 1913, to Feb., 1917, Superintendent, Saskatoon Division, Sas-

katchewan District, C.P.R., Saskatoon. He took an officer's training course at Regina, Sask., early in 1917, and recruited a company of reinforcements for the P.P.C.L.I., and subsequently went overseas with them.

**Capt. J. E. Finlay**, Canadian Railway Troops, has been awarded the Military Cross. He organized and carried out an urgent piece of work under most difficult conditions, working for two days and nights without rest until it was completed. On the following morning, when the enemy was advancing, he showed great coolness in evacuating all his men under heavy shell fire.

**Major Chas. Flint**, B.A.Sc., 4th Battalion, Canadian Railway Troops, formerly Resident Engineer, C.P.R., Edmonton, Alta., who has received two promotions, has been awarded the Croix de Guerre for gallant and distinguished service.

**Capt. R. D. Galbraith**, Canadian Railway Troops, has been awarded the Military Cross. On finding that the troops of other units on his right flank had withdrawn, he brought his company out in good order to a support trench, 50 yards in the rear. Going forward himself with a machine gun to his old position, he inflicted very heavy casualties on the enemy. Having expended all the available ammunition, he withdrew his men again to a comparatively sheltered position, where he reorganized and reinforced his company with men of other units, and led it forward to his first position, and maintained it until relieved. His personal example, great courage, and devotion to duty had a most inspiring effect on all ranks.

**Acting Lieut.-Col. H. F. H. Hertzberg**, D.S.O., M.C., has been gazetted as Temporary Lieutenant-Colonel. He is a son of **A. L. Hertzberg**, Engineer, Ontario District, C.P.R., Toronto.

**Major James Hesketh** of the Canadian Railway Troops, was decorated with the Distinguished Service Order and the Military Cross, at an investiture at Buckingham Palace, July 9.

**Lieut. A. W. Hott**, Canadian Railway Troops, has been awarded the Military Cross. During an enemy attack, he was detailed with a small party to keep forward light railways open for traffic. He kept the lines in operation under heavy shell fire until he was almost surrounded, and then skilfully withdrew his men without casualties. By his coolness and determination he saved a large quantity of ammunition and valuable material.

**Lieut. C. E. Knox**, who was mentioned in dispatches by Field Marshal Sir Douglas Haig recently, is a son of **R. R. Knox**, Traffic Superintendent, Winnipeg Electric Ry. He left Canada with the 101st Battalion, and is now with the 16th Canadian Scottish, and has been in France for two years. Prior to entering military service he was chief clerk to his father in W.E.R. service.

**Lieutenant L. Lanigan**, of the Royal Air Force, reported killed in an airplane accident in England, July 12, was son of **W. B. Lanigan**, Assistant Freight Traffic Manager, C.P.R. Winnipeg.

**Major T. A. Loudon**, B.A.Sc., formerly of the Engineering Faculty, Toronto University, and of **James, Loudon & Hertzberg**, engineers, Toronto, has returned from the front, having been invalided in January. He was mentioned in dispatches.

**Capt. Clarence M. Marpole**, whose return on leave in June, was mentioned in our last issue, died at Vancouver, B.C., July 16, aged 38, following an operation for the removal of an abscess. He left Canada in 1915, with the 239th Railway Construction Corps and was later transferred to the 3rd Canadian Railway Troops, in France. Prior to going overseas, he was in business in Vancouver. He was a son of **R. Marpole**, General Executive Assistant, C.P.R., Vancouver, B.C.

**Col. G. P. Murphy**, of the Canadian Army Service Corps, and President, Ottawa Transportation Co., has been made a Commander of the Order of St. Michael and St. George.

**Lieut. R. S. Richardson**, 13th Light Railway Operating Co., R.E., formerly Superintendent, Canadian Government Railways, Fort William, Ont., writing from France early in June, said: "We have moved several times recently and have been acting in different capacities of labor. The men took it all with good grace, and now we are returning to our railway business once more, and everyone, officers and men, are delighted. We are tracklaying once more and will soon be operating again. I am confident that once the U.S. troops get going in full swing with us the situation will change very rapidly. June 6 was the anniversary of our arrival in France. We celebrated the day by service in the morning and by base ball, a tug of war and a tent pegging exhibition by the Fort Garry Horse in the afternoon, their officers and men being our guests. We had about 500 Canadians in the field."

**Major William Sharp**, Canadian Railway Troops, received the Military Cross at an investiture by the King, July 9.

**W. L. Stone**, formerly agent, C.P.R. Telegraphs, Edmonton, Alta., has been appointed to Y.M.C.A. work under the U.S. Army, and went overseas early in July.

**J. C. K. Stuart**, formerly on the Mount Royal Tunnel & Terminal Co.'s engineering staff at Montreal, has received a commission in the Royal Engineers.

**E. D. Toye**, formerly Division Storekeeper, Canadian Northern Ry., Trenton, Ont., who went overseas toward the end of 1916, as Quartermaster-Sergeant, No. 1 Construction Battalion, has been gazetted as a temporary lieutenant in the Canadian Militia, whilst serving with the Canadian Expeditionary Force, dating from Nov. 30, 1916.

**Company Q.M.S. J. Watson**, Canadian Railway Troops, has been awarded the distinguished conduct medal. During a withdrawal he succeeded in removing all the stores and equipment of his company, under an intense bombardment. On the following day, when rations were urgently needed, he went to a ration dump which was under heavy shell fire, and obtained the necessary supplies. On another occasion, he volunteered to remain behind and endeavor to save stores and equipment under heavy fire. He showed splendid coolness and resource.

**W. Russell Way**, B.Sc., son of **W. B. Way**, Superintendent, District 2, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., has been given a commission as lieutenant in the Canadian Engineers, and is attached to the Canadian Engineers' training depot at St. Johns, Que.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Edmonton & South Western Ry.**—The Edmonton, Alta., City Council has under consideration an application from the Hydro-Electric Power Co. for an extension of time for carrying out its contract to supply power in the city. A necessary part of the company's plans is a railway, from Edmonton to the Blue Rapids on the Saskatchewan River, where the power plant is to be located, and for the construction of which the E. & S.W. Ry. was incorporated by the Dominion Parliament. Under an agreement entered into in Mar., 1916, the company was to begin work in Jan., 1917, and was, within 2½ years, to expend \$1,500,000, and during the next two years approximately an additional \$2,000,000, unless prevented by causes beyond its control. The company reported that it had spent up to June, \$442,092 in connection with its plans, and that owing to war conditions the money for further development could not be raised. (May, pg. 186.)

**Grand Trunk Ry.**—Application is reported to have been made to the United States Government for aid in the completion of the Northern New England Ry. from Palmer, Mass., to Providence, R.I. This line is being built under the auspices of the Central Vermont Ry., which is controlled by the G.T.R. The line is about 65% completed, but no work has been done on it for several years. It is asked that aid to the extent of \$5,000,000 be provided. The matter came before F. L. Stuart, Chairman of the Budget Committee, Eastern Railways Region, in New York, July 2, and after hearing arguments, it was reported July 4, that the application would be given full consideration. (May, pg. 186.)

**Intercolonial Ry.**—Tenders were received to July 24, for building a siding 2,300 ft. long at mileage 21.3 from Moncton on the main line to Truro, N.S.

Some of the old shops in Moncton, N.B., yards are being pulled down to provide space for additional yard tracks.

Tenders are under consideration for building 40,000 gall. water tanks at Hampton, N.B., and West Bay Road, N.S.

Additional siding accommodation is being provided at Sackville, N.B., to handle the increasing traffic over the Prince Edward Island car ferry. A press report states that about three miles of new tracks are being laid.

At a celebration at Albert, N.B., July 1, in connection with the taking over of the Salisbury & Albert Ry. as an Intercolonial Ry. branch line, L. S. Brown, General Superintendent, Eastern Lines, C.G.R., was reported as saying that the work of bringing the line up to branch railway standard would be proceeded with at once.

C.G.R. officials made a trip of inspection recently over the Elgin & Havelock Ry., which was taken over as an Intercolonial Ry. branch June 1. It is said that the trip was made to see what work has to be done to bring the line up to the branch lines standard.

Work on the repair of the Moncton & Buctouche Ry. between Moncton and Buctouche, N.B., acquired recently as an Intercolonial Ry. branch, was started by the C.G.R. staff July 1. Some new rails are being laid, and a considerable amount of ballasting is being done. The principal part of the work is in the vicinity of Notre Dame, 19 miles from Moncton. (July, pg. 285.)

**Pacific Great Eastern Ry.**—A press report from Victoria, July 12, states that orders have been given by the British

Columbia Government for laying of rails on the right of way graded northwesterly from Clinton, B.C. The report says 2½ miles of grading are ready for the track; that 50 cars of rails have been delivered, and that 30 more cars of rails are on the way. It is also expected to complete about six or seven more miles of grading and lay track on it this season.

It is reported that for the accommodation of trade between North Vancouver and Squamish, plans and specifications are being made for a nine car barge, and that tenders will be asked for its construction. The railway at present rents a barge from the C.P.R. at \$60 a day. (June, pg. 241.)

**Quebec, Montreal & Southern Ry.**—A Quebec press dispatch of July 9, stated that advices have been received from the Delaware & Hudson Co., owning the railway, that nothing will be done in the way of extending the railway from Fortierville to Quebec until after the war, by which time the question of terminal facilities for all south shore lines in Quebec will probably be settled.

**Quebec & Saguenay Ry.**—Canadian Government Railways officials made a trip of inspection over the completed section of this railway between St. Joachim and Baie St. Paul, July 5, in connection with arrangements for putting a regular train service in operation. The section of line acquired from the Quebec Ry., Light & Power Co. from St. Joachim to Quebec will be used for the operation of a service from Quebec to Baie St. Paul. Construction is in progress between Baie St. Paul and Murray Bay, and it is expected that this section of the line will be completed in the autumn. The length of the line from St. Joachim to Murray Bay is 54.54 miles, and connection is made there with a line 7.50 miles long, completed in 1911, to Point au Pic, near Nairns Falls.

Tenders were received to July 23 for building of stations, section houses, tanks, etc.

A project is reported to be under consideration for connecting the line with the Quebec & Lake St. John Ry. (C.N.R.) in Quebec, and using the terminals of that railway jointly. (See Canadian Northern Ry. Construction, etc.) (June, pg. 241.)

**St. John & Quebec Ry.**—The New Brunswick Government, on July 10, decided to permit the Nova Scotia Construction Co. to complete its contract for the building of the extension of this line, provided satisfactory guarantees are given that the work will be completed in the autumn. The section under construction is from Gagetown to a junction with the C.P.R. near Westfield, N.B., 37.8 miles. Track was laid during 1917, from Gagetown to Queenstown, 8.5 miles, and considerable progress has been made in grading on the remaining mileage. (July, pg. 285.)

**Toronto, Hamilton & Buffalo Ry.**—The Hamilton City Council has, after considerable delay, decided to grant a lease to the company for five years of the lands necessary for the extension of the company's yards in the city. The city opposed the extension of the yards, but the Board of Railway Commissioners approved the company's plans and recommended the city to grant a lease, on a basis of 7% of the original cost of the land, \$2,960, or on the present assessed value, as may be thought advisable. The city had asked \$933 a year, together with the construc-

tion of a public road along the property leased.

Negotiations between the Saltfleet Tp. Council and the company in connection with building a second track are in progress. It was reported July 12, that some preparatory work was being done between lots 32 and 33, con. 6. (June, pg. 241.)

## Canadian Northern Railway Construction, Betterments, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$3,844,960	\$2,940,000	\$ 904,960	\$ 292,500
Aug.	3,405,200	2,812,000	593,200	478,800

## Mainly About Railway People Throughout Canada.

Mrs. E. N. Bender, wife of the General Purchasing Agent, C.P.R., died suddenly at Montreal, June 24.

Francis J. Cronk has been appointed Assistant Professor of Railway Engineering, Faculty of Applied Science, McGill University, Montreal.

Miss Florence Odell Bamford, only daughter of W. B. Bamford, District Freight Agent, C.P.R., Toronto, died there July 7, after a long illness.

H. G. Kelley, President, G.T.R. and Grand Trunk Pacific Ry., left Montreal early in July, for an inspection trip over the system to the Pacific coast.

S. G. Hatch, Passenger Traffic Manager, Illinois Central Rd., died suddenly in his office at Chicago, Ill., July 12. He was very well known in Canada.

E. D. Donald, who was accidentally killed by electric shock in a Toronto munitions plant, recently, was the only son of E. Donald, Land and Tax Commissioner, G.T.R., Montreal.

A. W. Smithers, Chairman of the Board, G.T.R., London, Eng., has been adopted as the conservative and unionist candidate for the British Parliament, for the Chislehurst Division of Kent, at the next election.

Mrs. T. H. Cooper, who died at Toronto, July 18, was widow of the late T. H. Cooper, at one time in G.T.R. service, and mother of D. D'E. Cooper, until recently, Canadian Freight Agent, Lehigh Valley Rd., Toronto.

S. B. Wass, Engineering Department, Canadian Government Railways, Moncton N.B., while travelling over the track near Penobscus, N.B., July 10, collided with another car, and suffered a compound fracture of a leg.

H. G. Kelley, President G.T.R. and G.T. Pacific Ry., left Montreal, July 6, for Winnipeg. He left Winnipeg for the Pacific Coast July 10, accompanied by W. P. Hinton, Vice President and General Manager, G.T.P.R.

W. R. Smith, Chief Engineer, Edmonton, Dunvegan & British Columbia Ry., Edmonton, Alta., addressed the Calgary Rotary Club, July 11, on the resources of the territory opened for settlement by his company's lines.

Sir Henry Mather Jackson, Bart., Vice Chairman, G.T.R. and Grand Trunk Pacific Ry., and associated with several other railway companies in Great Britain and Havana, has been created a Commander of the Order of the British Empire.

J. F. Kane, who has been elected Secretary, Pullman Co., Chicago, Ill., was born and educated at Ingersoll, Ont., and entered the Pullman Palace Car Co.'s service Sept. 1, 1891, as a telegraph operator, and was appointed Paymaster in 1904, and Assistant Secretary in 1913.

R. E. Marks, who has been appointed Passenger Trainmaster, Eastern Lines, G.T.R., Montreal, entered G.T.R. service Mar. 27, 1897, as brakeman on the Belleville Division, was promoted to conductor May 15, 1906, and acted as such until his appointment to his present position.

Mrs. H. D. Reid, wife of the President, Reid Newfoundland Co., died at St. John's, Nfld., July 12, after a long illness. Although an invalid for many years, she took considerable part in many of the philanthropic organizations brought into being by the war, and contributed largely to them.

D. C. Corbin, formerly President, Spo-

kane International Ry., died at Spokane, Wash., June 28, aged 85. He was considerably interested in railway and mining properties in the west. The Spokane International Ry. was acquired by Minneapolis, St. Paul & Sault Ste. Marie Ry. and C.P.R. interests last year.

John Gordon, who died at Toronto, July 4, aged 88, was born in Scotland, and came to Canada at the age of 22. He entered railway service with the Toronto, Grey & Bruce Ry., and on the absorption of that road by the C.P.R., remained with the latter company, as roadmaster. He retired from active service about 20 years ago.

W. E. Weegar, whose appointment as Trainmaster, Districts 30, 31 and 32, Ottawa Division, Ottawa, Ont., was announced in our last issue, entered G.T.R. service No. 17, 1887, since when he has

W. E. Weegar,  
Trainmaster, Ottawa Division, Grand Trunk Rail-  
way.

been, to Nov. 12, 1899, brakeman; Nov. 12, 1899, to Jan. 20, 1913, conductor; Jan. 20, 1913, to June 22, 1918, Passenger Trainmaster, Montreal.

W. C. Riddell, who has been appointed Advertising Agent, Grand Trunk Pacific Ry., Winnipeg, was born at Port Dover, Ont., and was for many years connected with newspaper and printing work at various point in Ontario. He entered G.T.R. service in 1902, and has since been chief clerk to the General Advertising Agent, G.T.R., Montreal.

F. A. Delano, member of the U.S. Federal Reserve Board, has resigned to accept a commission in the Corps of Engineers, U.S. Army, to engage in railway construction and management in France. He was President and Receiver, Wabash Rd., from 1905 to 1913, at which latter date he became President, Chicago, Indianapolis & Louisville Ry.

E. P. Quirk, who died at Montreal recently, was born in Ireland, and came to Canada in 1874. He was for some time

engaged on harbor works there, and later became associated with various railway undertakings in the vicinity, including the North Shore Ry., Northern Colonization Ry., St. Jerome Ry., South Eastern Ry., Montreal & Chambly, Pontiac Ry., and Montreal & Sorel Ry.

T. H. Gilmour, K.C., Solicitor, Western Lines, Canadian Government Railways, Winnipeg, visited Ottawa, Moncton and Toronto recently, particularly in connection with the operations of the act passed at the Dominion Parliament's last session, which provides that Dominion Government employees shall be subject to the provisions of the workmen's compensation acts in force in the various provinces.

William Edward McGill, who was appointed Assistant Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal, recently, was born at Toronto, Apr. 5, 1884, and entered C.P.R. service in 1900, since when he has been, to 1916, trainman and conductor, Farnham, Que., London and Toronto, Ont.; Feb. to Oct. 1916, Assistant Superintendent, Bruce Division, Ontario District, Toronto; Oct., 1916, to May, 1918, Assistant Superintendent, Sudbury Division, Algoma District, Sudbury, Ont.

John Vass, whose appointment as Assistant Master Mechanic, Ontario Lines, G.T.R., Allandale, was announced in our last issue, was born at Braidwood, Scotland, and went to the U.S. in 1888, and was, to 1894, locomotive fireman, Wabash Rd., Chicago, Ill.; 1894 to 1895, locomotive fireman, G.T.R., Battle Creek, Mich.; 1895 to 1903, locomotive man, G.T.R., Battle Creek, Mich.; 1903 to June, 1918, Road Foreman of Locomotives, Nichols, Mich. On leaving to take up his new duties, he was presented with a chest of silver by associates and other friends.

W. A. Brown, General Superintendent, Western District, Canadian Northern Ry., Edmonton, Alta., who was severely injured in a motor accident on the Brazeau Branch, May 11, is progressing favorably at Jasper Park, Alta., and it is expected that within a short time he will have sufficiently recovered to resume his duties. Five ribs were broken on the right side close to the vertebrae, and from the nature of the break it was expected that it would take some time to heal. He, however, attended at his office until June 17, when he decided to ask for leave of absence.

Leslie Langmuir Grabill, who has been appointed General Baggage Agent, G.T.R., Toronto, was born at Walkerton, Ont., Feb. 6, 1878, and educated in the public and high schools there. After a course in a mercantile business, he entered G.T.R. service in May, 1897, since when he has been to Jan., 1898, freight porter; Jan., 1898, to June, 1905, baggage porter and checker, Bonaventure Station, Montreal; June, 1905, to Dec. 15, 1907, baggage agent, same place; Dec. 15, 1907, to Jan. 1, 1909, chief clerk, General Baggage Agent's office, Toronto; Jan. 1, 1909, to July 31, 1918, Assistant General Baggage Agent, Toronto.

J. J. Sullivan, who has resumed duties as Roadmaster on the C.P.R., after returning from the front, was born at Fishers, N.Y., Apr. 29, 1866. He entered C.P.R. service in July, 1897, since when he has been, to June 20, 1901, rodman, instrument man, etc., on construction; June 20, 1901, to Dec. 1, 1903, Assistant Engineer; Dec. 1, 1903, to Jan. 1, 1907, Construction Engineer; Jan. 1 to Dec. 31,

1907, Assistant Engineer on location; Feb. 13, 1911, to July 11, 1912, Assistant Engineer on construction; Aug. 17 to Oct. 1, 1915, general trackman; Oct. 22, 1915, to July 20, 1916, Roadmaster. He went overseas as Major in the Canadian Railway Troops, and returned early this year.

**John D. Farrell**, who has been elected Vice President, Union Pacific System, was born at Brasher Falls, N.Y., July 31, 1856, and entered railway service as a track laborer in 1877. He was brought to Canada by the late Sir William Van Horne, and was from July, 1882, to May, 1883, chief clerk, and foreman of bridges, buildings and water department, C.P.R., Winnipeg; May, 1883, to Aug., 1884, Assistant Superintendent, Bridges, Buildings and Water Department, Western Lines, C.P.R., Winnipeg. He then returned to the U.S., where his subsequent railway service was given. Latterly he occupied the position of President, Oregon-Washington Rd. and Navigation Co., at Portland, Ore.

**D. H. McDougall**, heretofore General Manager, Dominion Steel Corporation, Sydney, N.S., has retired from that position and has been elected President, Nova Scotia Steel & Coal Co., New Glasgow, N.S., succeeding F. H. Crookard, who has resigned and returned to the United States. Mr. McDougall, who is 39 years of age, started work as assistant to the Dominion Coal Co.'s field engineer, subsequently occupying different positions in that company's service and in that of its successor, the Dominion Steel Corporation, his whole professional and business career having been with those companies, except for two or three years, when he was on engineering and construction work on the New York Central Rd.

**Fred Leonard Lamplough**, whose appointment as Superintendent, Ottawa Division, Eastern Lines, G.T.R., Ottawa, Ont., was announced in our last issue, was born at Cambridge, Vt., Aug. 15, 1867, and entered railway service in Oct., 1882, since when he has been, to Jan., 1883, timekeeper, Canada Atlantic Ry., Alexandria, Ont.; May, 1883, to May, 1884, assistant agent, same road, Greenfield and Alexandria, Ont.; May, 1884, to June, 1885, operator and agent, same road at various points; June, 1885, to July, 1886, operator in dispatcher's office, same road, Ottawa; July, 1886, to Jan., 1900, track dispatcher same road, Ottawa; Jan., 1900, to Apr., 1907, Chief Dispatcher, same road and G.T.R., Ottawa; Apr., 1907, to June, 1918, Trainmaster, G.T.R., Ottawa.

**Louis Drago** who died at Niagara Falls, Ont., July 10, aged 57, from pneumonia after a few days' illness, was born at Prairie Siding, near Chatham, Ont., and entered Great North Western Telegraph Co.'s service about 35 years ago, at Niagara Falls, Ont., as operator. He subsequently entered New York Central Rd. service, and was for several years, to Oct., 1908, Canadian Passenger Agent, Toronto. He was then transferred to Niagara Falls, Ont., in charge of the union ticket office at Clifton Hotel, later re-entering Great North Western Telegraph Co.'s service, latterly occupying the position of night operator at Niagara Falls, Ont. He leaves a widow and eight children and an aged mother. He began work and ended it under Geo. Phemister Local Manager, G.N.W.T. Co., at Niagara Falls.

**G. A. Stokes**, whose appointment as Terminal Superintendent, G.T.R., Toronto, was announced in our last issue, was born in Nassagaweya Tp., Ont., July 23, 1879, and entered G.T.R. service Nov. 15, 1897, since when he has been, to Oct. 15, 1898,

operator, Listowel, Ont.; Oct. 15, 1898, to Mar., 1899, relieving agent; Mar., 1899, to Apr., 1907, agent, consecutively, at Harriston, Wingham, Warton and Brantford, Ont.; Apr., 1907, to Nov. 1, 1910, dispatcher, Stratford, Ont.; Nov. 1, 1910, to Sept. 13, 1912, Yardmaster, Don Station, Toronto; Sept. 13 to Oct. 25, 1912, General Yardmaster, Toronto Terminals; Oct. 25, 1912, to Aug. 10, 1913, Terminal Superintendent, Toronto; Aug. 10, 1913, to Nov. 4, 1915, Division Agent, Ontario Lines, Toronto; Nov. 4, 1915, to June, 1918, Superintendent, Sarnia Tunnel Terminals, Port Huron, Mich.

**J. M. R. Fairbairn**, who has been appointed Chief Engineer, C.P.R., Montreal, was born at Peterborough, Ont., June 30, 1873. He graduated from the School of Practical Science, Toronto, in 1893, and until Aug., 1901, was engaged in survey and construction work, since when he has been, to Nov., 1902, Assistant Engineer, Maintenance Department, Eastern Lines, C.P.R.; Nov., 1902, to Aug., 1904, Resident Engineer, District 4, C.P.R., Ottawa; Aug., 1904, to Aug., 1905, Assistant

**Major Graham Airdrie Bell, C.M.G.**  
Acting Deputy Minister of Railways and Canals.

Engineer, Chief Engineer's office, C.P.R., Montreal; Aug., 1905, to Mar., 1906, acting Division Engineer, Eastern Division, C.P.R., Montreal; Mar., 1906, to Nov., 1907, Division Engineer, Ontario Division, C.P.R., Toronto; Nov., 1907, to Oct., 1908, Division Engineer, Eastern Division, C.P.R., Montreal; Oct., 1908, to Oct., 1910, Principal Assistant Engineer, Eastern Lines, C.P.R., Montreal; Oct., 1910, to Feb., 1911, Engineer of Maintenance of Way, Eastern Lines, C.P.R., Montreal; Feb. to Sept., 1911, acting Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Sept., 1911, to July 1, 1918, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal.

**J. E. Quick**, who has retired from the position of General Baggage Agent, G.T.R., Toronto, after 47 years of service with the company and its acquired lines, was born at Richmond, N.Y., July 19, 1851. He entered railway service in 1871, since

when he has been, to 1874, baggage master and supply clerk, Port Huron & Lake Michigan Ry.; 1874 to 1876, General Baggage Agent and ticket clerk, same road; 1876 to 1884, agent, Port Huron, Mich., and General Baggage Agent, Chicago & Grand Trunk Ry.; 1884 to Apr. 15, 1896, General Baggage Agent, same road, and Detroit, Grand Haven & Milwaukee Ry.; Apr. 15, 1896, he was appointed General Baggage Agent, G.T.R., and Aug., 1908, also General Baggage Agent, Grand Trunk Pacific Ry., relinquishing the latter position in Jan., 1916. He was elected Secretary of the American Association of General Baggage Agents, July, 1885, and has been re-elected at each annual meeting since. He is one of the surviving charter members of the association, which was formed in 1882. Prior to leaving his office, he was presented with an engraved diamond and gold locket, by a number of his associates.

**Major Graham Airdrie Bell, C.M.G.**, who has been appointed acting Deputy Minister of Railways and Canals, was born at Perth, Ont., Oct. 13, 1874, the son of James Bell, at one time Registrar for the south riding of Lanark County, and grandson of Rev. William Bell, a Presbyterian clergyman, who went to Perth, Ont., when it was opened as a military settlement, and was in the British Government's service as a clergyman there. He was educated at Perth public school and the collegiate institute. He entered government service at Ottawa, Dec. 1, 1890, with a temporary appointment in the Post Office Department, and received a permanent appointment in the Railways and Canals Department July 6, 1893, and has since advanced through the various grades in the accounting and auditing branches of the department. He was appointed Financial Comptroller, Sept. 1, 1908, and Assistant to the Minister, Jan. 1, 1917, holding that position until June 22, when the positions of Assistant to the Minister and Deputy Minister were combined, and he assumed the combined duties, with the title, for the present, of acting Deputy Minister. On the expiry of the year's leave of absence granted the Deputy Minister, A. W. Campbell, Major Bell will succeed to that position. He received a commission as lieutenant in the 43rd Duke of Cornwall's Own Rifles in 1900, and has passed the various grades to the rank of major. In 1912 he went to England at the request of the National Rifle Association to act as range officer at Bisley, and is the only Canadian officer who has held that position. At the end of that year he was appointed executive officer of the Dominion Rifle Association, which position he held until the outbreak of war. During 1915, he spent several months in France and England on special service, and was in the 207th Battalion, Canadian Expeditionary Force, during training, when he was recalled to civil duties. He was made a Companion of the Order of St. Michael and St. George in June, 1917.

**John G. Sullivan**, who has resigned as Chief Engineer, Western Lines, C.P.R., Winnipeg, to engage in private practice there, was born at Bushnell's Basin, N.Y., Jan. 11, 1863, and graduated C.E. from Cornell University in June, 1888. He entered railway service in July, 1888, since when he has been, to Mar., 1889, rodman, Great Northern Ry.; Apr., 1889, to Aug., 1890, rodman, instrument man and assistant engineer, Spokane Falls & Northern Ry.; Aug., 1890, to May, 1893, Assistant Engineer, Great Northern Ry. coast lines; July, 1893, to Feb., 1894, Assistant Engineer, Alberta Ry. & Coal Co.; July to Oct., 1894, section foreman, Northern

Pacific Ry.; Oct., 1894, to Apr., 1895, Locating Engineer, Butte Anaconda & Pacific Ry.; Apr. to Dec., 1895, Division Engineer, Kaslo & Slocan Ry.; Dec., 1895, to Feb., 1901, Locating and Reconnaissance Engineer, and Engineer in charge of construction, Columbia & Western Ry.; Feb., 1901, to Sept., 1905, Division Engineer of Construction, Western Lines, C.P.R.; Sept., 1905, to Feb., 1907, Assistant Chief Engineer, Panama Canal; Feb., 1907, to Sept. 15, 1908, Manager of Construction, Eastern Lines, C.P.R., Toronto; Sept. 15, 1908, to Jan. 1, 1911, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Jan. 1 to Oct. 9, 1911, Assistant Chief Engineer, Western Lines, C.P.R., Winnipeg, and from Oct., 1911, to July 1, 1918, Chief Engineer, Western Lines, C.P.R., Winnipeg. The chief work with which he has been concerned of recent years, is the construction of the Connaught Tunnel on the C.P.R. through the Rocky Mountains. He was President of the American Railway Engineering Association for 1917. In connection with Mr. Sullivan's retirement from C.P.R. service, D. C. Coleman, Assistant General Manager, Western Lines, C.P.R., said: "The withdrawal of Mr. Sullivan from active service is deeply regretted by all the officers who have been associated with him. We fully recognized his great abilities, and are proud of the fact that he stood at the very top of his profession in America. His name will always be honorably associated with the great programme of construction and betterments carried out by the railway during the past few years. Apart from his qualifications as an engineering officer, his personal qualities won for him the affectionate regard of all the officers in the west. We are glad that his association in a consultative capacity means that we will still have the benefit of his counsel."

### Freight and Passenger Traffic Notes.

Alberta stock raisers are asking the railways in the province to grant special rates over their lines for the carriage of hay and other feed for next winter's requirements.

The Northern Construction Co., which bought a large quantity of tile in Alberta and consigned it to Vancouver via C.P.R., sought recently to recover from the C.P.R. for tiles damaged in transit. It was shown that the loss by breakage was only about 2%, which the court did not consider excessive and the action was dismissed with costs.

The Board of Railway Commissioners was asked, July 9, to order the restoration of passenger train service on the C.P.R. between Ottawa and Waltham, such as existed prior to 1916. The company contended that the traffic on the extra train asked for would not compensate it for the extra cost of coal and for the wages of the train crew. Decision was deferred.

**Dismantled Railway Lines in Alberta.** The roadbed of the Canadian Northern and Grand Trunk Pacific Railways between Lobstick, on the C.N.R., and Resplendent on the G.T.P.R., about 300 miles, from which the steel rails were removed for shipment to France, is to be used as a highway to Kamloops, B.C. We are officially advised that the Department of the Interior's Parks Branch is having surveys made in connection with the project. Until a definite decision has been reached, the steel bridges on the railway will be allowed to remain.

### Railway Rolling Stock Orders and Deliveries.

The Canadian Locomotive Co. has delivered 3 switching (0-6-0) locomotives to Canadian Government Railways.

The G.T.R. has received 148 box cars, 80,000 lb. capacity, from American Car & Foundry Co.

The Canadian Copper Co. has ordered an all steel standard gauge snow plough from Canadian Car & Foundry Co.

The National Steel Car Co., since June 18, has shipped 470 box cars, with drop shutters, hand brakes and outside brake chain, to the Paris, Lyons & Mediterranean Ry., France.

The Dominion Iron & Steel Co. ordered recently, from Canadian Car & Foundry Co., 8 pairs of Simplex 80,000 lb. trucks, with solid side truck bearings 65 in. centers, for delivery in July.

Canadian Government Railways have placed two orders with Canadian Car & Foundry Co., covering repairs on approx-

W. C. Riddell,  
Advertising Agent, Grand Trunk Pacific Railway.

imately 400 cars, some of which will be changed into open pulpwood cars.

The C.P.R. received the following additions to rolling stock from its Angus shops, Montreal, between June 18 and July 16,—2 steel mail cars, 7 express refrigerator cars and 4 decapod type locomotives.

The Dominion Government has bought from D. R. Morrison & Sons, Summerside, P.E.I., 16 second hand dump cars, and 1 second hand saddle dinkey locomotive, 3½ ft. gauge, all for \$4,500, for use on the Prince Edward Island Ry.

The Dominion Government has bought 24 dump cars, 12 yard capacity, from the Dominion Dredging Co., at \$1,060 each. They were being used under rental by the Canadian Northern Ry. in connection with its Montreal tunnel and terminal work, and will be leased, sold or otherwise disposed of, by the government, to the C.N.R.

The Canadian Government Railways are building 200 wood underframe Hart convertible cars in their shops at Transcona, Man., at a total cost of \$625,000. They are of 50 tons capacity, side and center dump, similar to the 200 of the same type ordered in May and mentioned in our last issue, and which are being built by the Canada Car & Foundry Co. at its Fort William plant.

Following are chief details of the 15 Pacific and 20 switching locomotives which the Dominion Government has ordered from the Montreal Locomotive Works, as mentioned in our last issue. Of these locomotives, the 15 Pacific and 10 switching locomotives are for the G.T.R., and the other 10 switching locomotives for the Grand Trunk Pacific Ry.

	Pacific.	Switching.
Cylinders, diam. and stroke	24 x 28 in.	21 x 26 in.
Driving wheels	69 in.	51 in.
Boiler, diam.	72½ in.	68 in.
Boiler pressure	200 lb.	180 lb.
Firebox	108 x 75¼ in.	95-15/16 x 41¼ in.
Tubes, no. and diam.	228-2 in.	158-2 in.
	32-5¾ in.	21-5½ in.
Tubes, length	20 ft.	12 ft. 5 in.
Heating surface, firebox	215 sq. ft.	132 sq. ft.
Heating surface, tubes	3,302 sq. ft.	1,391 sq. ft.
Heating surface, total	3,517 sq. ft.	1,523 sq. ft.
Grate area	56.5 sq. ft.	27.5 sq. ft.
Wheel base, driving	13 ft.	12 ft.
Wheel base, engine	33 ft. 10 in.	12 ft.
Weight on drivers	170,000 lb.	154,400 lb.
Weight, front truck	46,000 lb.	
Weight, rear truck	48,000 lb.	
Weight, total	164,000 lb.	154,000 lb.
Tractive power	39,700 lb.	34,400 lb.
Factor of adhesion	4.3	4.49
Tank capacity	7,800 gall.	4,560 gall.
Coal capacity	12 tons	6 tons
Valve motion	Walschaert	Walschaert
Driving wheel centers	Cast steel	Cast iron
Tender wheels	Rolled steel	Tires and retaining rings
Safety valves	3-3 in.	2-3 in.
Tender type	C.G.R.	C.G.R.
Cab	Vestibule	C.G.R.
Grate shakers	Pneumatic	Hand
Steam heat	Gold	Gold or Vapor
Driving box shoes and wedges	Franklin	Brass
Reverse gear	Lever type	Casey-Cavin
Headlights	Pyle National	Pyle National

**Twist Drills Investigation.**—A series of experiments to disclose certain facts regarding the performance of metal drills has been completed by the University of Illinois Engineering Experiment Station, and the results published as bulletin 103. One-inch drills of many standard makes and special cast iron blocks made in the shop laboratories were used. The power required at the drill point for different speeds and rates of feed was noted in all tests, the thrust and torque of the drill were recorded by special dynamometers, and the endurance of drills of different designs was studied. The economical helix angle, point angle, clearance angle, speed, and feed were determined, and the effects of pilot holes and rounded corners were shown. Copies of the bulletin may be had free by addressing the Engineering Experiment Station, University of Illinois, Urbana, Ill.

**The Sea Foods Special.**—Following a conference of transportation officials, the principal shippers of fish, the Canada Food Board and representatives of the Canadian Fisheries Association, which was called by the Naval Service Department, and which met recently in Montreal, additional excellent transportation facilities for fish from the Atlantic coast to inland points has been provided. A train, known as the "Sea Foods Special," leaves Mulgrave and Halifax, N.S., on Thursday, Friday and Saturday of each week, hauling refrigerator cars for the transportation of fresh fish. The train operates on a practically express basis, and the cars are hauled right through to Montreal and Toronto.

## The Canadian Railway War Board's Work.

**Accidents to Employees.**—The board's attention having been directed to the large number of accidents to employees which occur through persons being struck by cars "kicked" into yard tracks or sidings at intermediate stations, apparently without proper warning being given, it is urged that member lines direct those of their officers and employees concerned to redouble the efforts to avoid personal injuries, and where safety first departments are employed, to have these organizations give particular attention to the elimination of accidents attributable to operations such as those above mentioned.

**Car Delays.**—In reference to delays to cars at Montreal and other Canadian ports served by Canadian lines, while awaiting orders from various organizations, the board considers that the growing demand for freight cars, which will become heavier as time advances, necessitates the handling of export as well as other traffic in a manner that will permit of cars being released with the least minimum delay. Reports received by the board show that large numbers of cars of export freight have been seriously delayed awaiting orders from ocean steamship lines and others. This practice is similar to that which formerly existed in other countries and which caused car shortage and congestion of unprecedented severity. In view of the burden which will be placed upon sea port terminals during next autumn and winter, and the shortage of box cars that will undoubtedly exist, the board feels that pressure must be brought to bear upon those concerned to unload export freight much more promptly than has been the case heretofore. Action has therefore been taken as an incentive to speedy releasing of cars to apply existing demurrage regulations to export shipments, allowance being made of course for a longer period of free time than in the case of domestic traffic.

**Car Inspection, Etc.**—As separate car inspection and recording staffs are maintained at some interchange points, member companies have been urged, in view of the saving in men and other economies accruing from the employment of joint staffs, to arrange for the adoption of a joint system.

**Cars on Foreign Lines.**—Although the number of box cars in Canada has become greater during the past three months by approximately 14,000, the increase consists almost entirely of U.S. owned equipment which is now being loaded home rapidly. In the meantime the number of Canadian owned box cars on foreign lines has remained stationary, this being due in part to a relaxation on some member railways of the regulations restricting the use of Canadian owned cars to points on Canadian lines. As Canadian railways will, according to all present indications, be called upon to move an unprecedented volume of grain and other foodstuffs during the ensuing autumn and winter, and as experience has shown that the great majority of foreign cars are defective to an extent to render them unsuitable for this traffic, it is imperative, if the demand is to be met, that member lines take action to see that Canadian owned box cars are held, until further notice, in service on Canadian railways. Member lines have been directed to re-issue instructions to those of their officers and employees concerned, prohibiting the loading of Canadian owned box cars contrary to the foregoing, and in addition thereto to in-

struct employees at interchange points with member lines, that in the case of cars being offered in interchange by such connecting member line, loaded or billed in violation of these instructions, the cars to be refused, the offering line to bear any expense involved in such refusal, including per diem charges and cost of transshipping. A member line becoming aware of its box cars being loaded to foreign railways in violation of the foregoing regulations is asked to report full particulars to the board.

In view of the comparatively plentiful supply of U.S. owned box cars at present available in Canada, and with proper intro-line distribution, the practice of using Canadian owned cars for international traffic, goods being transferred to U.S. cars at boundary points, involving as it does, considerable delay to cars and expenditure of labor and money, should be discontinued. Member lines have been asked to issue instructions accordingly to those of their officers and employees concerned.

**Cars on U.S. Government Controlled Lines.**—Certain lines of Canadian railways operating in the United States are now operated by the U.S. Government. Canadian box cars entering thereon are automatically absorbed in the box car pool existing on U.S. lines and are thereby taken from Canadian service. It is essential, if an adequate supply of grain cars is to be available for movement of the 1918 crop, that Canadian box cars be retained in Canada. By way of taking further action to avoid loss of Canadian box cars, existing instructions have been amended to prohibit the loading of Canadian owned box cars to points on Canadian lines in the U.S., except when consigned to a point located upon the line of the owner of the car; for example, G.T.R. box cars, but no other Canadian owned box cars, may be loaded to points on the G.T.R. in the U.S.

**Cars Received Under C.S.S. Orders.**—In the event of Canadian owned cars being received by a Canadian line under a car service section order, such Canadian cars, unless belonging to the road in whose favor order issued, must be diverted to owner instead of being moved through to receiving line on c.s.s. order billing. Deficiencies in deliveries under c.s.s. orders, resulting from abstraction of Canadian cars as above, should be promptly reported to the board, so that adjustment may be arranged by placing of supplementary order or in some other suitable manner.

**Rails for Sidings.**—The board has recommended member lines that the prices for second hand relaying rails, disposed of to industries for sidings, etc., should be the same as fixed by the United States Railroad Administration, viz: from \$55 to \$65 a gross ton, depending upon quality and location, f.o.b. carriers' tracks nearest to delivery point. In general, the price for good second hand rails, for sidings and spur tracks, should be \$60 east of the Rocky Mountains, and \$65 west of them, except that light inferior rails may be sold at from \$55 to \$60.

**Cornwall Terminal Co., Ltd.,** has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to carry on a general warehousing and wharfinger and forwarding business, and in connection therewith, to own and operate warehouses, railways, tramways and other means of transportation, and to own and operate steam and other vessels.

## Traffic Orders by Board of Railway Commissioners.

### Grand Trunk Pacific Steamship Co.'s Freight Rates.

Commissioner Boyce gave the following judgment June 26, which was concurred in by the Assistant Chief Commissioner, D'Arcy Scott:—

This complaint was on the list for hearing at Vancouver, June 6, 1918, and the parties were notified. No one appeared in support of the complaint, and counsel for the respondents showed cause. Objection was taken to the board's jurisdiction to adjudicate upon the issues involved, on the ground that the tariff filed, and in question, was a special local freight tariff (port to port) of the G.T.P. Coast Steamship Co., which, while admittedly a subsidiary company of the Grand Trunk Pacific Ry. Co., was not, within the meaning of sec. 7 of the Railway Act, a company whose vessels were owned, chartered, used, maintained or worked by the G.T.P.R., nor, as it was contended, was such railway company (within the meaning of such section) a party to any arrangement for using, maintaining or working the steamship company vessels for carrying traffic by sea or by inland water between any ports or places in Canada.

The tariff filed by the steamship company is a purely local, port to port, tariff applicable only for carriage by water between Victoria and Vancouver, B.C., Seattle, Wash., and ports of call on northern British Columbia coast service. No question of a through tariff was involved, and the principle of the decision in Dawson Board of Trade vs. White Pass and Yukon Ry., 9 C.R.C. 190, is not applicable. While the G.T.P.R. Co. is the parent company of the steamship company whose local tariff is attacked, there is no such unity or relation between the two separate corporate entities within the meaning of the section referred to which would give this board jurisdiction over the local port to port rates involved in the dispute. The two companies, although, perhaps, having the same interests common to both, preserve their independent corporate existences, and must be treated as separate and individual entities for the purposes of this complaint. This board has never exercised any jurisdiction over port to port traffic, neither do I think that there is any authority conferred upon it by the Railway Act to do so. Wherever the board has exercised such jurisdiction the water traffic has been a part of, and incident to, a through railway rate, and jurisdiction was assumed by reason of the railway and not the water character of the traffic. In the present case the rate is purely a local rate for water-borne traffic between local ports, no part of it being, by any stretch of imagination, attributable to railway traffic or the traffic of the railway company. I am of opinion that this board has no jurisdiction in this complaint.

Apart from the question of jurisdiction, and if the board assumed jurisdiction in this matter, I should be very reluctant indeed upon the statements made at the hearing, to hold that, having regard to the nature of the traffic, the tariff was unreasonable. There is considerable hazard in connection with the traffic, expense of maintenance of it is great, and for many years it has been very unprofitable. It is stated that only last year was there a surplus from the earnings of the company. Added to the above reasons, it is very clear and ought to be a cogent and deciding factor, that the traffic is

largely, if not altogether, of a temporary character and most of it is directly attributable to the state of war now existing, as appears from the statements made at the hearing. It is more than probable that at the termination of the war the traffic would relapse to the former unsatisfactory conditions. The tariffs do not bear such an unreasonable proportion to the marketable value of the commodities carried as would in any event justify the board in going to the length of ruling that they were exorbitant and improper. It may be that there is some evidence in the complaint that they are not normal tariffs, but it is also to be observed that these tariffs are applicable to an abnormal condition of things, and to an exceptional and special condition of traffic which is of a temporary character. In my opinion the complaint must be dismissed.

### Westbound Transcontinental Freight Rates.

General order 241. June 29. Re westbound transcontinental freight rates, and the powers conferred upon the board under sec. 323 of the Railway Act. Whereas the westbound transcontinental freight rates on specific commodities from Eastern Canada to destinations in British Columbia, recognized as Pacific coast terminals, have been in the past and are now lower than the regular scale of rates under the Canadian Freight Classification, and the said commodity rates were definitely related to the rates on the same or similar commodities shipped from the eastern states of the Union to Pacific coast points, including those in British Columbia, until March 15, when the last mentioned rates were increased without corresponding increases from eastern Canada; and whereas the Director General of the U.S. Railroad Administration has ordered U.S. carriers to increase the rates which were in effect from the eastern states immediately before June 25, by 25%, effective from that date, and because of the competitive character of the traffic it is expedient to continue at least the equilibrium existing before March 15, it is ordered that the railway companies in Canada engaged in the said westbound transcontinental traffic be hereby permitted to increase the present so-called commodity rates from eastern Canada so as to place them on at least an equality with the rates now in effect from the neighboring states of the Union, and that the rates so increased be permitted to become effective not earlier than Aug. 1, 1918, upon not less than five days notice to the board and to the shipping public by filing and posting in the manner prescribed in the Railway Act.

### Idler Cars Taking Care of Overhang.

General order 242. June 28. Re application of Dominion Bridge Company, Montreal, for a ruling on the following question: "Should an idler car used to take care of an overhang from a car loaded with articles taking a commodity rate with a greater than classification minimum weight be charged two-thirds of the tariff weight of the commodity tariff or of the classification?" Upon hearing the application at Montreal, June 10, the applicant, the Canadian Freight Association, and the Grand Trunk and Canadian Pacific Railways being represented at the hearing; and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the authority be, and it is, hereby given for a change in rule 1 (c) of Canadian Freight Classification 16, so as to provide that the mini-

mum weight for the first car in a series of platform cars (the longest car in the series to be considered the first car) carrying articles too long for one such car be that provided for in the appropriate tariff covering such articles, and two-thirds of the said minimum for each additional car over which the load extends. And it is declared that the lawful charge for each additional car used as herein described, prior to the effective date of the amendment herein authorized, was and is, two-thirds of the minimum weight provided for in the Canadian Freight Classification for the articles so carried, unless specifically excepted from the provisions of the said Classification in the tariff applicable.

### Agricultural Limestone and Stone Dust.

27378. June 28. Re complaint of the Crushed Stone, Limited, Toronto, and Henderson Farmers' Lime & Phosphate Co., of Woodstock, Ont., against increased rates charged by G.T.R. on agricultural limestone and stone dust from Kirkfield, Ont., to various points. Upon hearing the complaint at Toronto, Feb. 15, the complainant, the Toronto, Hamilton & Buffalo, the Grand Trunk, the Canadian Pacific, and the Canadian Northern Railways, the United Farmers of Ontario, the Guelph Agricultural College, and the Canadian Freight Association being represented; and upon the report of the board's Chief Traffic Clerk, it is ordered that the complaint be dismissed.

### Coast Terminal Rates to Sidney, B.C.

The Assistant Chief Commissioner, D'Arcy Scott, gave the following judgment, June 26:—Sidney is on the south eastern end of Vancouver Island. It is reached by the Great Northern Ry. car ferry from Vancouver, and also by the Canadian Northern Ry. via car ferry to Patricia Bay, and thence by interchange of its railway with the Great Northern Ry., which on Vancouver Island is called the Victoria & Sidney Ry. Sidney is not served by the C.P.R., except by its coast and island boats, which call at Sidney periodically. Sidney is not a port of call for any ocean going vessel.

The applicants state that there is an arbitrary rate of 5½c per 100 lb. carload and 11c per 100 lb. l.c.l., which is added to the coast terminal rates on all traffic to Sidney. The Sidney Board of Trade applies for the cancellation of this arbitrary rate. Sidney is about 18 miles nearer Vancouver than is Victoria, via the Great Northern car ferry and rail route. There are several industries established at Sidney, notably a saw mill, a plant for the manufacturing of roofing and a cannery. Sidney is not reached by rail by the C.P.R. Therefore, that company may be eliminated from the consideration of this matter, as no case could be made out against it. The Canadian Northern only, reaches Sidney over the Victoria & Sidney Ry. tracks from a point of interchange about 1½ miles from Sidney. Therefore, no stronger case could be made out against the Canadian Northern than against the Great Northern. The latter company's traffic for Victoria passes over the same line as traffic for Sidney and it is hauled 18 miles longer distance at a lower rate than similar traffic to Sidney. If the circumstances and conditions of the traffic are substantially similar, subsec. 5 of sec. 315 of the Railway Act prohibits a higher rate being charged to Sidney, unless the board is satisfied that owing to competition it is expedient to allow the lower toll for the

longer haul. Victoria is a port for ocean going vessels. There is actual competition via the Panama Canal and other water routes with the Great Northern Ry. service to Victoria. It is to meet this competition that the railway maintains the lower rate to that city. There is no such competition at Sidney, as it is not served by ocean going vessels. Under these conditions, I think the railway is justified in maintaining the lower rate to Victoria, without making it applicable to intermediate non-competitive points like Sidney. The reasonableness of the rates to Sidney per se was not attacked. Therefore this judgment deals merely with the competitive feature of the rates referred to. On the evidence before us I think the application should be dismissed.

Order 27,383 was passed, June 28, dismissing the application.

#### Grain Delivery in New Westminster.

27,402. July 6. Re complaint of Grain Growers' British Columbia Agency, that the Canadian Northern Ry., although publishing rates on grain to New Westminster, B.C., makes an extra charge for delivery in that city. Upon hearing the complaint at Vancouver, June 6, the complainants and the railway company being represented, it is declared that the rate the C.N.R. was authorized to charge the complainants for delivery in New Westminster of the carload of barley from Clyde, Alta., was the rate shown in its tariff C.R.C. no. W.384, subject with respect to delivery on the C.N.R. tracks to the board's General Inter-switching Order that the collection by the C.N.R. of the toll of 1c per 100 lb. charged by the Great Northern Ry. for its switching service was unauthorized and illegal under the said tariff, and that the C.N.R. is granted leave to refund to the complainants the excess amount so charged and collected by it on the shipment in question.

#### Minimum Carload Weights for Sheep.

27,407. July 5. Re application of South Alberta Wool Growers' Association for an order requiring railway companies to establish a minimum carload weight to 12,000 lb. on sheep in single deck cars. Upon hearing the application at Calgary, June 10, in the presence of C.P.R. counsel, no one appearing for the applicant, it is ordered that the application be refused.

#### Car Doors for Sand and Gravel.

27,426. July 11. Re complaint of E. A. McKenzie of Arden, Man., against refusal of railway companies to supply him with car doors for sand and gravel shipments or to pay him for doors supplied by himself. Upon hearing the complaint at Winnipeg, June 15, in presence of counsel for Canadian Pacific and Canadian Northern Railways, the complainant appearing in person, it is ordered that the complaint be dismissed.

#### Classification of Zam-buk.

27,429. July 12. Re application of the Freight and Express Underwriters of Toronto, for same rating for Zam-buk as is provided in Canadian Freight Classification for vaseline. Upon hearing the application at Toronto, June 24, the applicant and the Canadian Freight Association being represented, it is ordered that the application be dismissed.

#### Interchange Tracks at Forrest, Man.

27,436. July 11. Re application of Canadian Manufacturers' Association (Brandon Section) and other interested shippers in Brandon, Man., for an order requiring the construction of an interchange track between the Canadian Pacific and the Grand Trunk Pacific Railways at Forrest Man. Upon hearing the application at Winnipeg, June 15, in the pres-

ence of counsel for the applicants and the Grand Trunk Pacific and Canadian Pacific Railways, it is ordered that the G.T.P.R. be directed to construct interchange tracks between its railway and the C.P.R. near Forrest, Man.; the said railway forthwith to file detail plans of the proposed interchange; the work to be completed within 60 days from the approval of the plans by the board, and the expense of constructing such interchange tracks to be paid by the G.T.P.R.

#### Commodity Rates on Glass Bottles.

27,438. Re complaint of Montreal Board of Trade against proposed cancellation of present commodity rates on glass bottles in carloads from Hamilton, Toronto, and Montreal, published and filed in C.P.R. Supplement 77 to Tariff C.R.C. no. E. 3210, effective July 25, 1918, and in G.T.R. Supplement 73 to Tariff C.R.C. no. E. 3426, effective July 28, 1918: Upon reading what is filed in support of the complaint and on behalf of the railway companies, it is ordered that the said supplements cancelling the present commodity rates on glass bottles in carloads from Hamilton, Toronto, and Montreal, be suspended, pending hearing on a date to be fixed by the board.

#### Rates on Turnips.

27,439. July 17. Re application of Ontario Turnip Association and others for suspension of supplements to tariffs of the Canadian Pacific, Grand Trunk, and Toronto, Hamilton & Buffalo Railways, by which it was proposed to cancel through rates on turnips in carloads from stations in Ontario to points in the southern United States: Upon reading what has been submitted on behalf of the applicants, it is ordered that Supplement 7 to Toronto, Hamilton & Buffalo Ry. Tariff C.R.C. no. 502; Supplement 20 to G.T.R. Tariff no. E. 2619, and Supplement 9 to C.P.R. Tariff C.R.C. no. E. 2461, be suspended, pending hearing on a date to be fixed by the board.

#### Heaters in Banana Cars.

27,458. July 22. Re complaint of Vipond Fruit Company, Winnipeg, against a heater charge of \$15 a car on bananas from Minneapolis, Minn., to Winnipeg: Upon hearing the complaint at Winnipeg, June 15, the complainant and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railways being represented, and upon its appearing that there is no tariff provision for the supplying of heaters only, it is declared that the heater charge of \$15 a car made by the C.P.R. on bananas from Minneapolis to Winnipeg was wrongfully made, and the C.P.R. is authorized to refund the amount to the complainant company.

#### Coal Rates to Edmonton.

27,459. July 22. Re application of Great West Coal Company, Edmonton Collieries, and Byers Mine Coal Co., for an order directing the Grand Trunk Pacific Railway to reduce its rate on coal from the Great West spur to Edmonton: Upon hearing the application at Edmonton, June 11, it is ordered that the G.T.P.R. be required to reduce the rate on coal, shown in its Special Joint and Competitive Freight Tariff, C.R.C. 285, from the mines on the Great West Coal Co.'s spur to Edmonton to 45c a ton.

27,460. July 20. Re application of Twin City Coal Co., Swift Canadian Co., Northern Alberta Coal Operators' Association, and Alliance Power Co., all of Edmonton, Alta., for reduced rates on slack coal to that city: Upon hearing the application at Edmonton, June 11, the applicants and the Canadian Northern, Canadian Pacific, and Grand Trunk Pacific

Railways being represented, it is ordered that the application be dismissed.

#### Heater Charge on Bananas.

27,461. July 22. Re complaint of Plunkett & Savage of Calgary, Alta., against a heater charge of \$22.50 a car from Minneapolis, Minn., to Calgary, via Minneapolis, St. Paul, and Sault Ste. Marie and Canadian Pacific Railways, on 5 carloads of bananas ex New Orleans: Upon hearing the complaint at Calgary, June 10, and upon its appearing that the bananas arrived at Minneapolis in heated cars, and that there is no tariff provision for the supplying of additional heaters, it is declared that the heater charge of \$22.50 a car from Minneapolis to Calgary made by the C.P.R. was wrongfully made, and the C.P.R. is authorized to repay to the complainants the excess amount collected by it on the shipments.

#### Rate on Bundles of Mouldings.

27,462. July 22. Re complaint of Security Traffic Bureau of Minneapolis, Minn., alleging overcharge by C.P.R. on a shipment from Winnipeg, April 27, 1912, to Wilkie, Sask., described in the bill of lading as 62 bundles of mouldings: Upon hearing the application at Winnipeg, June 15, the C.P.R. being represented, no one appearing for the applicant, it is ordered that the application be, and it is hereby, dismissed.

### Toronto, Hamilton and Buffalo Railway Report.

The report for the calendar year 1917 covers the operation of mileage as follows:—Main line, 79.88 miles; branches, 20.13 miles; lines operated under trackage rights, 4.36 miles; total road operated, 104.37 miles.

The total operating revenues were \$2,358,023.51, an increase over the previous year of \$487,786.83. Freight revenue was \$1,681,869.35, an increase of \$442,607.48, due to the greater volume of coal, iron and steel products, and other commodities handled. Passenger revenue was \$412,900.16, a decrease of \$9,559.98, due largely to a falling off in excursion business in July, 1917. Express revenue was \$51,428.53, an increase of \$14,783.96, due to the heavier volume of business. Switching revenue was \$137,460.87, an increase of \$28,323.33, and demurrage revenue was \$40,507.75, an increase of \$7,989.25, largely due to greater activity of industries at Hamilton and Welland. Dining and buffet revenue was \$24,578.36, an increase of \$3,670.64. Operating expenses were \$1,535,072.25, an increase of \$390,203.58, and were 65.10% of the operating revenues, which is 3.88% more than the operating ratio of the previous year. The increases in operating expenses are due to the handling of a greater volume of business than in the previous year, to higher rates paid for labor, and to increases in the cost of fuel and material. After payment of dividends aggregating 5% on outstanding capital stock, a surplus of \$308,914.30 was carried to profit and loss.

Unusual weather conditions which prevailed during the spring and early summer and recurrence of same during the latter part of the year seriously interfered with construction work in the Bridgeburg yard, in consequence of which no part of the yard was actually put into service. Two tracks, however, were completed on Canada Southern Ry. right of way leading from the entrance of the International Bridge to that company's Victoria yard, and they were put into service about Dec. 1. This relieved considerably the operating conditions at the

Victoria yard terminal. Yard construction was resumed as early as weather conditions justified, and it was expected to complete the same so as to bring the yard into operation Aug. 1, 1918.

The steel car ferry boat Maitland No. 1, owned and operated by the Toronto, Hamilton & Buffalo Navigation Co., resumed operation about the middle of March, continuing in service through the remainder of the year. The net income for the year amounted to \$10,711.02, or approximately 2.68% on the navigation company's capital stock, all of which is owned by the T.H. & B. Ry. Co. While this net income alone is not sufficient to justify the ownership and operation of the steam-

ship, the other benefits, resulting to the railway company, make such ownership and operation profitable, as the operating income of the branch line extending to Port Maitland amounted to \$57,824.74 for the year. After deducting interest and other fixed charges, the net surplus from the handling of traffic over the branch line was \$16,880.27. The revenue accruing to this company, on business originating on or in connection with the Port Maitland line, over and above the earnings on traffic handled over the branch line itself, amounted in the year to \$131,254.05. The railway company earnings, mentioned, are largely due to the operation of the car ferry steamer.

## Great Northern Railway Report.

The report for the calendar year 1917 is the first for a full twelve months since the date of the ending of the fiscal year was changed from June 30 to Dec. 31. The directors' report states there has been no change in the capital authorized to be issued, which remains at \$250,000,000, of which \$249,478,250 has been issued. The unissued stock includes 17½ shares held to acquire 14 shares of St. Paul, Minneapolis & Manitoba Ry. stock, of which 10 shares are in the company's treasury and 4 are still outstanding, and 5,200 shares of the last issue of \$19,000,000 which have not yet been offered for subscription. Of the bonds outstanding, \$163,140,515.16 are in the hands of the public, \$39,813,393.93 held by mortgage trustees, \$500,000 held in pension fund, and \$17,716,000 held in the company's treasury. There were issued during the year first and refunding mortgage gold bonds, series A, 4¼%, for \$3,567,000, in accordance with the terms of the mortgage against the acquisition of the following securities:—\$707,393.93 St. Paul, Minneapolis & Manitoba Ry. Pacific extension mortgage 4½% bonds; 26,500 shares of capital stock of Vancouver, Victoria & Eastern Ry. & Navigation Co.; 850 shares capital stock of the Crows Nest Southern Ry.

The company's investment in Canadian companies has been increased as follows: By purchase of capital stock of V.V. & E. Ry. & Navigation Co., \$2,650,000; purchase of capital stock of Crows Nest Southern Ry., \$85,000; purchase of capital stock of Midland Ry. of Manitoba, \$250,000; by advances to Brandon, Saskatchewan & Hudson Bay Ry., \$1,300.93; to Manitoba Great Northern Ry., \$2,479.40; to Nelson & Fort Sheppard Ry., \$8,828.83; to Red Mountain Ry., \$1,671.24; making a total of \$2,999,280.90. From this is to be deducted \$1,779,760.48, repaid the company on account of advances made in previous years, leaving the net increase on investment in Canadian companies for 1917 at \$1,219,520.42. The proceeds received from the sale of their share capital by the Canadian companies named, was used in making repayment to the G.N.R., in paying cost of construction and additions and betterments during the year, or is being held for payment of cost of future construction, additions and betterments.

The President's report shows that 9.71 miles of additional sidings, spurs and other tracks were laid in connection with the controlled lines in Canada; that 240,544 cubic yards of material were moved in filling the terminal grounds at False Creek, Vancouver, B.C.; and that the new passenger station at Vancouver was put in use. The work in progress at Vancouver includes not only the new passenger station, with express wing, but also

a bright freight house, power house, fuel oil plant, locomotive house, turntable, sand house, ice house, etc. Among the improvements on the company's lines are the building of a 200 ft. extension to the dock at Burrard Inlet, Vancouver, and a 200 ft. extension to the warehouse thereon.

Following are the results of operation:	
Revenue from transportation .....	\$86,479,067.60
Revenue from operation other than transportation .....	2,119,666.04
Gross operating revenue .....	\$88,598,734.64
Operating expenses .....	59,282,156.31
Net operating revenue .....	\$29,316,578.33
Railway taxes accrued .....	6,392,952.08
Operating income .....	\$23,013,626.25
Other income .....	8,031,140.95
Gross corporate income .....	\$31,044,767.20
Deductions from income .....	8,004,594.98
Net corporate income .....	\$23,040,172.22
Dividends .....	\$17,462,959.50
Appropriations .....	5,385,635.00
	22,909,069.60
Balance to profit and loss .....	\$ 131,103.22

The consolidated general balance sheet shows the company's investments in Canadian lines as follows:—

Midland Ry. of Manitoba .....	\$2,400,000.00
Manitoba Great Northern Ry. ....	2,073,449.73
Brandon, Sask. & H. B. Ry. ....	1,151,943.09
Crows Nest Southern Ry. ....	4,295,000.00
Nelson & Fort Sheppard Ry. ....	1,129,407.26
Red Mountain Ry. ....	312,290.81
Vancouver, Victoria & Eastern Ry. ....	23,580,000.00
New Westminster Southern Ry. ....	260,000.00
Total .....	\$37,202,090.89

The mileage of lines owned by the G.N.R. and its controlled companies is 7,843.64, or, including second, and additional tracks, 8,119.23 miles, and including sidings, spurs and yard tracks, 10,495.60. In addition, the company has trackage rights over 420.35 miles of other companies' tracks. Following are the mileages in Canada:—

	Main line.	Spurs, etc.
Midland Ry. of Manitoba (joint with Northern Pacific Ry.) ...	2.10	11.11
Manitoba Great Northern Ry. ...	91.77	9.61
Brandon, Sask. & Hudson Bay Ry. ...	69.45	1.61
Crows Nest Southern Ry. ....	74.18	13.92
Nelson and Fort Sheppard Ry. ...	55.42	3.27
Red Mountain Ry. ....	9.59	2.84
New Westminster Southern Ry. ...	15.18	1.31
Vancouver, Victoria & Eastern Ry. ...	269.66	61.21
(Second track) .....	....	7.12
	587.35	121.00

Trackage rights:—

Canadian Northern Ry.—From boundary at Noyes, Minn., to Midland Ry. of Manitoba at Winnipeg .....	66.57
Canadian Northern & Grand Trunk Pacific Ry. at Winnipeg .....	1.68
Grand Trunk Pacific Ry. at Portage la Prairie .....	.99
Canadian Northern Ry., Hope to Camrose, B.C. ....	37.18
Kettle Valley Ry., Brookmere to Hope, B.C. ....	53.47

Canadian Pacific Ry., Troup Jct. to Nelson, B.C. ....	5.44
Province of B. C., New Westminster Bridge .....	1.48
	166.81

## Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—It is reported that Grant & Horne, contractors for the erection of the new grain elevator at no. 1 berth, St. John, N.B., have begun work thereon.

We are officially advised that no new elevator is being built at St. John. Grant & Horne, contractors, are doing some maintenance reconstruction on the company's grain conveyor gallery from elevator A to no. 1 berth, and along the face of no. 1 berth, a length of 581 ft. of gallery.

The Board of Railway Commissioners, July 12, authorized the company to appropriate certain lands for an additional main track between West St. John and Fairville, to build the main line at grade across the St. John Ry. at Main St., and also to cross at grade, North St., Union Point Road, Main St., Raynes Ave., Sherbrooke St. and Sand Cove Road, Fairville.

British Columbia District.—The Vancouver, B.C., City Council is negotiating with the company for the construction of a ramp to improve the approach to the C.P.R. station and other public property.

We are officially advised that business between the mainland and Vancouver Island has been increasing very rapidly, and that as barges cannot be taken in or out of Burrard Inlet, except at favorable tides, it has been decided to build a second transfer slip at Vancouver. It will be a three track slip, to be built just east of the present one, with an apron about 70 ft. long, similar to the one built at Esquimalt. It will be built of creosoted piles and lumber and is expected to cost \$70,000. (July, pg. 300.)

## Amendment of Rules re Testing Eyesight.

The Board of Railway Commissioners passed general order 240, June 21, as follows:—Re the application of C.P.R. for an order amending clause 20 of general order 94, July 24, 1912, prescribing uniform rules governing the determination of visual acuity, color perception, and hearing of railway employees on steam railways so as to read "minimum" instead of "maximum standard specified." Upon hearing the application at Montreal, June 10, 1918, in the presence of counsel for the applicant, the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen being represented, it is ordered that the said general order be amended by striking out the words "maximum standard specified" in clause 20 of the rules thereunder approved and inserting in lieu thereof the words "the minimum standard of vision."

The clause as amended now reads as follows:—

"20. An employe in Class C, D, E or F who has been in continuous service for a period of not less than 5 years, and who, through diminution of vision or muscular imbalance, fails to reach required standard will be considered satisfactory if his acuteness of vision, with or without glasses, reaches the minimum standard of vision for the class of service in which he is employed."

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Boston & Albany Rd.**—H. M. BISCOE, heretofore Vice President, has been appointed Federal Manager, under the U. S. Railroad Administration. Office, Boston, Mass.

**Boston & Maine Rd.**—B. R. POLLOCK, heretofore General Manager, has been appointed Federal Manager under the U. S. Railroad Administration. Office, Boston, Mass.

**Canadian Government Railways.**—W. R. DEVENISH, Superintendent, Moncton, N.B., has had his jurisdiction extended to cover the Elgin & Havelock, St. Martins, Moncton & Buctouche, and Salisbury & Albert Rys., which are now incorporated with District 3, Intercolonial Division.

G. W. VAUGHAN, heretofore Superintendent, St. Martins Ry., Hampton, N.B., has been appointed a conductor on the St. Martins Branch, District 3, Intercolonial Division, C.G.R., and will also act as special agent. Headquarters, Hampton, N.B.

W. R. FITZMAURICE, Superintendent, Campbellton, N.B., has had his jurisdiction extended to cover the York & Carleton Rys., which has been incorporated with District 2, Intercolonial Division.

G. C. BROWNELL has been appointed Chief Dispatcher, Grant, Ont., vice J. P. Johnson.

F. H. PAULLEY has been appointed foreman upholsterer, Transecona, Man., vice C. Kemkes, enlisted in the 76th Battery.

**Canadian Northern Ry.**—W. ADAMS is reported to have been appointed signal inspector, Port Arthur, Ont., vice H. E. McDonald, transferred to Duluth, Winnipeg & Pacific Ry.

J. C. O'DONNELL, Superintendent, Divisions 2 and 3, Central District, Winnipeg, has been appointed acting General Superintendent, Western District, during the absence, through injuries, of W. A. Brown. Office, Edmonton, Alta.

J. J. CROWE is reported to have been appointed acting signal inspector, Edmonton, Alta.

**Canadian Pacific Ry.**—J. M. R. FAIRBAIRN, heretofore Assistant Chief Engineer, Eastern Lines, Montreal, has been appointed Chief Engineer of the C.P.R. system. Office, Montreal.

J. G. SULLIVAN, heretofore Chief Engineer, Western Lines, Winnipeg, has retired to engage in private practice, but will remain associated with the company as Consulting Engineer.

Sir George Bury, Vice President, issued the following circular, in connection with the above changes: "J. G. SULLIVAN, who has so well filled the position of Chief Engineer, is retiring to enter private practice, but will remain associated with the company as Consulting Engineer. J. M. R. FAIRBAIRN is appointed Chief Engineer."

W. A. JAMES, heretofore Division Engineer of Construction, Western Lines, Winnipeg, has been appointed Assistant Chief Engineer, Western Lines. Office, Winnipeg. No appointment as Division Engineer of Construction is to be made for the present.

Grant Hall, Vice President and General Manager, issued the following circular in connection with the above:—"W. A. JAMES is appointed Assistant Chief Engineer, with office at Winnipeg, in place

of J. M. R. FAIRBAIRN, who has been appointed Chief Engineer, with office at Montreal.

L. BERGER, heretofore Roadmaster, Winchester Subdivision, Smiths Falls,

J. M. Fairbairn,  
Chief Engineer, Canadian Pacific Railway.

W. A. James,  
Assistant Chief Engineer, Western Lines, Canadian Pacific Railway.

Ont., has been appointed Roadmaster, Sherbrooke, Que.

JOHN BURNS, heretofore Master Mechanic, Quebec District, Montreal, has been appointed Assistant Works Mana-

ger, Angus shops, Montreal, vice J. W. Buckland, granted leave of Absence.

C. A. WHEELER, heretofore Division Master Mechanic, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Master Mechanic, Quebec District, vice John Burns, promoted. Office, Montreal.

E. J. MELROSE, Assistant Superintendent, has been appointed acting Superintendent, London Division, Ontario District, during the absence of A. Williams, on holidays. Office, London, Ont.

W. J. STINSON has been appointed acting Assistant Superintendent, London Division, Ontario District, London, Ont., while E. J. Melrose is acting as Superintendent.

P. J. BELL has been appointed General Foreman, North Bay, Ont., vice J. S. Allen, promoted.

J. S. ALLEN, heretofore General Foreman, North Bay, Ont., has been appointed Division Master Mechanic, Sudbury Division, Algoma District, vice C. A. Wheeler, promoted. Office, Sudbury, Ont.

J. F. EARL has been appointed Resident Engineer, Winnipeg, vice C. H. Fox, on leave of absence for military service.

J. KILPATRICK, heretofore Roadmaster, La Riviere and Gretna Subdivisions, Winnipeg Division, Manitoba District, Winnipeg, has been appointed Roadmaster, Kenora Division, Manitoba District, Headquarters, Kenora, Ont. This is a new position.

C. BRYNELSON has been appointed Roadmaster, La Riviere and Gretna Subdivisions, Winnipeg Division, Manitoba District, vice J. Kilpatrick, transferred. Headquarters, Winnipeg.

D. M. SMITH, heretofore Road Foreman of Locomotives, Medicine Hat, Alta., has been appointed Division Master Mechanic there, his former position remaining vacant for the present.

E. J. LEMIEUX, heretofore Division Master Mechanic, Lethbridge, Alta., has been appointed Division Master Mechanic and Trainmaster, Calgary Division, vice A. E. Dales, now locomotive man, Winnipeg, and J. D. Fraine, transferred, respectively. Office, Calgary, Alta.

J. D. FRAINE, heretofore Trainmaster, Calgary Division, Alberta District, Calgary, has been appointed Terminal Trainmaster, Calgary, Alta.

J. M. GILMOUR, heretofore chief clerk to Superintendent, Edmonton, Alta., has been appointed Yardmaster, Edmonton and Strathcona terminals, vice L. Stone, enlisted for active military service.

F. REYNOLDS, heretofore store man, Calgary, Alta., has been appointed storekeeper, Field, B.C., vice L. Norman, who has enlisted for military service.

**Delaware & Hudson Co.**—W. H. DAVIES, heretofore Comptroller, Albany, N.Y., has been appointed Treasurer, vice C. A. Walker. Office, New York.

W. H. EPPLER, heretofore Chief, Bureau Departmental Accounts, Albany, N.Y., has been appointed Comptroller, vice W. H. Davies. Office, New York.

L. K. LUFF, heretofore Auditor of Revenue, has been appointed General Auditor. Office, Albany, N.Y.

W. J. DALLER has been appointed Auditor of Revenue, vice L. K. Luff, promoted. Office, Albany, N.Y.

A. J. GIES, heretofore Auditor of Disbursements, has been appointed Auditor of Expenditures. Office, Albany, N.Y.

W. L. SCHNEIDER has been appointed Freight Claim Agent, Albany, N.Y., vice H. D. Chamberlain, transferred.

**Duluth, Winnipeg & Pacific Ry.**—H. E. McDONALD, heretofore signal inspector, C.N.R., Port Arthur, Ont., is reported to have been appointed signal inspector, D. W. & P. R., Virginia, Minn.

**Grand Trunk Ry.**—L. L. GRABILL, heretofore Assistant General Baggage Agent, has been appointed General Baggage Agent, vice J. E. Quick, who, after continuous service for 47 years on the G.T.R. System, retired, July 31, under the pension rules. Office, Toronto.

C. H. TILLET, heretofore Supervisor of Signals, Eastern Lines, Montreal, has been appointed Electrical Engineer, vice J. A. Burnett, whose appointment as Technical Assistant to the British War Mission at Washington, D.C., was announced in our last issue. Office, Montreal.

J. J. GINTY has been appointed Supervisor of Signals, Eastern Lines, Montreal, vice C. H. Tillett, promoted.

R. E. MARKS, heretofore conductor, has been appointed Passenger Trainmaster, Eastern Lines, vice W. E. Weegar, whose appointment as Trainmaster, Ottawa Division, was announced in our last issue. Office, Montreal.

J. C. GARDEN, heretofore Master Mechanic, Battle Creek, Mich., has been appointed Master Mechanic, Stratford Shops, Ont., vice C. Kelso, assigned to other duties.

E. P. EAST has been appointed Road Foreman of Locomotives, Stratford, Ont., vice W. Kirkwood, promoted.

W. KIRKWOOD, heretofore Road Foreman of Locomotives, Stratford, Ont., has been appointed Travelling Engineer, London, Ont.

H. W. MATTHEWS has been appointed Superintendent Sarnia Tunnel Terminals, vice G. A. Stokes, whose appointment as Terminal Superintendent, Toronto, was announced in our last issue. Office, Port Huron, Mich.

C. J. HAIG, having been assigned to other duties, the position of Commercial Agent at Philadelphia, Pa., has been abolished. All correspondence with respect to business transacted at that office is dealt with by the General Eastern Freight Agent, 1450 Woolworth Bldg., New York, N.Y.

J. B. HECKENDORN has been appointed Lake and Rail Agent, Chicago, Ill., vice G. J. Harris, who, owing to ill health, has been assigned to other duties. Office, Canada Atlantic Transit Co.'s Dock, 309 East North Water St.

The following positions have been abolished, and correspondence with respect to business transacted there, is now dealt with by the Assistant Freight Traffic Manager, Chicago, Ill.: Pacific Coast Agent, W. H. BULLEN, Los Angeles, Cal.; Commercial Agent, J. WAUGH, San Francisco, Cal.; Commercial Agent, G. H. Brown, Omaha, Neb.; Commercial Agent, H. A. RICHARDS, Kansas City, Mo.

The position of City Passenger and Ticket Agent, Portland, Ore., heretofore occupied by D. B. SMITH, has been abolished.

**Grand Trunk Pacific Coast Steamship Co.**—J. H. BURGIS, heretofore General Agent, Passenger Department, G.T.R., Seattle, Wash., has been appointed General Agent, Passenger Department, G.T.P.C.S. Co. there, and his former position has been abolished.

**Grand Trunk Pacific Ry.**—W. C. RIDDELL, heretofore chief clerk to General Advertising Agent, G.T.R. System, Montreal, has been appointed Advertising Agent, G.T.P.R., and will act as assistant in Western Canada, of the General Ad-

vertising Agent, G.T.R. System. Office, Winnipeg.

**Great Northern Ry.**—L. W. HILL, Chairman of the Board, has been elected President, vice W. P. Kenney, appointed Federal Manager under the U. S. Railroad Administration. (Note.—As the operation of the railways in the U.S. is now undertaken by the U. S. Railroad Administration, the duties of presidents are presumably concerned with corporate affairs.)

**Maine Central Rd.**—D. C. DOUGLASS, heretofore General Manager, has been appointed General Manager under the U. S. Railroad Administration. Office, Portland, Me.

**New York Central Rd.**—M. S. BARGER has been appointed Treasurer of the company, vice E. L. ROSSITER, appointed Treasurer, N.Y.C.R. and Lake Erie & Pittsburg Ry. for the U. S. Railroad Administration, reporting to the Federal Manager. Office, New York, N.Y.

H. G. SNELLING and E. FREEMAN have been appointed Assistant Treasurers of the company. Offices, New York, N.Y.

L. L. Grabill,  
General Baggage Agent, Grand Trunk Railway.

L. BENDER and G. W. PORTER have been appointed Assistant Treasurers, N. Y. C. R. and Lake Erie & Pittsburg Ry. for the U. S. Railroad Administration, with offices at New York, and R. P. AHRENS has been appointed Local Treasurer, for the U. S. Railroad Administration at Cleveland, Ohio.

**New York, New Haven & Hartford Rd.** E. J. PEARSON, heretofore President, has been appointed Federal Manager, N. Y.N.H. & H.R. and Central New England Ry., under the U. S. Railroad Administration. Office, New Haven, Conn.

**Quebec, Montreal & Southern Ry., Napierville Junction Ry.**—W. H. DAVIES, Treasurer, Delaware & Hudson Co., has been appointed Treasurer, Q. M. & S. and N. J. Rys. Office, New York.

W. E. EPPLER, Comptroller, Delaware & Hudson Co., has also been appointed Comptroller, Q. M. & S. and N. J. Rys. Office, New York.

H. D. CHAMBERLAIN, heretofore Freight Claim Agent, Delaware & Hudson Co., has been appointed Auditor, Q. M. & S. and N. J. Rys. Office, Albany, N.Y.

A. L. CURRIE, heretofore Secretary, has been appointed Superintendent, Napierville Jct. Ry. Office, Sorel, Que.

R. F. HOLLAND has been appointed Car Accountant, Montreal.

## Railway Finance, Meetings, Etc.

**Canadian Northern Ry.**—Payment of an issue of \$5,700,000 of notes maturing is reported to have been made in New York, July 10. Another issue amounting to \$10,000,000 matures in September.

The company is reported to have sold through W. A. Read & Co., New York, an issue of \$5,000,000 of 6% equipment trust certificates at a price to yield the investor 7½%. Of these notes \$750,000 will mature July 1, 1919, and July 1, 1920; \$450,000 annually thereafter until July 1, 1926, inclusive, and \$400,000 on July 1, 1927, and July 1, 1928, respectively. The proceeds of the sale have been utilized to buy 4,500 steel frame box cars, 250 gondolas, 215 flat cars, 200 stock cars, 250 ballast cars and 25 steel tank cars.

There has been deposited with the Secretary of State at Ottawa, duplicate original of a lease dated July 1, 1918, and executed July 9, made by Canadian Northern Rolling Stock, Ltd., to the C.N. R., covering certain rolling stock, and attached, an assignment thereof to The Pennsylvania Company for Insurances on Lives and Granting Annuities.

**Canadian Northern Ry.**—Equipment trust certificates, series A, 6%, for \$5,000,000, maturing in different amounts from July 1, 1919, to July 1, 1928, have been bought by W. A. Read & Co., New York.

**Pacific Great Eastern Ry.**—The Premier of British Columbia announced July 6 that arrangements had been made to pay interest on the bonds of this railway from the consolidated revenue fund. The amount involved is \$452,541, of which \$309,293 is payable in London, Eng., and \$143,248 in Victoria, B.C. Up to January, the Government had paid for interest on the bonds, \$1,927,916.50 under its guarantee, and the company had paid \$1,021,647.60 out of the money turned over to it by the government from the proceeds of the bonds on construction account.

### Pacific Great Eastern Ry.—

Traffic earnings for May .....	\$12,833.13
Traffic earnings for May, 1917 .....	8,174.16

**Timiskaming & Northern Ontario Ry.** Passenger receipts for May, \$54,992.67; freight receipts, \$182,645.02; total receipts, \$237,637.69, against \$53,266.07 passenger receipts; \$143,972.47 freight receipts; \$197,238.54 total receipts, for May, 1917. Aggregate total receipts for five months ended May 31, \$1,106,983.84, against \$855,732.45 for same period 1917.

**White Pass and Yukon Route.**—Earnings for March, \$16,209, against \$44,714 for Mar., 1917. Aggregate earnings for three months ended Mar. 31, \$35,370, against \$83,921 for same period 1917.

**Pacific Great Eastern Ry. Lands.**—The British Columbia Government announced July 13, that it had decided to assume ownership of the P.G.E. Development Co.'s property, under the terms of the settlement agreement with the P.G.E. Ry. Co. The land includes 516 town lots and 7,000 acres of land, valued by the railway company at \$1,300,000.

# Electric Railway Department

## Increases in Electric Railway Freight and Passenger Rates.

The Board of Railway Commissioners has passed the following orders, in addition to those given in Canadian Railway and Marine World for May, June and July:—

**Hamilton Radial Electric Ry.**—27471, July 22. Re application of Hamilton Radial Electric Ry. for an order permitting it to file tariffs providing for a general advance in the tolls for the carriage of passengers and freight over its line, in the same manner and to the same extent as has been permitted by the board in the case of steam railways: Upon hearing the application at Toronto, June 24, the applicant company, the townships of Nelson and Trafalgar, the Burlington Beach Commission, the towns of Oakville and Burlington, and the city of Hamilton being represented, it is ordered that the company be authorized to increase its standard maximum freight mileage tariff by 15%, and its carload rates on coal and coke by 15c a ton. That the company be authorized to increase its standard maximum passenger tariff from 2c to 2½c a mile, subject, however, to the limitations created by the bylaws of the townships of Saltfleet and Nelson, the village of Burlington, and the town of Oakville, consenting to the construction and operation of the company's railway through their respective municipalities. And it is further ordered that the increased rates herein authorized shall not become effective until the company has complied with the requirements of sec. 327 and 331 of the Railway Act.

**Hull Electric Co.**—27379, July 8. Re application of Hull Electric Co. for authority to file tariffs providing for a general advance in tolls for carriage of passengers and freight in the same manner and to the same extent as has been permitted by the board in the case of steam railways: Upon hearing the application at Ottawa, May 21, in the presence of counsel for the company, the Town of Aylmer being represented at the hearing, and what was alleged; and upon reading the further submissions filed, it is ordered that the company be authorized to publish and file tariffs increasing its existing freight rates, except on coal and coke, by 15%, and its rates on coal and coke by 15c a ton; also to increase its standard maximum passenger rate so as not to exceed 2.875c a mile. And it is further ordered that the said tariffs may be made effective in 15 days from the date of this order, subject to the provisions of sec. 327 and 331 of the Railway Act as to standard tariffs.

27411, July 10. Approving Hull Electric Co. Standard Passenger Tariff C.R.C. no. P9, and Standard Mileage Freight Tariff C.R.C. no. F82, to become effective July 22, same having been filed on basis permitted by order 27379 of July 8.

**London & Lake Erie Ry. & Transportation.**—27421, July 10. Approving L. & L.E. R. & T.C. Standard Mileage Freight Tariff C.R.C. 6, filed on basis permitted in order 27105 of April 4.

**Montreal & Southern Counties Ry.**—The Chief Commissioner gave judgment, July 11, to allow the M. & S.C.R. to file tariffs providing for a general advance in freight and passenger rates in the same manner and to the same extent as permitted by the board in the case of

steam railways. At the hearing the Town of St. Lambert and the municipalities of Greenfield Park and Longueuil objected to the proposed advances on the ground of agreements. The agreement between the Town of St. Lambert and the company provided that the rates to be charged should not be higher than those charged by steam railways for similar tickets at the date of passing the bylaw. The Chief Commissioner held that it would be unfair to increase the rates in other municipalities and not in St. Lambert and the other municipalities which had agreements, and stated that in his opinion an order should issue as asked for, notwithstanding any municipal agreement to the contrary. Up to the time of writing (July 24), the order had not been issued.

**Windsor, Essex & Lake Shore Rapid Ry.**—27382, July 4. Approving W.E. & L.S.R.R. Standard Mileage Tariff C.R.C. 236, to become effective July 20, same having been filed on basis permitted by order 27308, June 15.

### OTHER APPLICATIONS AND INCREASES.

**The Brantford Municipal Ry. Commission**, which operates the electric railways owned by the City of Brantford, Ont., in that city and the interurban line between Brantford and Paris, which was formerly a part of the old Grand Valley Ry., being faced with a deficit of \$12,000 for the year, largely owing to increased wages, has abolished the sale of green limited tickets heretofore sold, 8 for 25c, and which were good from 6 to 8 a.m., from noon to 2 p.m., and from 5 to 7 p.m. Only one class of tickets, red, is now sold, 6 for 25c. The cash fare remains at 5c. Following is a comparison of the rates on the Brantford-Paris line:—

	Old rate	New rate
Single fare	20c	20c
Return fare	30c	35c
Children's return fare	15c	20c
Workmen's card ticket, return	20c	25c
Workmen's book of tickets, return	25c	30c

The fares between Paris and Brantford cover transfer on the Brantford city lines when required.

**British Columbia Electric Ry.**—We were officially advised, July 16, that arrangements had been made between the company and the Vancouver and New Westminster city councils under which cash passenger fares have been advanced to 6c in those cities, and also in the Vancouver city lines in South Vancouver and Point Grey municipalities, 6 tickets being sold for 35c. Children's fares remain at 2½c. The cash fare from Vancouver to South Vancouver and Point Grey is 12c. Settlers' tickets giving transfer into Vancouver City from South Vancouver and Point Grey are sold for 7c each in strips of 10. North Vancouver having refused permission to charge 6c, the company has ceased operating there. Burnaby having also taken the same attitude, the 2 miles in that municipality are also not being operated. In Victoria the mayor flatly refused to agree to an increased rate, so the company took advantage of its charter powers and is charging a 5c fare without giving a transfer. Children's fares have been abolished.

**The Cape Breton Electric Co.** applied in June to the Nova Scotia Board of Pub-

lic Utility Commissioners for authority to increase its cash passenger fares in Sydney and Glace Bay from 5c to 6c. On the Sydney and Glace Bay interurban line there are 5 zones, in each of which a 5c fare is charged, making the one way fare from Sydney to Glace Bay 25c. The company has asked authority to increase 1c in each zone, which would make a 6c fare in each zone and 30c for the through fare from Sydney to Glace Bay. It has also asked for authority to charge 1c each for transfers, which are now issued free. It does not sell any tickets at reduced rates, either unlimited, workmen's or school children's. The application was heard by the board at Sydney on July 16, 17, 18 and 20, when the hearing was adjourned to Aug. 13. The municipalities in which the company operates were represented by counsel, who opposed the increases asked.

In connection with the application, the company has been carrying on an advertising propaganda in the form of one-minute talks on tramway matters, in which its side of the question is stated. The local newspapers have been carrying on a counter editorial campaign.

**Edmonton Radial Ry.**—The Edmonton, Alta., City Council, on June 25, refused to again take up the question of re-introducing workmen's tickets on the municipal railway.

**Fort William Municipal Ry.**—The managements of the Fort William Municipal Ry. and the Port Arthur Civic Ry. have made a joint application to the Ontario Railway and Municipal Board for authority to make a further increase in passenger fares. As the board considers that a serious point of law is involved in connection with the matter, it has been referred back, and no further action has been taken.

**Grand River Ry.**—The Ontario Railway and Municipal Board issued the following order June 10. Re application of Grand River Ry., on behalf of the Galt, Preston & Hespeler St. Ry. and Berlin & Waterloo Ry. for an increase of 15% in freight and passenger rates: Upon reading what has been filed in support of the application and upon the report and recommendation of the board's Traffic Expert, it is ordered that the Galt, Preston & Hespeler St. Ry. and the Berlin & Waterloo Ry. increase their freight rates by 15%, with the following disposition of fractions of one cent:—.24 and under to be dropped, .25 to .74 to be counted as ½c, .75 and over to be counted 1c. That the passenger fares of the said companies may be increased by 15%, but not to exceed a maximum of 2c a mile. The disposition of fractions to be as provided by the Ontario Railway Act. It is also ordered that the increased rates may be made effective after compliance with the requirements of sec. 177 of the Ontario Railway Act.

As soon as the board's decision was announced, municipal councils and boards of trade in Galt and Kitchener asked for the going into effect of the order to be delayed so that they might be heard. A protest was also made by the South Waterloo District Trades and Labor Council, to which the board replied, in part, as follows:—"The passenger rates approved by the board are those allowed under sec. 210 of the Ontario Railway

Act, chap. 185, R.S.O., 1914, which reads as follows:—“(a) The fare to be taken by a company on a railway operated by electricity for each passenger shall not exceed 5c for any distance not exceeding 3 miles, and where the distance exceeds 3 miles, shall not exceed 2c a mile or fraction thereof for the distance actually travelled,” etc. For example, the distance from Galt to Preston is 4.54 miles; under the act the company can charge 10c. These rates could have been charged by the company since 1906 under the law. The Lake Erie & Northern Ry., which runs from Galt to Port Dover, under Dominion jurisdiction, had its rates increased from 2½c to 27½c a mile. In granting the increase in freight rates of 15%, it was shown to the satisfaction of the Board's Tariff Expert and to the board that the average increase in cost of material in 1917 over what it cost in 1915 was 90.66%, and another statement showed an increase in the cost of labor, covering operation and maintenance, of 30.31% for the same period. In addition to this, our Tariff Expert advises us that the London & Port Stanley Ry., London & Lake Erie Ry. & Transportation Co., Chatham, Wallaceburg & Lake Erie Ry., Windsor, Essex & Lake Shore Rapid Ry., Brantford & Hamilton Ry., Quebec Ry., Light & Power Co., and Lake Erie & Northern Ry. were all allowed similar increases for these same reasons by the Board of Railway Commissioners, and as a result the Ontario Railway and Municipal Board could not do otherwise under the circumstances. Much of the Grand River Ry.'s track and equipment requires renewal and repairs, and for some time back this board has been insisting on the company putting its tracks and equipment in better shape, and to comply with the board's request in this particular would require the expenditure of a considerable sum.”

**Montreal Tramways Co.**—Canadian Railway and Marine World for July gave some particulars, from press reports, of the increases in fares authorized by the Montreal Tramways Commission. We have since received an official copy of the resolution adopted by the commission on June 21, as follows: Whereas

An operating allowance of 22c per revenue car-mile for cars equipped with motors, and an operating allowance of 15c per revenue car-mile for trailers, used for the transportation of passengers, have been granted this day to the Montreal Tramways Co. for its operating expenses and taxes for the year ending June 30, 1919;

A maintenance allowance of 7.9c per revenue car-mile for cars equipped with motors, and a maintenance allowance of 5.2c per revenue car-mile for trailers, used for the transportation of passengers, have been granted this day to the M.T. Co. for its maintenance and renewal expenses for the year ending June 30, 1919;

The M.T. Co. must receive an annual return of 6% on \$36,286,295, its capital value, including all physical assets owned by it on Dec. 31, 1917;

The said company has a right to receive an annual return of 7% on all additions made to its capital value from Dec. 31, 1917, to this date, the additions amounting to \$195,086.56;

This commission must provide for an annual return of 7% on all additions to be made by the company to its capital value within its first year of operation;

This commission must provide for an annual return of 6% on all working capital to be furnished by the company during the first year of operation;

The company must receive annually, out of gross revenues, \$181,431.47 to cover the expenses to be incurred by it in procuring additional capital;

The City of Montreal must receive out of gross revenues over and above all other amounts to which it may be entitled under the contract governing the operation of the company, \$500,000 a year.

This commission must provide for a contingent fund into which a sum equal to 1% of the gross revenue of the company shall be paid annually;

This commission must amend the tramways tariffs in order to give full effect to the contract executed by the City of Montreal and the company, on Jan. 28, 1918;

Be it resolved that the following tariffs be established and put in force for the passengers carried by the company:—

1.—In the uniform tariff territory comprising the City of Montreal, as it exists at present, as well as the Towns of Westmount, Outremont, Verdun, St. Laurent, Mount Royal, also the territories of the portions of St. Laurent Parish and of the Municipality of Cote St. Luc, lying to the east of the company's line, running from Snowdon Jet. to Cartierville, including the land occupied by that line:—

(a) From midnight to 5 a.m., 15c cash.

(b) From 5 a.m. to midnight, 6c cash or 5 tickets for 25c.

(c) For school children, from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

(d) Transfers shall be issued free to school children specified in clause (c) and to all passengers travelling on cars between 6 a.m. and 8 a.m., on week days only. At all other times, a transfer shall be issued to any passenger paying his or her regular fare, at a charge of 1c.

**Municipalities Outside the Uniform Tariff Territory.**

2.—Town of Montreal West. Local traffic:—

(a) From midnight to 5 a.m., 5c cash fare.

(b) From 5 a.m. to midnight, 2c cash fare or 6 tickets for 10c.

(c) For school children, from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 1c cash fare or 6 tickets for 5c.

3.—Town of Lachine. Local Traffic:—

(a) From midnight to 5 a.m., 10c cash fare.

(b) From 5 a.m. to midnight, 5c cash fare or 6 tickets for 25c.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

(d) The above tariff will also apply to all passengers travelling from the Town of Lachine to the western limit of the uniform tariff territory and vice versa.

4.—Ville St. Pierre.

From the western boundary of Ville St. Pierre to the western limit of the uniform tariff territory and vice versa:—

(a) From midnight to 5 a.m., 5c cash fare.

(b) From 5 a.m. to midnight, 2c cash or 6 tickets for 10c.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 1c cash fare or 6 tickets for 5c.

5.—Town of Montreal North. Local traffic:—

(a) From midnight to 5 a.m., 10c cash fare.

(b) From 5 a.m. to midnight, 5c cash fare or 6 tickets for 25c.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

6.—Town of Montreal East. Local traffic:—

(a) From midnight to 5 a.m., 5c cash fare.

(b) From 5 a.m. to midnight, 2c cash fare or 6 tickets for 10c.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 1c cash fare, or 6 tickets for 5c.

7.—Town of Pointe aux Trembles and Town of Laval de Montreal:—

(a) From midnight to 5 a.m., 10c cash fare.

(b) From 5 a.m. to midnight, 5c cash fare.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

Interurban Traffic.—From Laval de Montreal to western limits of Pointe-aux-Trembles, and vice versa:—

(a) From midnight to 5 a.m., 10c cash fare.

(b) From 5 a.m. to midnight, 5c cash fare.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

From Pointe aux Trembles to eastern limits of uniform tariff territory:—

(a) From midnight to 5 a.m., 10c cash fare.

(b) From 5 a.m. to 8 a.m., 10c cash.

(c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

In connection with the decision, the following statement was given out:—

“The Tramways Commission, in establishing the tariffs, were bound to carry out the stipulations of the contract entered into by the City of Montreal and the Montreal Tramways Co. on Jan. 28, 1918, and ratified by the Quebec Legislature on Feb. 9, 1918. The tariffs, according to the act, must give full effect to this contract. The revenues to be derived from such tariffs are to provide tramways service at cost. The commission, after a careful study of the expenditures incurred by the company in previous years, and taking into consideration the increase in labor and material, found it necessary to provide for a total revenue of approximately \$10,000,000 for the 12 months ended June 30, 1919. This gross revenue exceeds the revenue of the year ending June 30, 1917, by about \$2,500,000, during which period the fares averaged 4.11c per revenue passenger. The increased cost of wages and material, as well as the increased fixed charges due to additional capital required, bring up the estimated cost per revenue passenger to approximately 5.5c. This increase of about \$2,500,000 is made up as follows:—Estimated increase in wages for 13 months, \$750,000; deficit incurred since putting in force of contract until June 30, 1918, \$400,000; estimated increased cost of material and supplies, \$1,000,000; additional fixed charges, \$280,000.

A Montreal paper points out that those living in the center of the city or adjacent thereto will help to bear the cost of operating the tramways in the newer parts of the city, for under the franchise agreement, the whole of the city of Montreal, including Cartierville, comes under the uniform tariff rate, as do also the cities of Westmount, Outremont, Verdun, and the towns of St. Laurent, Mount Royal and portions of St. Laurent parish and Cote St. Luc east of the tramways line, running from Snowdon Jet. to Cartierville.

People who do not buy 5 tickets for 25c, will have to pay a cash fare of 6c, and if they want a transfer after 8 a.m., they

must pay an extra cent.

People travelling after midnight and before 5 a.m. will have to pay a fare of 15c cash, against the 10c cash fare heretofore in force.

Workmen who formerly were able to buy 8 yellow tickets for 25c, and get a free transfer, will, when the new rates go into operation, be able to secure only 5 tickets, the same as every other citizen. The concession is made to them, however, that between 5 and 8 a.m., when most of them go to work, they will be able to get a free transfer on week days. There will be no free transfers for the return journey in the evening, and if they have to transfer to reach their homes from their work, they must pay 5c for their fare and 1c for their transfer.

Under the uniform tariff system a citizen can travel from Cartierville to the limits of the city east or west, a distance of about 12 miles, for 6c, including a transfer, or in the early morning for 5c. The previous fare from Cartierville was 15c, in addition to the city fare.

The rates outside of the uniform tariff territory are considerably altered. Heretofore there was an additional fare on the Lachine line ranging from 5c to 15c. Under the new tariff it will be 5c additional. To get to the end of the line in Montreal West, there will be an additional 2c in the day time, or 6 tickets for 10c, but as the uniform tariff territory extends to the corner of Westminster Ave., this will not be paid by many, as the car line only extends three blocks beyond the city limits.

The residents of Ville St. Pierre will also have to pay an additional 2c, or get 6 tickets for 10c, while passengers travelling to Montreal East will have to pay a straight 2c cash fare additional. To get to Montreal North the additional cash fare will be 5c, and the same to Pointe aux Trembles and Laval de Montreal, as against a maximum of 20c heretofore to the end of the line, while for interurban traffic between the two last named places the fare will be 5c straight. In the case of Lachine, Montreal North, Pointe aux Trembles and Laval de Montreal, the fare after midnight will be 10c additional to the city fare of 15c, making a total of 25c.

There will be no change in the fare for residents of Notre Dame de Grace, or Rosemount, for early morning workers, as they now pay a straight 5c fare, but those travelling after 8 a.m. and needing to transfer will pay a cent more.

In regard to the charge of 1c for a transfer, we are officially advised that a passenger desiring to make more than one transfer on a continuous trip in the uniform rate territory, will only be required to buy one transfer ticket.

As a result of several meetings held in the municipalities in which the Montreal Tramways Co. operates, appeals against the new schedule of fares were entered by all the municipalities on the general ground of the amount fixed by the Tramways Commission for the operation and maintenance expenses per car mile, and the fares fixed for the transportation of passengers for the year ending June 30, 1919; while additional objections were set out in one or two particular cases. The company also entered an appeal, contending that the sums allowed for operation and maintenance and renewals are too small; that the amount allowed for deficit on the working of cars during May and June is not sufficient; that allowance should be made for a deficit in operation for July, or until such time as the Public Utilities Commission decides the appeals and the new fares are put in force. The

Quebec Public Utilities Commission fixed July 19 for hearing of the appeals.

Prior to the day appointed by the Quebec Public Utilities Commission for the hearing of the appeals referred to above, a writ of prohibition was obtained from a Quebec court with the object of restraining the Q.P.U. Commission from acting until the general question of the validity of the legislation appointing the Montreal Tramways Commission is settled by the courts. The action was taken by L. Dubois and H. Robert, the Montreal Tramways Commission, the M.T. Co., the local municipalities and the Attorney General being named as defendants. At the Quebec Public Utilities Commission's sitting on July 19, counsel for the plaintiffs in the action argued in favor of postponing the hearing by the commission until the civil action is disposed of, but counsel for the city and for the M.T. Co. urged the necessity of an early settlement. The Public Utility Commission, after hearing argument, adjourned until July 14, when the Chairman, F. W. Hibbert, gave judgment, holding that the Public Utilities Commission has plenary powers in its own field and is not a court of inferior jurisdiction to the Superior Court. It also pointed out that a stay of proceedings might injuriously affect the public interests. The Public Utilities Commissioners then fixed July 31 for the opening of the hearing on the appeals.

**New Brunswick Power Co.**—See article "New Brunswick Power Co. Investigation" on another page of this issue.

**Port Arthur Civic Ry.**—See Fort William Municipal Ry. in an earlier part of this article.

**Quebec Railway, Light & Power Co.**—In reference to changes in this company's fares, detailed in Canadian Railway and Marine World for July, pg. 305, it was stated that workmen's tickets, the price of which was changed from 8 for 25c to 7 for 25c, good between 6 and 8 a.m. and 5 and 7 p.m., would be accepted only from males, and not also from females as formerly. It is now announced that their use by both sexes will be allowed during the limited hours above mentioned.

### Electric Railway Statistics for Year Ended June 30, 1917.

A table prepared by the Comptroller of Statistics of the Railways Department at Ottawa as to electric railway operations in Canada for the year ended June 30, 1917, give the following details:—

	1916-1917.	1915-1916.
Mileage, operating ..	1,743.54	1,730.73
Capital stock .....	\$70,606,520.00	\$67,738,275.00
Funded debts .....	90,628,219.00	87,157,349.00
Gross earnings .....	30,237,663.54	27,416,284.60
Operating expenses ..	20,098,634.35	18,099,905.65
Net earnings from operations .....	10,139,029.19	9,316,378.95
Miscellaneous income ..	2,292,200.76	2,928,573.83
Corporate income ..	\$12,431,229.95	\$12,244,952.78
Taxes, interest, etc., ..	7,552,368.55	7,358,283.67
Net income .....	\$4,878,861.40	\$4,886,669.11
Appropriated to reserves ..	1,285,654.22	1,535,071.35
Appropriated to dividends ..	2,468,686.61	2,834,906.82
Unappropriated net earnings .....	\$1,124,520.57	\$516,690.94
Passengers carried ..	629,441,997	580,094,167
Tons of freight hauled .....	2,332,539	1,936,647
Car mileage .....	\$4,073,046	\$2,516,612
Equipment, all kinds ..	4,295	4,442
Employees, all grades ..	11,696	10,622
Salaries and wages ..	\$9,451,685.00	\$8,767,734.00
Accidents, all kinds—		
Killed ..	63	50
Injured ..	2,728	3,029

### Toronto Suburban Railway Trailer Cars.

The Toronto Suburban Ry. has bought 2 second hand trailer cars, for use on its Guelph Division, where the existing rolling stock has proved quite inadequate to cope with the traffic. They were built by the Pullman Co., and purchased from the Transit Utilities Co., New York, and are finished straight panel outside and with mahogany and wood head lining inside. There are two steps on each side of the platform, 10 and 13 in. respectively, the drop from the lowest step to the ground being 26 in., for which a stool is used. The seats are both cross and longitudinal, upholstered in cane, and there is seating accommodation for 48 persons. There are 12 windows on each side and 4 at the ends, with upper and lower sash and pantasote curtains. The main body longitudinal sills, of which there are six, are 4 by 5½ in., platform sills, two outside 8 by 3¼ in., tapering to 6 in. at outer edge of platform; these run under the main sills of car body, with dimensions of 3¼ by 3½ in., and butt against car body steel bolster. The inside sills, 3½ by 8 in., are reinforced by steel plates and tied by rods, and they project under the main car body the same as the outside sills. Following are the chief dimensions:—

Length outside of sills .....	38 ft. 3 in.
Length over all .....	46 ft. 5 in.
Width outside of sills .....	8 ft. 6 in.
Width at eaves .....	8 ft. 9½ in.
Height over all .....	13 ft.
Length inside .....	38 ft. 3 in.
Width inside .....	7 ft. 10 in.
Weight of body .....	31,772 lb.
Truck wheel base .....	5 ft.
Wheel gauge .....	4 ft. 8¼ in.
Wheels .....	Chilled, 33 in.
Axles .....	M.C.B.
Journals .....	3¼ by 6 in.
Truck weight .....	6,200 lb.
Brakes .....	Westinghouse hand
Coupler .....	Tomlinson
Heating .....	Hot air

### Calgary Municipal Railway Finances and Fares.

In an interview on July 10, Commissioner Graves, discussing the financial position of the city's electric railway for the six months ended June 30, is reported to have said that there was a surplus of \$4,672 this year, against a deficit of about \$20,000 at June 30, 1917. It might be said that the line was \$24,000 better off than in 1917, but that was not a justifiable premise on which to base any argument. The different position is due to better business conditions, general prosperity, and to the saving in cost of operation due to the introduction of the one-man cars. Mr. Graves further said that there will be considerable extra expenditure this year for many necessary repairs. Extensive repairs of an expensive character are necessary on the cars. The first shipment of wheels for this purpose is expected early in August. The car repairs are only the first of the big items of expense that will have to be taken into account. This will mean, he added, that increased revenue will have to be found somewhere, and the suggestion that workmen's fares be eliminated, will likely be the first step in that direction.

The matter of fares on the municipal railway was casually mentioned at a recent meeting of the city council, when the estimates for 1918 were under consideration. Suggestions were then made in the direction of cutting off workmen's tickets, of making the ordinary fare a straight 5c one; and of a double fare on the Bowness Park line.

# Increases in Electric Railway Employees' Wages.

**British Columbia Electric Ry.**—As mentioned in Canadian Railway and Marine World for July, a board of conciliation and investigation was appointed by the Dominion Minister of Labor, to deal with a dispute between the company and its employees. The application for the appointment was made by the company, the board being constituted as follows: Mr. Justice W. A. MacDonald, chairman; F. Buscombe, representing the company; and T. J. Coughlin, representing the men. The nature and cause of dispute, including claims and demands by either party to which exception was taken, were set forth as follows: "The B.C.E.R. Co., on Sept. 1, 1915, entered into an agreement with the Amalgamated Association of Street & Electric Railway Employees of America, represented by local division 101, of Vancouver; local division 109, of Victoria; and local division 134, of New Westminster, comprising employees in various departments of the company, which agreement embodied a wage schedule and working conditions for the period ending June 30, 1918. On Sept. 16, 1916, and again on June 21, 1917, certain amendments to the agreement, by way of increase in wages and change in working conditions, were made by mutual agreement between the parties thereto. The company has offered to continue the agreement of Sept. 1, 1915, as amended, for a further period to be agreed on, with an increase in the wages therein stipulated equivalent to 10% of the total aggregate wages now paid to all the employees affected by the agreement, the allocation of such increase to be mutually agreed upon. The association has refused to continue the agreement after June 30, 1918, on the terms offered by the company and has demanded from the company wages and working conditions to take effect from July 1, which the company cannot accept."

The rate of wages per hour paid under the old agreement was as follows:—

	City lines.	Interurban lines.
1st six months .....	27c	28½c
2nd six months .....	35c	36½c
2nd year .....	35c	36½c
3rd year .....	36c	37½c
4th year .....	38c	39½c
After 4th year .....	40c	41½c

No extra rate for Sundays; overtime for day men, time and a half for first 6 hours, double time afterwards; overtime for night men, time and a half for first 2 hours, double time thereafter.

The men asked for an 8 hour day and other concessions, and for a maximum rate of 51c an hour, while the company offered 44c an hour as the maximum rate for the Vancouver men.

A majority report was issued July 6, the dissentient being T. J. Coughlin, the men's representative. The report concedes the principle of the 8 hour day, but recommends that its application be postponed until after the war; the minimum wages for conductors and motormen and conductors recommended is 40c an hour, and the maximum 47c an hour, this maximum to be reached in 2 years instead of 4 as heretofore; the new agreement to be for one year, and it is recommended that in the event of an appreciable further increase in the cost of living, the rate of wages be varied accordingly. The report also recommends that overtime should be paid after 9 hours' work instead of after 9½ hours as heretofore. The report refers to the jitney traffic, which materially affected the company's receipts, and added: "Whether, under the circum-

stances, the company will attempt to meet the heavy loss in operation, by curtailment of its lines, reduction of the number of cars, elimination of jitney traffic, increase of fares, or adoption of the 'carry for cost' scheme, is not for us to determine. At present it is in the unfortunate position of being unable, under existing conditions, to pass the enormously increased cost on to the public, upon whom, however, it must inevitably fall in the end; for if the public wants the service, it will have to pay for it."

Prior to the issue of the award, the men showed considerable restiveness, and on June 27, the chairman of the conciliation board intimated that they would be guilty of a direct violation of the law if they went on strike before the award was made. Notwithstanding this intimation, they decided at a meeting on the night of June 29, to go on strike July 2. The strike extended over the entire system, both on the mainland and on Vancouver Island, and continued until July 10. As the men refused the conciliation board's recommendation, a new scale was arranged, ranging from 40c to 51c an hour, the maximum to be reached in 2 years. Another strike started July 16, the men going out in sympathy with the electrical workers.

**The Montreal & Southern Counties Ry.** has advanced its conductors' and motormen's wages to the following rates per hour:—

Suburban lines, conductors and motormen, 1st year, 28c; 2nd and 3rd years, 29c; 4th and 5th years, 30c; 6th and 7th years, 31c; 8th and 9th years, 33c; 10th year, 35c.

Interurban lines, conductors and motormen, 1st year, 30c; 2nd and 3rd years, 31c; 4th and 5th years, 32c; 6th and 7th years, 33c; 8th and 9th years, 35c; 10th year, 37c.

Interurban lines, trainmen, 1st year, 28c; 2nd and 3rd years, 29c; 4th and 5th years, 30c; 6th and 7th years, 31c; 8th and 9th years, 33c; 10th year, 35c.

Conductors and motormen entering the company's employ must work at least six months on the suburban lines before being eligible for work on the interurban division.

**Montreal Tramways Co.**—In the particulars of increases in wages, given in Canadian Railway and Marine World for July, on pg. 308, the new rate for 4th year men was stated as 35c an hour. It should have been 33c, the same as for the 3rd year. As stated in the same issue, the increases were to date from June 1, but they were held back owing to the City of Montreal and surrounding municipalities having appealed against the Montreal Tramways Commission's decision authorizing the company to increase its passenger fares. Towards the end of July the men refused to wait longer and the new scale of wages was put into effect.

**New Brunswick Power Co.**—The board of conciliation appointed to investigate the dispute as to the New Brunswick Power Co.'s street railway employees' wages, consisting of Judge Chandler, of Moncton, chairman; G. E. Day, representing the company, and W. F. Hathaway, representing the men. The men asked an increase of 7c an hour for all classes of employees, with an additional 4c an hour for Sunday work. The present schedule for conductors and motormen is: 1st six months, 25c; second six months, 27c; after one year, 28c; after two years,

30c. Sunday labor is paid for at 4c an hour above regular rates.

**Ottawa Electric Ry.**—A board of conciliation was appointed recently to arbitrate as to employees' wages. The present rate of wages for conductors and motormen is 26c an hour for the 1st year, 27c for the second year, and 30c afterwards, with 4c an hour extra on Sundays and legal holidays and double time for over 9 hours' work. The wages of chief conductors and chief motormen are \$95 a month. The men asked for a rate starting at 46c and rising to 50c an hour, the higher rate to be reached after one year's service. The company expressed its willingness to accept any award made by the board, at the same time stating that it regarded the increase asked for by the men as being exorbitant. The board consisted of Judge Gunn, chairman; G. F. Henderson, K.C., representing the company, and F. Bancroft, representing the men.

**Regina Municipal Ry.**—Representatives of the union employees petitioned the Regina, Sask., City Council on July 16, asking that the minimum rate for all employees be 40c an hour. The present rate of pay is 30½c an hour for the first 6 months and 33c thereafter. The council's street railway committee, on July 15, recommended the council to raise the minimum rate to 55c an hour. The whole question was referred back to the committee for further consideration.

**The Three Rivers Traction Co.,** Three Rivers, Que., which heretofore paid its motormen from 25c to 29c an hour, has advanced them to from 30c to 34c an hour.

**Toronto Ry.**—See under "Toronto Ry. Machinists' Wages" on another page of this issue.

## Regina Municipal Railway Investigation.

An investigation into Regina Municipal Ry. affairs was opened at Regina, Sask., before Judge Harrison, July 2. The scope of the investigation was set out in the report of the city council's committee published in Canadian Railway and Marine World for July, pg. 305. 'One parties interested were represented by counsel, who examined witnesses at length, and a considerable number of documents were put in. The judge of investigation sat until July 6, and again on July 13, it being expected that the hearing of evidence would be concluded early the following week.

It was reported at a meeting of the City Council July 12, that it had been arranged to postpone further investigation proceedings until the autumn.

**The Southern Canada Power Co.,** which comprises among its properties the Sherbrooke Railway & Power Co., Sherbrooke, Que., has made some changes in its directorate, C. J. McCuaig, of Montreal, having retired. W. C. Hawkins, Vice President and Managing Director, Dominion Power & Transmission Co., Hamilton, Ont., has been re-elected President, the other directors being: F. W. Teele, Vice President; J. B. Woodyatt, General Manager; L. C. Haskell, Secretary-Treasurer; W. K. Baldwin, H. T. Chalifoux, Jas. Davidson, W. H. Miner, J. R. Moodie, A. J. Nesbitt, Geo. Parent, K.C., C. E. Read, J. M. Robertson, C. W. Tooke, J. S. Gillies, H. A. Sifton.

## Toronto Railway Machinists' Wages Arbitration.

The Minister of Labor appointed a board of conciliation in June to deal with a dispute between the Toronto Ry. and its machinists, members of the International Association of Machinists. Judge Ruddy, of Whitby, Ont., was chairman. H. H. Dewart, K.C., representing the company, and F. Bancroft the men. The chairman and F. Bancroft made a majority report on July 4, from which the following are extracts:—

The company's representatives sought to show that its machine shop is not one which could be compared with a machine shop connected with an industry producing commodities for sale, and endeavored to compare it with locomotive houses on steam railways. The men's representatives sought to prove that the machinists employed by the company are doing general machine work for the company, for subsidiary companies associated with it, and also for other parties distinct from the Toronto Ry.

The members of the board who sign this award are convinced that the men's representatives have established by the evidence adduced that the men involved

of the week, time and a half. After 10 p.m., double time, until workman is finished and goes off duty. On Saturday, time and a half shall be paid for 4½ hours after one-half of the regular day has been worked, and then double time until workman leaves duty. Double time shall be paid on Sundays and holidays. No man shall suffer a reduction through the adoption of the foregoing rates. If any grievance arises between the parties to the contract, the company shall receive a committee of its machinists, and, if possible, adjust such grievance. In case of a disagreement over the interpretation of the schedule, there shall be no cessation of work until negotiations between the highest representatives of both parties shall have failed to come to an understanding. No discrimination shall be shown against shop committees elected by the men to transact their business. The award shall remain in force for one year from June 1, 1918, unless 30 days notice be given by either party of a desired change.

While the majority award is retro-active to June 1, and the machinists have

fares, it is unable to raise fares in order to compensate for advances in wages. He considered that the minimum rate of wages should be 55c an hour; that 9 hours should constitute a day's work on the first five days of the week and 5 hours on Saturday. The two matters affecting overtime and Sunday labor were dealt with together. He considered that as the Toronto Ry. operates continuously day and night all the year round, at a fixed schedule of fares, which is reduced during certain hours daily and on Sundays, the company is in a different condition from ordinary manufacturing and industrial concerns. He recommended that all hours worked in excess of 9 per day be considered overtime, and paid for the 10th hour at a rate not less than the minimum flat rate of 55c an hour; that the rate for Sunday labor be the same, subject to the provisions that no man shall be required to work more than 6 days in any one week. The terms of the award to be accepted for one year from June 1, and to be binding upon both parties.

While disagreeing with the majority report, the company considered it in the best interests of all concerned to accept it, and notified the Department of Labor accordingly.

Montreal Tramway Co.'s Float in Y.M.C.A. Campaign.

The float was made on a freight car, which was fixed up with beaver board, sand bags and paint, to represent a scene at the front, showing the trenches and a Y.M.C.A. hut, the latter being made from the car's cab. The car was run all over the city lines during the days and evenings of the campaign, carrying a uniformed band, and attracted great attention. We are indebted to A. Gaboury, Superintendent, M.T. Co., for the photograph.

are qualified machinists; that the standard minimum rate in Toronto for machinists is 55c an hour; that the standard working day for machinists in Toronto is 9 hours, and that overtime rates prevail after a regular working day of 9 hours for five days a week, and half a day on Saturday. The company's own witnesses to some extent corroborated these claims. It was established by witnesses for the company that men in the C.P.R. and G.T. R. machine shops enjoy a 9 hour day and general overtime rates. The majority of the board recommends the following as terms of employment for the men involved, "which ought to be satisfactory to both parties":—

That the minimum wages be 55c an hour. Nine hours shall constitute a day's work, for the first five days of the week, and 4½ hours on Saturday, to be worked as follows: From Monday until Friday, inclusive, between 7 a.m. and 5.30 p.m., and on Saturday between 7 a.m. and 12 noon. All hours worked in excess of this shall be overtime and paid for as follows: From the end of the regular working day until 10 p.m. on the first five working days

been working 10 hours a day during June, it is recommended that the 10th hour from June 1 to July 4 be paid at straight time, and after July 4 overtime rates prevail as herein before recommended.

H. H. Dewart, representing the company, made a minority report in which, after reviewing the nature of the application, and the efforts made to bring about a settlement, he set out the following matters as being in dispute and upon which the board's recommendation should be made:—The minimum rate of wages per hour; the hours of labor per day; the question of weekday overtime, time and half; double time for Sundays and holidays; the period during which any settlement should continue and the date when it should commence. The two first mentioned matters are dealt with together. The machinists based their claim upon concessions made by a large number of firms in February, 1918, which gave a rate of 55c an hour, both night and day, for practically a nine hour day. He contended that the Toronto Ry. stands in a different position from other concerns. On account of having a fixed tariff of

Regina Municipal Ry. Traffic.—The Regina, Sask., City Council on July 9, took up the question of street car service to the military camp on the exhibition grounds. In addition to the present street car service, jitneys are being operated for which the council charges a license fee. It was stated that 15 cars would be required for the transportation of the soldiers on their being released from their afternoon work, and that an additional number over the present service would be required to land them back at closing time. This is a question of extraordinary traffic of a temporary character, for the accommodation of which special provision can only be made by reducing service on other parts of the system, or by having rolling stock and a staff sufficient to cope with it.

The Levis County Ry. has bought a simplex side dump car, 12 to 14 yards capacity, with double trucks, cabin at one end, G.E. equipment and Westinghouse straight air brake.

The Toronto & York Radial Ry. has bought two second hand cars from Edmonton Radial Ry.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—The Brantford, Ont., City Council, on July 8, decided to employ a qualified electrician to make a report on the line from Brantford to Paris, and to have the City Engineer report as to the condition of the roadbed. This was the outcome of a discussion as to the condition of the line, its earning power and prospects. W. R. Turnbull, one of the commissioners in charge of the line, said the investigation would show that the line was safe, though not in a first class condition.

Reference was made to the projected Terrace Hill line, but no action was taken. (May, pg. 211.)

**British Columbia Electric Ry.**—We are officially advised that the only work being done now is the completion of the sub-station at Point Grey, and that no other betterments are contemplated at present. (July, pg. 308.)

**Calgary Municipal Ry.**—Several meetings have been held, at which the city council and the property owners affected by the proposal to straighten the Ogden line, were represented, but after considerable discussion no decision was reached. The Calgary & Western Land Co. gave certain parts of the present right of way, on certain understandings with the city, and it is opposing any change. The proposed straightened route would cut down the operating time on the line by three minutes a trip. (July, pg. 308.)

**Edmonton Radial Ry.**—The City Council has authorized the placing of new crossings on Jasper Ave., from 102nd to 108th streets at a cost of \$1,150, and some track repairs on Saskatchewan Ave., at a cost of \$800. (July, pg. 308.)

**The Guelph Radial Ry.** is, we are officially advised, constructing 3,000 ft. of track on Garden St., Guelph, Ont. A. H. Foster, Guelph, is Manager. (May, pg. 211.)

**Kettle Valley Ry.**—J. J. Warren, President, is reported to have stated recently that arrangements had been completed for carrying through the development of the Copper Mountain plans, which include the building of a branch of the K.V.R. to the mining properties. The three projects—the railway, the West Kootenay Light & Power Co.'s power line, and the erection of the ore mill by the mining company, will, he said, be carried through simultaneously. The contract for the railway was let to W. P. Tierney, who got his outfit on the job at the end of April. (July, pg. 285.)

**The Levis County Ry.** received tenders recently for the supply of 16,000 cedar, hemlock or jackpine ties, no. 1 grade, 6 in. thick, with a minimum face of 6 in., delivered at Levis, Que. H. E. Weyman, Levis, Que., is Manager.

**Montreal Tramways Co.**—We were officially advised, July 12, that work on the extension of lines in the city had not been commenced owing to the impossibility of obtaining the special type of rails required. As a result, the date of starting the work had been extended by the commission to July 15, and it was thought likely that it would be further extended until early in 1919. The work to be done is as follows:—

Route A, 1.95 miles—On St. Patrick St., from Church St. to Monk Boulevard, and on Monk Boulevard from St. Patrick St. to Allard St., these lines to be connected with those on Church St.

Route B, 1.49 miles—From Westmount on the company's property and on the

Cote de Neiges Road to Queen Mary Road with connections both east and west to the existing tracks on this last mentioned road.

Route C, 1.84 miles—On Park Ave. from Atlantic Ave. to Beaumont St., from Park Ave. to Bickerdike St., and on Bickerdike St. to Ball St.

Route E, 2.78 miles—On De Fleuremont St. from Christophe Colomb St. to Papineau St., with connection to the existing lines on De Fleuremont St. and with connection to the lines on Christophe Colomb St. and Papineau St. to the north; on Rosemont Boulevard from Papineau St. to Boulevard Pie IX., with connection to the lines on Papineau St., and on Boulevard Pie IX. to the south; on Boulevard Pie IX. from Rosemont Boulevard to the present double track of Boulevard Pie IX.; on Bellechasse St. from Henri Julien St. to St. Denis St., with connection to the lines on St. Denis St. in both north and south directions; the construction of these lines thus forming a continuous line from St. Lawrence St. to Pius IX. Boulevard, inclusively by way of Bellechasse, St. Denis, De Fleuremont and Papineau Streets and Rosemont and Pius IX. Boulevard.

Route F, 2.31 miles—On Iberville St. from Mason St. to Belanger St., with connections with the present lines on Iberville and Mason Sts., and with connections with the lines to be constructed on Rosemont Boulevard both east and west.

These lines are to be laid with 115 lb. steel rails on 6 x 8 x 8 ties, welded joints, without bonds, and to be ballasted with stone.

The other line, route D, is 4.11 miles long, and is on Kelly St. in Bordeaux Ward, from the Ahunstia railway station to Tolhurst St., on Tolhurst St. from Kelly St. to Daze St., on Daze St. from Tolhurst St. to Meilleur St., on Meilleur St. from Daze St. to McDuff St., on McDuff St. from Meilleur St. to Poincarre St., on Poincarre St. from McDuff St. to Boulevard Gouin, with a connection with the line to the Bas de Sault. This line is to be laid with 80 lb. steel rails on 6 x 8 x 8 ties, continuous joints, 2—4 0 bonds, and to be ballasted with stone. (June, 1917, pg. 243.)

**Moose Jaw Electric Ry.**—The Moose Jaw, Sask., City Council, on July 2, ordered the stopping of street railway traffic over the South Hill bridge, on and after July 5. A committee of investigation reported that while the bridge was in good condition, the method of laying the rails was such that the supports of the understructure must be absolutely sound. The stringers had become more or less rotten and the track was dependent upon the rails for alignment, the condition being such that the bridge was dangerous for traffic. The company had been advised that the council would take no responsibility for its further operation over the bridge. It was recommended that the finance committee and the City Commissioners consult with the committee as to necessary repairs to the bridge.

**Quebec Ry., Light & Power Co.**—W. J. Lynch, General Manager, on his return from a consultation with the company's directors in Montreal, July 10, is reported to have said that as soon as estimates are completed showing the materials required, construction will be started on the projected extension of the line along the Beauport Road, from Limoilou to the city boundary. It is also reported that the company will take over the spur line from Mastai station to Beauport asylum and

operate it in conjunction with its system. (July, pg. 308.)

**The Suburban Rapid Transit Co.**, a subsidiary of the Winnipeg Electric Ry. Co., applied to the Assiniboine Municipal Council, July 2, for concessions respecting its pole lines. The council refused the application on the ground that the changes proposed were not in the locality's best interests.

**Toronto Suburban Ry.**—Under an agreement made with the Toronto City Council Nov. 30, 1917, and ratified at the Ontario Legislature's recent session, the company is granted an extension of time to Nov. 30, within which "to construct, complete, equip and put in operation its railway upon the portion of Davenport Road lying east of Bathurst St., to the northern limits of the city as the same existed in 1899. (Mar., pg. 117.)

**Winnipeg Electric Ry.**—The Winnipeg City Council received notice, July 3, that the company proposed to start work on the Sargent Ave. extension at once. (July, pg. 308.)

**Winnipeg Electric Ry.**—The city engineer reported to the Winnipeg Board of Control July 8, that the company had expended \$30,000 upon betterments and improvements to its lines and cars during May, being \$5,000 more than the agreement with the city called for. No expenditures had been made in the nature of construction work, so far as the elimination of electrolysis was concerned.

The city council was informed, July 10, that although the company looked upon an extension of the Talbot Ave. line to Cameron St. as a necessary one, it could not undertake it this year. (June, pg. 255.)

**Fuel for Chatham, Wallaceburg & Lake Erie Ry.**—The Ontario Railway and Municipal Board, on July 17, granted an extension of time to Aug. 1, for the use of natural gas for the generation of power for the operation of this railway. The reason for the extension is that there has been a delay in the delivery of repair parts required for the plant before other fuel can be used.

The Hydro Electric Power Commission of Ontario has received 10 of the 12 electric locomotives which it ordered recently from C. E. A. Carr Co., Toronto, for use in connection with its Chippewa-Queens-ton power development scheme. The trucks, bodies and cabs are being built by the National Steel Car Co. Six of the locomotives are supplied with General Electric equipment, and are supplied complete by C. E. A. Carr Co., and for the other six, which have Westinghouse equipment, that firm supplies the trucks, bodies and cabs only. These locomotives were completely described in Canadian Railway and Marine World for Dec., 1917, and illustrated in Apr., 1918.

The London Public Utilities Commission entertained representatives of London and other municipalities at dinner at Port Stanley, Ont., July 11. Among the speakers were the Premier of Ontario; Sir Adam Beck, chairman of the Hydro-Electric Power Commission of Ontario; R. Pocock, chairman London Public Utilities Commission, and J. W. Lyon, President Hydro-Electric Radial Ry. Association. Sir Adam Beck, in referring to criticisms of the London & Port Stanley Ry. finances, said the audited reports showed that the railway was not a burden to the city, but the exact reverse.

# The Electrical Workers Strike in British Columbia.

The placing in jeopardy of so essential a public service as light, power and electric transportation by the action of a body of men who acknowledge no responsibility to the public, is a situation which should not be allowed to pass without a warning. An unprecedented state of affairs arose recently in Vancouver, due to the action of the operators of the British Columbia Electric Ry.'s power plants and substations in wilfully attempting to close down all electrical supply, as a means of enforcing their wage demands and other alleged grievances. The details of the actions which preceded the shutting off of power at midnight on Saturday, July 13, without notice being given to the company or the public, warrant full disclosure.

The agreement between the B.C. Electric Ry. Co., the Western Power Co. and the B.C. Telephone Co. respectively and the electrical workers expired on June 30. Previous to that the men laid a new agreement, embodying many drastic increases and changes, before these companies. The two first named offered the men increases of 10%, but they were refused. Accordingly a conciliation board under the Dominion Act was proposed, but the men refused, thereby necessitating the Dominion Government naming an arbitrator for them. The conciliation board was formed, but the electrical workers refused to recognize it.

In the meantime, an arbitration with the B.C. Electric Co.'s street railway men was going on, but its sessions did not close until June 28, and no time was left in which to bring down a decision before June 30. The men in both unions, decided to go on strike at midnight, July 1, in contravention of the law.

It is believed that the electrical workers fully intended that Vancouver and the surrounding country should have been left without light or power on their going on strike, but the Electrical Superintendent, and some seven or eight of his assistants, maintained the service in a score of substations scattered over the mainland. No inconvenience was occasioned, except by the absence of street car service, both because the street car men were on strike and because the handful of men could not keep the rotaries in operation.

On July 11, about 1.10 a.m., the company came to a settlement with the two unions, agreements were signed, and service was resumed the same day. It was believed that the matters had been finally settled, with the exception of one or two minor details, such as free transportation and a lighting rate concession, which had by consent been left to be adjusted later.

The astonishment of the whole district, the company's management included, may be imagined when it is stated that a few minutes after midnight on July 14, suddenly and without warning, all lights, power, street cars and interurban cars fed by the B.C. Electric Co.'s system stopped. Thousands of persons were abroad at this hour. Street cars were loaded. Interurban cars were miles from their destinations. One car with 60 passengers and another with about 50 had set out from Vancouver for New Westminster. A train with 70 persons in it was stalled at New Westminster, unable to proceed along the Fraser Valley division. Other interurban cars were stalled on the Lulu Island and Burnaby lake lines, each with passengers in them.

The effect of the stoppage of light and power in hospitals and cold storage plants need not be emphasized. It is evident

that the men intended to make the tie-up complete, because not a switch was left in place in the main receiving station.

The Electrical Superintendent arrived there within a few minutes and found a large group of linemen and operators around the station. Luckily he had an electric torch in his automobile, for without it he would hardly have been able to make his way through the station. There was not a lantern left. The substation had been deserted.

All that it was possible to ascertain was that the operators had received orders from someone unknown, not the load dispatcher, to close down the plant. The operators at the Lake Buntzen hydro-electric plant were telephoned to and they threw off the machines there. All switches throughout the country were pulled, thus entailing a tremendous mechanical task to reinstate them.

Superintendent Newell immediately got in touch with Lake Buntzen and aroused the Superintendent there, who had retired for the night. Other engineers arrived and in 40 minutes the most of the city load had been picked up and an hour and a half later most of the railway lines were operated and cars able to proceed to the barns. Many of them finished their owl runs.

An attempt was made to arrive at the cause of the trouble, but communication with E. H. Morrison, business agent for the electrical workers, brought no coherent account. He intimated finally that they would not meet the company in any way unless the Electrical Superintendent was discharged. On Sunday morning Mr. Morrison called up and asked if this had been done, and when he was told that it had not, he refused to have further communication with the company. He mentioned that other unnamed officials would have to be discharged also.

The company understands, and it has been stated in the newspapers, that the men's union cabled to the directors of the company in London, Eng., demanding the dismissal of the Electrical Superintendent.

On Sunday, July 14, members of the board of trade and the mayor formed a committee to endeavor to bring about a settlement. Street cars were again tied up, owing both to the scarcity of current and to the refusal of the men to work while the electrical workers were on strike. A joint committee was formed, having on it several labor representatives, and the company laid its case before them.

The men demanded transportation and lighting concessions, and although it was pointed out that these had never come up, they were granted forthwith.

They alleged that 25 men had been dismissed in discriminating fashion and strike breakers kept on.

W. G. Murrin, Assistant General Manager, showed clearly that the men who had been laid off were linemen and groundmen, and were extra staff that had been working on special work, who the company expected to lay off several weeks since on the completion of the work. These men were laid off strictly according to the length of their service and not a single non-union lineman or groundman was in the company's employ.

The men demanded the dismissal of Mr. Newell, but it was pointed out that the 25 men had not been laid off by him, but by the foreman in the regular course of work. The company, however, agreed to

submit the case of the Electrical Superintendent to arbitration, while the electrical workers should go back.

This solution was accepted by the joint executive of electrical workers and street railway men, who promised to recommend it to their members. The street railway men met on Monday and car service was resumed the same afternoon. The electrical workers met on Monday night, but refused to carry out the recommendations of their executive and demanded the dismissal of the Superintendent immediately.

The arbitrary attitude of the electrical workers is without precedent in British Columbia, and they should be censured without exception, for their deliberate attempt to tie up the life of Vancouver and district when they shut down all electrical supply without warning on notice on the morning of July 14.

This has ceased to be a matter between the B.C. Electric Ry. and the employees. It is a matter for the public to settle, whether they will allow any person or body of persons to close down such essential services as electric light and power without a moment's notice and without responsibility for the consequences. The men may have the right to cease work, but they have not the right to tamper with the company's property, thereby inconveniencing thousands of persons and causing possible destruction of property, and perhaps death.

It is hard to see what good could have resulted from such action, which affected the public more than the company. The public is well aware who is to blame, and there is no disposition to saddle this disruption of public utility service on any but the men. Whatever grievances they might have had, they were not warranted for a moment in pulling the switches and plunging the country into darkness, without notice, but should have laid them before the company officers, when they would have been given fair consideration.

## Mainly About Electric Railway People.

W. H. McAuloney, of Halifax, N.S., and formerly Superintendent of Rolling Stock, Denver Tramways Co., Denver, Col., has been appointed Superintendent of Rolling Stock, Winnipeg Electric Ry., vice G. Garrett, resigned.

James Anderson, Vice President and Purchasing Agent, Sandwich, Windsor & Amherstburg Ry., who intended making a trip to the Pacific Coast some two months ago, and had to postpone it owing to his wife's illness, hopes to be able to go in the near future, as Mrs. Anderson, who has been in Wellesley Hospital, Toronto, for some weeks, is convalescing satisfactorily.

Allan H. Royce, of Toronto, Vice President, Toronto Suburban Ry., and Secretary-Treasurer, Canadian St. Ry. Association, from 1904 to 1907, who died in North Carolina, April 16, left an estate valued at \$305,854.86. It consisted of clothing and jewellery, \$100; book debts, \$75; mortgages, \$6,204.83; life insurance, \$10,000; cash, \$104,114.86; real estate, \$5,400; miscellaneous, \$75,000; agreements for sale of land, \$30,000. As there was no will, the estate will be divided among his mother and four brothers, one of whom is Lt.-Col. G. C. Royce, Secretary-Treasurer and General Manager, Toronto Suburban Ry.

## New Brunswick Power Co. Investigation.

Under the provisions of an act passed by the New Brunswick Legislature at its last session, the Lieutenant Governor in council appointed a commission to investigate the New Brunswick Power Co.'s affairs. The commissioners, G. W. Currier, Henry Holgate and Prof. A. S. Ritchie, commenced their sittings in St. John, June 28. The act authorizes them to examine so far as they shall deem necessary all records of the company and its predecessors, and subsidiaries, to ascertain the original cost of plant, the amount realized from the sale of stocks and bonds and the earnings and expenditures—in fact, they have power to review everything done by any of the companies since their formation, and to trace what has been done with the capital subscribed, the proceeds of the sales of bonds, and the earnings of the several companies. The commissioners are also especially directed to enquire into the matters and affairs of the New Brunswick Investment Co., alleged to have been formed for the purpose of working out the purchase and transfer of the St. John Ry. Co. to the N. B. Power Co., so far as the same are pertinent to the enquiry; to enquire into the cost of the water privileges, etc., acquired by the N.B.P. Co. from the New Brunswick Hydro-Electric Co. or other company or persons; to enquire into the cost of street paving and maintenance and the removal of snow on streets occupied by the car tracks, and generally the use of the city property and franchise for uses connected with the power company's operations; to examine and analyse all legislation affecting the company or its predecessors, together with letters, orders-in-council, etc.; and to prepare and recommend for enactment such new legislation, or amendments to existing legislation, as in their opinion will ensure to the city of St. John adequate public utility service in street railway traffic, electric light and power and gas supply for heat and light at fair and reasonable rates; provide for a proper measure of control of streets and franchises by the city; define clearly the respective rights of the city and the power company, and conserve all legitimate rights, interests and franchises of the power company, as well as those of the city of St. John.

In order to carry out the investigation, the commissioners have power to appoint accountants, engineers or other qualified persons to make any enquiry and report on such matters as may be referred to them; to hear any evidence that may be offered and to call any witnesses. A penalty of not less than \$50 or more than \$500 may be enforced for disobeying the commissioners' orders to produce books, etc., and witnesses are liable to the same penalties for disobedience as in the case of proceedings before the supreme court. The costs are to be divided between the city and the company, and the commissioners' report is to be submitted to the government in sufficient time to be acted upon at the legislature's next session.

The act provides that notwithstanding any other provision of any act, the commissioners may, during the course of the investigation, whenever it shall appear to them advisable or justifiable and necessary for the temporary financial relief of the company, adjust and allow rates of fare for transportation, and rates for heating, lighting or power, which rates shall become operative seven days after the first publication of the order in the city's papers, and these rates will remain

in operation until altered by the commissioners or the legislature.

The commissioners may for the purposes of the investigation, adopt in whole or in part the evidence taken before the N.B. Board of Public Utilities in respect of the company's application to fix a rate for gas; the reports of W. F. Sloan and J. W. Waterman (the company's engineers), reports of the directors, and audits of the affairs of any of the companies.

W. C. Whiting, Boston, Mass., and W. B. Bennett, Wisconsin, Wis., have been investigating the company's plant on behalf of the city; and H. Loring, Boston, Mass., is watching the interests of United States holders of the company's securities.

The investigation is likely to last some considerable time.

## Eliminating Jitneys in Vancouver B.C.

Under the powers conferred by the British Columbia Legislature last session, carrying out the suggestions in Adam Short's report following his investigation into transportation matters in the territory in which the British Columbia Electric Ry. operates, the Vancouver City Council on June 21 passed a bylaw amending the old bylaw as to motor cars, covering the operation of jitneys. The new bylaw repeals a number of sections and subsections of bylaw 952 as amended by bylaw 1218, and enacts in their place sections classifying motor vehicles, and fixing the fees to be charged as licenses for certain classes, and prohibiting the operation of others on and after July 1.

Motor vehicles are divided into seven classes, of which two are prohibited, viz.: Class A, which includes all motor vehicles inviting passengers to travel by them over any particular route or within any zone, "as a means of local transportation similar to that ordinarily afforded by the operation of street railways." Class B includes motor vehicles accepting passengers for transportation at the terminus of any route traversed by it, and all other motor vehicles not covered by class A, C, D, E, F or G.

The other five classes for which licenses are required to be taken out to permit their operation after July 1, are:—Class C, including taxicabs or touring cars having no specified route, and hired only from a fixed stand on a public street or from a garage for a minimum fare of 25c in the city or partly in the city, and not more than two miles without, or for a minimum fare of 50c if the distance outside the city exceeds 2 miles. Class D includes sight-seeing cars not used in the carrier business, charging fares of 25c and 50c, as in class C. Class E includes motor vehicles used by hotels for the transportation of guests to and from trains and steamboats. Class F includes motor vehicles used exclusively for ambulances, hearses, or for the transportation of pall bearers at funerals. Class G includes motor vehicles used exclusively for carrying passengers between Woodward's Landing and Vancouver post office by a route specified in the bylaw. The license fee for each of these classes is \$30, with the exception of class D, the sight-seeing cars, for which \$50 is fixed.

The portion of the old bylaw as to license fee which is struck out is contained in schedule A of bylaw 952, as amended by bylaw 1218. It provided that "Every automobile or taxicab up to seven passengers, for every vehicle, \$30 per annum. Over seven passengers, per vehicle, \$50 per annum."

Notwithstanding the bylaw, which came into effect July 1, the jitney men continued their operations, the tie up of the street railway offering an excuse. Outside jitney men rushed in to the city, and a rate of 10c was generally charged, which was subsequently reduced. It was reported July 5 that over 400 jitneys were being operated during the strike.

Application was made to Justice Morrison in chambers, by the jitney men's league for an injunction to stay the coming in operation of the bylaw, which was granted. The council was advised by its legal department July 12 that the judge's action was ultra vires, and acting on this advice, the city's license inspector was directed to prosecute any drivers operating in contravention of the bylaw. The men were at once warned, and it is reported that a considerable number ceased operations.

## Public Control of Public Utilities in Quebec.

The Quebec Telegraph says:—"The extent to which the Province of Quebec is honeycombed by public utility corporations of every description is fully revealed in the Quebec Public Utilities Commission's eighth annual report, which has just been issued. This commission—composed of F. W. Hibbard, President; Sir George Garneau and F. C. Laberge, commissioners, with Jos. Ahern, Secretary,—has the regulation and supervision of all the public utilities operating on Provincial charters.

"The Quebec Government, in establishing this central governmental authority, has recognized the fact that all companies operating public utilities have an especially close relationship to the public, which imposes in return for special privileges, special obligations, a point upon which special stress has been laid, within recent years, in all progressive communities.

"Owing to the close relation of the public utility to the community generally, a strong current of opinion is noticeable in favor of public ownership of public utilities. In instituting public control of public utilities through an efficient government commission, the Quebec Government has anticipated this movement for public ownership. Public control, as it thus exists, in the Province of Quebec, while less radical and drastic than public ownership, has nevertheless conferred many of the benefits of the more extreme system, since, while ensuring justice to the private companies operating the utilities, it has insisted ever on the rights of the public to adequate service. In its adjustment of all disputes, the commission has met with a singular success in satisfactorily settling all differences, and providing for the continuance of the necessary service. The Quebec Public Utilities Commission is, in fact, an outstanding example of the possibility of combining private enterprise with successful public control."

**Women Conductors at Kingston.**—The Kingston, Portsmouth & Catarqui Electric Ry., at Kingston, Ont., has 11 female conductors, no males being employed. Some of them have been working over 6 months. They are paid \$2.25 a day, and the management has experienced no difficulties in employing them, and states that their work has proved most satisfactory. No male conductors were discharged, but as vacancies occurred women were employed.

## Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry. and allied companies.**—

	10 months to Apr. 30, 1918.	10 months to Apr. 30, 1917.
Gross	\$515,417	\$447,429
Expenses	35,420	350,341
Net	129,997	97,088

Gross	\$533,393.40	\$499,731.83
City percentage	106,678.68	99,946.36

A New York press report states that among the public utilities securities maturing there during this year is an issue of \$750,000 of the company's 6% one year notes, payable Dec. 1.

**Winnipeg Electric Ry. and subsidiary companies.**—

	10 months to Apr. 30, 1918.	10 months to Apr. 30, 1917.
Gross	\$296,433	\$265,594
Expenses	230,694	194,179
Net	65,739	71,415

## Proposed Sale of London & Lake Erie Ry. & Transportation Co.

The directors of the L. & L.E.R. & T. Co. decided, July 3, to refuse the London, Ont., City Council's offer for the purchase of the company's property. This offer was reported to be \$241,500, with a bonus of \$12,500, together with a bonus of \$25,000 to be contributed by Westminster Tp., \$15,000 and \$5,000 each from Yarmouth

and Delaware Tps., and was made subject to a vote of the ratepayers.

The St. Thomas, Ont., City Council has decided to submit a question to the ratepayers at an early date as to the purchase of the St. Thomas—Port Stanley section of the line at an early date.

## British Columbia Electric Railway Franchise.

Under the franchise agreement between the company and the Vancouver City Council, the city has to give six months notice of its intention to take over the company's lines. The date for giving this notice is Aug. 11, but as there have been tentative negotiations going on for some time past between the city and the company upon franchise matters, an understanding was reached, June 27, under which the existing franchise is to be extended for two months, the effect of which is that the city will not be required to give notice under sec. 34, before Oct.

## Electric Railway Notes.

The Brantford, Ont., Municipal Ry. is reported to have ordered two new cars for the Brantford-Paris line, from the Preston Car & Coach Co.

The Toronto Civic Ry. has bought 2 tons of broom cane, for sweeper, 30 in. long, from the C. E. A. Carr Co., Toronto, at \$440 a ton f.o.b. Toronto.

The Edmonton, Alta., Public Utilities Committee extended until midnight the time during which day fares were available on the Edmonton Radial Ry. during the annual exhibition held recently.

Brantford, Ont., City Council on Jan. 8, authorized the City Treasurer to provide the Brantford Railway Commission with \$8,000 to complete payment for two interurban cars for the line to Paris.

The Detroit United Railway has asked the Interstate Commerce Commission for permission to increase its passenger fares to 2c a mile and to cancel all mileage and reduced rate tickets except school children's fares.

Complaints that the Sarnia St. Ry. was not giving an adequate service, and that its cars were not fitted with sufficient safety appliances, were investigated at Sarnia, July 15, by the Ontario Railway and Municipal Board.

The charges against Hamilton St. Ry. conductors of stealing tickets from fare-boxes were concluded in the Criminal Court at Hamilton July 2 and 3, with the following results:—J. W. Thompson was acquitted; G. Rodney, Jas. Fraser, G. Phillips, C. House and L. E. Binkley were each sentenced to two months imprisonment.

The St. John, N.B., City Council passed a resolution, July 16, asking the New Brunswick Government to repeal the agreement entered into with the St. John Ry. in regard to the use of the new bridge at the Reversible Falls, whereby the value of the company's property in the city for purposes of taxation was fixed during the currency of the agreement.

The Fort William, Ont., Trades and Labor Council wrote the mayor on July 4, as follows:—"In view of the proposed increase in the fares of the Port Arthur and Fort William street railways, steps should be taken at once by you to supply better service and to prevent the disgraceful overcrowding of the cars, especially in the hours when workers are traveling."

11. This understanding was officially ratified July 3.

The franchise matter came before the Vancouver City Council's railway committee June 27, the company being represented by Geo. Kidd, General Manager, and A. T. Goward, Local Manager, Victoria. Mr. Kidd stated that he was willing and anxious to discuss a new franchise, as the present one was out of date and not in line with franchises in other cities of the size and importance of Vancouver. Campbell Sweeney, who had acted as chairman of a board of trade committee on street railway matters, referred to the mass of material this committee had collected, and stated that it had come to the conclusion that the company could not continue to operate under the present conditions. After some general discussion, it was agreed that when details of the proposed new franchise are to be discussed, the board of trade and other representative public bodies would be asked to send representatives to assist in framing the terms.

A Hamilton, Ont., press dispatch of July 25, states that a number of p.a.y.e. cars will be put in operation on the Hamilton St. Ry. lines, Aug. 5. An earlier press dispatch stated that these cars would be placed on certain lines only, and would be operated as one-man cars; but we were advised July 22, that the adoption of one-man cars had not been considered.

Toronto Ry. representatives are reported to have interviewed the Ontario Railway and Municipal Board, July 18, in an effort to prove that with conditions as at present it is impossible for the company to comply with the board's order to place the required number of new cars in service. It is stated that the board advised the representatives that it could take no action without notifying the city authorities and holding a special hearing.

Edmonton Radial Ry. tickets are sold 4 for 25c on the cars, and are sold 5 for 25c at certain stores. A considerable number of stores handled the tickets when the new schedule came into operation, but it was reported that at the end of June that most of them had ceased doing so. The commissioners are considering some other plan for handling the 5 for 25c tickets. The City Council on July 25 refused to again take up the question of reintroducing workmen's tickets.

A deputation from Richmond Hill, Ont., and other points on the Toronto & York Radial Ry.'s Metropolitan Division waited on the General Manager, July 5, to discuss the new fares put in operation. The deputation claimed that the effect of the new rates would be to force working men to live in Toronto city, where there work is. The General Manager stated that with the large increase in wages and other expenses, any compromise was impossible.

The Regina, Sask., City Council, on July 16, passed a bylaw fixing the license fee of motor cars charging a fare of less than 25c, at \$100, with a \$5,000 bond and prohibiting such cars being operated on any street upon which the Regina Municipal Ry. operates. It was reported that there was only one jitney service being operated in the city, the principal route being from the city to the exhibition grounds, for which a 10c fare was being charged.

# Marine Department

## Steamship Building in Canada for British Government.

**Cameron-Genoa Mills Shipbuilders, Ltd.**—The s.s. *War Skeena*, built by Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C., is having her machinery installed by Hutchison Bros., Victoria, B.C.

**Canadian Vickers, Ltd., Montreal.**—The s.s. *War Duchess* was launched at Montreal, June 29, the ceremony being performed by Col. W. I. Gear, Director of Steel Shipbuilding, Imperial Munitions Board. She was built under contract with the Imperial Munitions Board, for the

ter being considered a complete loss. Two other vessels are under way, and it is expected that 7 of the order for 9 will be completed this year. This is in addition to the s.s. *Alaska*, completed recently, and which was built originally for Norwegian interests, and taken over by the British Government.

**Fraser, Brace & Co., Montreal.**—The first two of the four wooden hulls under construction by this company for the Imperial Munitions Board, were launched,

*War Squash*. This will complete the orders for wooden vessels placed with this company by the Imperial Munitions Board for the British Government.

**Midland Shipbuilding Co., Midland, Ont.**—The steel cargo steamship *War Fiend*, now building by this company, is the first of three ships ordered from it by the Imperial Munitions Board, and is of the following dimensions:—length over all, 261 ft.; length between perpendiculars, 251 ft.; depth moulded to main deck, 23 ft.; deadweight carrying capacity, 3,400 tons; load draft, 19½ ft. The vessel is being built to Lloyd's highest class and is of the ocean going type, with raised forecastle, bridge, and poop decks, the propelling machinery being placed amidships. The deckhouse containing the officers' quarters is located on the bridge deck, accommodation being provided for the chief officer, second and third mates, chief engineer and assistants, wireless operators and steward. The saloon, dining room, pantry, storeroom, galley and other offices are also contained in this house. Above these quarters are the captain's cabin and chart room, which are surmounted, in turn, by the pilot house and the navigating bridge. The layout of accommodations under the poop deck provide for 6 seamen, 6 firemen, cook and assistant, 2 mess rooms, wash room and shower, while the boatswain and the donkeyman are located in the forecastle, as is also the hospital. Coal bunkers are fitted alongside the engines and boilers, with coal chute above, and 3 coaling hatches each side on main deck; the space in 'tween decks can also be utilized for bunker coal.

A complete double bottom of the cellular type 42 in. deep runs for the entire length of the ship, constructed with solid floors on every frame and one longitud-

Wooden cargo steamship *War Erie*, for British Government, in Fraser, Brace & Co.'s basin, Montreal.

British Government, under the supervision of J. S. Bonnyman, representing the British Ministry of Shipping. She is a sister vessel of the s.s. *War Earl*, launched June 8, and described and illustrated in our last issue.

**J. Coughlan & Sons, Vancouver, B.C.**—The s.s. *Alaska*, which has been completed at this firm's yard recently for the British Government, was originally intended for Norwegian registry, but was taken over by the Imperial Munitions Board, when on the stocks. The hull is of steel, with double bottom, 5 water tight bulkheads, with poop, long bridge and forecastle. The officers' cabins are in the deck house on the bridge, and the crew's quarters are in the poop. She is equipped with Fletcher turbines with reduction gear, and 3 single ended Scotch boilers, equipped for oil fuel, and also for coal. There are two steel masts, with topmasts made to telescope for passing under bridges on the Manchester (Eng.) Ship Canal; 8 derricks of 5 tons capacity, 2 of 3 tons and 1 of 30 tons capacity. The chief dimensions of the vessel are: length over all 427 ft., length on water line 410 ft., beam 54 ft., depth 29¾ ft., draft loaded 24 ft. 2½ in.; deadweight tonnage 8,800, gross tonnage 5,825, net tonnage 4,201; speed on trial 12.65 knots in light condition; shaft horse power 2,500; revolutions on trial 107 per min.

Work is proceeding rapidly on the erection of the portions of the plant which were destroyed by fire recently. The damage was confined to the boiler shop and slips 3 and 4. The company has an order for 9 steel steamships of 8,800 tons each, from the Imperial Munitions Board, for the British Government. One of these, *War Camp*, was launched Mar. 16. Two others, *War Charger* and *War Chariot*, were on the ways at the time of the fire, and were considerably damaged, the lat-

July 4, and named *War Erie* and *War Huron*. Instead of being launched in the usual manner, water was let into the company's basin where the vessels were erected, and they were floated out. The third was expected to be launched during July, and the fourth during August. The two latter will be named *War Niagara* and *War Ottawa*.

Wooden cargo steamship *War Huron*, for British Government, in Fraser, Brace & Co.'s Basin, Montreal.

**Grant & Horne, Ltd., St. John, N.B.**—It was expected that the wooden steamship hull under construction by this company, under order of the Imperial Munitions Board, for the British Government, would be launched about July 26, and it was stated that she would be named *War Fundy*.

**Wm. Lyall Shipbuilding Co., Vancouver, B.C.**, launched its fifth vessel for the Imperial Munitions Board, June 26, it being named *War Nicola*, by Mrs. A. B. Taylor, wife of the company's chief accountant. The sixth vessel was expected to be ready for launching during July, and it was stated that it would be named

inal girder on each side of the center line. Four water tight bulkheads, all extending to the main deck, divide the peaks and machinery space from the 2 cargo holds. There are 4 main cargo hatches. Two 26 x 18 ft., one 22 x 18 ft., and one 18 ft. square. The hatch coamings are 42 in. high, with extra stiffening to withstand heavy weather; the web beams are spaced about 4½ ft. apart, and fitted thwartship with fore and aft hatch covers. In common with the arrangements for loading and discharging cargo, the whole of the working gear is of the most modern type. Four steel hinged derrick posts 30 ft. high are provided, each with 2 cargo

booms, having a lifting capacity of 4 tons to each boom.

Eight 7 x 10 in. steam winches of the latest type are supplied. The steering engine is located on the main deck of the aft end of bridge erection, and is of the usual type for ocean freighters; the control shafting being run alongside the casing top on boat deck to the engine, with rods and chain to the quadrant. The steering engine is supplied from Scotland. There are 2 metallic lifeboats 24 x 7 ft. and 9 x 3 ft. 3 in. deep, each boat being capable of accommodating the entire crew; one 16 ft. working boat is also provided for. The propelling machinery consists of triple expansion engines, with cylinders 20 $\frac{1}{2}$  x 33 x 54 x 40 in. stroke, steam being supplied by 2 single-ended Scotch boilers 15 $\frac{3}{4}$  ft. diameter by 11 ft. long, both engines and boilers being built by John Inglis & Co., Toronto. The vessel will be fitted out in accordance with the latest Board of Trade requirements, and during construction is under the personal supervision of Capt. E. E. Tedford, representing the British Government.

Port Arthur Shipbuilding Co., Port Arthur, Ont., on July 20 launched its steamship 21, War Hathor, a steel cargo vessel, for the British Government, almost

ate room is provided for each officer on the bridge deck amidships. She was completed and ready for sea early in July.

The Pacific Construction Co., Port Coquitlam, B.C., which received an order from the Imperial Munitions Board for 2 wooden steamship hulls, intended, in addition to its wooden shipbuilding yard, to establish berths for the building of steel steamships. We are advised that several contracts were offered for building steel steamships for the French and Norwegian Governments at satisfactory prices. Before these can be accepted, it is necessary to obtain permission from the Dominion Government, which takes the position that it is inadvisable at present to start a new steel shipbuilding yard, as it is considered that the labor and materials available are only sufficient to keep present yards employed. The company is said to be satisfied that it can obtain the necessary labor and materials, but, of necessity, accepts the Government's decision.

The hull of the s.s. War Sumas, the second built by this company for the Imperial Munitions Board, was launched July 12. This completes the order for wooden vessels for the British Government placed with the company.

Quebec Shipbuilding & Repairing Co.,

stalled at the Louise dock tidal basin, and it is expected that the former will be ready for her trial trip about Aug. 15, and the latter about the end of September.

Wallace Shipyards, Ltd., North Vancouver, B.C.—The Dominion Public Works Department's steam tugs Point Ellice and Point Grey, which, as reported in our last issue, have been leased to the Imperial Munitions Board in connection with the transportations of spruce for airplane manufacture, from the Queen Charlotte Islands, are being lengthened at this company's yards. The Point Ellice is to be lengthened 15 $\frac{3}{4}$  ft., and the Point Grey 17 $\frac{1}{2}$  ft. Both vessels use oil fuel and the extra space is to enable them to carry sufficient oil for longer cruises than undertaken heretofore.

Western Canada Shipyards, Ltd., Vancouver.—The s.s. War Nootka, which was launched by Western Canada Shipyards, Ltd., Jan. 4, underwent her trials at the end of June, over a measured course in Parry Bay out of Victoria.

Additional Orders.—There have been persistent rumors recently that the Imperial Munitions Board is about to place additional orders for steel steamships for the British Government, but up to the time of going to press no official information is available.

Launchings of Steamships.—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to July 16, giving in each case the date of the launching, the name of the steamship, the name of the builder and the deadweight tonnage:—

#### Steel Steamships.

	Tonnage.
May 18, 1917—War Dog, Wallace Shipyards North Vancouver, B.C.	4,500
July 9, 1917—War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N. S.	1,500
Aug. 19, 1917—War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300
Nov. 2, 1918—War Lance, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Mar. 16, 1918—War Camp, J. Coughlan & Sons, Vancouver, B.C.	5,800
Mar. 23, 1918—War Power, Wallace Shipyards, North Vancouver, B.C.	4,600
Apr. 3, 1918—War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
May 5, 1918—War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
May 21, 1918—War Bee, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	2,400
May 27, 1918—War Osiris, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
June 8, 1918—War Earl, Canadian Vickers Ltd., Montreal	7,000
June 29, 1918—War Duchess, Canadian Vickers Ltd., Montreal	7,000
Total 12 steel steamships	53,500

#### Wooden Steamships.

Dec. 28, 1917—War Songhee, Foundation Co., Victoria, B.C.	3,050
Jan. 4, 1918—War Nootka, Western Canada Shipyards, Vancouver, B.C.	3,050
Jan. 24, 1918—War Yukon, Cameron-Genoa Mills, Victoria, B.C.	3,050
Feb. 16, 1918—War Puget, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,050
Mar. 6, 1918—War Selkirk, Western Canada Shipyards, Vancouver, B.C.	3,050
Apr. 10, 1918—War Caribou, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,050
Apr. 11, 1918—War Comox, New Westminster Construction & Engineering Co., New Westminster, B.C.	3,050
Apr. 11, 1918—War Massett, Foundation Co., Victoria, B.C.	3,050
Apr. 13, 1918—War Tye, Pacific Construction Co., Coquitlam, B.C.	3,050
Apr. 25, 1918—War Haida, Cameron-Genoa Mills, Victoria, B.C.	3,050
Apr. 27, 1918—War Cayuse, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,050
May 11, 1918—War Mohawk, Quinlan & Robertson, Ltd., Quebec, Que.	3,050
May 11, 1918—War Sioux, Port Arthur Dredging Co., Port Arthur, Ont.	3,050
May 21, 1918—War Atlin, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,050

Launching of wooden cargo steamship War Quebec, for British Government, by Quebec Shipbuilding & Repair Co., at Quebec, Que.

identical with the War Isis, which was described and illustrated in Canadian Railway and Marine World for June, pg. 274. The War Hathor was christened by Miss Hazel Whalen, daughter of the company's President, Jas. Whalen.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.—The s.s. War Bee, the launching of which on May 20, is illustrated in this issue, is the second steel steamship built, under order from the Imperial Munitions Board, for the British Government. She has the following principal dimensions: length 248 $\frac{3}{4}$  ft., breadth 35 ft., depth 20 ft., and will carry a cargo of about 2,400 tons deadweight. She is equipped with triple expansion engines, with cylinders 17, 28 and 46 in. dia. by 33 in. stroke, built entirely by the company, with air, feed and bilge pumps directly connected. Steam is supplied by two boilers 11 $\frac{1}{2}$  ft. dia. by 11 ft. long at 185 lb. working pressure under natural draft. Other equipment includes complete cargo discharging gear, folding masts, four large hatches, complete electric lighting plant, etc. A separ-

Quebec, Que.—The hull of the first of the two wooden steamships under order from the Imperial Munitions Board, was launched June 28, and christened War Quebec, by Mrs. D. McLaughlin, wife of the Superintendent of the yard. The hull was subsequently towed to the deep water pier of the Louise docks, where the machinery is being installed.

Propelling machinery for the War Quebec has been somewhat delayed, but work is proceeding on the installation of the piping.

Quinlan & Robertson, Ltd., Limoulu, Que.—The keel of the fourth vessel to be built under the Imperial Munitions Board's order, was laid May 13, and construction is proceeding satisfactorily. Two vessels have been launched, the War Mohawk on May 11, and the War Seneca on June 13, not June 14, as mentioned in the news item in our last issue. The third vessel was expected to be launched July 25, and the fourth about Sept. 1.

The vessels War Mohawk and War Seneca, launched May 11 and June 13, respectively, are having machinery in-

## General Shipbuilding Notes Throughout Canada.

**Cape Breton Shipbuilding Co.,** Johnstown, N.S.—It is reported that a site has been acquired and contract let to R. Musgrave, for the construction of the yards. F. L. Kelly is President, N. A. McMillan, K.C., Secretary, and Wm. Hackett, Treasurer.

**Dartmouth, N.S.**—A London, Eng., press cablegram stated recently that Sir Wm. Beardmore, of Wm. Beardmore & Co., Ltd., shipbuilders, Glasgow, Scotland, had conferred there with the Canadian Premier, respecting the establishment of a shipbuilding plant at Dartmouth, and that the matter would be taken up further on the arrival of the Minister of Marine, Mr. Ballantyne, in England.

Another cablegram of July 11 said that Sir Robert Borden had discussed with the Minister of Marine, Mr. Ballantyne, the development of the shipbuilding industry in Canada.

**The Dominion Shipbuilding Co., Ltd.,** has been incorporated under the Dominion Companies Act, with an authorized capital of \$3,000,000, and office at Toronto, to build, own, operate and deal in vessels of any class, and to carry on a general shipbuilding and ship owning business. Power is also obtained to purchase the assets of any company at present carrying on a shipbuilding or engineering business, and to pay for same either in cash or shares, and also to build for its own use, or for hiring out, graving and other docks, for the convenience of building, repairing and docking vessels.

An Ontario charter was obtained under this name by the same interests in Nov., 1917, and the work of laying out the plant was proceeded with. The site was provided by the Toronto Harbor Commission on reclaimed land situated due south of the Thor Iron Works, near the foot of Bathurst St., Toronto. The land extends from the foot of Spadina Ave., westerly for 1,386 ft., and covers 15.2 acres. The Toronto Harbor Commission was responsible for the engineering work connected with the preparation of the site, and for the construction and equipment of the plant. The interests concerned with the Dominion Shipbuilding Co., control, and own practically the whole of the stock of the Thor Iron Works, Ltd., and it is understood that that property will be absorbed by the new incorporation. L. Dahlgren, President and General Manager, Thor Iron Works, Ltd., is Vice President and General Manager, Dominion Shipbuilding Co.

**H. A. Ellis, Barachois, Que.,** launched the schooner *Gaspe Trader* towards the end of June. She is 120 ft. long over all, 29 ft. beam, and 10 ft. depth of hold, and of 300 tons register. She will have 2 masts, ketch rigged, and will be equipped with Fairbanks-Morse crude oil engines of 75 h.p. each, driving twin screws. Her other equipment includes a patent steering gear and gasoline engine for hoisting sails, anchor, etc., and there will be a complete electric lighting plant. She is intended for service between Montreal,

Gaspe ports and Newfoundland, and is expected to be on her route early in August.

**Harrison & Lamond Shipbuilders, Ltd.,** Vancouver, B.C., is reported to be proceeding with the building of a wooden schooner with auxiliary power, 2,550 tons capacity, and of the following dimensions: length 225 ft., breadth 44 ft., depth 21¼ ft., 1,600 tons gross. This firm had a contract from the Dominion Government last year for building such a vessel, at an approximate cost of \$230,000, for operation between Canadian Atlantic and Pacific ports via the Panama Canal, details of which were given in Canadian Railway and Marine World for Oct., 1917, but, owing to difficulty in obtaining the requisite material within the contract

**Melanson Bros.,** Gilberts Cove, N.S., have laid the keel for a three masted schooner of about 200 tons register.

**S. A. Moulton, Prince Rupert, B.C.,** is reported to have an order for the construction of 10 composite boats.

**Port Arthur Shipbuilding Co.,** Port Arthur, Ont., has completed two trawlers for the Naval Service Department, which have already sailed. They are of the Castle class type, with the following general dimensions:—length, 125 ft.; beam, 23 ft. 4 in.; moulded depth, 13½ ft.; net tonnage, 116.3; gross tonnage, 294.5. They have one single end Scotch boiler and one triple expansion engine, developing 500 i.h.p. The company has completed four trawlers altogether this year and has six others to build, two of which

Two trawlers for Naval Service Department, just prior to launching by Port Arthur Shipbuilding Co.

time, declined to proceed except on a cost plus 10% basis. The contract was eventually cancelled.

**Kingston Shipbuilding Co.,** Kingston, Ont.—The third trawler built by this company for the Dominion Department of Naval Service, was launched July 6.

**Wm. Lyall Shipbuilding Co.,** North Vancouver, B.C.—A press report from Vancouver, July 15, stated that Montreal interests had placed a contract with the company for the construction of 24 wooden steamships. These vessels, it is said, will be of a slightly larger type than these now being built, being of 3,500 tons.

The company is building on its own account, 6 auxiliary powered schooners, which will be rigged with topsails, and three of them will be equipped with twin Atlas full Diesel engines, the other three having twin Fairbanks-Morse semi-Diesel engines. The vessels will be 235 ft. long at the water line, 44½ ft. beam and 20½ ft. moulded depth, with approximately 2,500 tons deadweight capacity.

**Marine Construction Co. of Canada, Ltd.,** St. John, N.B., is reported to have laid the keel of a double deck steamship, about 200 ft. long over all.

**McLennan Foundry & Machine Works, Ltd.,** is reported to be arranging to establish a shipbuilding plant on the Restigouche River at Duncans Point, N.B.

were expected to be launched before the end of July.

**Prince Rupert, B.C.**—W. P. Hinton, Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, is reported to have announced that a contract has been closed for building five steel steamships at the Grand Trunk Pacific Ry.'s dry dock and shipbuilding plant at Prince Rupert, and that there is another order in prospect for five more. These will probably be of about 8,500 tons each. Negotiations have been proceeding for some time for leasing the plant to some U.S. interests, who are desirous of building steel vessels at Prince Rupert, but up to the time of writing, we have not been advised that the matter has been definitely closed.

**T. Rawding, Allendale, N.S.,** has laid the keel for a 250 ton three masted schooner, and expects to begin work shortly on another schooner of 175 tons. The master builder in charge is R. McLeod, formerly of the Tusket Wedge Shipbuilding Co.

**Shelburne Shipbuilders, Ltd.,** Shelburne, N.S., are building a tern schooner 136 ft. long, and one of 150 ft. The first is expected to be launched in September and the second in November.

**Songhees Reserve, Victoria, B.C.**—It is reported that negotiations have been com-

pleted for laying down a new shipyard in Victoria, for the construction of wooden vessels for Norwegian interests. A site is said to have been leased at West Bay on the old Songhees reserve, that a contract has been made for the construction of the vessels, and that keels will be laid shortly. Chris. Cholberg is mentioned as being in Victoria, as representative of the interests concerned. The contract mentioned is stated to be for three wooden sailing schooners about 1,400 tons each and 200 ft. long, for operation in the Norwegian trade.

**Standard Shipbuilding Co., Vancouver, B.C.**—In addition to the 6 wooden steamships of the Donahoe type, with steel keelsons, 3,500 tons deadweight capacity, under order for French interests, as mentioned in our last issue, it is reported that the company has received an order from the Brazilian Government for 2 similar vessels.

**St. John Shipbuilding Co., St. John, N. B.**—Orders are reported to be in hand for 10 five masted auxiliary powered schooners. As mentioned in our last issue, the company plans to establish a steel and wood shipbuilding plant at Courtenay Bay, St. John, but apart from local reports that these plans are being pushed ahead, there is nothing to indicate any active construction. The promoter states that the work to be undertaken by the St. John Dry Dock & Shipbuilding Co., which has taken over the balance of the Norton Griffiths Construction Co.'s contract from the Dominion Government, will not interfere with his company's plans. The directors of the company, as given in Canadian Railway and Marine World for Sept., 1917, are: J. W. Norcross, R. M. Wolvin, Montreal; Senator W. C. Edwards, Ottawa; M. J. Haney, Toronto; Angus Mclean, Bathurst, N.S.; R. O'Leary, Richibucto, N.S.; T. Bell and T. Nagle, St. John, N.S. Several of these are interested in Halifax Shipyards, Limited, which has been organized recently.

**Tidewater Shipbuilders, Ltd., Three Rivers, Que.**—It was expected that a steel steamship with wooden bottom would be launched before the end of July, at this yard, for Canada Steamship Lines, Ltd. She is 240 ft. long, 40 ft. beam and 15½ ft. moulded depth, with a displacement of about 3,000 tons. She is equipped with twin engines and 13 ft. Scotch boiler. She has been named T. P. Phelan after one of the C. S. L. directors.

**Victoria Shipbuilding Co., Victoria, B.C.**, is reported to be building wooden cargo steamships for the British Government. All orders for steamships to be built in Canada for the British Government have been placed by the Imperial Munitions Board, and a complete list of these orders was published in Canadian Railway and Marine World for March. At that time no order for vessels had been placed with the company, by the Imperial Munitions Board, and it is a well known fact that the British Government decided not to place any further orders for wooden steamships, prior to the date the list mentioned was published. The Victoria Shipbuilding Co. was organized in the early part of the year, J. H. Price, President, Cameron-Genoa Mills Shipbuilders, Ltd., being chiefly interested, and it was reported that arrangements had been practically completed for building 20 wooden vessels for the British Government, and that plans had been submitted direct to the British Controller of Shipping. Similar negotiations were undertaken some time ago by another firm, and in commenting on them in March, we stated that we were unable to obtain any verification of the reports, but from the

best information available, thought it unlikely that the British Government would place any further orders for wooden steamships, though there were possibilities of orders from allied or neutral countries. So far as our information goes, no change has taken place in the situation regarding this matter.

### The Canadian Northern Car Ferry Canora's Voyage to British Columbia.

J. D. Macpherson, Wreck Commissioner for British Columbia, Victoria, B.C., wrote recently, as follows: "I note with interest in Canadian Railway and Marine World for July, an account of the C.N.R. car ferry Canora, and the route she is to follow from Quebec to Vancouver, though why she is to call at Port Townsend, Wash., I am at a loss to imagine, for not only will she have to clear at the quarantine station at Williams Head, off Victoria, but she will, I presume, have also to touch here for a pilot.

"Further, the distance from Port Townsend to Vancouver is 89 miles (not as you have it, 80 miles), making a total distance from San Francisco to Vancouver via Port Townsend of 859 miles, whereas the distance from San Francisco to Vancouver via Victoria is 817 miles, a saving of 42 miles, thus:

"San Francisco to Port Townsend.....	770 miles
"Port Townsend to Vancouver .....	89 miles
	859 miles
"San Francisco to Victoria .....	744 miles
"Victoria to Vancouver .....	73 miles
	817 miles"

Mr. Macpherson's letter was referred to Capt. Norman McKay, of the Canora, who replied as follows:—"The chart from which I figured the approximate sailing distance on the proposed voyage of the Canora to Vancouver was a very general one. In fact there was no distance shown from Port Townsend to Vancouver, hence my guess that it was about 80 miles. The reason that Port Townsend was listed as a point of departure was merely that it was indicated on this chart, with the mileage shown from San Francisco to that point, whereas as above stated, there was no mileage indicated inward, either

from Port Townsend or Victoria to Vancouver. There would be no good reason for the ship calling at Port Townsend unless in distress."

### Newfoundland Shipping Department.

Reference has been made in previous issues to the formation of a Shipping Department by the Newfoundland Government. Following is a summary of the act creating the department and defining the duties of the Minister, which details have only come to hand recently. There shall be a department called the Department of Shipping, over which the Minister of Shipping shall preside, and he shall have the management and direction of the department, holding office during pleasure. A Shipping Board shall be formed, of which the Minister of Shipping, ex officio, shall be chairman, and not less than two other members, appointed by the Governor in council, holding office during pleasure, the board's powers and duties being to confer with and advise the Minister of Shipping on matters over which the department has control. The department shall have control and regulation of all shipping available for the country's needs, and shall regulate the movement and employment of that shipping so as to make the best use of it having regard to the circumstances, with power to take steps for providing and maintaining an efficient supply of shipping. The appointment of the present Minister of Shipping, Hon. J. C. Crosbie, and all things done by him as such Minister have been ratified by the act.

**Inverness Harbor, N.S.**—The improvements contemplated in Inverness harbor, tenders for which were received July 5, cover the dredging of a channel 30 ft. wide at the bottom, and to a depth of 6 ft. below low water spring tides, from the Gulf of St. Lawrence to McIsaacs Pond; the extension of the existing western and eastern breakwaters; the repairing of the existing western breakwater, and the raising of the top of the eastern breakwater to the level of the new works, and providing that the top of the covering of the extensions shall be 5 ft. above high water and 9 ft. above low water spring tides.

## Cargo Steamship Building for Dominion Government.

**Orders for Steamships.**—Since Canadian Railway and Marine World for July was issued, the Marine Department has ordered from the Port Arthur Shipbuilding Co. 2 steel cargo steamships of about 3,400 tons d.w. capacity. The department has also agreed to give Halifax Shipbuilders, Ltd., an order for 3 steel cargo steamships of approximately 10,000 tons d.w. capacity each, when its yard at Halifax, N.S., is ready to begin building. This makes the orders given and promised up to date as follows:—

Canadian Vickers, Ltd., Montreal—1 of 4,300 tons, and 1 of 8,100 tons.

Collingwood Shipbuilding Co., Collingwood, Ont.—2 of 3,750 tons each.

Halifax Shipbuilders, Ltd., Halifax, N.S.—Order promised for 3 of approximately 10,000 tons each.

Tidewater Shipbuilders, Ltd., Three Rivers, Que.—2 of 5,100 tons each.

Wallace Shipyards, Ltd., North Vancouver, B.C.—2 of 4,300 tons each, and provisional arrangements for 4 of 5,100 tons each.

Other orders will be placed, as berths may be becoming vacant, with the shipbuilders mentioned in Canadian Railway and Marine World for March and April, and if the St. John Drydock & Shipbuilding Co. goes on with its proposed shipbuilding plant at St. John, N.B., it will also probably be given some orders.

Thos. Nagle, of the St. John Shipbuilding Co., St. John, N.B., is reported to have stated there recently that that company has been given an order to build 3 steamships for the Dominion Government. We were officially advised by the Marine Department recently that no such order had been given by that department, which has charge of all the cargo steamship building for the Dominion Government.

**The 4,300 Ton Type of Steamship.**—Following is a description of the 4,300-ton type of steel cargo steamships for the Dominion Government, which are to be built under the Minister of Marine's shipbuilding programme, as first detailed in Canadian Railway and Marine World for February, and additional particulars in regard to which have been given in each subsequent issue. As previously stated in these columns, three steamships of this type have been ordered, one from Canadian Vickers, Ltd., Montreal, and two from Wallace Shipyards, Limited, North Vancouver, B.C. Other orders for similar steamships will be placed as suitable berths become available at various shipbuilding yards. Canadian Vickers, Limited, laid the keel on April 12 for the one ordered from them. The following are the principal dimensions, etc., of these vessels:—

Length . . . . .	320 ft.
Breadth . . . . .	44 ft.
Depth . . . . .	25 ft.
Draft, loaded . . . . .	21 ft. 2 in.
Speed, maximum . . . . .	11½ knots
Permanent bunkers . . . . .	670 tons
Water ballast capacity . . . . .	630 tons
Complement, officers and men, including gunners . . . . .	35

The vessels will be of the single deck type, with poop, bridge and forecastle, straight stem, elliptical stern and subdivided into 13 watertight compartments. A double bottom 42 in. deep, with solid floors on every frame, will be fitted from the collision bulkhead to the after peak bulkhead, connected up in the usual way with the steam suction. The vessel will be built on the ordinary transverse system, the frames being of bulb angle spaced 24 in. apart, ample compensation being provided to the shell plating in lieu of side stringers. The main deck, poop,

bridge and forecastle decks will be of steel sheathed with B.C. fir in way of the accommodation.

The cargo hatches will be arranged for the speedy handling of bulk cargoes and will have the following dimensions:—No. 1, 22 ft. x 22 ft.; no. 2, 26 ft. x 22 ft.; no. 3, 12 ft. x 18 ft.; no. 4, 26 ft. x 22 ft.; no. 5, 26 ft. x 22 ft.

The usual stanchion arrangement in the holds will be dispensed with, in order to facilitate loading and unloading. The holds will be of the following capacities in cubic feet:—No. 1, 48,300; no. 2, 78,200; no. 3, 86,800; no. 4, bridge erection, 13,060.

In accordance with what is now recognized practice in modern cargo vessels, the seamen and firemen will be housed under the poop deck aft, in large compartments, each accommodating 2 men. Separate mess rooms will be provided for the seamen and firemen, and all other requirements, such as lighting, ventilation and sanitation will be in conformity with the Board of Trade regulations governing the survey of masters and crew spaces. The ship's officers, etc., will be berthed in an island deck house, at the fore end of the bridge deck, which will contain one cabin for each officer, wireless office, dining saloon, pantry, baths, lavatories, and the usual stores. An internal stairway will lead to the captain's quarters and chart room on the upper bridge, which will be surmounted by the flying bridge and navigating positions. The engineers, petty officers, mess rooms, baths and lavatories will be located in side houses abreast the engine casing near the aft end of the bridge deck. All the accommodation throughout will be steam heated.

Each vessel will be provided with 6 derrick posts, and 1 pole mast, carrying wireless aerials. Each derrick post will have 2 derricks fitted, capable of lifting 5 tons each. The 11 cargo winches will be 7 x 12 in., of the Clarke-Chapman type, manufactured by Canadian Vickers, Limited. The windlass, which will be placed on the forecastle head, will also be of the Clarke-Chapman type, and manufactured by the builders. The steering gear will be at the after end of the engine room casing, inside the bridge erection. The engine will be of the ordinary Hastie horizontal type with cylinders 9 in. diameter by 9 in. stroke and will be manufactured by Canadian Vickers, Limited.

A 10 k.w. electric generating set will be placed in the engine room. The dynamo will be built by Vickers, Limited, Sheffield, Eng., and will be coupled to a single cylinder enclosed forced lubricating engine, manufactured by the Goldie & McCulloch Co., Galt, Ont.

The life saving appliances will be in accordance with the requirements of the Canadian Board of Steamship Inspection and will comprise: 2 lifeboats, 22 x 6½ x 2¾ ft.; 1 lifeboat, 20 x 6½ x 2½ ft., and 1 dinghy, 20 x 5½ x 2 ft. 4 in. Each vessel will be fitted with the usual armament as required by law and provision will be made for defence from floating mines.

The propelling machinery will be of the triple expansion surface condensing type, having cylinders 25 x 41 x 67 x 45 in. stroke. It is being built on separate contract by the Goldie & McCulloch Co. The air, feed and bilge pumps will be worked off the main engine. The main circulating pump will be of the centrifugal type driven by an enclosed forced lubrication engine, manufactured by Goldie & McCulloch Co. The general service pump and

auxiliary feed pump will be 9½ x 7 x 15 in. of G. & J. Weir's make, and the ballast pump will be of the vertical duplex type, 7½ x 9 x 10 in. The reversing engine will be of the all round type.

Steam will be generated in 2 single ended boilers 15½ ft. diameter by 11½ ft. long, designed to work under forced draft and with a working pressure of 180 lb. per sq. in.

The vessels will be built to Lloyd's 100 A1 class, under special survey, and under the direct supervision of the Marine Department's shipbuilding branch. Satisfactory progress is being made with the work of construction in both hull and machinery departments and it is anticipated that the first vessel under the government's shipbuilding programme will be placed in service well under the contract date.

Grant Smith & Co., Vancouver, B.C., is reported to have received an order from the Dominion Government for 6 wooden cargo vessels of 3,000 tons capacity, and of the following dimensions:—length 250 ft., breadth 43½ ft., depth 25 ft., with engine equipment for a speed of 9½ knots an hour. Canadian Railway and Marine World for July contained, on page 316, information of the orders placed for steamships by the Dominion Government, covering all the orders placed by the government for cargo steamships, up to June 20. As previously pointed out, the Dominion Government has decided not to place any orders for wooden steamships, and so far as we are at present advised, has not placed any orders for cargo vessels, other than those mentioned on this page. During 1917, the Dominion Government awarded contracts for the construction of wooden schooners with auxiliary power, but on the ground that the Imperial Munitions Board had practically cornered the supply of ship timbers, the contractors declined to proceed, except on the cost and percentage basis. The government then cancelled the contracts.

Wallace Shipyards, Ltd., North Vancouver, B.C., which has built 2 steel cargo steamships for the British Government, under order from the Imperial Munitions Board, has orders for 2 steel cargo steamships, 4,300 tons deadweight capacity, for the Dominion Government, and provisional arrangements have been made by the government for the construction of 4 additional steel steamships of 5,100 tons deadweight capacity. The company is also reported to be building 2 wooden schooners with auxiliary power, 2,500 tons capacity, for the Dominion Government, and 4 wooden cargo steamships totalling 17,500 tons for undisclosed interests. Elsewhere we have mentioned that up to June 20, subsequent to the date of the report, the Dominion Government had placed no orders for wooden vessels. A schooner of this type was ordered last year by the government, and the contract was subsequently cancelled.

The Canadian Merchant Service Guild's members have, according to a press dispatch from Vancouver, decided to resign from the service of steamship companies which refuse to recognize the guild, the dispatch stating that, as a result, steamships of the C.P.R., the Union Steamship Co. and the British Columbia Towboat Owners' Association will be without masters and officers. On application from the men, a conciliation board has been appointed to deal with the matter.

# St. John, N.B. Harbor Work, Drydock and Shipbuilding Plant.

Canadian Railway and Marine World for June and July contained particulars of the St. John Drydock & Shipbuilding Co.'s plans for establishing a drydock and shipbuilding plant at St. John, N.B., and in connection therewith to do certain harbor improvements. We have since been favored with copies of the orders in council passed by the Dominion Government in connection therewith. The first order, passed May 18, was not satisfactory to the company, and another order was passed June 10, cancelling the previous order. The Minister of Public Works' report, dated May 31, on which the second order in council was based, is as follows:

As authorized by an order in council dated Feb. 12, 1912, a contract was entered into on Mar. 25, 1912, with Norton Griffiths & Co. (Canada) for the construction of certain works, at an approximate cost, according to the schedule rates, of \$7,500,000, required to provide at the important port of St. John, N.B., adequate shipping facilities to meet the requirements of Canada's increasing trade, and particularly to create terminal facilities for the Intercolonial, the Grand Trunk Pacific, the National Transcontinental, and other projected railways, such as the St. John Valley Ry. The following works were comprised in the contract. The construction of a breakwater 4,570 ft. long, including 5 groynes, each 150 ft. long. The dredging of a channel about 6,800 ft. long, 500 ft. wide at bottom and to a depth of 32 ft. below low water; the dredging of a basin to a depth of 32 ft. below low water in Courtenay Bay; the construction of 4,890 lin. ft. (more or less) of quay walls; the filling of the whole of the area shown in red on plan, sheet I, approximately 28 acres; the construction of a drydock of the first class under the provisions of an Act to encourage the construction of drydocks statutes of 1910, chap. 17. That with regard to the drydock it was stipulated that the government would enter into an agreement with the company for the payment of a subsidy thereon.

The company proceeded to carry out the contract, but as time advanced it was seen that but comparatively little progress was being made with the works as a whole. The company was notified time and time again that it must see to the prosecution of the works with greater diligence, but the efforts of the Public Works Department in this direction were without result, and the company finally ceased operations. The following was the standing of the contract on May 31, 1918:

Amount of final estimate returned	\$3,913,502.07
Amount of extras on contract returned	
In final estimate	127,955.09
Total payable to contractors, thus far	3,913,502.07
Actually paid	3,910,048.78
Amount held against claims	3,753.29
Claims against contractors, on file	2,655.00
Amount of security deposit which was released under order in council of Aug. 8, 1917	250,000.00

The Norton Griffiths Co. Ltd. (Canada) is in liquidation, and has assigned any rights which it may have under the contract mentioned to the St. John Dry Dock & Shipbuilding Co. Ltd., subject to the Minister of Public Works' approval. The Department of Justice has expressed the opinion that there can be no legal objection to the assignment of this contract to another contractor who will complete the works upon the terms stipulated. The St. John Drydock & Shipbuilding Co. Ltd. proposes to establish a shipbuilding plant at St. John, and has filed an application for a subsidy agreement for the construction of a drydock of the first class at St.

John. In an order in council passed May 18, 1918, which granted authority, as hereinafter quoted, it was stated that in order to afford access to the proposed drydock it would be necessary to complete the dredging of the basin in front of the dock site, to dredge a channel from the main channel to St. John harbor, to the said basin—it to be understood, however, that no submarine rock work was to be included in the excavation of this channel—and to protect the dredged channel by the extension of the existing breakwater for approximately 2,500 ft. It was also stated in the said order in council "that the present scheme may be summarized as hereunder, showing the probable cost thereof as estimated by the Chief Engineer of the Public Works Department, amounting approximately to \$1,962,265.52"—To extend the existing breakwater approximately 2,500 lin. ft., estimated cost \$1,030,369.60. To dredge a channel from the main channel to the St. John harbor, inside the breakwater, to the basin in front of the proposed drydock, it to be understood, however, that no submarine rock work is to be included in the excavation of this channel. Estimated cost \$746,296.00. To complete the dredging of the basin, estimated cost \$185,599.02.

The following authority was granted by the order in council of May 18, 1918, referred to: 1—To approve of the assignment of the contract of Norton Griffiths & Co. Ltd. (Canada)—in liquidation—for the construction of the works above mentioned, to the St. John Drydock & Shipbuilding Co. Ltd., subject, however, to the following conditions:—(a) That nothing in the agreement of assignment herein or in the approval by the government of this agreement shall be deemed to prejudice or affect any right, title or claim on the part of His Majesty accrued, accruing or provided for, under, or by reason of the contract of Mar. 25, 1912. (b) That the assignee shall covenant with the government that it will execute and perform all unfulfilled covenants, agreements or obligations which the contractors had made with the government under the contract of Mar. 25, 1912, subject to the provisos hereinafter contained. (c) That the assignee shall enter into an agreement to construct a drydock of the first class at St. John, N.B., under the provisions of an Act to encourage the construction of drydocks, 9-10 Edward VII, chap. 17 (1910), as amended by chap. 27, 1917.

2—To extend the existing breakwater, constructed under the above contract, by a length of 2,500 lin. ft.

3—To complete the dredging of the basin in front of the drydock site as well as the dredging of a channel from the main channel of St. John harbor inside the breakwater to the said basin.

The works described in paragraphs 2 and 3 above to be carried out under the terms, conditions and prices of the contract with Norton Griffiths & Co. Ltd. (Canada), as amended by the following provisos: (a) The works to be performed in accordance with the annexed layout plan; (b) with reference to the dredging of the channel from the main channel to St. John harbor inside the breakwater to the basin of the drydock site, no submarine rock work is to be included in the excavation of this channel; (c) no work to be performed beyond the amount of the parliamentary appropriation granted in any one fiscal year; (d) the time

for the carrying out of these works to extend over three years; (e) the St. John Dry Dock & Shipbuilding Co. Ltd. to deposit a cash security of \$125,000 as a guarantee for the proper carrying out of the said works.

The estimate of \$1,962,265.52 for the work described will have to be increased very materially for the following reasons:

Extension of existing breakwater. The quantities on which the estimate for this given in the order in council was based were taken from the contract plans prepared in 1911. A plan which has been made recently by the engineer in charge shows that the extension will have to be built in deeper water, hence the increase in the quantities.

Completion of dredging of basin and submarine rock in entrance leading to proposed drydock. It is proposed to increase the area of the basin as described in the order in council of May 18, 1918, so as to make it coincide with the area set forth in the plan attached to the original contract, with the exception, however, that the pier sites and slips as shown on the plan hereto annexed are not to be dredged and the piers are not to be constructed unless the company is specially called upon to do so by the department, and there will also be rock excavation leading to the drydock entrance.

Detailed estimate on which the order in council was based.

Core stone in breakwater, 333,333 cu. yds. at \$2.50	\$ 833,332.00
Cover stone in breakwater, 51,852 cu. yd. at \$3.80	197,037.60
	\$1,030,370.10
Dredging channel, 2,407,407 cu. yd. at 31c.	746,296.00
Dredging basin, 773,333 cu. yd. at 24c.	185,599.92
	\$1,962,265.12
Add contingencies 5%	96,100.00
	\$2,058,365.12

Quantities according to revised estimate.

Core stone in breakwater, 588,625 cu. yd. at \$2.50	\$1,471,562.50
Cover stone in breakwater, 81,250 cu. yd. at \$3.80	308,750.00
	\$1,780,312.50
Dredging channel, 2,500,000 cu. yd. at 31c.	775,000.00
Dredging basin, 4,200,000 cu. yd. at 24c.	1,008,000.00
Submarine rock in entrance leading to proposed dry dock, 75,000 cu. yd. at \$8	600,000.00
	\$4,163,312.50
Contingencies 5%	208,165.62
	\$4,371,478.12

There is an amount of \$500,000 provided in the estimates for 1918-19 for St. John harbor improvements. The Minister, therefore, recommends that the order in council of May 18, 1918, already referred to be cancelled, and that authority be granted as follows:—1—To approve of an assignment of the contract of Norton Griffiths & Co. Ltd. (Canada), in liquidation, for the construction of the works mentioned at Courtenay Bay, St. John, to the St. John Drydock & Shipbuilding Co. Ltd., subject to the following conditions:—That nothing in the agreement of assignment herein or in the approval by the government of this agreement shall be deemed to prejudice or affect any right, title or claim on the part of His Majesty accrued, accruing or provided for under or by reason of the said contract of Mar. 25, 1912. That the assignee shall covenant with the government that it will execute and perform all unfulfilled covenants, agreements or obli-

gations which the contractors had made with the government under the contract of Mar. 25, 1912, subject to the provisos hereinafter contained. That the assignee shall accept in their present condition the works and such of the specific chattels referred to in the schedule to the said assignment as are on the premises and works, and shall be bound by the certificates of the engineer heretofore given, and under no circumstances shall the assignee be entitled to payment for work performed at the date hereof, and the assignee shall not advance any claim for damages or otherwise for anything arising out of the partial performance of the contract by Norton Griffiths & Co. Ltd. (Canada), provided, however, that any work heretofore performed on the construction of a drydock shall not come under the provisions of this clause. That the assignee shall enter into an agreement to construct a drydock of the first class at St. John, under the provisions of an Act to encourage the construction of drydocks, 9-10 Edward VII, chap. 17, (1910), as amended by chap. 27, 1917.

2—To extend the existing breakwater, constructed under the above contract, by a length of approximately 2,500 lin. ft.

3—To complete the dredging of the basin in front of the drydock site, as well as the dredging of a channel from the main channel of St. John harbor inside the breakwater to the said basin, and also to dredge the entrance leading to the drydock, the same not to exceed 300 ft. in width.

The works described in paragraphs 2 and 3 immediately preceding to be carried out under the terms, conditions and prices of the aforementioned contract with Norton Griffiths & Co. Ltd. (Canada) as amended by the following provisos:—The works to be performed in accordance with the annexed layout plan. Should the amount voted by parliament and applicable towards payment for the work hereby contracted for, be at any time expended previous to the completion of the works the Minister or the engineer may give the contractors written notice to that effect, and upon receiving such notice the contractors may, if they think fit, stop the work, but in any case shall not be entitled to any payment for work done beyond the amount voted and applicable as aforesaid unless and until the necessary funds shall have been voted by parliament in that behalf. And in no event shall the contractors have or make any claim on His Majesty for any damages or compensation by reason of the suspension of payment, or by reason of any delay or loss caused by the stoppage of work. And in the event of the contractors electing to proceed or proceeding with such work after such notice, and before such additional funds are voted, no action of the engineer or of any other person on behalf of His Majesty, in giving orders, directions or instructions, or otherwise acting with respect to such work, shall be taken or considered as in any manner improving the rights of the contractors or as waiving in any particulars any of the provisions of this section. The time for the carrying out of these works to extend over four years. The Crown to have the same remedies against the assignee in case of default or failure to perform the work diligently as against the Norton Griffiths & Co. Ltd. (Canada). The St. John Drydock & Shipbuilding Co. Ltd., to deposit a cash security of \$125,000 as a guarantee for the proper carrying out of the said works.

The approximate estimated cost of the works for the carrying out of which au-

thority is asked is, as already stated, \$4,371,478.12.

The foregoing report was approved by the Privy Council on June 10.

**Harbor work to be done.**—The agreement between the Dominion Government and the St. John Drydock & Shipbuilding Co., entered into on July 11, provides for an extension of 2,500 ft. to the existing breakwater of 4,570 ft., making a total length of 7,070 ft.; dredging an entrance channel about 6,800 ft. long, to a depth of 22 ft. below low water, and excavating a basin in front of the drydock, with a channel leading into it, to a depth of 32 ft. below low water, including the removal of approximately 75,000 cu. yd. of submarine rock at the entrance to the drydock. These harbor works are estimated to cost over \$4,000,000. The time for completing them has been extended to June 30, 1922.

**Drydock.**—Under another agreement entered into July 11, the company has undertaken to build, under the Drydock Subsidies Act, a drydock of the first class, capable of docking the largest British war vessels. It will have the following dimensions:

Length on center line on bottom from caisson groove to head .....	1,150 ft.
Width of entrance at coping level .....	133 ft.
Width of entrance on bottom .....	125 ft.
Width of dock at coping level .....	143 ft.
Depth of water on sill at l.w.l. ....	12 ft.
Depth of water on sill at h.w.o.s.t. ....	40 ft.

The estimated cost of the dock is about \$5,900,000, including work already done by Norton Griffith & Co., at a cost of \$1,093,831.25, and the subsidy to be paid is based on a maximum amount of \$5,500,000, as fixed by the act for docks of the first class, that is, 4½% on that amount for 35 years. The company is to commence work on the drydock by Jan. 11, 1919, and to complete it by July 11, 1922.

After the company shall have expended \$2,000,000 upon the construction of the drydock, including the work already done by Norton Griffith & Co., it will not be compelled to proceed further with its construction until the Dominion Parliament shall have voted the following sums, viz.: for the fiscal year 1919-1920, \$500,000, and for each of the three following fiscal years \$750,000. The company is to keep the drydock in repair and working order, in default of which the Minister of Public Works may take possession of it and repair and operate it.

**Subsidies.**—The company has submitted a proposal in regard to its protest to the New Brunswick Government and to the city and county of St. John, with a view to obtaining cash bonuses aggregating \$500,000. In addition to this, it is desired to obtain the right to divert the road at the head of the dry dock site, and the freehold to the land occupied by the municipal home, which the company will undertake to reproduce elsewhere. T. A. Duff, Toronto, one of the directors, is reported to have stated that unless assistance is forthcoming from the province, city and county, the company will not build the shipbuilding plant; but if the assistance is granted, work will be proceeded with at once. He is also reported as stating that work will commence on the drydock at once.

**Personnel of Company.**—The contracts entered into with the government, on July 11, as stated above, were signed for the company by the President, Robt. Wall, Manager Contractors' Supplies Co., Montreal, and by the Secretary, R. T. Heneker, K.C., Montreal. Since then the directorate has been reorganized as follows:—President, Jas. Playfair, President Great Lakes Transportation Co., Midland, Ont.;

Vice President and Managing Director, D. S. Pratt, coal, wood and lumber merchant, and General Manager Canadian Dredging Co., Midland; Secretary-Treasurer, T. A. Duff, legal advisor for Great Lakes Transportation Co., Canadian Dredging Co., Midland Shipbuilding Co., Midland Engine Works Co. and other companies in which Mr. Playfair is interested, Toronto; other directors, R. S. Heneker, K.C., Montreal; W. E. Phin, contractor, Hamilton, Ont.; W. J. Sheppard, lumberman and former President, Northern Navigation Co., Waukegan, Ont.; D. L. White, Jr., President Midland Shipbuilding Co., President Midland Lumber Co., and partner with Jas. Playfair in Playfair & White, wholesale lumber, Midland.

Among others said to be interested in the company are Senator H. W. Richardson, Vice President Great Lakes Transportation Co., and G. Y. Chown, manufacturer, Kingston, Ont.; J. B. Tudhope, M.P., Orillia, Ont.; Robt. Hobson, President Steel Co. of Canada, Hamilton, Ont.; Geo. McAvity, hardware merchant and manufacturer, and Jno. Moore, St. John, N.B.; J. B. Craven, contractor and electrical engineer, New York, N.Y., and J. A. Paisley, Cleveland, Ohio. J. B. Craven was interested in the original contract held by Norton Griffiths & Co., and on the abandonment of the contract, he applied at Montreal for an interlocutory injunction to prevent the transfer of certain of the company's property, and claimed that he was interested to the extent of one half of 49% of the total net profits on the contract, over and above 15% of the total prime cost of the construction works.

The harbor work will probably be carried out by the Canadian Dredging Co., in which Mr. Playfair and some of the other persons above mentioned are interested, and of which D. S. Pratt is General Manager.

The company has appointed as its Chief Engineer, A. R. Dufresne, B.A.Sc., C.E., heretofore Assistant Chief Engineer, Public Works Department, Ottawa. The Public Works Department engineer in charge of the St. John harbor works is Alex. Gray.

**Nova Scotia Steamships, Ltd.,** is reported to have been organized to operate a steamship service between Halifax, Newfoundland and New York. F. H. Chipman, formerly Manager, Canada Atlantic & Plant Steamship Co., is mentioned as Manager, and H. L. Chipman, who was Manager before him, and has been on military service in Canada since early in the war, is stated to be acting as Halifax Agent. Shea & Co. are said to have been appointed agents at St. John's, Nfld., and the Federal Line, agents at New York. It is said that the offices occupied formerly by the Canada Atlantic & Plant Steamship Co. at Halifax are being renovated for occupation by the company, and its vessels will use the Plant Line wharves. The Canada Atlantic & Plant Steamship Co. discontinued business May 1, 1917, on account of the falling off of passenger traffic due to war conditions.

**British Vessel Purchases.**—In a report covering transfers of vessels from and to the United Kingdom register during 1917, it is shown that 371 steamships and 23 sailing vessels changed ownership. The gross tonnage of the steamships was 1,060,155, and of the sailing vessels, 42,990. During the year, Great Britain purchased from neutral and allied countries 355 steamships of 752,780 gross tons, and 76 sailing vessels of 96,174 gross tons.

## The Toronto Ferry Co's Earnings, Fares Etc.

Towards the end of June, the Toronto City Board of Control dealt with the Toronto Ferry Co.'s application for permission to increase passenger fares from 10c to 15c a round trip, between the main land and Toronto Island, and the board passed a resolution approving the increase, and ordering that a bylaw be drafted to give effect to it. When the matter came before the city council subsequently, the board's action was not approved and any further move was delayed pending a report on the company's financial position. On receipt of this, and after some discussion by the council, when some opposition was made to the proposals, a bylaw was drafted and submitted to the Ontario Government for approval. In the meantime, it was pointed out that the bylaw did not carry out the council's wishes, as it was stated to be the intention that fares for children should not be increased, and that the increases authorized under the bylaw, should be for the duration of the war only. The Government thereupon returned the bylaw for amendment. As a special meeting of the council would be necessary for this purpose, and as this was not considered expedient in view of the holiday season, the board of control approved the proposal that an agreement be made with the company providing that the bylaw shall not apply to increase children's fares above the existing rate, which by the original bylaw is fixed at half the adult fare; that it shall not apply to picnics and baseball combination tickets, and that the increases authorized by the bylaw shall be only for the duration of the war.

The bylaw has been submitted to the Government again for approval by order in council, and until such approval is given, the fares remain as hitherto. It is not known, at the time of writing (July 24), what the Government will do in the matter, as it has returned the bylaw once for amendment. It may possibly amend it, according to the council's wishes, of its own volition, or may withhold approval until such time as it is thought fit to call a meeting of council to have the bylaw put in the shape in which it should have been before being submitted to the government. In any case, the proceedings exhibit a degree of municipal ineptitude which bodes ill for the municipal operation of the street railway system in the near future.

In connection with the Toronto Ferry Co.'s recent application for authority to increase its passenger fares between Toronto and Toronto Island, the city board of control requested the Commissioner of Finance, T. Bradshaw, and the City Auditor, W. Sterling, to examine the company's statements for five years, from Oct. 31, 1912 to Oct., 1917. As their report will be of special interest to ferry companies generally, and also to others, it is given in full as follows:—

The revenue from "passage traffic" and from rentals year by year is as follows:—

Year.	Rental.	Passage	Rental.	Total.
1912 .....	\$118,057		\$17,731	\$135,788
1913 .....	121,518		17,109	138,627
1914 .....	109,066		20,757	129,823
1915 .....	90,641		15,361	106,002
1916 .....	94,931		16,679	111,610
1917 .....	107,782		21,094	128,876

Average \$125,121

The revenue fluctuated from \$106,002 in 1915, to \$138,627 in 1913, and the average for the whole period was \$125,121.00. The revenue for 1917 was \$3,755.00 in excess

of the average of the period. The greatest fluctuation took place in "passage traffic." In 1915 the receipts from this source were \$90,641.00, while in 1913 they reached the maximum, \$121,518. In 1917 they were \$107,782. Receipts from rentals were higher in 1917 than in any of the previous years.

**Operating and Other Expenses.**—The following statement shows the operating and other expenses for the same period:—

Year.	Operating and other expenses.
1912 .....	123,626
1913 .....	113,513
1914 .....	127,906
1915 .....	107,153
1916 .....	108,284
1917 .....	120,718

The operating expenses have had their ups and downs. In 1915 they were \$107,153, while in 1912 they reached \$123,626.00. The average for the six years was \$116,867.00.

### Comparison of Revenue and Expenses.

Year.	Revenue.	Expenses.	Per cent. of Revenue.
1912 .....	135,788	123,626	91
1913 .....	138,627	113,513	82
1915 .....	106,002	107,153	101
1916 .....	111,610	108,284	97
1917 .....	128,876	120,718	94

Operating expenses have run from 82% to 101% of revenue, and since 1915, which was the most unfavorable year for the company, there has been a steady improvement. For 1917, the expenses represented 94% of the revenue.

**Comparison of Expenses.**—1915 being the most unfavorable year of the company's experience, it has been thought desirable to analyze the expenses of that year with those for 1917, in order to determine the cause of the great variation:

Expenses 1915. Expenses 1917		
Fitting out .....	\$2,953	\$3,511
Repairs .....	5,234	8,568
Running expenses .....	35,068	44,301
Laying up .....	2,113	2,296
Hanlan's Point expense .....	8,172	7,012
General expense .....	6,418	7,263
Electric light .....	3,993	3,035
Advertising .....	1,208	1,684
Entertainment .....	9,066	10,116
Accident insurance .....	2,376	2,388
Dockage .....	5,813	6,431
H. o. expense .....	6,630	5,484
Insurance boats .....	6,425	6,706
Interest .....	11,684	11,924
	\$107,153	\$120,719

The net increase of 1917 expenses over those of 1915 were \$13,566. The items of increase arise chiefly in operations involving labor and material.

**Surplus and Deficit on Year's Operations.**—In order to determine how profitable or otherwise the company's operations have been, the net results for the past six years are tabulated.

Year.	Surplus.	Deficit.
1912 .....	12,162	
1913 .....	25,114	
1914 .....	1,917	
1915 .....		1,151
1916 .....	3,326	
1917 .....	8,158	

The foregoing expenses include interest on all borrowed moneys, including that on the mortgage bonds of \$100,000.00. In 1915 there was an actual deficit of \$1,151, while in 1913 there was a surplus of \$25,114. In 1917 the surplus was \$8,158. The average earnings for the six years were \$8,254, or practically the same as those for the past year.

**Capitalization.**—The company is capitalized as follows:—Common stock, \$300,000; 8% preferred stock, \$100,000. In addition to the foregoing there are outstanding mortgage bonds for \$100,000, carrying interest at the rate of 6%. We are informed that the preferred stock and bonds were sold at par, and that the com-

pany received the full face value. It is stated that the \$300,000 new common stock was transferred in exchange for common stock of the old company. Just exactly what this implies, we cannot say.

**Dividends.**—Interest has been regularly paid on the mortgage bonds, but the 8% dividend on the preferred stock has only been paid up to 1913. For 1914 only 4% was paid thereon, and since that no dividends whatever have been paid. Two per cent. was paid on common stock in 1906 and 1907, but no dividend has been paid since.

**Depreciation.**—No amount has been charged, nor provision made for depreciation. We are informed that the increase in wages this year, compared with those in effect in 1917, will amount to \$1,000 a month, and that the cost of material in connection with operating and repairs has increased during the past year 50%.

**Concessions.**—We understand that for certain concessions the company receives rentals. Whether the rentals received for these concessions are fair or not, we are unable to determine, nor do we know to whom these concessions have been granted.

**Increase in Rates.**—If the same volume of passage traffic is experienced in 1918 as in 1917, and if rates are advanced as mentioned below, the increases in revenue will be: 10%, \$10,778; 20%, \$21,556; 30%, \$32,334; 40%, \$43,112; 50%, \$53,891.

**Canada's First Concrete Steamship.**—The first reinforced concrete steamship to be built in Canada made her trial trip between Montreal and Cornwall, July 25, making the trip under 24 hours, at an average speed of 10 knots an hour. This vessel, which has been named *Concretia*, was launched at the Atlas Concrete Shipbuilding Co.'s premises, Montreal, Nov. 14, 1917. After completing the trip, the vessel returned to Montreal, where the superstructure and other work is to be completed. Her dimensions are given as follows:—length 126 ft., width 22½ ft., depth 12½ ft. The skeleton frame, on which the concrete was poured, consists of structural steel ribs 5 in. at the top and 14 in. at the base and spaced 27 in. center to center. She is spoken of as the "first genuinely concrete vessel to be built and launched in America," but this is incorrect, as the concrete steamship *Faith*, was launched in California some time ago, and made a trial trip on the coast as far north as Vancouver.

**Steel Plant for British Columbia.**—A press dispatch from Trail, B.C., states that that place has been selected as the site for the erection of a steel plant to be bonused by the Dominion and provincial governments. As far as we are aware, the Dominion Government has not decided on any policy of granting a bonus for the erection of a steel plant, and in the case of the rolling mill for steel plates for shipbuilding, which is being built at Sydney, N.S., by the Dominion Iron & Steel Co., the Dominion Government has merely undertaken to buy a certain tonnage of plates over a period of years.

**Frank Waterhouse & Co. of Canada, Ltd.**, the incorporation of which was announced in a recent issue, has its head office at Vancouver, B.C., the board being as follows:—Frank Waterhouse, Seattle, Wash., President; H. B. Neil, J. R. Lane, Seattle, Wash., and D. G. Marshall and John Speer, Vancouver, B.C. The company has bought the steamships *Easthol*, *Westham* and *Selkirk* from the Lincoln Steamship Co.

## Atlantic and Pacific Ocean Marine.

The s.s. Sewalls Point, 3,354 tons, which went ashore in a fog at Five Fathoms Harbor, near Halifax, N.S., July 1 has been floated and docked at Halifax.

The s.s. Celtic Prince, 10,500 tons, which went ashore near Father Point about July 14, arrived at Quebec, July 24. She was bound to Montreal from Liverpool, Eng., on her maiden voyage.

France & Canada Steamship Co. has purchased the yacht Karina, stated to be one of the largest three masted schooner yachts in the world, from Mrs. T. P. Burgess, Dedham, Mass., for use as a training ship. She is of steel construction, 200 ft. long overall, 150 ft. long on the water line, 34 ft. wide, and draws 17 ft.

The Cunard Line s.s. Carpathia was reported to have been sunk by a German torpedo off the Irish coast, July 19, outward bound on transport service. No lives were reported lost. She was about 14,000 gross tons, and came into prominence for the part she played in rescuing survivors from the s.s. Titanic which was lost on her maiden voyage in April, 1912.

At Elder, Dempster & Co.'s annual general meeting at London, Eng., recently, Sir Owen Phillips, Chairman, stated that while, under pressure of circumstances, the company had been obliged to suspend its Canada-South Africa steamship service, the British Ministry of Shipping was endeavoring to release some tonnage to enable the company to meet the position.

Canadian Pacific Ocean Services, Ltd., is reported to be negotiating for the chartering of one or two steamships for its Pacific Ocean service. Since the requisitioning of its Pacific Empresses by the Dominion Government, the trans-Pacific service has been curtailed, only two vessels being operated, and much of the traffic has been diverted to Japanese lines. Reports were current recently that the company might charter two steamships owned by companies located in Holland, but the two vessels then mentioned, are being operated by the U.S. Shipping Board.

## Maritime Provinces and Newfoundland.

The tern schooner Herbert Warren, which was purchased by the Newfoundland Government about a year ago, was sold by auction at St. John's, Nfld., July 18, for \$76,500, to J. Sellars.

Reinhardt Bros., La Have, N.S., are reported to have purchased the tern schooner Marion Douglas, registered as owned in Parrsboro, N.S., and built there about a year ago, for \$92,000.

The Public Works Department received tenders to July 23 for repairs to the wharf at Shediac, N.B.; to July 25 for repairs to the breakwater at Cow Bay, N.S., and to July 25, for dredging at the Government wharf at Fouchu, N.S.

The service given by the s.s. Aranmore between Yarmouth, N.S., and Boston, Mass., which was suspended recently for ten days, has been resumed, and it is reported that the Dominion Government has agreed that the service be continued indefinitely.

The Department of Public Works has dredged a channel 200 ft. wide inside the breakwater at the south entrance to Shipigan Gully, N.B., to give a more direct course into the harbor. The new channel obviates the abrupt bend to the eastward, immediately inside the breakwaters, and the sharp turn to the westward above the main light.

## Ontario and the Great Lakes.

The Dominion Public Works Department will receive tenders to Aug. 7, for the completion of the renewal of the south pier at Bayfield, in Huron County.

The Northern Navigation Co.'s s.s. Huronic was towed into Port Arthur, July 24, having blown out a cylinder head, while upbound, near Passage Island. The passengers were transferred to a C.P.R. steamship.

The s.s. Australia, owned by the Pioneer Steamship Co., Cleveland, Ohio, which was sunk in collision in the St. Clair River recently, has been raised by the Reid Wrecking Co., Sarnia, and taken to Port Huron, Mich., for overhaul and repairs.

The Dominion Public Works Department has completed the dredging of a channel from deep water in Sarnia Bay, St. Clair River, to the Dominion Salt

length 91.2 ft., breadth 18.3 ft., depth 8.8 ft.; tonnage, 99 gross, 65 register.

W. H. Evans, Montreal, is asking the Superior Court there to declare that he is the only lawful owner of an undivided seven-eighths interest in certain property at the corner of Craig St. and Victoria Square, Montreal, and a judicial sequestrator has been appointed for the Ogdensburg Coal & Towing Co., which has been ordered to give security for all petitioner's claims to the revenues from the property pending final judgment of the action.

It was announced from Cleveland, Ohio, July 24, that members of the Great Lakes sailors' union had decided to call a strike for July 28, on the ground that vessel owners had not granted the demands for better working conditions and increased wages. A statement issued by a vessel owner and member of the Lake Carriers' Association, declares that the working conditions were submitted to the U.S. Shipping Board in Sept., 1917, and the

Wooden cargo steamship, War Mohawk, immediately after launching by Quinlan & Robertson, Ltd., Limoulu, Quebec.

Co.'s wharf. The channel is 1,050 ft. long with a bottom width of 60 ft., and a depth of 15 ft. below zero of the gauge at Point Edward, which is 578.51 ft. above mean sea level, New York.

J. E. Lawrence, formerly paymaster for the Welland Canal, under the Department of Railways and Canals, was sentenced to imprisonment for 3 years, at St. Catharines, Ont., July 12, for the theft of about \$16,000 from the Dominion Government. The method adopted was that of padding the payrolls, and the defalcations extended over 25 years.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for June, as follows:—Superior, 602.10; Michigan and Huron, 581.97; St. Clair, 575.89; Erie, 572.53; Ontario, 247.01. Compared with the average June levels for the past ten years, Superior was 0.16 ft. below; Michigan and Huron 1.19 ft. above; Erie 0.42 ft. below, and Ontario 0.02 ft. below.

The steam tug Alex. Clark, registered at Collingwood, has been bought by the Canadian Stewart Co., and is being overhauled and remodelled by the Collingwood Shipbuilding Co., to make her suitable for ocean service. She was built at Collingwood in 1911, and is screw driven by engine of 29 n.h.p. Her dimensions are:

whole matter left in its hands. The matter of wages has been given considerable discussion by the Shipping Board, and on May 18, a wage scale was put into force for the sea coast, which is lower than the voluntary scale for the Great Lakes. The strike did not materialize, better counsels having prevailed.

## Manitoba, Saskatchewan and Alberta.

The Dominion Public Works Department reports the following improvements by dredging in the Red River channel between Selkirk, Man., and Lake Winnipeg:—Selkirk repair slip—a cut 170 ft. long by 20 ft. wide on each side of the outer end of the boat repair slip, at Selkirk; Park Point—a curved cut 2,400 ft. long, the upper 1,789 ft. 80 ft. wide, the lower 611 ft. 40 ft. wide, around Park Point below the town, to improve the channel close to the west bank, following the curve of the point; Sugar Island Bar—a cut 951 ft. long by 40 ft. wide in the channel through the bar below Sugar Island; Selkirk slough—a cut 3,215 ft. long by 40 ft. wide to improve the channel to the wharves in the slough; Slough turning basin—a cut 488 ft. long by 40 ft. wide on the east side of the slough oppo-

site the government ship yard, to provide a turning basin; entrance to Middle Channel at Forks—a cut 1,753 ft. long by 140 ft. wide at the Forks to improve the main channel leading to the lake; easing of bend into new channel—easing of the turn at the junction of middle and new channels by dredging 120 ft. in width off the point; back filling protection work, a cut 957 ft. long by 50 ft. wide between the breakwaters, close to the west one, the material deposited outside the west breakwater for back filling; deepening channel outside breakwaters—a cut 954 ft. long by 140 ft. wide immediately outside the breakwaters in the axis of the range lights; all this dredging has been done to a depth of 9 ft. below low water, which is 711 ft. above mean sea level at New York.

### British Columbia and Pacific Coast.

The Border Line Transportation Co. is stated to have chartered the reinforced concrete barge built recently by the Inter-Ocean Barge & Transport Co., Seattle, Wash., with the intention of operating her in general freighting business between Seattle and Victoria and other B.C. ports. The barge has the following dimensions: length 116 ft., breadth 34.9 ft., depth 10 ft. The hull is divided into 8 water tight compartments, which can be used for carrying liquid cargo in bulk, and she has a deck cargo capacity of 550 tons. The steel reinforcing ranges from  $\frac{1}{2}$  in. to  $1\frac{1}{2}$  in. thick, and the sides, bottom and deck of the vessel are of concrete  $3\frac{1}{2}$  in. thick.

### Fast Freight Service on New York Barge Canal.

Through freight service with all the commercial machinery common to railway freight service has been initiated by the U.S. Railroad Administration on the New York State Barge Canal, the operation of which the government took over some months ago. A triweekly fast freight carload and less-than-carload service has gone into effect between New York and Buffalo, serving Albany, Troy, Amsterdam, Little Falls, Utica, Rome, Syracuse, Rochester, Lockport, Tonawanda, Niagara Falls and Buffalo. Ten deck-loading power freighters and two covered barges were acquired to form the nucleus of a fleet. As traffic develops and demand for additional equipment arises, the service will be extended to other points and additional vessels acquired. Freight agents have been appointed and will be located at each of the above named ports.

Uniform bills of lading, naming all the conditions and liabilities accepted by rail lines, will be issued and freight will be accepted subject to the rules and regulations relative to ratings, packings, etc., that are prescribed by current classification. Tariffs have been issued naming class and commodity rates between all points to be served. The rates are the old railway rates, which are about 25% less than the present railway rates. Tariffs will also be issued naming joint rates with connecting carriers, both water and rail. For the present the new boat line will operate only between Albany and Buffalo, transfer being made at Albany to the Hudson River Line.

As a part of the new freight service the government has had built a 50 ft. spur at Troy, which connects the Boston & Maine Rd. tracks with the barge canal warehouse and dock. This is the first actual track connection between railway

and canal, and will permit the ready transfer of freight between these two carriers. The Railroad Administration is also building trestles at Ithaca on Lake Cayuga and Watkins on Lake Seneca, to be used in loading barges with coal from the accessible fields.

### Mainly About Marine People.

Hon. A. K. Maclean, M.P. for Halifax, N.S., is acting Minister of Marine and Fisheries, during the absence in England of Hon. C. C. Ballantyne.

H. S. Carmichael, Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., has been installed as Worshipful Master of Canada Lodge 3527 of the Freemasons.

Lieut.-Commander J. V. Forster, R.N. R., Marine Superintendent, Canadian Pacific Ocean Services, Ltd., Liverpool, Eng., has been given the Order of the British Empire.

Capt. J. M. Bales, deputy port warden, Montreal, is reported to have been appointed port warden, vice Capt. A. Reid, deceased. He has been in Montreal harbor service since May, 1899, and was born in Liverpool, Eng., in 1854. He was formerly in Elder, Dempster & Co.'s service on vessels plying between Montreal and South Africa.

Capt. A. A. Sears, who died at Victoria, B.C., July 6, aged 55, was a native of Sackville, N.B., and had been connected with the coasting service in British Columbia for the past 28 years. He was for some time in Canadian Pacific Navigation Co.'s service, and later with the Pacific Coast Steamship Co.

Hon. C. C. Ballantyne, Minister of Marine and Fisheries, arrived in England on July 8 to join Sir Robert Borden and other colleagues. Mrs. Ballantyne and family are spending some time at St. Andrews, N.E. A London cablegram of July 27 said that Mr. Ballantyne, with Sir Robert Borden, had had an important conference with Admiral Sir Rosslyn Wemyss and Admiral Hope.

A. E. Philp, who was given the Order of the British Empire recently, is chief engineer of the Canadian Pacific Ocean Services' s.s. *Empress of Britain*, and the senior chief engineer of the service. After serving the customary apprenticeship of seven years in a locomotive works in Glasgow, Scotland, he entered marine service with Elder, Dempster & Co., with whom he served in all engineering grades to that of chief. He passed to C.P.R. service when that company acquired the Beaver Line. He has had considerable experience of transport work, having taken part in it in connection with the Benin and Ashanti expeditions of 1895-96, and also during the South African war.

**Standard Shipbuilding in China.**—A press dispatch says that the British Government has contracted with the Shanghai Dock & Engineering Co. for the construction of three standardized steamships, each of 5,000 tons d.w. capacity. The engines, boilers, steam steering gears, windlasses, winches and other auxiliary machinery will be made in the company's workshops.

**A Shipbuilding Record.**—Workman, Clark & Company, Belfast, Ireland, are stated in a cablegram to have achieved a world's record in completing an 8,000 ton standard steamship in 15 days after she was launched. The vessel was launched at 9 a.m. By 8 p.m. the same day all her engines and boilers were in position.

### The Limitations of Lake Built Vessels for Ocean Service.

It has always been considered that the shipbuilding yards on the Great Lakes, are at a great disadvantage with regard to the construction of vessels suitable for ocean service, owing to the necessary limitation in size, to allow of their passage through the connecting canals. This situation has not been lost sight of, and the construction of the new Welland Ship Canal, work on which is temporarily suspended, is a good step in the right direction. Unfortunately the cause for the suspension of that work, and the cause for the renewed demand for an enlarged outlet to the ocean, are one and the same, namely, the war. Some opinions have been expressed to the effect that the Dominion Government should not have suspended the work at all, but should have pushed it along, as an urgent measure. Undoubtedly, if the canal had been completed, the passage of lake vessels to the ocean to relieve the vessel shortage there, would have been hastened considerably. The only other means which could be employed to get the vessels into this urgent and necessary service, are those adopted, namely, that of cutting the vessels in two and rejoining them after the passage of the canals.

Numerous suggestions have been made regarding plans to overcome the difficulties and loss of time entailed by this procedure, and the following paragraph has recently appeared in the daily press:—"Lake boats built this year will carry sufficient steel with them through the Welland Canal to enable another section to be built into them when they reach the coast." We have not been able to obtain any confirmation of this method of obtaining larger vessels from lake shipyards, but if such a proposal is to be carried out, we do not quite see the advantage to be gained. To build in another section at the coast, would entail the cutting of the vessel in two, either at the coast, or on the lakes. If the vessel is to be cut in two, it would certainly be better to have it done on the lakes, where the vessel is built. It then follows that the vessel might as well be made the larger size at first, sent through the canals in two parts and rejoined after passing through the St. Lawrence Canals, thus leaving the situation practically as at present.

Another suggestion is the construction of the hull in two separate fore and aft sections, and joined together by a form of sponson on each side, thus making the completed vessel, a ship of four compartments. It is claimed that such a vessel could be built on the lakes and taken to tidewater without difficulty, and that the fish-jointing, or overlapping of the sponsons would make a much stronger vessel than an ordinary lake vessel, cut in two and re-joined. A plan of a vessel of this type has been prepared, showing one of 500 ft. long over all, 480 ft. long on the water line, 72 ft. beam. The two sections of the vessel are 250 ft. long each, and the sponson attachments are each 250 ft. long by  $14\frac{1}{4}$  ft. wide by 32 ft. deep.

**Coals Company, Ltd.**, has been incorporated under the Dominion Companies Act, with \$1,500,000 authorized capital and office at Montreal, to carry on a wholesale coal, wood and fuel business, and for such purpose to own and operate steam and other vessels, railways, coal handling plants, etc., and to carry on a general navigation and transportation business.

## Shipbuilding Information and Its Value.

It has never been Canadian Railway and Marine World's policy to utilize space which should be devoted to other purposes, for sounding its own praises, or calling attention to its good points, but occasionally it is quite legitimate to do so. Since the awakening of Canada to the realization of the opportunities offered for the building of ships, we have expended a great deal of time and energy in obtaining the necessary information to enable our readers to keep pace with the great expansion of the trade throughout the Dominion. This information has been collected from various sources, and in almost every case is officially confirmed. Where it is not possible to obtain confirmation before the matter is published, it is given with reserve, and again dealt with when further details are obtained. We believe that in placing information before our readers, it is a duty we owe to them, as well as to ourselves, to see that it is correct, and on this policy has been built the reputation of the past 20 years.

The importance of the expansion of the shipbuilding industry cannot be emphasized too much, nor can the necessity for the allied industries keeping in close touch with the actual situation as it develops. To enable manufacturers to anticipate and meet the demands arising from this expansion, it is necessary that they should have easy access to reliable information concerning the industry, and for this purpose we collect and classify the information in condensed and easily read form, month by month, so that in following through our various issues, the reader finds a complete consecutive record of the progress made.

We have been complimented several times recently on the character and form of the shipbuilding information we publish, and on looking over our pages for the past twelve months, we feel that we are above comparison. The same attention to detail is being continued, and readers may rest assured that the information placed before them can be relied on as correct.

### Manufactured Shipbuilding News.

The following Canadian Press Dispatch, dated Quebec, Que., July 17, was published by a number of daily papers during July:

"With a capital of \$5,000,000, a new shipbuilding concern has been formed, and will operate one of the largest shipyards in America on the shores of the St. Lawrence, opposite Quebec City. The new concern will take in a number of actually existing firms, among which are some Ontario companies. The new syndicate will comprise the Federal Shipbuilding Co. of Sarnia, the Dominion Shipbuilding Co. of Collingwood, and Dussault & Hutchinson of Levis, and a number of old country French capitalists. The firm will build steel vessels for the French Government, and yesterday the building of the docks and yards was started. The Federal and Dominion Shipbuilding Companies will cease building ships in Ontario."

Canadian Railway and Marine World for July stated that W. H. Hutchinson, of Baldry, Yerburch & Hutchinson, Ltd., contractors, St. Catharines, Ont., and President of the National Shipbuilding Co., Ltd., Goderich, Ont., and H. Dussault, President, General Public Enterprises Co., Levis, Que., were among the promoters of a company to establish a shipbuilding plant at Benson's Cove, New Liverpool, in St. Romuald Parish, Que., the site selected being on the south side of the St. Lawrence River, near the Quebec Bridge.

At the time of writing no official information is at hand as to the incorporation of a company, as indicated in the dispatch. Of the companies named as likely to com-

prise the new syndicate, we have no information as to the Federal Shipbuilding Co. of Sarnia, and may point out that there is no Dominion Shipbuilding Co. at Collingwood. The Dominion Shipbuilding Co., Ltd., which obtained an Ontario charter with a capital of \$1,000,000, some time ago, and which has now been incorporated with a Dominion charter and a capital of \$3,000,000, is building a large shipbuilding plant at Toronto, and an officer of the company stated, July 17, that his company was in no way connected with the proposals mentioned.

W. H. Hutchinson, of Baldry, Yerburch & Hutchinson, Ltd., was in charge of the contract held by that company, for a section of the Welland ship canal, and on the closing down of that work, acquired the Doty engine works at Goderich, Ont., and incorporated the National Shipbuilding Co. The company has not built any vessels, and the plant at Goderich is apparently only engaged on engine work. In conjunction with H. Dussault, he purchased the Dominion Government dredge Galveston recently, and intends converting it into a cargo steamship for Atlantic service. The General Public Enterprises, Co., of which H. Dussault is President, owns a number of dredges and contractors vessels.

### U.S. Shipbuilding Notes.

J. H. Rosseter, Vice President and General Manager, Pacific Mail Steamship Co., San Francisco, has been appointed Director of Operations of the U.S. Shipping Board.

A total of 67 wooden steamships, with an aggregate tonnage of 242,200, was added to the U.S. merchant marine up to June 1, according to figures prepared by the Division of Wood Ship Construction. Twenty-two of these are of the Hough type, 28 Ferris, 16 of the Emergency Fleet Corporation's own design and 1 of the McCormick type.

Merchant vessels built in the U.S. during the year ended June 30, as officially returned to the Bureau of Navigation, numbered 1,622, or 1,430,793 gross tons, giving the U.S. a merchant marine of about 10,000,000 gross tons.

The U.S. flag has been raised over the first of 8 former German steamers which were seized some time ago by the Uruguayan Government. This is the Artigas, once known as the Weygand, a vessel of 8,800 d.w. tons. The other German ships that will shortly follow the Artigas into the U.S. merchant marine will increase the new tonnage thereof by 62,000.

Counting in 2 steamships which stuck on their ways, 11 which had been held up by a sudden freshet on the Columbia River and whose crews had stood by until midnight hoping the flood would subside in time to get the ships overboard on July 4, and the 8 which, through tidal or other causes, had been launched on the eve of July 4, there were launched on that day 95 ships with an approximate dead-weight tonnage of 474,464 tons. The list comprises 42 steel ships of 287,464 d.w. tons and 53 wooden steamships of 187,000 d.w. tons.

Following the conclusion of an arrangement with the Kiangnan Dock & Engine Co. of Shanghai, China, whereby that company is to build 120,000 tons of steel steamships for the U.S. Shipping Board, contracts for 30 additional steel cargo steamships had been awarded to Japanese shipyards. The U.S. Shipping Board had already chartered 150,000 tons of shipping from Japan and purchased another 127,000 tons. Some of the ships will be

equipped with guns and gun crews and put immediately into the overseas service to carry men and supplies to France. Others will be used in the coastwise and South American trades. Total contracts now let to Japanese shipbuilders provide for 380,000 tons of shipping, including 50 cargo carriers. These will cost approximately \$78,000,000, of which about \$20,000,000 has been expended. The Shipping Board has permitted Japan to obtain 100,000 tons of steel plates, and will now provide 35,000 tons for this new construction.

### Steamboats in the Far Northwest.

The following item appeared in Canadian Railway and Marine World for July:—

"The Peace River Development Co.'s steamboats are the only ones trading from Peace River Landing to Herschel Island, 2,000 miles, this season. The route is not a continuous one. The steamers connect with the Edmonton, Dunvegan & British Columbia Ry., and the first piece of navigation extends to Vermilion Chutes, whence a motor road is being completed to Lower Peace River, where there is steamboat connection to Chipewyan on Athabaska Lake. From this point there is a steamboat route to McMurray on Athabaska River, which is the terminal point of the Alberta & Great Waterways Ry., extending to Edmonton. The tourist possibilities of this area are being developed by the railway company."

A correspondent writes pointing out that the first sentence of the item is erroneous, as the Hudson's Bay Co. is operating its steamboats north of Vermilion Chutes as in former years. The Peace River Development Corporation operates on Peace River from Hudson's Hope, on the boundary between Alberta and British Columbia, to Vermilion Chutes. At this point freight and passenger traffic is transferred to the Hudson's Bay Co.'s steamboat McMurray and carried on to Fort Fitzgerald. After crossing Smiths Portage, which extends from Fort Fitzgerald to Fort Smith, freight and passengers are taken on by the Hudson's Bay Co.'s steamboat McKenzie River to Fort McPherson, at the head of the delta of the Mackenzie River.

The Edmonton, Dunvegan & British Columbia Ry., connects Edmonton with the Peace River navigation by its Central Canada Ry. branch, from McLennan to Peace River Landing.

**Warning to Navigators in Welland Canal.**—The attention of masters of vessels is drawn to the fact that the s.s. Wiley M. Egan, loaded and down bound, sank in the Welland Canal, immediately north of the Michigan Central Rd. swing bridge, south of Welland, after having struck the southerly rest pier, July 15. Her stern rests on the eastern bank and her bow points somewhat out into the channel. She is tied up as securely as possible, but there is imminent danger of her sliding into the channel and blocking navigation. Vessels passing her must do so at low speed and exercise great caution, otherwise the maximum penalty provided under the canal rules will be imposed. Patrols will enforce this regulation.

The J. H. Price Shipbuilding Corporation, headed by J. H. Price, President, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C., is reported to have purchased the Sandstrom Shipbuilding Co.'s plant at Meadow Point, Seattle, Wash., and to be building wooden motor ships.

## Dominion Canal Statistics for 1917.

The total traffic through Canadian canals during the navigation season of 1917 was 22,238,935 tons, a decrease of 1,344,556 tons from 1916. The distribution of the traffic through the various canals, with increases or decreases, was as follows:—

	tons.	Increase.	Decrease.
		tons.	tons.
Sault Ste. Marie ..	15,447,092	.....	1,366,557
Welland ..	2,490,542	.....	54,422
St. Lawrence ..	3,391,144	23,080	.....
Chambly ..	434,818	55,841	.....
St. Peters ..	62,254	52,625	.....

## British Colonies Transportation Company, Limited.

This company has been incorporated under the Dominion Companies Act with an authorized capital of \$750,000, divided into \$250,000 of cumulative preference stock bearing interest at 8%, and redeemable at 110, and \$400,000 of common stock. An issue of \$230,000 of preference has been placed on the market, with a bonus of 30% of common stock. The charter provides that 10% of the net earnings shall be used annually in the redemption and cancellation of preference shares, and the prospectus states that it is estimated that in about four years, one half of the preference shares will have been redeemed through this sinking fund. The first preference dividend is to be paid Nov. 1, and quarterly thereafter (of course, if earned).

The prospectus also states that it is estimated that on the basis of contracts which can now be secured, the earnings for the first year will approximate \$300,000. Thus, after providing for interest and sinking fund on \$200,000 of bonds which are to be issued in part payment of vessels, and for the preference dividend, and setting aside the amount required for redeeming preference shares, the balance of earnings should show approximately 30% on the common stock. The bonds are redeemable annually over four years and the amount to be paid off in the first two years should reduce the bonded indebtedness nearly 75%. It is also stated that owing to the shortage of tonnage and the large amount of freight awaiting shipment to and from South Africa and other southern ports, a steady business is assured at very remunerative rates.

The company has three wooden ships under construction, and these are now nearing completion. It is expected that two of them will be delivered during August, and the third in September. The first two have a carrying capacity of about 1,000 tons each, and the third, about 2,000 tons. The smaller vessels will be three masted, and of the following dimensions:—length over all 171 ft., beam 35

Two wooden cargo steamships for British Government, in Cameron-Genoa Mills Shipbuilders, Ltd., Yard, Point Ellice, Victoria, B.C.

Total .. 22,238,935 126,384 1,470,940

The tonnage for 1917 was divided as follows:—Canada, 5,964,369; U.S., 16,274,566. It covered the following classes of commodities:—

Agricultural products .....	3,827,692 tons
Animal products .....	13,439 tons
Manufactures .....	813,158 tons
Forest products .....	1,170,402 tons
Mine products .....	16,410,856 tons

Total .. 22,238,935 tons

The volume of Canadian wheat carried through the Canadian canal at Sault Ste. Marie in 1917, was 60,551,243 bush., against 82,807,342 in 1916; and the volume of Canadian wheat carried through the U.S. canal, during the same period, was 98,023,019 bush., making a total of 158,574,262. This was distributed between ports as follows:—

From Fort William and Port Arthur ..	Bushels.
To Montreal ..	1,280,170
To Georgian Bay ports ..	62,453,042
To other Canadian ports ..	31,369,487
To Buffalo, N.Y. ....	72,872,692

157,975,391

From Duluth, Minn., to Montreal .. 598,871

Total .. 158,574,262

In addition to the foregoing, 13,230,859 bush. of Canadian wheat passed through in the form of flour, making a total of 171,805,112 bush. of Canadian wheat waterborne.

Carriers by water obtained exceptionally high rates on wheat, during 1917, which may be taken as indicating heavy tolls for all commodities. The rate over the different routes for 1915, 1916 and 1917, all out of Fort William and Port Arthur, were as follows:—

may be understood properly in their relationship to gross earnings, allowance should be made for the following charges per bushel paid by shipowners on all cargoes of wheat between Fort William and Montreal:—

Clearing house at Fort William.....	0.01 to \$0.03c
Trimming at Fort William .....	0.06c
Elevation at Montreal .....	0.30
Shovelling at Montreal .....	0.20c
	0.59c

tions would be 0.44c a bush.; to Georgian Bay ports, 0.38c, and to Buffalo, 0.41. The total rates from Duluth to Montreal were substantially the same as from Port Arthur and Fort William to Montreal.

A considerable volume of other grains passed through the Sault Canals, the actual figures being as follows:—

	1916 bush.	1917 bush.
Oats ..	57,743,636	37,014,644
Barley ..	8,679,697	5,149,725
Flax seed ..	4,931,569	5,073,760

Total .. 71,354,812 47,238,129

ft., depth of hold 12 ft. 8 in. The larger vessel will be four masted, and 216 ft. long over all, 39 ft. beam and 18½ ft. depth of hold. The vessels will be equipped with oil engines for handling pumps, cargoes, sails and anchors, and generating electricity for lighting. They are being built to Lloyd's highest classification, with a rating for 13 years. The three vessels are valued at over \$450,000. They are being built in the Maritime Provinces.

The company's head office is at St. John. N.B., and the directors for the cur-

rent year are:—Senator Crosby, Halifax, N.S.; F. W. Sumner, Moncton, N.B.; J. A. McDonald, Amherst, N.S.; G. Douglas, Amherst, N.S.; J. F. M. Stewart and C. E. A. Goldman, Toronto.

### Licenses for Sailing Vessels.

The following order in council was passed May 11, providing regulations for sailing ships leaving Canadian ports:—

1. No sailing ship registered in Canada shall, after May 11, 1918, start on or make any voyage other than a voyage from one port in Canada to another port in Canada, unless a license therefor has been granted to or in favor of the owners or charterers of such sailing ship.

2. The committee of persons appointed by the Minister of Marine and Fisheries under the provisions of the order in council of March 11, 1916, respecting the licensing of steamships exceeding 500 tons gross tonnage, shall have power to grant the license required by the next preceding paragraph. Licenses may be general with reference to any such sailing ship and its voyages, or may be special with reference to a particular voyage.

3. The owners, charterers, and master of any sailing ship violating the provi-

## Test of Electric Welding for Shipbuilding.

A report of the purposes and possible benefits of the ship welding test now being conducted by the United States Emergency Fleet Corporation, under the direction of A. J. Mason, has been made to C. Piez, Vice President of the corporation. Following are the principal portions of the report:—

The committee, of which Prof. C. A. Adams is chairman, has been enlarged and is active in bringing to bear all the knowledge and apparatus available. Electric welding in its various phases has for years been employed in shipyards and in the arts generally, but for a number of reasons the work has been confined to odd jobs and repairs. The proposal to extend its use to the major part of ship construction has met with gratifying approval from the shipbuilder. It remains for us through this large test to demonstrate its economy in time and money and its adequacy to build a staunch ship. The purpose of this test is to demonstrate these advantages—to do it in such a way that all may see and contribute, and finally to test the structure itself so completely that there will follow a heart-

pieces to fit on the ways. There lies in the above items an excellent likelihood to save a month's time in construction and a saving of no less than \$40 a ton in the cost of steel structure, at least \$100,000 a hull on a 10,000-ton vessel.

Briefly the programme is to assemble a hull rapidly by spot welding, tacking the ship together much as a tailor bastes his work in assembling a suit of clothes. The structure then becomes a house favorable for work in all weather, and at night, in which the completion of the ship may go on. After the material is thus assembled and fastened with spot welds, so that it is sufficiently strong to hold its shape, the work is completed by arc welding all seams, to insure strength and render the work watertight. Roughly we expect the spot welds to be about 10 in. apart. One quarter of the structure will be riveted and the other three fourths welded, so that the tests of strength will afford a basis of comparison.

Electric welding offers a great field for lightening a ship. In this design various views of this opportunity will be tried. The field here is very great—ultimately

Steel cargo steamship War Bee, built by Nova Scotia Steel & Coal Co. for British Government.

sions of these regulations shall be guilty of an offence and shall be liable upon summary conviction to a fine not exceeding \$5,000, and the sailing ship with respect to which such offence was committed shall be subject to forfeiture.

The order in council, P.C. 1184, passed Apr. 30, 1917, has been cancelled.

The committee referred to in the above order, consists of the Deputy Minister of Marine, chairman; Deputy Minister of Naval Service, the Deputy Minister of Trade and Commerce and the Commissioner of Customs.

The Troja Steamship Co., Ltd., the incorporation of which, with office in Montreal, was announced in our last issue, was formed chiefly for the purpose of taking out a charter for the operation of the s.s. Troja, built recently by Thor Iron Works, Ltd., Toronto, for Norwegian interests. Reports indicate that the vessel is to be requisitioned by the Dominion Government and placed in service. She was built originally under an order from James Playfair, President and General Manager, Great Lakes Transportation Co., Midland, Ont., and sold subsequently to a Norwegian party resident in the U.S.

whole and unanimous belief in the method. The test itself will take the form of building part of a hull at the Federal Shipbuilding Co.'s plant at Newark.

It has been necessary to design a ship to suit the material available, without encroaching on that needed for the regular ship construction at the plant. This has been done. The hull will have the outline, dimensions and strength conforming to the ships the Federal Co. is building. It has been thought best to conduct the work at a site apart from the shipways, so as not to interfere with that programme.

A 10,000-ton ship, costing \$2,000,000, now costs but \$70,000 to rivet. It must be plain that if electric welding only promises to modify this amount there would be no very substantial gain. Splendid benefits we all feel do offer themselves in the possible change in the whole regime of shipbuilding. Our test has in view abolishing or greatly diminishing: 1. The railway journey from rolling mill to fabricating plant when the latter is not at the shipyard. 2. The template-makers' work. 3. The markers' work. 4. The punching. 5. Much of the work of the fitters and bolters who flog and pull the

10% of the steel may be eliminated. One derrick will bring material and the other derrick will support the spot-welding yoke, whose function is to tack the material together, fastening the plates either to the frames or to the adjoining plates. If one visits the ways at any shipyard it becomes obvious that at any time only a portion of the men are for the moment at work. This is unavoidable under the present system. We hope to establish a plan of assembling with more continuity and less waiting of one another. Only a fifth of the men on a hull are riveters. The spot-weld yoke will forthwith pull the parts to place with a much vigorous agency than flogging and pulling to place by numerous bolts, now done by the other four-fifths.

The problems of fitting in place the parts of a hull are almost wholly problems arising out of the necessity to make a number of little holes in a plate made by one man at one time and place match a number of little holes made by another man at another time and another place. Once all holes are left out of the material all parts fit. The creeping and kindred problems so perplexing to the shipbuilder disappear. Every plate becomes a closer.

Every plate justifies itself.

An adequate system of testing the work when done is under consideration. The primary test will consist of filling the hull with water and shifting the points of support under continual and close scrutiny. As one quarter of the whole will be riveted in the normal manner, there will be always a gauge of comparison with that portion which is welded. Likewise there will be a chance for comparison of the two forms when subjected to abuse by pumping with rams and in various other ways.

Wooden cargo steamship War Ontario, for British Government, just prior to launching by Toronto Shipbuilding Co.

### Munition Vessels and Halifax Harbor.

The Mayor of Halifax complained to the Minister of Marine recently that vessels loaded with high explosives were constantly entering and leaving Halifax harbor, and requesting that in view of the disastrous explosion of Dec. 6, the Naval Service Department be ordered not to permit any more vessels so loaded to enter the harbor. Subsequent to the disaster mentioned, the then mayor communicated with the Minister of Marine to the same effect, and received a reply indicating that his communication was virtually a request that no convoys or munition ships should thereafter use the port of Halifax, and doubting whether he realized the inevitable consequences that would result from the policy he advocated. It was pointed out that the strategical position of Halifax plays an important part in the prosecution of the war, and the view that no munition ships should be laden or unladen at any pier in the port would undoubtedly retard very seriously its successful conclusion, and have a considerable effect on the future of the port. The Government's policy was clearly stated that every possible precaution must be taken to ensure safety and to prevent any danger or disaster from munition or other ships entering the port, such precautions of course being equally essential in the lading and unlading of dangerous cargoes. If the request were acceded to, it would mean the removal of the Atlantic naval base from Halifax, and the building up at some other port of the repair and

other shipping facilities which the Government is endeavoring to establish at Halifax.

While it is natural that Halifax citizens should feel somewhat nervous regarding the handling of vessels containing high explosives within the harbor, it should be remembered that these vessels sail into ports in Europe, which are most crowded, with less room for the handling of vessels, and therefore much more risk of accident, and yet without casualty. It is evident that if no vessels containing high explosives were allowed to enter Halifax har-

bor, traffic there would cease. The disaster of December, 1917, was of course a lamentable one, but it must be remembered that it was the result, chiefly, of a disregard of rules and regulations provided for the safeguarding of the port, and therefore not an inevitable corollary of such traffic using the port. No doubt, with the extra precautions being taken there, and the more efficient superintend-

Launching of wooden cargo steamship War Ontario, by Toronto Shipbuilding Co.

ence of the port and on the handling of vessels generally, there is little room for fear of any repetition of the disaster, and it is possible that the request for the removal of that traffic will not be persisted in. The projects at present in view for the development of Halifax are such as to give those immediately concerned every hope in the future of the port and nothing should be done derogatory to the port's interests, nor which would render nugatory the efforts for its rehabilitation.

### Merchant Service Dress.

A majority of a committee appointed by the British Board of Trade has recommended a national standard uniform for the British mercantile marine, as follows:

The officer's cap to be of blue cloth, and the badge oval on a dark blue background, with a center medallion bearing an anchor. Embroidered gilt leaves to surround the medallion, which would be surmounted by a naval crown. The King, it is suggested, should be asked to sanction the naval crown for the exclusive use of the mercantile marine, as the Admiralty is willing to transfer its use to them.

Right to wear the uniform to be limited to holders of Board of Trade certificates and to surgeons, pursers and cadets or apprentices, as well as uncertificated junior officers.

It is argued by two members who sign minority reports that the change cannot be carried out during the war, and that after peace is declared officers will prefer the old companies' uniforms.

### Requisition Charter Rates on U.S. Vessels.

The U.S. Shipping Board has issued an order providing that the "bare boat" charter rate for all steamships under the U.S. flag, requisitioned under Act of Congress of June 15, 1917, shall be, as follows:—

Cargo ships, including tankers, up to and including 11 knots, per deadweight ton per month . . . . .	\$3.65
For each knot or part of a knot over 11 knots . . . . .	.50
Passenger ships, up to and including 11 knots per ton gross register per month . . . . .	\$5.25
For each knot or part of a knot over 11 knots . . . . .	.50

These rates apply to all such vessels now operating under the "bare boat" form of requisition. Those operating under the "time form" of requisition charter are not affected.

**Electric Welding for Shipbuilding.**—Canadian Railway and Marine World for June mentioned some experiments which had been authorized in the U.S. respecting the extensive use of various forms of arc welding for shipbuilding purposes. Advice from England state that the first

steel vessel built without rivets, so far as known, has just been launched on the south coast there, the plates being fused together by electric welding in one process. No details have been received, but it is stated that the U.S. Shipping Board has kept in close touch with the experiments. Electric Welding & Shipbuilding Co. of Canada, Ltd., was incorporated recently at Montreal to carry on shipbuilding and to use electric and other welding processes.

## Halifax Drydock and Shipbuilding Plant.

Canadian Railway and Marine World for July contained all the particulars then available in reference to the shipbuilding plant to be built at Halifax, N.S., by Halifax Shipbuilders, Ltd., since which the following additional information has been obtained:—

On May 24 the Minister of Public Works reported to the Privy Council as follows:—In the disastrous explosion of a munitions ship in Halifax harbor on Dec. 6, 1917, the dry dock which was built by the Halifax Graving Dock Co., Ltd.,

for the expropriation and for the direction and control, for reasons declared to arise out of the present war, of the business, property and rights of, or connected with the operations of the dry dock, and that the question of compensation for the property, etc., be submitted to the Exchequer Court for adjudication. This report and recommendation was approved by the Privy Council on May 27.

On June 4, the Minister of Public Works reported to the Privy Council that, in accordance with the order in council of

the Halifax drydock property and plant to the company for one year at a rental of \$62,500, the company to pay all taxes, etc., and to agree to purchase the drydock property and plant outright at any time during the term of the lease for \$1,250,000.

On June 24, the Minister of Public Works reported to the Privy Council that it was necessary for the company's purposes that a parcel of land in the center of the site should also be expropriated, and that \$11,484, which he considered a fair and reasonable compensation, be tendered for the same. This recommendation was also approved.

The Halifax drydock, which, as stated above, was completed in 1889 by the Halifax Graving Dock Co., Ltd., with headquarters in London, Eng., was given a subsidy of \$10,000 a year for 20 years, commencing in 1890. Other subsidies, aggregating \$20,000 a year, were obtained from the British Government and the city of Halifax. The dock is 585 ft. long, 102 ft. wide at coping, 72 ft. wide at bottom, and the depth of water on sill at ordinary spring tides is 30 ft. After the dock was wrecked by the explosion on Dec. 6, 1917, the Dominion Public Works Department took over the work of repairing and reconstructing it, the work being done directly by the department, which up to May 29, had expended about \$60,000 thereon, under the superintendence of Alex. McMurray, engineer in charge. As soon as arrangements were made to expropriate the property and lease it to Halifax Shipbuilders, Ltd., the department discontinued work on it.

Tenders were received by Halifax Shipbuilders, Ltd., to July 3, for work connected with the establishment of the shipbuilding yard and covering the piling and grading of three shipways, each 530 ft. long; the excavating, filling and grading of the shipyard for buildings, tracks and storage; excavation for Canadian Government Railways relocation and grading, track laying and ballasting same, equal to about a mile of double track railway; construction of 580 ft. of concrete sea wall and back filling same; construction

Launching of steel cargo steamship War Duchess, for British Government, by Canadian Vickers, Ltd.

and completed in 1889, was badly damaged and the repair shops and plant connected therewith were practically destroyed. In view of the great importance of Halifax as a naval base, and of the fact that the port is very largely used by war ships and war craft of all kinds and by the allied governments' transports, and also as a rendezvous for ships needing convoy, it is urgently necessary for the purposes of the war that all facilities for the repairing of ships should be effectively available with the least possible delay. In order to attain this object, an agreement was entered into with the owners of the dock, in which they agreed to proceed with the reconstruction of the dock and to furnish \$111,000, which was the amount of the insurance, towards the cost, provided the government would supply the balance of the cost of reconstruction by way of a subsidy, relieving the government of any alleged liability, as well as responsibility for the operation and maintenance of the dock.

The progress made by the company in the reconstruction of the dock has not been satisfactory and in view of the urgency of restoring Halifax to its former status as a naval base and rendezvous during the war, and of preparing it to meet the greatly increased needs of shipping after the war, it is necessary that the government take immediate measures to enter into possession of the dock at once and to proceed with its reconstruction. From reliable information it would seem that \$1,100,000 is a fair estimate of the value of the dock as it stands at present, and the Minister recommended that authority be given to offer this sum to the Halifax Graving Dock Co. for the property as it stands at present, including all work of reconstruction done up to the present, and that if this offer is refused, authority be granted, pursuant to the powers conferred by the War Measures Act, 1914, and all other powers vested in the Governor in council.

May 27, the drydock, etc., had been expropriated and vested in the Crown. He further reported as follows: "The Halifax Shipyards, Ltd., has been formed to carry on shipbuilding and repairing on a large and modern scale, and intends proceeding at once with the erection of the necessary plant and equipment, on which it contemplates an expenditure of about \$3,000,000. The company has acquired the property immediately adjoining the drydock, known as the Acadia Sugar Refinery

Wooden cargo steamship War Tatla, built by Western Canada Shipyards, Ltd., Vancouver, B.C.

property, where three shipbuilding berths will be laid down, upon which steel ships of approximately 10,000 tons may be constructed. The first of these, the largest ever built in Canada, will be ready for service inside of 15 months. It is considered advisable, under existing circumstances, when the provision of additional tonnage is so urgent and important in the public interest, to lease the property to the Halifax Shipbuilders, Ltd., to be operated by it in connection with its new enterprise. The Minister therefore recommended that authority be given to lease

of reinforced concrete retaining wall along the right of way of the railway relocation, and the extensions to sewers, water mains, etc. The work will require approximately 270,000 cu. yds. of earth and rock, dry excavation, and 20,000 cu. yds. of concrete. It was stated subsequently that the contract has been awarded to the Bedford Construction Co., successors to Cavicchi & Pegano, general contractors, who were to commence work immediately, and that it was anticipated that the first of three shipbuilding berths will be completed within four months.

The Minister of Marine has, we are officially advised, agreed to give the company an order for three steel cargo steamships of approximately 10,000 tons d.w. capacity each, when the yard is ready to start work.

### Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held recently into the following casualties, and judgments delivered:—

#### Stranding of s.s. Hochelaga.

Held at Sydney, N.S., before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Lieut. H. C. Owen, R.N.R., and Capt. A. J. Morrison, as nautical assessors. The s.s. Hochelaga is owned by the Dominion Coal Co. and grounded on the Newfoundland coast, June 6. The court found that the master, George Tudor, committed a grave error of judgment in assuming a position which he could not exactly define, owing to atmospheric conditions and the absence of a log to determine the distance run, the log having been lost on the previous night. From the loss of the log he presumed to establish the speed of the ves-

overtaken by fog, and for not stopping the vessel, instead of merely stopping the engines, just prior to the stranding, and was reprimanded very severely and cautioned to exercise all prudence in future, and not assume that because previous voyages were effected successfully, the same results must always be expected. The court recommended that it be made an inflexible rule that the master, or the company, issue written and printed instructions that the officers on watch be obliged to take observations of whatsoever nature and register same as soon as possible, and that the navigation of the vessel should not be a one-man occupation, but one in which all officers are interested, and they should be called upon to check each other's calculations as to compasses, charts, speed, etc., which, after all, is but an elementary recommendation.

#### Stranding of s.s. Aikoku Maru.

Held at Victoria, B.C., before Capt. J. D. Macpherson, British Columbia Wreck Commissioner, assisted by Capt. D. S. Jones-Evans and A. O. Cooper, as nautical assessors. The court came to the conclusion that the s.s. Aikoku Maru stranded on Kelp Reef, Haro Straits, B.C., owing to a combination of unusual and unavoid-

English speaking member, conveyed messages between the master and the pilot, and there can be no question that on him must be placed the blame for having named the deviation easterly instead of westerly, though, without doubt, unintentionally.

The vessel grounded very easily, owing to the skilful handling of the pilot, and released herself after about eight hours, with comparatively slight damage.

#### Stranding of s.s. Sewalls Point.

At Halifax, N.S., July 16, an investigation was held into the causes of the stranding of the s.s. Sewalls Point, during a heavy fog at Five Fathoms Harbor, near Halifax, July 1. After hearing the evidence, the court held that the master, Capt. R. M. French, was in default, through over confidence, and a copy of the finding was sent to the British Board of Trade.

### The Consolidated Whaling Co. Ltd.

The incorporation of this company was announced in a recent issue, with a capital of \$2,500,000 and head office in Toronto. The operating office is in Victoria, B.C., and S. C. Ruck is General Manager. The company has taken over the Victoria Whaling Co., with fisheries and factories at Sechart, Kyuquot, Rose Harbor and Naden Harbor, B.C., and also the American Pacific Whaling Co. and North Pacific Sea Products Co.

The Victoria Whaling Co. owned 8 steam whalers and one vessel of 850 tons, used as a tender. The whalers are named Black, Blue, Brown, Green, Orion, St. Lawrence, W. Grant, and White, and the tender is named Gray. The whalers are about 92 ft. long, 16 ft. beam, and are equipped with triple expansion engines of about 300 i.h.p.

The American Pacific Whaling Co. has a station at Bay City, Wash., from where four vessels are operated, all of a similar type, and named Aberdeen, Moran, Paterson and Westport, and another station at Akutan in the Aleutian Islands, from where three vessels, the Kodiak, Tangynak and Unimak are operated. These three vessels are all somewhat larger than the other vessels mentioned, one, the Tangynak, being driven by twin screws. All the U.S. vessels burn fuel oil and the Canadian ones coal.

The company purchased recently the s.s. Elihu Thomson, 1,000 tons, from the Pacific Cold Storage Co., Tacoma, Wash., and is having it fitted out with cold storage compartments with capacity of about 600 tons, for the conveyance of whale meat from the northern station to cold storage at Tacoma. The auxiliary powered schooner Halcyon is also owned by the company. She is 72 ft. long and is fitted with gasoline engine of 100 h.p. She is engaged in halibut and cod fishing at the Aleutian Islands.

### Canadian Express Co. Withdraws from United States Business.

Jno. Pullen, President, Canadian Express Co., issued the following circular to officers and agents in the States of Maine, New Hampshire, Vermont and Michigan, on June 28:—

The United States Railroad Administration having taken over for operating purposes certain of the lines of the Grand Trunk Ry. of Canada located within the U.S., viz.: Portland, Me., to Norton Mills, Vt.; Lewiston Jct., Me., to Lewiston, Me.; South Paris, Me., to Norway, Me.; and Port Huron, Mich., to Detroit, Mich., over

The United States Steamship Wasco.

The Wasco, which was completed June 8, was the first of the U. S. Emergency Fleet Corporation's orders to be turned out at Portland, Oregon. The ship is 286 ft. long and 46 ft. wide and sailed June 10 on her first voyage.

sel from the records of previous voyages. He was aware of uncertain currents existing, both as to direction and velocity, and the court considered that his position should have been checked by a cast. Also when the shouts of fishermen were heard, instead of only stopping the engine, the vessel should have been brought to a stop by full speed astern. It is fortunate that the vessel was not lost. The master's evidence was somewhat contradicted by the first mate, but corrected afterwards, which created a better impression on the court. The court felt that in view of the master's successful career, and relying on the evidence that in other circumstances he has attended seriously to his navigation duties, it could deal leniently with him. It was also evidenced that some measure of prudence was taken, though unfortunately it was not of the thoroughness that the situation demanded, but a clever feat of seamanship was performed after the grounding, in order to bring the vessel to a somewhat sheltered beach to wait for assistance. He was found in default for not taking a sounding when off Cape George; for not sounding when

able circumstances, unfortunately all working in the same direction, the result of which, under the then conditions, was inevitable. These circumstances were:—a very strong ebb tide acting on the vessel's starboard bow, a grave error in the naming of the deviation, and a dense fog. No single one of these would have led to the casualty, but the three combined were fatal, more especially as the first two erred in the same direction. In the court's opinion, after the fog set in, the vessel was navigated in an efficient and proper manner, and with the one exception of the maximum speed being maintained, which the court considered, under the circumstances, not only excusable, but essential, every regulation was strictly adhered to, and an ample and efficient lookout was kept. No blame was therefore attached to J. C. Foote, pilot. So far as the master, T. Yoshira, was concerned, the court saw no reason to blame him. He seemed to have attended to his duties in an intelligent and efficient manner. No other member of the crew was held worthy of blame, with the exception of M. Machikake, an apprentice, who, as the only

which the Canadian Express Co. now operates the express service, and having entered into a contract with the American Railway Express Co. giving that company the exclusive privileges of conducting express service thereon, effective July 1, 1918, the offices of the Canadian Express Co. in the states named will be closed at midnight June 30. On July 1, the express operations will be carried on by and in the name of the American Railway Express Co. Suitable instructions will be issued by the officers of that company as soon as possible. Meanwhile, until such instructions have been received, the present employees of the Canadian Co. will continue to perform their duties as usual, using the present books and forms until new ones have been supplied.

The Canadian Express Co.'s accounts must be balanced and closed as of June 30, and new accounts or books started for the new company July 1. All equipment and office supplies are to be transferred to the American Railway Express Co. on July 1. Agents will make a special list of all undelivered goods on hand at midnight June 30, showing charges thereon, and send same to the superintendent.

At Buffalo, N.Y., Suspension Bridge, N.Y., Port Huron, Mich., and Detroit, Mich., where the Canadian Express Co. has heretofore been operated jointly with the American Express Co. or National Express Co., the offices will on, and after July 1, become exclusive offices of the American Railway Express Co.

The management of the Canadian Express Co. desires to take this opportunity of thanking its employees in the states named for their services, and to bespeak for the new company their co-operation.

### The Western Express Co. and U.S. Business.

The Western Express Co., which is owned by the Dominion Ex. Co. and which carries on express business on C.P.R. controlled lines in the U.S., has issued the following circular to employees:—

It is the wish of the Director General of Railroads that there shall be in the U.S., during the period of federal control of railroads, but one express company. To accommodate that wish, the Western Ex. Co. will, at the close of business on June 30, retire from the express transportation business for the period of federal control of railroads. A new express company will be organized, which will, as the Agent of the Director General of Railroads, transact the express business upon all the railroads in the U.S., commencing July 1. The management of the Western Ex. Co. has agreed with the management of the new express company to promote, in every way possible, the employment by the new company of the employees of the Western Ex. Co. It is understood that Western Ex. Co. employees accepting employment with the new company will retain their service records for participation in the pension system of the new company. The details of the transfer of the business and of the property will be set forth in a subsequent circular. The management of the Western Ex. Co. gratefully acknowledges your loyal support and co-operation which has enabled the company to establish a reputation for efficiency and fair dealing. The management has provided for employment by the new company of all employees wishing to accept such employment. The management hopes you will accept employment with the new company and that you will accord to the Director General through the new company, that same de-

gree of efficiency and that wonderful spirit of loyalty which the Western Ex. Co. has enjoyed, to the end that the public may be properly served and the desires of the Government may be fully realized.

We are officially advised that the above does not apply to Maine and Vermont, where the Western Ex. Co. will continue to operate over C.P.R. lines in Maine and Vermont, as hitherto.

### Among the Express Companies.

Canadian Ex. Co. employees are stated to have been granted an increase in wages, and a new time schedule. The new graded scale of pay is said to be \$100 a month after 5 years service.

The Board of Railway Commissioners has extended the express collection and delivery limits at Rossland, B.C., to include the portion on Earl St. from Fourth Ave. to the West Kootenay Power & Light Co.'s works.

A press dispatch from Washington, D.C., states that the operation of eight interstate express companies for January, resulted in a deficit of \$1,637,757. One company, the Southern Ex. Co., showed a profit, the operating income being \$89,630. The largest deficit was that of the American Ex. Co., \$752,645.

### Telegraph, Telephone and Cable Matters.

The Association of Railway Telegraph Superintendents is included in the list of associations which have been disapproved by the U.S. Railroad Administration, and for which no expenditures are permitted by any railway without special authority.

A board of conciliation has been appointed to deal with wages and working conditions of C.P.R. commercial telegraphers. Judge Scott, Perth, Ont., is chairman, N. W. Tilley, K.C., represents the company, and D. Campbell, Regina, Sask., the men.

The U.S. President has, by proclamation, taken over the operation of all telegraph and telephone lines throughout the U.S., as from July 31, and has placed them under the Postmaster General's control. Wireless telegraph and cable lines are not included.

The Great North Western Telegraph Co. has deposited plans, etc., with the Public Works Department, for laying and landing a submarine telegraph cable in the Straits of Juan de Fuca, the proposed landing being at the foot of Douglas St., Victoria, B.C.

M. H. Clapp, Superintendent of Telegraph, Northern Pacific Ry., St. Paul, Minn., and President of the Association of Railway Telegraph Superintendents, has been appointed Manager of the Telegraph Section of the U.S. Railroad Administration, reporting to C. R. Gray, Director of Operation, with office at Washington, D.C.

The Great North Western Telegraph Co. has opened offices at Grand Anse, N.B.; Abenakis Springs, Little Metis Beach, Manoir Richelieu, Perthuis station, Pointe au Pic and Woodlands, Que.; Bala Park, Chaffey's Locks, Dunnville, Dwight, Lake Joseph, Sellwood and Sparrow Lake, Ont.; and Alberta Beach, Alta.; and has closed its offices at Les Eboulements wharf, Que., Atherley, Ont., and Durban and Langruth, Man.

A few weeks ago certain charges were preferred against two operators employed by the Great North Western Telegraph Co. at Toronto, alleging wrongful use of the company's wires in connection with horse racing news. These men were ac-

quitted of fraud in the local court, but the company dismissed them. The telegraphers' union intervened and demanded that the men be reinstated, eventually serving the company with notice that unless they were unconditionally reinstated, a general strike of the employees would occur at 10 a.m., July 16. After some negotiations, the matter was adjusted by the re-employment of the men, and a strike was averted.

The Dominion Telegraph Co.'s 49th annual meeting was held at Toronto, July 10, when the report for the year ended June 30 was adopted. It was announced that payment had been made quarterly in advance, for the past 39 years, of the guaranteed interest at 6%, on the company's capital stock, by the lessees, the Western Union Telegraph Co., the lease being for 99 years from July 1, 1879. The assets are given as \$1,309,720.82, and the liabilities as \$1,017,490.10, the balance at credit of profit and loss being \$292,230.72. The directors for this year are: Sir Henry M. Pellatt, President; Aemilius Jarvis, Vice President; F. Roper, Secretary and Treasurer; G. W. E. Atkins, R. C. Clowry, E. Y. Gallaher, Sir John M. Gibson, and C. O'Reilly.

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**Johnson & Higgins.**—P. L. Roberts has been appointed Manager, Montreal Branch, Johnson & Higgins, average adjusters and insurance brokers, New York, with office in Board of Trade Building, Montreal.

The Canadian Ingersoll-Rand Co. has issued a catalogue of direct lift vertical air hoists, giving complete details, with illustrations, of the different types of valve used for various classes of work up to 5 tons capacity, the dust proof single acting, the dust proof air balanced, and the dust proof double acting. Complete tables are given, including one of the free air consumption of the hoists.

The Ohio Brass Co. has issued a booklet, "Guarding the Grade Crossings," which describes the national trolley guard, which consists of a wire mesh formed into an inverted trough mounted above the trolley wire. Among the illustrations are views showing installations on the Hull Electric Co.'s railway, London St. Ry., Sudbury-Copper Cliff Suburban Electric Ry., Toronto & York Radial Ry. and Toronto Ry.

# Canadian Railway and Marine World

September, 1918

## The Advance of Freight Rates by Order in Council.

Canadian Railway and Marine World for August contained the full text of the Dominion Government's order in council of July 27, passed under authority of the War Measures Act, 1914, increasing freight rates on railways. Following are copies of the order in council of July 16, directing the Board of Railways Commissioners to prepare a schedule of increased freight rates, of the Chief Commissioner's report thereon and of the Chief Commissioner's recommendation that the Toronto Board of Trade's protest against the increased rates be dismissed:—

similar demands have been made on other railway companies in Canada; that the attached letter from the Chairman of the Board of Railway Commissioners has been received by the acting Premier, and referred by him to the Minister of Railways and Canals, from which letter it appears that the extra amount of wages which the three larger systems, viz., Canadian Pacific, Grand Trunk and Canadian Northern, would be called upon to pay, should the same rate of wages be adopted in Canada as is now in force in the United States, would be \$36,865,894.00, while on government lines the increase

in Canadian territory should be increased as increased in U.S. territory, by the award commonly known as the McAdoo award, as the same may be from time to time amended or extended, in so far as the Government Railways are concerned, and that it is advisable in the public interest that companies, privately owned, should make similar increases to their employees. That the net earnings of the railway systems as a result of increased costs of transportation, which has already accrued, have greatly decreased. That the net earnings of the Grand Trunk in 1917 decreased to £26,279, against

Organization of Canadian Board of Adjustment No. 1 by Canadian Railway War Board and Labor Organizations.

This photograph was taken in the Canadian Railway War Board's office in Montreal recently when Canadian Board of Adjustment No. 1, consisting of 6 representatives of railway companies and 6 representatives of railway employees' organizations was organized, to deal with railway employees' wages questions. Those shown in the group are as follows:—

**BOTTOM ROW**, from left to right:—Jas. Murdock, Vice President, Brotherhood of Railway Trainmen; J. H. Walsh, General Manager, Quebec Central Ry.; Major G. A. Bell, C.M.G., acting Deputy Minister of Railways; D. B. Hanna, Third Vice President, Canadian Northern Ry.; Ash Kennedy, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers; S. N. Berry, Vice President, Order of Railway Conductors.

**TOP ROW**, from left to right:—C. A. Hayes, General Manager, Eastern Lines, Canadian Government Railways; W. V. Turnbull, Vice President, International Brotherhood of Maintenance of Way Employees; S. J. Hungerford, General Manager, Eastern Lines, Canadian Northern Ry.; S. E. Payne, Manager, Ottawa & New York Ry.; J. M. Mein, Deputy President, Order of Railway Telegraphers; H. Shearer, General Superintendent, Michigan Central Rd.; F. F. Backus, General Manager, Toronto, Hamilton & Buffalo Ry.; G. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Engineers; Sir Geo. Bury, Vice President, C.P.R.

### The Minister of Railways' Recommendation of Increased Wages and Freight Rates.

The following report of the committee of the Privy Council was approved by the Governor General on July 16:—The committee of the Privy Council have had before them a memorandum, dated July 15, from the Minister of Railways and Canals, stating that representations have been made by the organization of railway employees for an increase in the scale of wages of employees engaged on the Intercolonial, National Transcontinental and Prince Edward Island Railways, and that

would amount to \$5,600,000.00, and it further appears that the railway companies are of the view that the wages paid railway employees in Canada ought to be the same as that adopted in corresponding territories in the U.S., as the class of work is the same in both countries. That there is a large interchange of traffic, and that as a result, many employees work in both countries; and on the further grounds that different organizations are international in their scope, and that heretofore the wage scale in both countries have been relatively the same. That in view of the increased cost of living, wages

\$1,202,281 in 1916, and the deficit of the Canadian Northern largely increased, while the Canadian Pacific net earnings in the first six months of this year decreased some \$7,000,000, and the increased scale of wages as contemplated will cost that company alone \$15,000,000 over and above its present costs. That in order to enable the railways of Canada to meet the increased wage charges which they will be obliged to pay by reason of the increases hereinbefore referred to, the Minister of Railways and Canals believes that similar action ought to be taken in Canada as was taken under similar cir-

cumstances in the United States, and that freight rates be raised in Canada as such rates have been raised in adjacent United States territory.

The Minister recommends, under the authority of the War Measures Act:—That the scale of wages of railway employes as fixed by the McAdoo award in U.S. territory, including any amendments or extensions thereof, be applied in Canadian territory, in so far as all lines of railway owned, operated or controlled by

the government, are concerned. That the wage scales of privately owned railways companies in Canada should be similarly advanced. That increases be made in the freight rates of all Canadian railway carriers, subject to the jurisdiction of Parliament, as have been made in the rates of U.S. carriers by the Interstate Commerce Commission, and under orders of the Director General of Railroad Administration of the U.S. That on the acceptance

by the Canadian Pacific, Grand Trunk, Canadian Northern and other railway companies of the said McAdoo schedule, the Board of Railway Commissioners be required to forthwith prepare a schedule of rates which will grant similar increases in railway freight rates in Canada to the increases already granted in U.S. territory, effective as of Aug. 1, 1918. The committee concur in the foregoing recommendation, and submit the same for approval.

## The Chief Railway Commissioner's Report Recommending Increases in Rates.

Following is the report made by Sir Henry Drayton on July 25, on which the order in council of July 27 was based:—

Under order in council 1768, the opinion is expressed that, in view of the increased cost of living, the wages in Canadian territory should be increased as increased in United States territory by the award commonly known as the McAdoo award, as the same may from time to time be amended or extended, in so far as the Government railway systems are concerned; and that it is advisable, in the public interests, that the companies privately owned should make similar increases to their employes. The order definitely advances the scale of wages of railway employes, as fixed by the McAdoo award, for lines of railway owned, operated, or controlled by the government, and recommends that the wage scale of privately owned railway companies in Canada should be similarly advanced. The order further provides that should the privately owned railway companies adopt the McAdoo schedule, the Board of Railway Commissioners shall forthwith prepare a schedule of rates which will grant similar increases in railway freight rates in Canada to the increases already granted in U.S. territory, effective as of Aug. 1, 1918. The railway companies have notified their employes of their acceptance of the McAdoo scale. The effect of the order is to reimburse the companies for the additional increased cost to which they will be put by the adoption of the scale and in their railway operation. The advance is limited to freight rates, and is also limited to the advances already made in U.S. territory for the same purpose. The estimates of the increased costs filed by the Canadian Railway War Board show a total of \$50,616,226, in addition to which there are further claims to be settled by the McAdoo award, which, if settled adversely to the companies, might call for an additional \$19,930,000, making a possible outlay of \$70,546,260.

The McAdoo award is popularly supposed to increase freight rates 25%. In some instances, not amounting, however, to a great volume, the McAdoo award exceeds this percentage. In a large number of instances, owing to maximum advance limitations and to a flat rate increase, which, while advancing in a higher percentage the rate for the shorter mileages, holds down all longer movements, the increase of 25% is not obtained. The Railway Statistics for 1917 show the total freight earnings of all systems in Canada as amounting to \$215,245,256.49. This includes railways which are not under the Dominion Parliament's jurisdiction and whose increases are not mirrored in the companies' estimates. The difference, however, would not be very great. Assuming, however, that the whole amount represented earnings of companies under Dominion jurisdiction, and assuming, further, that the increases under the McAdoo scale would net in gross the whole 25%, which they will not, the total amount of

the resultant increases under the McAdoo award would amount to \$53,811,314. These figures, however, cannot be accepted. On the one hand, the freight earnings in 1917 were very large—the volume may not prove representative—but, on the other hand, as rates have already been increased, the resultant gross revenues may well be much larger. As the board has not had the time necessary to compile statistics based on the newer rates, the U.S. increases, which were arrived at as necessary in U.S. territory after much investigation, are treated as those necessary, subject to the recommendation hereinafter made for rate reduction. The increases herein covered are those permitted under the order of the Director-General of the U.S. Railroad Administration, when the Canadian rate situation permits the adoption of the whole increase, and in other instances the extent that the increases may be adopted.

Different action has been taken in the U.S. in connection with the eastern and western territories. Different action has also been taken by the board. In order to arrive properly at a conclusion, the different increases already granted by the board in Canada in many instances will have to be deducted before the gross increases granted in the U.S. are given full effect. As the increases made by the board differ in eastern territory, as against the western territory, it is necessary that the matter be dealt with separately. Rate decisions increasing rates in eastern territory have been made from time to time in both jurisdictions. At a comparatively recent date the rates in eastern U.S. territory were increased by varying, but large, percentages. No such increase took place in Canada, but a general increase was made in Canada under the board's judgment in the 15% case. It is impossible at the moment to report the full effect of the increases in both countries for the past few years. In arriving at the net increase which ought to be given in Canada, in order to make similar increases to those made in the U.S., the board, therefore, has not considered any increase granted in either jurisdiction prior to the application of the so-called 15% case in both countries, justification for these applications being the increase of all costs, and, therefore, a proper point at which to commence.

**Territory East of Fort William.—Class Rates.**—The Interstate Commerce Commission on June 29, 1917, granted a 15% increase in class rates in eastern U.S. territory. This board made a similar increase in class rates in eastern territory on Dec. 26, 1917. The order of the Director General of the U.S. Railroad Administration (for the sake of brevity, hereinafter called the "McAdoo order"), gives a direct increase of 25% in U.S. eastern class rates. As similar increases have been granted in both territories, in order to bring the final increase to a parity, an increase of 25% in Canadian territory ought to be made in the existing sched-

ules. A result of the McAdoo order is to create a direct advance in the minimum charge. As a result of this increase, all class rates are increased more than 25%, in so far as all movements up to 25 miles are concerned.

Sec. 1, ss. (d) of the McAdoo order reads: "After such increase, no rates shall be applied on any traffic moving under class rates lower than the amount in cents per 100 lb. for the respective classes as shown below for the several classifications."

Official Classification scale.					
1	2	3	4	5	6
25	21½	17	12½	9	7
cents per 100 lb.					

In order to carry the McAdoo increase into effect in Canada, while it will be necessary to repeat its provision as to minima, the proper first class minimum rate in Canadian territory is 24c, rather than 25c, having regard to the Canadian rate scale. This is practically the same increase.

In addition to the percentage increase, the McAdoo order provides that the minimum charge on less than carload shipments shall be that provided in the classification governing, but in no case less than 50c. The minimum charge in Canada is in no case less than 35c. The increase involved, therefore, is 15c.

**Commodity Rates.**—Rates on coal were increased by the board's order of Dec. 26, 1917, by 15c a ton flat. Similar increases were since granted by the Interstate Commerce Commission. The increases, however, were not put generally into effect as in Canadian eastern territory. The McAdoo order, however, reads:—

"Where rates have not been increased since June 1, 1917, the increase to be made now shall be determined by first adding to the present rate 15c a ton, net or gross as rated, or if an increase of less than 15c a ton, net or gross as rated, has been made since that date, then by first adding to the present rate the difference between the amount of that increase and 15c a ton, net or gross as rated; and to the rates so constructed the above increases shall now be added."

As a result, the increases granted under the McAdoo order for the coal traffic are increases calculated either on a previous 15c advance, or else upon a 15c advance made necessary and justified by the order itself. The conditions are, therefore, similar in the two territories. In order to give the railways in Canada similar increases as in the U.S., it will be necessary to adopt the section of the McAdoo order giving the coal schedules, reading as follows:—

"Where rate is 0 to 49c a ton, 15c a net ton of 2,000 lb.

"Where rate is 50 to 99c a ton, 20c a net ton of 2,000 lb.

"Where rate is \$1 to \$1.99 a ton, 30c a net ton of 2,000 lb.

"Where rate is \$2 to \$2.99 a ton, 40c a net ton of 2,000 lb.

"Where rate is \$3 or higher a ton, 50c a net ton of 2,000 lb."

Coke stands in exactly the same position as coal in so far as increases in both countries are concerned. The increase in the McAdoo award, however, is higher than in the case of coal, the rates being advanced to the following scale:—

"Where rate is 0 to 49c a ton, 15c a net ton of 2,000 lb.

"Where rate is 50 to 99c a ton, 25c a net ton of 2,000 lb.

"Where rate is \$1 to \$1.99 a ton, 40c a net ton of 2,000 lb.

"Where rate is \$2 to \$2.99 a ton, 60c a net ton of 2,000 lb.

"Where rate is \$3 or higher a ton, 75c a net ton of 2,000 lb."

It is unfortunate that through rates do not apply on movements of coal and coke to Canadian points. Prior to the McAdoo order, the rate on anthracite in U.S. territory was \$2.15 to Buffalo. Under the McAdoo order that rate became \$2.60. The present Buffalo-Toronto rate is \$1c. Under the McAdoo order that rate would become \$1. The increase on the McAdoo order, if the traffic moved under a joint tariff, would be held down to an increase of 50c in all; a difference of 14c, as against an increase under the present system of 64c. This matter is entirely out of the hands of Canadian railway companies or this board.

**Iron Ores.**—While commodity rates were generally advanced by the Interstate Commerce Commission, iron ores were made an exception in Canadian eastern territory. This board increased the rates on them 15%. The McAdoo order deals with the movement of this commodity as follows:—

"30c a net ton of 2,000 lb. except that no increase shall be made in the rates on ex-lake ore that has paid one increased rail rate before reaching lake vessel."

The reference to an increased rail rate in connection with the boat movement does not of necessity show any general increase in the iron ore rate. The board is not advised of any general increase in U.S. territory. The effect of the 30c increase is to give a greater increase than that already given by the board on all traffic carried at a rate of less than \$2 a ton, while it holds down the increase for the longer movements. To place the increases on a parity, the board's increase of 15% should be struck out and 30c a net ton added to the former Canadian rate.

**Stone, artificial and natural,** building and monumental, except carved, lettered, polished or traced.—In U.S. territory the Interstate Commerce Commission by its order of Mar. 12, 1918, increased the commodity rates, with certain exceptions in which stone is not included, by 15%. The board made a similar increase in its judgment of Dec., 1917, in eastern territory. The increase in the McAdoo order amounts to 2c per 100 lb., and the like increase will follow in Canadian territory.

**Stone, broken, crushed and ground.**—This stone is of low value and for that reason the Canadian board held down the increase in its 15% case to a flat addition of 5c a ton. An increase was allowed of 15% in U.S. territory. As many of the hauls are comparatively short, there probably is not much disparity in the results in the two countries; the Canadian increase would be somewhat the smaller. The advance under the McAdoo order is 1c per 100 lb. The same increase should be made in corresponding Canadian territory.

**Sand and Gravel.**—These rates are in exactly the same position as stone, broken, crushed and ground. The McAdoo order allows a similar increase of 1c per 100 lb., and the same increase should be allowed here.

**Brick,** except enameled or glazed.—Similar increases have been granted in both countries by the respective commissions. The McAdoo order allows an advance of 2c per 100 lb., which should also be permitted in Eastern Canada.

**Cement.**—An increase of 15% has already been made in Canada. Specific ad-

vances were also allowed by the Interstate Commerce Commission on Jan. 15, 1918, is so far as a very large amount of traffic in U.S. territory is concerned. It is impossible to state what the actual results of the increase over the whole field may be, increases having been made in both territories, some of those in the U.S. being much heavier than the Canadian increase of 15%. The increase under the McAdoo order, which amounts to 2c per 100 lb., can be applied.

**Lime and Plaster.**—Lime is not excepted from the increase of 15% in commodity rates given by the Interstate Commerce Commission and already has been increased by the board 15%. The addition of the increase under the McAdoo order of 1½c per 100 lb. in Eastern Canada will restore the parity.

**Lumber and other forest products** not otherwise herein specifically dealt with.—An increase of 15% was granted by the board in Eastern Canada. An increase was also given in U.S. eastern territory by the Interstate Commerce Commission, but the increase made by the Interstate Commerce Commission was held down to an increase of 1c per 100 lb. In order to put the increase on a parity, the increase of 15% already allowed by the board will have to be taken off, and 1c added to the former tariff, which will then be increased by 25%, but not exceeding 5c per 100 lb.

**Pulpwood.**—The Canadian board allowed an increase of 15% on pulpwood. In the Maine and New Hampshire districts, where pulpwood is produced and comes directly into competition with Canadian pulpwood, the U.S. railways put into force an advance of 15% before the McAdoo order was made, and on international business the increase granted by the McAdoo order, which amounts to 25%, but not exceeding 5c per 100 lb., is already in effect. Parity is, therefore, obtained by increasing the present rates in Canada as provided by the McAdoo order.

**Cordwood, slabs and mill refuse** for fuel purposes.—The rates on these articles were advanced 15% in Canada under the board's judgment. Under the Interstate Commerce Commission order an increase was granted of 1c per 100 lb. in some instances and 15% in others. Under the McAdoo order the rates take an advance of 25%, but not exceeding an increase of 5c per 100 lb. Taking the rates for a 60-mile haul, the Canadian position is as follows:—Prior to the 15% increase, the rate was 4¼c, the increase being to 5c. Applying the McAdoo order on the present Canadian rate of 5c, the rate would become 6¼c. A considerable quantity of cordwood is hauled 125 miles. The old rate for this distance was 5¼c; the 15% case made it 6c, and the McAdoo advance would make it 7¼c; while, if the Interstate Commerce Commission's increase of 1c was added to the original rate and the McAdoo increase added, the rate would be 8c. The railways' attention has been called to the fact that owing to the shortage of coal it is desirable that as much cordwood be carried as possible. While the railways insist that the expenses to which they have been put, having particular regard to the recent increase in wages, are such that the whole increase of the McAdoo order would be absolutely required, under the circumstances they raise no objection if, instead of applying the full increase, a flat increase of 1c over the present rate is applied to the whole movement. The result would be that the increase on this commodity would make the new rate for 60 miles 6c instead of 6¼c, and for 125 miles 7c instead of 7¼c.

**Wheat.**—The board advanced the rate in eastern territory 15%, subject to a

maximum increase of 2c per 100 lb. The Interstate Commerce Commission had advanced the rate in U.S. territory 15%, without limiting the increase by a maximum. Comparative increases will be secured by the companies carrying the board's former judgment into effect, without the limit imposed of 2c per 100 lb., and adding the increase provided by the McAdoo order, which amounts to 25%, but not exceeding an increase of 6c per 100 lb.

**Other Grains, Flour and other mill products.**—These rates should be treated in the same way as the wheat rates. The McAdoo order in dealing with them reads:—"25%, but not exceeding an increase of 6c per 100 lb., and increased rates shall not be less than new rates on wheat."

**Livestock.**—Similar increases have been made in both countries by the respective commissions. The McAdoo order increases the rates 25%, but not exceeding an increase of 7c per 100 lb. where rates are published per 100 lb., or \$15 per standard 36-ft. car where rates are published per car.

**Packing House Products and Fresh Meats.**—An increase of 15% has been made in both countries by the respective commissions. The McAdoo order makes a further increase of 25%, except that the rates published from all Missouri River points to Mississippi River territory and east thereof shall be the same as the new rates from St. Joseph, Mo. The exception is without significance, having regard to territory contiguous to Canada. The adoption of the McAdoo order will make a parity of increase.

**Bullion,** base (copper or lead), pig or slab, and other smelter products.—15% increases have already been granted in both countries. The McAdoo order increases the rates 25%, and may be adopted.

**Sugar,** including syrup and molasses, where sugar rates apply thereto.—A 15% increase was granted by the Interstate Commerce Commission. A 15% increase was also granted by the board. Canadian eastern territory is contiguous to U.S. territory covered by the Official Classification. Under the McAdoo order, sugar rates are to be advanced 25%, except that where the Official Classification applies the 5th class rates as increased will apply. Commodity rates for sugar were in effect in U.S. eastern territory prior to the McAdoo order and are today in effect in eastern Canada. Sugar classifies 5th class, and only moves on 5th class in so far as the all rail movement from eastern to western Canada is concerned. The district covered by sugar commodity tariffs stops at North Bay, on the Grand Trunk, and at Sudbury on the C.P.R. The effect of the McAdoo order is to increase the rates on sugar between points in the U.S. formerly covered by commodity tariffs to a greater extent than 25%. For example, the former commodity rate on sugar from New York to Detroit was 24¼c. Under the McAdoo order it now becomes 35c, an increase of 42%. From New York to Chicago the commodity rate was 32¼c; new rate 45c, an increase of 43%. The New York to St. Paul and Duluth rate was 38¼c; new rate 65c, an increase of 69%. As the commodity rates in Eastern Canada were not based on any fixed proportion of the 5th class, the percentage of the resulting increase would change in almost every instance. As similar increases were made in both countries before the McAdoo order, the parity of treatment in increases will be obtained by providing for an increase of 25%, except that in Canada, where the Canadian

Freight Classification applies, the 5th class rate as increased would be substituted.

The effect of the McAdoo order on the sugar movement from Montreal to Toronto would be as follows:—The present rate is 18½c per 100 lb., while the present 5th class rate is 26½c, and as increased under the McAdoo order would be 33c. As a result, the rate would be increased 14½c per 100 lb., or 78.3%. The increase would make the freight costs 0.33c a lb., as against 0.185c a lb., and on a 10 lb. purchase by the consumer 3.3c, as against 1.85c.

**Ice.**—No authority to increase ice rates in U.S. eastern territory prior to the McAdoo order appears. Under these circumstances, the increase of 15% allowed by the board should be cancelled, and the McAdoo advance of 25% should be calculated on the former rate.

Commodity rates not included in the foregoing should be increased 25%, as allowed by the McAdoo order.

**Territory West of Fort William—Class rates.**—No increase was made in class rates in western territory by the Interstate Commerce Commission. An increase of 15% was allowed by this board. As a result, the increase granted by this board should be cancelled and the 25% increase allowed by the McAdoo order calculated on the old rates. The position in so far as minimum rates are concerned is similar to the position already covered, having regard to the eastern rates. The result is that the same minimum of 24c 1st class, in view of the Canadian tariff construction, should be adopted in lieu of the 25c minimum provided by the McAdoo order. The minimum charge on less than carload shipments will also be increased so as to provide for a minimum charge of 50c, instead of 35c, as in eastern territory.

**Coal.**—The McAdoo order makes the same increases on coal as in eastern territory, and in view of the provision of the order that in any case where a flat 15c had not already been allowed the increased rate should be calculated upon that basis, makes the situation such that to arrive at a comparative increase the full McAdoo increases must be adopted as in eastern territory.

**Coke.**—The position as to coke is exactly the same as to coal, and the increases here, again, are the same as already shown for eastern territory.

**Iron Ores.**—This is not an important movement in western Canada. No increase was made in the U.S. rate prior to the McAdoo order, which allows a flat increase of 30c a net ton of 2,000 lb., except that no increase shall be made in rates on ex-lake ore that has paid one increased rate before reaching lake vessel. As a result, the existing tariffs to cover this movement should be cancelled and the 30c a net ton allowed by the McAdoo order added to the rates existing prior to the 15% case.

**Other Ores.**—Ores other than iron under the McAdoo order are covered by a general increase of 25%. The U.S. rate situation does not at all compare with the situation in western Canada. Ore rates to western Canadian smelters are compiled for the lower values on the rubble and dimension stone commodity mileage basis, on values exceeding \$50, to \$100 on the 10th class distributing rates, and on values exceeding \$100, on the 10th class standard rates. In the U.S., however, the ore rates have no such relation. It is inadvisable to change the Canadian basis. Increases, however, can be obtained

by advancing the Canadian rates in the same manner as the McAdoo award advances the commodity and class rates upon which the Canadian rates are based. The district particularly interested is the Kootenay. On low grade ores of the value of \$5, the old rate was \$1.35 a ton from Kimberley to Trail. An increase of 10% has since been made, so that the existing rate is \$1.50 a ton. Under the basis recommended this rate will become \$1.55 a ton. If the straight McAdoo increase had been applied, the rate would become \$1.70 a ton. For the same movement on ores of \$15 a ton the old rate was \$1.65, increased to \$1.80, and the proposed increased rate will be \$1.85. Under the McAdoo award the increased rate would amount to \$2.10.

The increases on the rubble and stone commodities are but 1c per 100 lb., and the increases in the ore rates are thus held down. Values from \$25 to \$50, inclusive, are based on the dimension stone commodity tariff. The increase here under the McAdoo order is 2c per 100 lb., and the result is that on the same movement of ore of the \$25 value, the old rate of \$1.90 a ton, which has been increased to \$2.10 a ton, and would move at a rate of \$2.30 a ton. Under the McAdoo order the rate would be \$2.40.

For the \$50 ore the old was \$2.80, the rate as increased is \$3.10, and the increase which should be allowed would bring the rate up to \$3.20. In this case the McAdoo order would allow an increased rate of \$3.50. On \$100 ore the old rate was \$4 a ton; as increased, \$4.40 a ton, and would become \$5. It is to be observed that the basis of the McAdoo increase would make the same \$5 rate.

Over and above the ordinary ore rates there are other ore rates covering train load lots. These have been increased in Canadian territory. The increases granted ought to be disallowed and the new rates be based on the former rates, plus an advance by 25%, as per the McAdoo order.

**Stone, artificial and natural, building and monumental, except carved, lettered, polished or traced.**—The rates on these commodities were advanced by the board in the 15% case. No advance was made by the Interstate Commerce Commission. The advanced tariff approved by the board should be cancelled, and the 2c per 100 lb. called for by the McAdoo order added to the tariffs as they existed prior to the 15% case.

**Stone, broken, crushed and ground, sand and gravel.**—The rates on these commodities were advanced by the board in the 15% case. No advance was made by the Interstate Commerce Commission. The advanced tariff approved by the board should be cancelled, and the 1c per 100 lb. called for by the McAdoo order added to the tariffs as they existed prior to the 15% case.

**Brick, except enameled or glazed.**—The rates on this commodity were advanced by the board in the 15% case. No advance was made by the Interstate Commerce Commission. The advanced tariff approved by the board should be cancelled and the 2c per 100 lb. called for by the McAdoo order added to the tariffs as they existed prior to the 15% case.

**Cement.**—The position of relative increases is similar to that in eastern territory and the same action may be taken.

**Lime.**—An increase of 15% has already been made in Canada. No increases were allowed by the Interstate Commerce Commission. The advanced tariff approved by the board must be cancelled and the increase under the McAdoo order, which

amounts to 1½c per 100 lb., applied in the former rate.

**Lumber.**—The most important movement in western territory is from British Columbia, which province, together with Washington and Oregon, are closely in relation one to the other in the production of lumber. The Canadian mills sell in U.S. territory in competition with the U.S. producer, and the U.S. producers sell in Canadian territory in competition with British Columbia mills. The original rates were the same. The rate from Vancouver to Winnipeg was 40c. The rate from Portland and from Seattle to St. Paul and Winnipeg was also 40c, the Winnipeg rate being competitive. Some years ago the U.S. lines, with the subsequent approval of the Interstate Commerce Commission, advanced their rate from 40c to 45c to St. Paul, although for competitive purposes, owing to the fact that Canadian lines could not increase their rates, the U.S. 40c rate to Winnipeg was maintained.

The matter of lumber rates was considered by the board in the 15% case. The situation was found to be such that no flat 15% increase could be allowed. The consideration of chief importance in lumber rates was found to be the relation one to the other, having regard to the different points of production in Canadian territory. Certain advances were allowed, and among them the rate Vancouver to Winnipeg was advanced to 45c. The main rate was, therefore, restored to a parity with the U.S. rate as formerly. Under the McAdoo order the U.S. lines have increased their rate to St. Paul and Minneapolis from 45c to 50c. Other rates in U.S. territory have been advanced to the full 25% allowed by the McAdoo order, subject to the maximum of 5c. The increase given by the board in the 15% case practically restored parity between Canadian and U.S. rates. If the increase allowed by the McAdoo order of 25%, subject to a maximum of 5c per 100 lb., is allowed in the existing tariffs, that parity would be maintained. The increases will, of course, extend not only to movements in local territory, but also to eastern Canada and to the eastern States.

Other sources of local supply are the northern spruce belt and the Lake of the Woods, Rainy River and Thunder Bay districts. Under the McAdoo order these rates will take the same advance.

**Grain and Grain Products to Fort William and Port Arthur.**—These rates in Canadian western territory are lower than the rates in contiguous U.S. territory. The U.S. hauls are to the terminals at St. Paul, Minneapolis and Lake Superior ports. All these terminals take the same rate. The haul within Canadian territory is to Port Arthur and Fort William. For example, the rate from Garrison, Mont., to Minneapolis, 1,172 miles, was 33c. The haul from Lethbridge to Fort William, 1,177 miles, had a 23c rate. Under the McAdoo order the rate from Garrison moved up a further 6c, making that rate 39c, while under the board's order the grain rate from Lethbridge was increased 2c, making that rate 25c, so that the difference became much accentuated. The parity of increase in haul, although, of course, not in rate, which is not for a moment recommended, can be easily obtained by adding the increase under the McAdoo order to the old rates for mileages substantially similar to those in the U.S. The following table is submitted as showing the results of the application of the McAdoo scale on this basis to points representing different mileages:—

From.	Miles	Old rate	Pre- rate as increased by board	New rate based on McAdoo order, for similar U. S. mileages
Winnipeg, Man. ...	420-CP	10	12	14
Portage la Prairie, Man. ....	475-CP	12	14	16
Brandon, Man. ...	553-CP	13	15	17

Edmonton, Alta. ...	1243-GTP	25	27	31

**Grain and grain products** between local points and the Pacific coast.—In so far as local rates and rates to Vancouver are concerned the McAdoo order would also increase these 25%, with a maximum of 6c per 100 lb. The simplest way of dealing with these movements, which are not in any way related to the U.S. market or U.S. competition, is to disallow the increase already made by the board and calculate the increases on the old rates.

**Livestock.**—Attention has not been called to any increase either on the Great Northern or on the Northern Pacific Railways. These companies occupy territory contiguous to that of Canadian carriers in the west. Increases in the U.S. livestock rates in the more southerly territory were granted in 1915. These increases would not, however, appear to control the situation. The increase already granted by the board should, therefore, be struck out and the increase allowed under the McAdoo order of 25%, but not exceeding an increase of 7c per 100 lb. for rates published per 100 lb., or \$15 per standard 36-ft. car, where rates are published per car, added.

**Packing house products** and fresh meats.—These rates were advanced by the board in the 15% case. No increase was allowed by the Interstate Commerce Commission. The advance under the McAdoo order is 25%. The advance tariffs authorized by the board should be cancelled and the increase calculated on the tariffs in effect prior to Mar. 15, 1918.

**Bullion**, base (copper or lead), pig or slab, and other smelter products.—The McAdoo order allows an increase of 25% on existing rates, except that:—1. Rates from producing points in Arizona, California, Idaho, Montana, Nevada, New Mexico, Oregon, Utah and Washington to New York, N.Y., shall be \$16.50 a net ton, with established differentials to other Atlantic seaboard points; and 2. Rates from points in Colorado and El Paso, Texas, to Atlantic seaboard points shall be increased \$6.50 a net ton. Separately established rates used as factors in making through rates to the Atlantic seaboard shall be increased in amounts sufficient to protect the through rates as above increased.

There are three smelters in British Columbia, one at Greenwood, one at Grand Forks, and one at Tadanac (Trail). The chief movement of the smelter products in Canadian territory is to Toronto, Hamilton and Montreal. The exact percentage of increase, owing to the blanket form of the McAdoo order, is somewhat

difficult to apply to any mileage basis, or to the Canadian rate basis. Under the order, the rates to Buffalo from Northport, which is the U.S. smelter nearest to the Canadian group, is 71½c per 100 lb. An increased rate to the Canadian carriers, which would place Toronto and Hamilton on the same basis as Buffalo, would be reasonable and fair. This 71½c rate produces a rate per ton of \$14.30. The present rate to Toronto for the Canadian haul is \$13.40. Under the McAdoo order the Boston rate becomes \$16.90 a ton, while the New York rate is \$16.30. The Montreal rate ought to be held down to the New York rate. To territory east of Montreal in Canada the usual arbitraries should be added to the Montreal rate. Rates to points in Western Canada should take the advance of 25%, as provided by the McAdoo order. In view of conditions existing at Canadian smelters and the cost of production of zinc, the present zinc rates for domestic purposes should be reduced to the copper and lead rates already referred to.

**Sugar, Syrup and Molasses.**—Sugar is refined in western territory in Vancouver, whence the movement extends as far east as Winnipeg. The McAdoo order is difficult to apply to this traffic. For example, it provides that from points in California to points taking Missouri River rates and those related thereto, under the Interstate Commerce Commission's 4th section order, and to points east of the Missouri River, an increase of 22c per 100 lb. was made. The order, of course, includes an increase of 25%, except in specific cases. As already pointed out in connection with the eastern movement, it makes a large increase by cancelling the commodity rates and making the increased 5th class rates applicable. Sugar from Vancouver to destinations in the west moves under commodity rates, as eastern sugar moves locally in Eastern Canada. The eastern refiner has long alleged an undue preference which enables the British Columbia shipments to be carried as far as Winnipeg under the commodity tariff, while he, shipping all rail to the western provinces, has to pay the 5th class rates, and the complaint has also been made that the B.C. tariff is out of scale. Judgment has been reserved for a considerable time by the board in this question, but a readjustment of the sugar rates will have to be made before the question is properly and finally determined. The fairest way of increasing the B.C. sugar rates would appear to be to apply to them the same basis and principles as recommended for eastern territory.

**Commodity rates** not included in the foregoing should be advanced by adding the increase of 25% provided by the McAdoo order, to the rates as they existed prior to the increase of 15% permitted by the board, and the board's increase disallowed.

**General class rates** between points in Eastern and Western Canada.—The eastern portion of these rates was increased 6c in the 1st class shortly before the 15% application had been made, a further increase of 10% being then allowed by the board. The increase in western Canada was 15%. The like U.S. rates were increased, in so far as eastern territory was concerned approximately 10%, this increase being made on Mar. 15, 1918, the former New York-Duluth rate being \$1.18 1st class and increased in July, 1917, to \$1.30. Under the McAdoo order the rates have increased 25%, so that the present rate is \$1.62½. In order to produce a like parity in Canada, the McAdoo increase in eastern territory of 25% will be calculated on the existing rates, but in

western territory the 15% already allowed by the board must be disallowed and a 25% increase made on the old rates.

**Commodity rates between points** in Eastern and Western Canada.—Specific commodity rates in the separate territories have already been dealt with, and in both territories commodity rates which are not covered by specific provision are shown to require an increase of 25% in order to give the increase called for under the McAdoo order. In connection with commodity rates between eastern and western Canada, the appropriate increases would, therefore, be those which would obtain hereunder in the different territories in like commodity rates therein, in so far as the portion of the rate in each territory is concerned.

**Both export and import rates** are cancelled by the McAdoo order, although the right to make a differential rate has been reserved. The Canadian rate structure and traffic conditions do not permit similar action.

The question of export rates had already been dealt with by the board.

The increases in import rates which would result by the general adoption of the increased scales for local tariffs as provided by the McAdoo order ought not to be allowed. With the longer rail haul in Canada, and the different traffic conditions obtaining, in order to do business the railways in the past have deemed it necessary to maintain an import rate basis which would be as low as that obtaining from the U.S. port enjoying the lowest rate. Just so soon as these rates became equalled by local rates in Canadian territory, local rates from that point onward obtained. The only increase that ought to be permitted in import rates, if the very proper policy of the past is continued, is to authorize increases in the import rates, subject to the limitation that the rates as increased shall not exceed in any particular class or commodity the lowest import rates to the same points, from Baltimore or any North Atlantic seaport in the U.S.

**Disposition of Fractions.**—In applying rates fractions should be disposed of as follows:—

Rates in cents or in dollars and cents per 100 lb. or per package: Fractions of less than ¼ or 0.25 to be omitted. Fractions of ¼ or 0.25, or greater, but less than ¾ or 0.75, to be shown as ½. Fractions of ¾ or 0.75, or greater, to be increased to the next whole figure.

Rates per ton: Amounts of less than 5c to be omitted. Amounts of 5c or greater, but less than 10c, to be increased to 10c.

Rates per car: Amounts of less than 25c to be omitted. Amounts of 25c or greater, but less than 75c, to be shown as 50c. Amounts of 75c or greater, but less than \$1, to be increased to \$1.

**Observance of Differentials.**—The McAdoo order contains the following provision:—

"In establishing the freight rates herein ordered, while established rate groupings and fixed differentials are not required to be used, their use is desirable, if found practicable, even though certain rates may result which are lower or higher than would otherwise obtain."

There is no objection to the adoption of this clause. As a matter of fact, it merely applies to the scales as advanced, the practice usually followed in the preparation of schedules.

**Miscellaneous.**—It should be pointed out that in the preparation of the schedule of increases in this report the provisions of order in council 1768 have been adhered to, and the directions to establish similar increases to those granted in adjacent U.S. territory have been complied

with to the extent the Canadian rate system and conditions permit. In the result the previously existing parity of rates in Canadian and U.S. territory has been as near as may be preserved, and whenever under the former rate schedules Canadian railway rates have been on a lower rate basis, lower rates in Canada have been maintained. In the general result it will be found that smaller increases will obtain in Canada than in the United States. Where it has been found impracticable to give the full increase allowed in U.S. territory under the McAdoo order, the matter has been fully discussed with the chief traffic officers of the companies chiefly concerned.

It is difficult accurately to forecast the increased gross earnings that the rate increases will give. It is much more difficult to arrive with any degree of accuracy at the result of the net. Traffic conditions and operating expenses constantly change. The U.S. authorities have gone into all the circumstances requiring and the added expenses necessitating a rate increase with much care. As a result of this study, in the opinion of those authorities, the so-called 25% increase was necessary.

Increased costs and war conditions bear even more hardly upon railway conditions in Canada than in the U.S. The Canadian railways themselves are large contributors to increased U.S. freight charges. Railway coal for Quebec, Ontario, and a considerable portion of the western prairies is imported from the U.S. coal mines and subject to long hauls by the U.S. carrier. The G.T.R. estimates that the additional amount its coal for the year will cost, owing to the increase of freight rates alone in U.S. territory, is approximately \$800,000, the C.P.R. \$900,000, and the Canadian Northern \$450,000. A large percentage of other raw materials required by the railways in their operation are also imported from the U.S. The Canadian railways not only pay the ordinary duty, but also a special war tax on their coal.

It is also clear that the increases authorized by the McAdoo order, to the extent adopted by order in council 1768, will not give the Canadian railways the increases U.S. lines receive under it. No increases are allowed on Canadian lines on passenger sleeping or parlor car tariffs. It is also true that the increases

on a large volume of the traffic will fall a considerable degree short of the 25% increase popularly connected with the McAdoo order, owing to the maximum limitation the order creates and the flat increases in other cases allowed. The order in council was not passed for the purpose of increasing company profits over those of previous years, but for the purpose of meeting the advanced costs of transportation, of preventing strikes, and the collapse of the country's transportation. The railway executives, while stating that the increases allowed will enable transportation to continue in efficiency, claim that such increases will not be sufficient to cover the whole increased cost of operation. Whether this will or will not be the case is largely a matter of speculation. Under all the circumstances, it is submitted that the board be instructed to advise the cabinet, through the Minister of Railways, month by month, the monthly net results of the operations of the three larger systems, i.e., the Grand Trunk, Canadian Pacific, and Canadian Northern, to the end that any increases that may be found to be unnecessary be promptly curtailed.

## Toronto Board of Trade's Protest Against Increased Freight Rates Dismissed.

The Chief Commissioner, Board of Railway Commissioners, Sir Henry Drayton, made the following report to the Dominion Government, Aug. 3:—

A protest has been made by the Toronto Board of Trade against the order in council raising freight rates, and amendments to the order are requested. This application has been referred by the acting Prime Minister to be reported upon. Two questions are raised in the application: (1) It is argued that the new sugar rates "will place upon this staple food product an unwarranted burden," and that it should not be called upon to bear a greater increase than other commodities. It is also submitted that the order should not become effective until Aug. 27, so as to give time to the public to adjust itself to commercial conditions. Complaint is also made in the same city that the increase was made without consulting either the shippers or the general public.

It is important that the basic principles on which the order was made should not be lost sight of. The position with which the government was confronted was that a strike of certain railway employees was imminent; that a lengthy investigation had been made by a competent and in every sense well qualified commission in the United States, as a result of which wages were very substantially advanced in U.S. territory; that the increased cost of living to which the railway employees, in common with the general public, were subject obtained in Canada as well as in the U.S.; and that operating conditions in both countries were largely similar; that, as a measure of justice to railway employees, their wages had been advanced in U.S. territory; and that in order to provide sufficient revenues to cover the increased costs, substantial rate increases had also been made, not only for freight, but passenger traffic as well; that, as a measure of justice to Canadian railway employees, many of whom work on both sides of the line, the government requested Canadian railways under its jurisdiction to adopt the so-called McAdoo wage scale, and for the purpose of providing the necessary funds, directed similar rate advances (although perhaps slightly lower than the advanced rates in U.S. territory), but on freight traffic only.

The rates as fixed by the order in council are war rates, to meet a war emergency. In reporting upon similar increases in Canadian rates to those prescribed by the McAdoo order in U.S. rates, the rates have not been passed upon by the Board of Railway Commissioners as permanent rates. They may bear no relation to what the final rates ought to be, having regard to different commodities, when the war is over and conditions become normal. The pressing necessity was to obtain revenue, in order that strikes might be prevented and transportation carried on. The urgency was immediate and required immediate action. Public hearings in the different provinces, or any hearings at all, could not be held. Complaints many and serious have been made from time to time, showing lack of facilities and unsatisfactory movements; many have come from Toronto. Adequate transportation can only be obtained if either the receipts or the reserves available are sufficient for the purpose of meeting, not only running expenses and maintenance, but also for the purpose of improving, where necessary, any inadequate facility.

Subject to such considerations, I deal with the complaint as to the rates on sugar. Sugar prices to the public have advanced considerably. Nevertheless, the article had moved at low commodity rates, and is carried at a lower basic charge than analogous commodities of probably similar value in the same group of the freight classification, a preference that, whatever its origin, of course has the effect of accentuating the amount of the increase allowed. The added burden complained of is a burden more in percentage than in fact, as compared with relative commodities. United States Director General of Railroads, Mr. McAdoo, was evidently of the opinion that sugar ought to move under its appropriate classification. There is no question but what the added receipts are necessary, and as already pointed out in the main report, the cost of transporting a pound of sugar on the 330-mile haul from Montreal to Toronto had advanced from 0.185c to 0.330c. Expressed in percentage, the increase is undoubtedly great. In view, however, of the present financial neces-

sity (which is by no means confined to the necessities of companies, but is also national, in view of the fact that the country itself now owns and is responsible for a considerably larger mileage than Canada's largest individual railway, (the Canadian Pacific), the money must be obtained. I see no reason why the action taken in U.S. territory should not be duplicated in Canada. On the other hand, apart from the financial emergency and added costs, it ought to be. Sugar in Canada does move under the appropriate 5th class rate for longer mileages in eastern territory. The low commodity rates stop on the G.T.R. at North Bay and on the C.P.R. at Sudbury. There is more justification for applying a lower basis of rates to long hauls than to short hauls. Here the converse is applied. As a matter of justice, sugar rates ought to be placed on the same basis.

I now deal with the date on which the rates ought to become effective. It is much to be regretted that conditions are what they are; that the cost of living has gone up; that the war ever took place; and that, as a result, the costs of railway operation have increased. Unquestionably any advance in rates is a matter of annoyance, and sometimes loss to shippers. Unquestionably, also, the longer the notice that can be given, the less the resultant inconvenience and possible loss. The government, however, was obliged to deal with conditions as it found them. Among those conditions was the pressing necessity for an immediate wage increase without funds with which to meet it.

Reference is made in the Toronto Board of Trade's appeal to the action which has been taken in the U.S. It is true that there Mr. McAdoo's order did not go into effect until 30 days after its date. It is also true that in the U.S. the increased freight rates and the increased wage scale went into effect on June 25, so that the U.S. Railroad Administration obtained the benefit of the rate increase at the same time that it was put to the cost of the wage increase. It is also true that in Canada, in some instances, the new wage scale dates back, but, speaking generally, comes into effect Aug. 1. The railway systems in Canada, therefore, whether owned by the country or by companies,

only receive added revenues 12 days after the added costs have applied. They are thus put to a loss to which the U.S. Railroad Administration has not been subject, and a loss which is serious in view of the large amounts involved. The question raised as to further postponing the date is practically as to whether this loss shall be extended for 15 days more.

In view of the fact that the only complaint as yet received from any board of trade is that of the Toronto Board of Trade, not only for the sake of brevity, but for a more concise statement of the existing situation, I deal with the position of the Toronto shippers on the one hand and the G.T.R. on the other. The G.T.R. does the chief business in Ontario and carries a very large proportion of Toronto's traffic, both in and out. It is certainly fair to say that Toronto, as much as any other municipality, uses and benefits by the service supplied by the G.T.R. Nineteen hundred and sixteen was an exceptionally good year for the G.T.R., war costs in transportation had not commenced to be felt, at least to any serious extent, and the gross was large. War costs did commence appreciably to be shown in the spring of 1917. Bad as the results of 1917 were, the situation in 1918 is, however, worse. The following statement shows the company's gross receipts for the five months, January to May, in each year. It also shows the net receipts after paying costs of operation and taxes:

	1917.			1918.		
	Gross receipts.	Net receipts.		Gross receipts.	Net receipts.	Loss in net.
January . . . . .	\$ 3,788,177	\$ 662,468		\$ 3,236,262	\$ 869,618	\$1,532,086
February . . . . .	3,032,980	108,397		2,774,475	1,179,965	2,288,362
March . . . . .	4,907,624	852,760		4,286,715	65,892	918,652
April . . . . .	3,778,421	944,197		4,988,984	615,721	328,476
May . . . . .	4,566,592	881,347		5,217,271	742,071	139,276
	\$19,173,794	\$3,449,169		\$20,503,707	\$ 757,683	\$4,206,852

After Mar. 15, 1918, the full effect of the increases granted by the board in the so-called 15% case, became apparent, but these rate increases have not covered the constant cost increases. In April and May, 1918, the gross receipts were \$10,206,255, against \$8,345,013 for these months in 1917, resulting in the substantial increase of \$1,861,242, or 22.17%. The net receipts, however, show a very different result. For the same two months in 1918 they were \$1,357,792, against \$1,825,544, a decrease of \$467,752, or 25.06%. Net operations for the two months on the higher rate basis give an operating ratio of 66.696, or in other words leave the company 13.304c out of each dollar earned with which to pay fixed charges and to apply on dividends. For the same period in 1917, operating on the lower rate basis, an operating ratio of 78.124 was secured, with a resultant balance out of each dollar earned of 21.876c. The operating ratio for the whole year 1916 was 73.60, leaving a balance per dollar of 26.40c. The operating ratio for the whole year 1917 was 83.94, leaving a balance per dollar of 16.06c.

The company's fixed charges amount to some \$9,617,979, which have to be paid before the preferred shareholders of the different classes can receive any dividend. If it be assumed that the large increased gross of April and May be maintained, and further assuming that no greater increase takes place in operating costs, and that the employees were denied the benefit of the wage increase provided by the McAdoo scale, and to which the government has found them entitled, the results would be as follows:—Fixed charges for two months period (average of the 12 months), \$1,602,996. Operating net, \$1,357,792. Resultant deficit in running

fixed charges, \$245,204. For the whole year, therefore, adopting these two months as a basis, under the rates as increased by the board and applicable before the order in council was passed, the position of the shareholders would be that not only could no dividends be paid, but \$1,471,224 would have to be found by the shareholders for the purpose of paying fixed charges.

The wage increase which the company is obliged to adopt under the original McAdoo scale and 8 hour day readjustment alone would increase that deficit by some \$7,157,000. It is absolutely obvious that the G.T.R. is in such a position that at the earliest possible moment the full amount of increases which can be given it under the order should accrue to it.

Over and above the fixed charges already referred to, the G.T.R. has outstanding a guaranteed stock issue, as well as 1st, 2nd and 3rd preference stock issues. These guaranteed and preferred stocks amount in all to \$124,503,747. The whole of these large issues obtained no return whatever in 1917. No regard is had whatever to the issue of ordinary stock, which is, however, nearly as large as the total of the guaranteed and preferred issues. No dividend has ever been earned on this stock. In 1916 the amount available for dividends on the guaranteed and preferred stocks amounted to \$3,899,085. It is obvious that this profit to the shareholders can well be described as rea-

sonable, leaving out of consideration the question as to whether the dividends were really earned, in view of the condition of the property, lack of proper maintenance and locomotive power, which have already been reported on.

Many rates in Eastern Canada have always been held down by the rates that the G.T.R. itself has operated on in adjacent U.S. territory, and by the necessity of meeting the low rate scale obtaining in the eastern states, as well as by water competition. The board put into effect its 15% increase just as soon as these factors permitted, and shortly after the G.T.R. increased its tariffs in U.S. territory. The McAdoo order rendered possible the further increase which the government has authorized. This increase, large and all as it is when expressed in percentages, is not sufficient to remunerate the company doing a very large public service for Toronto's shippers.

The G.T.R. is a large system; it has of necessity large terminals in Toronto. Its facilities there, however, are not excessive. The contrary is really the case. I have never seen any charge substantiated that railways were unduly taxed in Canada. The G.T.R., however, in 1917, was assessed by Toronto on its land and buildings \$10,679,028, and the amount of the G.T.R.'s resultant tax bill was \$272,315.21. In 1918, the company's assessment is \$11,178,724. The abnormal tax rate for the year, in view of Toronto's increased expenses, of 30.05 mills, results in a tax charge to the G.T.R. of \$340,951.08, an increase in the one year of \$68,635, or 25.20%. In 1916 the gross earned was \$47,723,936, and in 1917, \$52,125,842, an increase of \$4,401,906. Notwithstanding this increase in gross, the net of 1916 of \$5,842,085 (surplus \$3,899.05, contingen-

cies reserve \$1,944,000) disappeared in 1917 and the reserve was reduced to \$127,715. While the G.T.R. shareholders paid Toronto in 1917 for taxes \$272,315.21 on but a small part of its investment, the result of the use of the whole of the G.T.R. system in the service of the public at large, was that the shareholders not only obtained no profit, but actually lost \$1,816,285. The members of the protestant board of trade are very directly interested in the service now being afforded by the G.T.R. without remuneration to the company's shareholders, and the company's tax payments to the general city fund cannot be a matter of indifference to them. The position of the company in 1918 is shown to be still more unfortunate. With increased gross receipts for the five months already referred to of \$13,229,913, the net receipts of 1917, inadequate as they proved to be, of \$3,449,169, became an actual operating deficit of \$757,683. This deficit, of course, the company has to make good, and in addition has had to find money to the extent of \$4,642,833 with which to pay fixed charges. Beyond all question the company's situation is indeed one which requires all the relief that the new rates will afford and without further delays.

The larger share of Toronto's business being carried by the G.T.R., that company's position ought properly to be first considered in connection with a Toronto complaint. The C.P.R.'s position is very different to the G.T.R.'s, with the benefits it has received under the original agreement, the long through hauls it enjoys, and the multiplicity of its operations, coupled with the fact that much more money has been put into its property actually in public service than its total bond and stock liabilities. No comparison exists between the two companies. But as a matter of fact, if the earnings of 1917, the drop in net receipts that has already developed in 1918, and the increased costs to which the C.P.R. is now subject to, be considered, unless action had been taken by the government in raising rates, not only would the company earn no surplus over dividends, but the dividends themselves would be impaired. The amount of business the Canadian Northern does in Toronto is relatively small and the increasing deficits of that system too familiar to require comment. I, for the foregoing reasons, beg to report that in my opinion the Toronto Board of Trade's application be dismissed.

The Cornwall Terminal Co., Ltd., the incorporation of which, with \$100,000 capital, and office at Montreal, was announced in our last issue, is associated with the Meigs Pulpwood Co.'s interests in New York, and it is the company's intention to carry on a lumber and pulpwood business, for which it is applying for a license in Ontario.

The Northern Pacific Ry. announced Aug. 18, it would suspend its freight and passenger service between Vancouver and Huntington, B.C. It is expected that the company's offices in Vancouver will be closed. The reason given for the change is that the company is desirous of conserving both men and equipment during the present period of pressure owing to war traffic conditions.

The Alberta & Great Waterways Ry. has been given a contract for carrying mail to the end of its track and there on to McMurray, Alta. Heretofore the mails have been taken by Canadian Northern Ry. to Athabasca Landing, thence by motor boat to House River, and then by pack horse to McMurray.

In addition to the revenue train mileage given in columns 4, 5 and 6, there was a total special revenue train mileage of 102,990, distributed over 24 railways

## Minimum Carload Weights for Commodities.

With a view to accomplishing further progress in the direction of loading freight cars to full capacity, and thereby conserving car supply, upon which it is expected a very heavy demand will be made during the ensuing autumn and winter, particularly, negotiations completed recently, to which representatives of the Board of Railway Commissioners, boards of trade, Canadian Manufacturers Association and the Canadian Railway War Board were parties, have resulted in an agreement that carload minima applying to certain commodities be increased. A statement of the present and new minimum figures with the commodities to which they are related, is given below. These alterations apply in railway commodity tariffs and become effective on legal notice. It is suggested to member lines of the Canadian Railway War Board, that they have tariffs amended without delay so that they may be in a position to take advantage of the new arrangements not later than the time of commencement of the grain movement.

### Minimum Carload Weights.

Commodity.	Present Minimum.	New Minimum.
Acid, Acetic, in barrels	24,000	36,000
Ammonia, Sulphate of	50,000	60,000
Asbestos cement	40,000	60,000
Asbestos fibre	24,000	40,000
Ashes, coke	50,000	60,000
Bags or bagging (cotton or jute in bds.)	24,000	30,000
Beans	40,000	50,000
Beans mixed with grain products	40,000	50,000
Beet pulp, sugar wet	40,000	60,000
Bleaching powder in barrels, casks or drums	30,000	40,000
Bottles, glass	24,000	30,000
Brick, or lining, stove	30,000	60,000
Brick (specific commodity rate only)	24	Marked capacity of car
Calf meal	40,000	45,000
Canned goods	30,000	40,000
Cardboard	30,000	36,000
Ceiling board and wall-board	30,000	36,000
Cigar box lumber	30,000	36,000
Coal	Varies from 25 net tons to capacity of car	Marker capacity of car, but not less than 60,000 lb.
Coal screenings	50,000	Marked capacity of car, but not less than 60,000 lb.
Cooperage stock, staves and heading	24,000	40,000
Mixed cars staves, headings and hoops	24,000	35,000
Cotton mill sweepings	24,000	30,000
Cross arms	30,000	45,000
Caustic soda	40,000	50,000
Filled boards	30,000	36,000
Ferro silicon	20,000 to 35,000	60,000
Grain products (straight or mixed cars (Exception), Pea and oat hulls and bran)	45,000	50,000
Granite	60,000	Marked capacity of car, but not less than 60,000 lb.
Hay (domestic consumption or export)	20,000	24,000
Hubs, wood	30,000	40,000
Leather, scrap or refuse	20,000	21,000
Linseed oil in barrels	24,000	30,000
Marble blocks and marble waste	60,000	Marked capacity of car, but not less than 60,000 lb.
Marble	60,000	Marked capacity of car, but not less than 60,000 lb.
Mill cinder and scale	18 gross tons	Marked capacity of car, but not less than 30 gross tons
Nitre cake	50,000	60,000
Millboard	30,000	36,000
Iron ore	25 gross tons	Marked capacity of car, but not less than 30 gross tons
Ore, silver	40,000	60,000
Paper—		
Rags	30,000	36,000
Core	30,000	40,000
Envelope	30,000	36,000
Newsprint	30,000	40,000
Printing	30,000	40,000

Toilet	30,000	30,000
Unfinished, in rolls	30,000	40,000
Wall, unfinished in rolls	30,000	40,000
Wrapping	30,000	40,000
Writings	30,000	36,000
Mixed cars, bags, toilet and wrapping	30,000	36,000
Petroleum products in packages	26,000	30,000
Pig lead	30,000 to 36,000	60,000
Rails and Rails 30 gross tons fastenings	30,000 to 60,000	Marked capacity of car, but not less than 60,000
Rice and rice flour	24,000	36,000
Resin	40,000	50,000
Salt	45,000	50,000
Scrap leather	20,000	24,000
Scrap tin	40,000	50,000
Starch, straight cars	24,000	30,000
Syrup of glucose	30,000	40,000
Mixed cars, starch, syrup and glucose	24,000	30,000
Sugar	30,000	40,000
Stone, field	80,000	Marked capacity of car, but not less than 60,000
Spraying composition in metal cans	24,000	30,000
In wood	24,000	36,000
Syrup and molasses	20,000	40,000
Tankage	40,000	60,000
Woodpulp	40,000 to 6,000	50,000 in rolls 60,000 N.O.S.
Woodpulp board	30,000	36,000
Iron and steel articles in box cars	Various	40,000
On flat cars	Minimum not to be increased, but understanding is that wherever possible cars are to be loaded to capacity.	
Bars, muck, or puddle ingots	25 gross tons	30 gross tons
Billets, blooms and	25 gross tons	30 gross tons
Crop ends	25 gross tons	30 gross tons
Pig iron	25 gross tons	30 gross tons
Wire rods	25 gross tons	30 gross tons
Chain, iron or steel	30,000 to 60,000	40,000, except no reduction will be made where tariffs provide a minimum in excess thereof
Note:—The minimum weight for mixed carloads of manufactured articles of iron and steel as shown in the lists contained in the various tariffs will be 40,000 lb.		
Building materials—		
Cinders, coal	50,000	60,000
Clay, common	80,000	Marked capacity of car, but not less than 60,000 lb.
Gravel	80,000	"
Gypsum rock	80,000	"
Sand, building or core	80,000	"
Slag, furnace	80,000	"
Stone, cobble, crushed, etc.	80,000	"
Stone screenings	80,000	"
Blocks, building, concrete	50,000	"
Blocks, gypsum	50,000	"
Blocks, paving, asphalt or stone	80,000	"
Blocks, plaster fireproofing	50,000	"
Brick, building, except enamelled or glazed	50,000	"
Drain tile, concrete or earthenware	40,000	50,000
Fire brick and fire clay, straight or mixed carloads	50,000	Marked capacity of car, but not less than 60,000 lb.
Lime	40,000	50,000
Plaster, wall, in packages	40,000	50,000
Roofing tile, earthenware	40,000	50,000
Sand, moulding	80,000	Marked capacity of car, but not less than 60,000 lb.
Sand common	80,000	"

### Selling Standardized Tickets at Special Windows.

The sale of railway tickets out of Washington, D.C., has been greatly facilitated by the arrangement at the union station of special windows for tickets to Baltimore, Philadelphia, Wilmington, and New York. These tickets can now be handled as rapidly as theater admissions.

In the past persons desiring to purchase these standard tickets have sometimes had to wait in line while tickets covered by more complicated rates were being worked out. The result of the change has

been to facilitate the sale of both classes of tickets. A large proportion of the travel out of Washington is to the points mentioned.

Similar arrangements are being made in other large cities wherever it is possible to thus care for standardized tickets for which there is a heavy demand.

### The Grand Trunk Railway's Proposed Extension to Providence, R. I.

From Engineering News-Record, New York.

The United States Railroad Administration has been petitioned to approve and provide funds for the completion of the branch of the Grand Trunk Ry. in southern New England to Providence, R. I., which was partly constructed in 1911-12. It is claimed that this additional outlet to tidewater from the G.T.R. system would help relieve congestion on New England railways.

How brief is the time since those stirring events in railway history, of which that Providence extension of the G.T.R. was a part, and what revolutionary changes have occurred since then! One recalls the ambitious projects for which the late Chas. M. Hays, as President of the G.T.R., was responsible, and his reception in Providence and Boston and other New England cities, where he painted glowing pictures of the benefits of railway competition, while the countryside was excited by the operations of mysterious surveying parties, and New England imagined it was to witness another era of competitive railway promotion and construction such as had prevailed a half century before. Then came Hays' tragic death on the ill-fated s.s. Titanic, followed by the revelation that the financing of his ambitious projects was not provided for. It was, in part at least, the public disappointment over this fiasco that led to the legislative investigation which revealed first the New Haven and Grand Trunk agreements and fallings out over New England territory, and later the extent to which the New Haven financial structure, once a tower of strength, had become a hollow shell.

Whether or not we are to return after the war to private ownership of railways it seems unthinkable that we shall return to the old time competitive railway construction—the building of strategic lines, not for public benefit but to defeat a rival. The public will never again look upon the railways of the country as private business enterprises as it did in the past, nor will it long endure any system of control that does not place the public interest first.

This means, too, that engineers will have to study railway construction problems from a broader standpoint than was ever possible in the past. Instead of the old time questions, what profit will this proposed line yield to the company which is to own it, or what injury will it do to a competitor, the engineer must determine the problem whether the proposed line will render a service to the public that will make its cost a justifiable investment. If public convenience and necessity demands the construction of a road, then it may be built. If the contrary is the case, the construction cannot be permitted.

It was announced, Aug. 15, that the overhauling of the Prince Edward Island car ferry had been completed, and that the regular ferry service between Cape Tormentine, N.B., and Borden, P.E.I., would be resumed Aug. 19.

## The Canadian Pacific Railway's Second Track Work between Leaside Jct. and North Toronto.

Present and prospective large increase in traffic made it necessary to complete the double tracking of the C.P.R.'s North Toronto line this year. The rapid expansion of the City of Toronto to the north, and the completion last year of a

side one another, they form a complete deck to carry the ballast and track work. A narrow sidewalk for railway employees only is provided on each side, protected by a pipe hand-rail, attached to reinforced concrete posts.

8 struts of one system are not in the same plane with the other, but at approximately the points of contraflexure; in this feature the structure is unusual.

The bents consist of 4 posts, of which the 2 outer ones are battered, and the interior ones are vertical. They are in turn supported on substantial piers which are continuous transversely across the bridge. The floor slabs, as above stated, were all pre-cast and were placed on the transverse caps of the towers by derricks. The deck was waterproofed in the usual manner, with a membrane and a protective layer of asphalt, after which the ballast and ordinary track ties were laid.

In order to maintain traffic and build the new bridge on the correct line, it was found necessary to build a temporary trestle on the north side of the structure, and entirely remove the old steel work. This allowed the use to the most economical length of concrete spans and also ensured that the new concrete would not be disturbed by the vibrations due to traffic passing on the old bridge.

The nature of the reinforcement in the towers is not different from modern practice. It consists of vertical rods located in the rectangular post sections. These rods are securely tied across to opposite rods, at close intervals, by units composed of rods previously bent to suitable shapes. The towers were poured story by story and splices in reinforcing bars were located immediately above the horizontal struts. The length of the horizontal girder slabs was dictated by the size of the reinforcing bars, the maximum size of which was 1 5/16 in. diam., bent up in the usual manner to take care of shear. All ends of the rods were bent in hook

Canadian Pacific Ry. bridge over Toronto Belt Line Ry. ravine, between Leaside Jct. and North Toronto

handsome, modern passenger station at North Toronto have greatly increased the passenger traffic of this line, which also handles the heavy freight traffic between the east and the Buffalo and Detroit gateways. The two miles of single track between the double track east of Leaside Jct., and west of North Toronto was a very busy piece of line and the increased traffic in immediate prospect necessitated prompt relief.

In building the second track which has been completed recently, no material changes in grade or alignment were made, as the new work runs to 0.4% for the former, and 3° for the latter. The grading was comparatively light, and this, together with all track work, was handled by the company's forces. It was, however, necessary to replace two single track steel viaducts, the one over the Toronto Belt Line by a 2-track, and the one over Reservoir Park ravine by a 3-track structure. This has been done in reinforced concrete and is now completed and ready for the heavy winter traffic which commences with the close of navigation on the Great Lakes.

The bridge over the Reservoir ravine is known as 1.8 North Toronto Subdivision, and consists of a 3-track structure, located with its south track approximately on the site of the existing main line, which is being used as a new switching lead, the other two tracks being used for east-bound and westbound traffic. The structure is 386 ft. long and 88 ft. high, supported on 2 abutments and 5 towers, which in turn support pre-cast T-beam floor spans of such design that, laid along-

Canadian Pacific Ry. bridge over Toronto Belt Line Ry. ravine, between Leaside Jct. and North Toronto, looking west.

The towers are of unusual design, in that no diagonal bracing is used; but instead thereof, a system of horizontal struts, to reduce the stresses in the columns from the longitudinal and transverse horizontal forces. The immediate

form to give mechanical bond. Each of the finished slabs weighs approximately 57 tons, and this, as well as the size of the rods, was the controlling feature in deciding span lengths.

The bridge over the Toronto Belt Line

Ry. is known as 0.9 North Toronto Sub-division, and is similar in general elevation to the Reservoir ravine bridge as well as in length and height. It has the same number of towers and abutments.

Both bridges were designed to carry the heaviest locomotives in existence, with a considerable margin of safety, and are epoch-making in bridge engineering inasmuch as they have demonstrated that

attempted; the spans of these two structures are each from 35 to 37 ft. long. These spans were made possible by the employment of unit construction, by which each span was designed as two T beams, which were laid side by side on the previously built reinforced concrete, after being manufactured near the work towers. The towers are really reinforced concrete structures constructed in the usual manner by means of wooden forms built around a steel reinforcement, which was assembled previously and securely wired together. When all was in readiness, the concrete was poured by means

Canadian Pacific Ry. bridge over Reservoir Park ravine, near North Toronto station.

It supports, however, only 2 tracks, instead of 3. The bents consist of 3 posts, 2 outer-battered and 1 inner-vertical, and being a 2-track structure, the width is

reinforced concrete can take the place of steel for a very large number of permanent bridges.

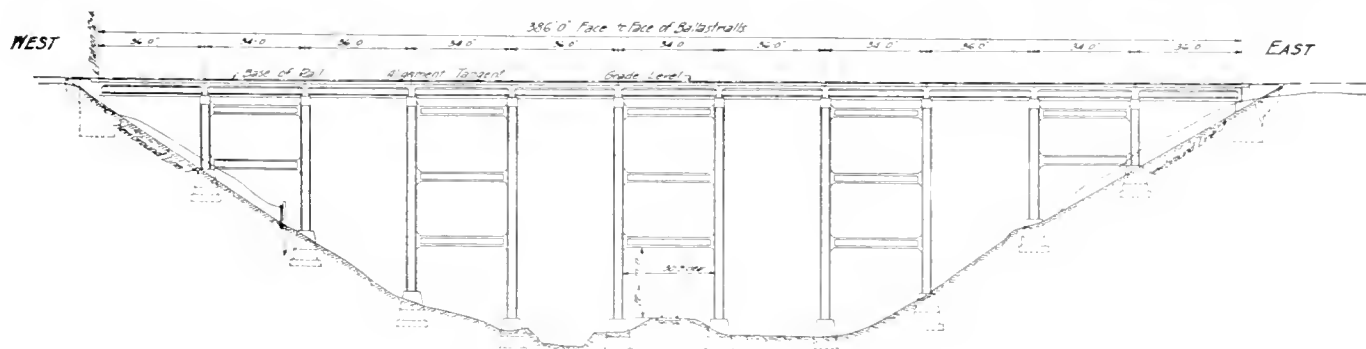

The length of the individual spans and

Bent No. 7 of Canadian Pacific Ry. bridge over Toronto Belt Line Ry. ravine.

of long spouts which led in several directions from the main mixing tower. The pouring of the concrete was maintained as continuously as possible until a whole tower was completed. This work was done during the winter, when the temperature was below freezing; it was performed inside of what was virtually a building erected to maintain a suitable temperature around the newly deposited concrete until it was out of danger of being damaged by frost.

The method employed in the erection of the reinforced concrete spans is specially interesting. Each slab, as a unit, weighed 55 tons, which was the limit load

Canadian Pacific Ry. bridge over Toronto Belt Line Ry. ravine, between Leaside Jet. and North Toronto.

correspondingly narrower. There are 2 narrow sidewalks for railway employees, protected by reinforced concrete posts and rail fence of same general character as the other bridge.

the details of their construction are claimed to be unprecedented in the engineering world. It is said that previous to this no reinforced concrete beam with a length of more than 25 ft. had been

that could be handled by the C.P.R. 100-ton standard wrecking crane. The crane engaged handled no less than 110 slabs, each 55 tons in weight, or in all something like 6,000 tons, and all this was

done without a single mishap to either men or material. Another remarkable feature is that both structures were built without interruption from the beginning of June, 1917, to the beginning of July, 1918, which was a shorter period than would have been required to manufacture and erect similar structures in steel. Passenger and freight traffic was continued without interruption during the progress of the work.

Both works were executed under the supervision of J. M. R. Fairbairn, Assistant Chief Engineer, Eastern Lines, now Chief Engineer of the entire C.P.R. system,

the designs being made by P. B. Motley, Engineer of Bridges, and the work was carried out under J. H. Barber, Engineer in Charge. The contractors of bridge 1.8 were Wells and Gray, Ltd., and for bridge 0.9 the Dominion Construction Co. The two steel trestles were removed by James Finley, structural contractor, Tweed, Ont. The temporary trestle over the reservoir ravine was erected by C.P.R. forces.

Work was started on the temporary trestles and grading, July 16, 1917, and the second track was put in operation July 4, 1918.

## Wonderful Movements of Troops by French Railway.

Although the events to which it referred occurred last year, the following article reproduced from a French revue, "Readings for Everyone," cannot fail to be of interest now. We are indebted to F. E. Gautier, Purchasing Agent, C.N.R., Winnipeg, for the translation:—

A French revue, "Readings for Everyone," publishes in its edition of the 15th Dec., 1917, a remarkable article entitled "Our soldiers in Italy," and the effort of France to transport almost at a moment's notice, several divisions of French and English troops from the western battle front to that in Italy.

Here is a summary of the article:—On a certain morning a stroke from the blue struck Paris:—"Italy is in danger, the Italian armies are retreating from the positions they had gained in Austria." The allies decided quietly to go to the help of Italy. It was on Oct. 23 that the German-Austrian attack began. Four days later the French and English Governments were advised of the gravity of the situation. The English Ambassador in Paris received instructions to offer Great Britain's fullest co-operation. The General in Chief of the French armies, the managers and chief engineers of the railways were summoned to Paris by telegraph. A meeting was held at 4 p.m. and by 6 o'clock the whole plan of assistance had been formulated. The military general staff instructed the division commanders and issued orders as to the immediate mobilization of different units.

The railway managers were asked: "Can you in 24 hours assemble sufficient material so as to throw 120,000 men over the Alps?" and the answer was "If necessary, we will do it in 18 hours." They were told to go ahead, and in 20 minutes the orders were issued to the different railways.

They were then asked "Could you double the effort?" They replied "Yes, if we get the co-operation of the Orleans Rv. and that of the Eastern System, so as not to paralyze the economic conditions of life in the country."

It then became necessary to carry out the decision arrived at, and to assemble during the night an enormous number of trains and to bring them to the points on the western battle front, and then to carry the troops, at express speed, to the Italian front, Lake La Garda and the Val Sugana, the two points most in danger.

On Oct. 22, at 6.30 a.m., the train movement began; the engineers had assembled in the office of the chief engineer; the time tables were established, a statement made out of all the cars and locomotives available; then the wires were kept hot. Twelve thousand railway carriages and 500 high speed locomotives were on their way two hours later, for the northeastern

frontier, at full speed. Everything in the way of traffic not absolutely necessary, was cancelled; every station master received definite instructions; every locomotive house, every department, knew exactly the minute at which the services of the men and the material would be required, so that 24 hours after the first meeting of the war council, 12,000 cars were practically behind the battle front in France.

Now what about the military side of the situation? The units were fighting or in battle array, while the trains were spreading northeast to embark them. It is not wise to speak of the military organizations at the front, but this can be said: as soon as a train arrived, the staff sergeants went to work and with a piece of chalk indicated very clearly, on each carriage, where each regiment, each company or section belonged; there were 40 cars to a train; this train carried a battalion, one battery of 75's, a half battery of heavy artillery, with the necessary ammunition for men and guns, and a squadron of aviators.

On the evening of Oct. 28, the general staff had instructed the army staffs as to which divisions were to leave. Locomotives and still more locomotives, with their trains of carriages, began to arrive, so that at 4 p.m. thirty-eight complete trains were on six large side tracks which had been built in the meantime. Long before the arrival of the trains, every man had his orders as to what he was to carry on his journey to Italy; the work of the non-commissioned officers was admirable. The temporary station was ablaze with electric reflectors. The first battalions started for the trains, and so perfect were the arrangements that every man stood in front of the particular carriage he was to occupy. Then at a bugle call all got on board, then a whistle from the locomotive, and amidst a thunder of "Au Revoir," "Good-bye," "We are off to the land of the sun," the trains pulled out. Battalions followed battalions at 10 minutes interval; then came the field kitchens, the rapid firing gun sections, the grenade companies, the ambulance waggons and corps, the army service waggons and staff. The trains keep going and going; then it was the turn of the artillery, the big guns, the little ones, the 75's, the 155's, the 210's, the larger ones on their railway truck, just as they left the factories. These trains required from two to three locomotives. Then came the full commissary department corps with the food. The night was well advanced when the last red light, on the last train, disappeared in the darkness. The speed was 35 kilometres an hour. The first train reached its destination on Nov. 2 on the Italian battle front at Asiago. Two trains carried the material necessary for

the depot commissariat, all the food for 180,000 men, bread, flour, fish, wine, etc. It takes 6,000 head of cattle a month to feed the troops; 30 cars a day are required to transport supplies of all sorts, but of this the censor will not let us say.

All of the above relates only to the transportation of the French troops, but what of the English effort for Italy? The French railways during the same time furnished the transport for men, ammunition, food, etc., etc. We are not acquainted with the military organization of our allies, but they performed the same feat. It was by thousands that their men went to Italy, and the French railways transported them and their equipment. The feeding alone of such an enormous number of allied troops in Italy, as well as the horses, and the continuous supply of ammunition, is a problem in itself. Then there are the returning trains with the wounded. All these great movements have been carried on quietly, smoothly, and without interfering with the daily requirements of the civilian population of France. Few know of the real hard work done by our railways and the difficulties they must overcome, often at a few hours' notice.

### An Appreciation of J. E. Quick.

The Eastern Canadian Passenger Association unanimously adopted the following resolution at its last meeting:—Whereas J. E. Quick, after 47 years continuous service with the lines of the Grand Trunk Rv. System, has retired from service as General Baggage Agent, under the company's pension rule, now be it resolved, that this association express to Mr. Quick its most sincere regret at the severance of business ties that have existed for many years, and the equally sincere hope and wish that he may be spared for many years to come to enjoy the fruits of his labor. Mr. Quick's instinctive gentility, unvarying courtesy and kindly disposition have endeared him in the hearts of all who have been associated with him, either in a business or social way; his dealings with his fellow men have always been along the lines of justice and right and devoid of any taint of selfishness or self aggrandizement and his judgment of the soundest. His withdrawal from the field in which he has so long been a leader and active worker will be keenly felt by those who know his sterling worth, ability, and willingness at all times to put his shoulder to the wheel, or reach out a hand to assist any in distress or need of help.

**Automatic Train Stops.**—The Board of Railway Commissioners issued the following circular Aug. 13:—In view of the frequency of accidents, as shown by reports made to the board from time to time, indicating that some grave consideration should now be given by Canadian railways to the question of the advisability of adopting an effective automatic train stop device, the board, in full realization of the necessities of the situation brought to its attention, desires an expression of the views of each railway company under its jurisdiction upon the subject after full consideration and investigation has been given by the railways. It is suggested that the Canadian Pacific, Grand Trunk, Michigan Central, Canadian Northern, St. Lawrence & Adirondack, Grand Trunk Pacific, and Toronto, Hamilton & Buffalo Railways should appoint a special committee to consider the matter, a report as to progress to be made to the board within 90 days.

## Birthdays of Transportation Men in September.

Many happy returns of the day to:—

W. B. Bamford, District Freight Agent, C.P.R., Toronto, born at Belleville, Ont., Sept. 10, 1863.

G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, born there, Sept. 7, 1861.

W. H. Biggar, K.C., Vice President and General Counsel, G.T.R., and G.T.P.R., Montreal, born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. J. Blais, Foreman Tinsmith, Canadian Government Railways, Transcona, Man., born Sept. 26, 1876.

E. R. Bremner, ex-Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born at Toronto, Sept. 9, 1875.

M. H. Brown, District Freight Agent, Ontario District, C.P.R., Toronto, born at Victoria Square, Ont., Sept. 2, 1866.

W. B. Bulling, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., born at Montreal, Sept. 16, 1858.

W. E. Burke, Assistant Manager and Director, Canada Steamship Lines, Ltd., Toronto, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 30, 1864.

A. S. Dawson, M.Can.Soc.C.E., Chief Engineer, Department of Natural Resources, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

H. B. Dufief, Assistant Solicitor, Grand Trunk Pacific Ry., Winnipeg, born at Washington, D.C., Sept. 16, 1883.

W. E. Duperow, General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.

C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

G. J. Fox, Superintendent, Calgary Division, Alberta District, C.P.R., Calgary, Alta., born at Montreal, Sept. 24, 1883.

R. S. Gosset, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Sept. 28, 1879.

E. Goulet, Agent, C.P.R., New Westminster, B.C., born at Quebec, Que., Sept. 1865.

D. W. Hatch, ex-Travelling Agent, Atchison, Topeka & Santa Fe Ry., Montreal, born at Bedford, Que., Sept. 1, 1841.

W. B. Howard, District Passenger Agent, C.P.R., Toronto, born at Chatham, N.B., Sept. 15, 1877.

W. R. Howard, dispatcher, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

G. C. Jones, Assistant to President, G.T.R., Toronto, born at Clyde, N.Y., Sept. 24, 1869.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, London, Ont., Director, National Steel Car Co., Hamilton, Ont., born at Thetford, Norfolk, Eng., Sept. 12, 1853.

R. E. Larmour, General Agent, Freight Department, C.P.R., New York, born at Brantford, Ont., Sept. 26, 1868.

C. D. MacKintosh, Superintendent, Lethbridge Division, Alberta District, C.P.R., Lethbridge, Alta., born at Auckland, New Zealand, Sept. 24, 1882.

W. A. Mather, Assistant General Superintendent, British Columbia District,

C.P.R., Vancouver, born at Oshawa, Ont., Sept., 1885.

M. B. Murphy, Manager, Winnipeg Joint Terminals, Winnipeg, born at Napa, Cal., Sept. 11, 1866.

J. Paul, District Freight Agent, Canadian Northern Ry., Winnipeg, born in Euphrasia Tp., Ont., Sept. 13, 1858.

W. D. Robb, Vice President, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.

H. T. Ruhl, Engineer, Maintenance of Way and Structures, Delaware & Hudson Co., Albany, N.Y., born at Mifflinburg, Pa., Sept. 29, 1882.

A. Scott, Resident Engineer, Prince Edward Island Ry., Charlottetown, P.E.I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

J. M. Silliman, Resident Engineer, London Division, Ontario District, C.P.R., London, Ont., born at Easton, Pa., Sept. 8, 1885.

H. A. Young, formerly Ontario Storage & Cartage Co., Ltd., Toronto, now of Buffalo, N.Y., born at Brooklyn, N.Y., Sept. 1, 1864.

## Advance in Freight Rates Compared with Advances in Goods.

The Canadian Railway War Board announced recently that a detailed study had been undertaken which will show not merely the increase in the cost of railway haul in the manufacture of common necessities of life, but will go into the actual cost of the labor and raw materials in these articles with a view to proving that while railway rates have increased possibly 30% since the war began, while railway costs of operation have increased by a larger percentage, manufacturers have actually increased their rate of profit out of all proportion to the actual increase in their cost of production.

One of the board's officials said in an interview recently:—"It is just about time that the public was shown who are the real profiteers at public expense. If all service, and if all production in Canada, was as efficiently carried on, if the standards were as high and the profits as low as they are on Canadian railways—there would be much less need for worrying over the cost of living. Railway service in Canada is cheaper than in any other country in the world except one—India, which is cheaper on account of the cheap labor.

"Washington has had to spoonfeed just over \$203,000,000 to keep the U.S. railways alive. It has had to boost not only freight but passenger rates, curtail service, cut out conveniences and put up with congestion at the same time. This is the inevitable result of their previous diligence in paring railway earnings to the bone, insisting upon feverish competition, and enacting into law almost every and any crank idea that some political incompetent could dream of for harassing and embarrassing the managements. Control as we have it in Canada does everything good for the public that the U.S. aimed to achieve, but there are a few fanatics who are apparently ready to wreck Canadian railway efficiency, upon the maintenance of which the country's business depends, by following the methods the U.S. people are repenting so bitterly these days.

"Listen to this list: Boots and shoes have risen in price since the war began, 100%; beef, 35%; clothing, 50%; coal, 100%; cordwood, 100%; flour, 90%; gaso-

line, 100%; hardware, 100%; pork, 75%; sugar, 80%; and tobacco, 50%. The roads are paying now a 100% higher pay-roll; 210% more for axles; 110% for brass castings; 200% for malleable castings; 100% for coke; 157% for iron and steel bars; 153% for fir; 80% for oak; 100% for pine and spruce; 130% for oil fuel at Montreal; 32% for oil at Vancouver; 50% for kerosene; 125% for steel tires; 100% for cleaning waste; 200% for lubricating waste; 90% for cast iron wheels—and then the precious private profiteer, whose prices, profits and standards of workmanship or quality are not fixed by government regulation, has the hardihood to talk about a total of 30% increase in railway freight rates since the war began! Surely if Canada is going to deal intelligently with her post-war problems we must commence to take at once some early A. B. C. lessons in ordinary business arithmetic and common uprightness of judgment."

## Regulations Requiring Reporting of Railway Accidents.

The Board of Railway Commissioners passed general order 244, July 26, as follows:—Upon the report of the board's Chief Operating Officer to the effect that railway companies are not fully complying with the requirements of the Act in reporting accidents to the board, and pointing out the desirability of a uniform practice on the part of railway companies in making returns of accidents, and upon his recommendation, it is ordered that every railway company be required within six days after the head officers of the company have received information of the occurrence upon the railway belonging to it of any accident, attended with personal injury to any person using the railway, or to any employee of the company, or whereby any bridge, culvert, viaduct, or tunnel on or of the railway has been broken or so damaged as to be impassable or unfit for immediate use, to give notice thereof to the board, such notice to be addressed to the board's Chief Operating Officer and to be made on hard paper in the forms A (relating to highway crossing accidents only) and B (relating to accidents other than those occurring at highway crossings, schedules to this order; such reports to be limited to accidents caused by transportation, that is to say, where train movements are involved, and not to apply to accidents occurring in railway shops or other manufacturing establishments, the property of railway companies.

2. In the case of derailments, collisions, and highway crossing accidents attended by personal injury, and in the case of any damage to any bridge, culvert, viaduct, or tunnel so as to render the same impassable or unfit for immediate use, the conductors or other employees of every such company shall, at the expense of the company and at the same time they report to the company, send to the board, addressed to its Chief Operating Officer, a telegram containing the following information:—Date and place, name of railway, number and description of train or trains, locomotive or locomotives concerned, number of passengers, employees or others killed and injured, a short and concise statement of the apparent cause of the accident, name and title of person sending report.

3. That where any such company grants or has granted running rights, or the joint use of its line or any portion thereof, to another company and the last named company is concerned in an accident occurring on said joint section re-

quired under this order to be reported, both companies shall report to the board as herein provided.

4. That every such railway company place before their conductors or other employees affected by the order a copy of

paragraph 2, directing said conductors or other employees to comply directly with the requirements of the provision.

5. That general order 39, circular 110, with supplements 1 and 2, circular 131, and circular 161 be rescinded.

## Railway Operating Difficulties in Winter.

By G. Beckingham, Superintendent of Track, G.T.R., Montreal.

During last winter almost all railways in North America suffered from extreme cold and snow; the delay to traffic was very great, to say nothing of the enormous expense in endeavoring to keep the line open. Why should there have been such delay to traffic, and is there a means to prevent it?

There are many maintenance officials on railways today who have been connected with railways for 30 years or more. Many of these officers can call to mind when our locomotives weighed from 30 to 40 tons, and at that time the railways did not experience the interruption to traffic met with last winter. Some of our locomotives today weigh 446,000 lb. with a steam pressure of 220 lb., and with this large size locomotive and high steam pressure, railways in winter time are not operated more successfully than they were with the small locomotive of 30 years ago, except, of course, that the locomotives haul a greater tonnage. This being the case, there must be a reason which did not exist 30 years ago for traffic being delayed during the winter. Any person with a knowledge of operating trains in winter in this northern country, would naturally think with the difference in locomotives of the present, compared with 30 years ago, that the trouble in running trains should be greatly eliminated.

In the first place, the men responsible for the keeping open of the road 30 years ago, were men who thoroughly understood their work, whereas in a great many instances today this work is handled in an altogether different method. Years ago, every man, regardless of his occupation, felt a certain responsibility, and everything in his power was done to keep the lines open for traffic. It would not be right or proper to say there are not some men of this class on railways today, but they are not in the same numbers as in years gone by, and with the improved equipment we have today, it would be well for stockholders of railways if men were of the same caliber as 30 years ago.

There is another reason for operating traffic so successfully 30 years ago, and that was some railways were better equipped with snow ploughs and flangers than they are today. Locomotives in those days were equipped with flangers. These flangers were placed on the pilot and were operated by the locomotive man by a lever. If our locomotives today were equipped with flangers as they were in days gone by, the interruption to traffic through snow would be reduced to almost nothing. In addition, it would be necessary, of course, to run wing ploughs over the line from time to time, or as often as would be required to keep the snow winged back from the track 6 or 7 ft. If this were done the flanger on the locomotive would clear the snow sufficiently from the rail to permit the locomotive to haul its train.

It has been said that railways should not operate snow flangers in front of locomotives for the reason that they are dangerous, in that they would remove a

torpedo from the rail if placed there in case of danger. If this is the case, the same would apply by a plough run ahead of the locomotive. In any event, I do not think railways can attribute many accidents to torpedoes being removed from the track by the flangers on locomotives. I am sure if railways today could go back 30 years and operate locomotives not equipped with flangers, the interruption to traffic would be so great there would be weeks at a time the line would be tied up.

There is one other feature very necessary in connection with the successful operation of snow ploughs and flangers; that is, a special siding should be provided for them at terminals where this equipment is kept. This siding should be constructed with a pit underneath track, which would permit of ploughs and flangers receiving proper inspection. Immediately when a plough arrives it should be placed on this track. In addition to its being thoroughly inspected, snow and ice should be cleaned away. In other words, everything necessary, including turning the plough, should receive immediate attention, on its arrival. There are very often serious delays due to this work being neglected.

It is also important that sufficient men trained to operate ploughs should know the line thoroughly. This is very necessary in order that the plough be operated successfully. When starting out with a plough, the conductor, locomotive man and man operating the plough should have it thoroughly understood as to the speed at which they wish to run, and to see that all concerned understand the signals, etc., as a mistake on the part of the locomotive man or man operating the plough might cause a very serious accident. There is no work on a railway more hazardous or of more importance than operating a wing plough ahead of a locomotive. Dispatchers and all concerned should exercise the greatest care while ploughs are being run in this manner.

A ballast leveller can be used to good advantage throughout the winter in yards, to clear snow from the tracks instead of loading up on to cars. There are cases where a leveller has cleared as many as 10 tracks, moving the snow to the outside. It is not always possible to use the leveller owing to local conditions, but where it can be used to advantage it does the work quickly and reduces expenses fully 75%.

**Women for Railway Work.**—Washington, D.C., press dispatch, Aug. 13:—Thousands of women will be drawn into railway employment within the next few months, to take the place of men entering the army and going to other industries, according to plans now being formulated by the U.S. Railroad Administration. Women are to be employed extensively as clerks in railway offices, as expert accountants, ticket sellers, station agents, crossing watchmen, car cleaners and to some extent as track laborers.

## Laying out Railway Curves from Long Chords.

By H. N. Graham, Penticton, B.C.

The accompanying diagram I have found very useful on railway survey work. It enables the user to lay out a simple railway curve by means of offsets from the long chord, where great accuracy is not required, such as in heavy brush or in swampy land. The diagram is for a 1° curve; for

other curves the offset should be multiplied by the degree of curvature.

The length of curve to which the long chord applies is shown by the curved lines on the diagram. The scale of offsets is read on the left-hand scale.

Following is an example: For a 5° curve, using a long chord of 300 ft., with the beginning of the chord at sta. 0+25, the first offset, to sta 1+00, being 75 ft. from the beginning of the chord,

is  $1.5 \times 5$  or 7.5 ft.; the second offset, to sta. 2+00, being 125 ft. from the end of the chord, is  $1.9 \times 5$  or 9.5 ft.; the third offset, to sta. 3+00, being 25 ft. from the end of the chord, is  $0.59 \times 5$  or 2.95 ft., as indicated in the smaller sketch.—Engineering News-Record.

## An Arch-Tube Straightener.

The accompanying sketch illustrates a device used in straightening arch tubes for locomotives. It consists of a wrought-steel bar 4 ft. long, tapering from  $3\frac{1}{2}$  in. at the center to  $1\frac{1}{2}$  in. at the ends, and is  $\frac{7}{8}$  in. thick. This bar is provided

with a hook at each end and a setscrew in the middle. To operate it the tube is set on the end hooks and is straightened by pressure brought to bear by the setscrew. This device has been in use for some time on several railways, and has been found to be a very simple and effective method for straightening arch tubes.

## Canadian Pacific Railway's Honor Roll 37.

Angell, Joseph	Specialist	Angus	Gassed
Atkinson, James	Storekeeper	Bredenburg	Died of wounds
Atkinson, James M.	Trainman	British Columbia Dist.	Killed in action
Berry, Ernest M.	Yardman	Calgary	Presumed dead
Boles, Ivo	Assistant agent	Treherne	Wounded
Caley, Alfred	Clerk	Montreal	Killed in action
Childs, Geo. M.	Boilermaker's helper	Lamhton	Wounded
Coleman, Cecil C.	Messenger	Edmonton	Wounded
Copeland, Thos.	Locomotive fireman	Revelstoke	Killed in action
Daly, Milfred J.	Apprentice	Winnipeg Shops	Wounded
Delaney, Reginald J.	Clerk	Regina	Killed in action
Devane, Guildford	Upholsterer	Mount Stephen House	Killed in action
Doyle, Frank	Bulldozer man	Winnipeg	Presumed dead
Dykes, Samuel	Clerk	Montreal	Wounded
Earl, W.	Miner	Lethbridge	Wounded
Edlund, Carl O. L.	Assistant agent	Clareholm	Wounded
Edwards, Mervyn	Clerk	Calgary	Died of wounds
Flynn, Edward	Wiper	Weyburn	Wounded and missing
Fowler, John	Inspector	Vancouver	Wounded
Fox, George A.	Cook	Vancouver	Died of wounds
Francis, David	Checker	Kenora	Killed in action
Grixnon, Lorenzo	Car repairer	Glen Yard	Presumed dead
Grundy, James	Porter	Moose Jaw	Wounded
Hall, Bernard	Apprentice	Winnipeg	Wounded
Hall, Robert B.	Clerk	Montreal	Killed in action
Hathaway, Albert	Wiper	Moose Jaw	Killed in action
Hoall, Charles W.	Springmaker	Orden Shops	Killed in action
Holmes, John E.	Operator	Winnipeg	Wounded
Kelly, Thomas	Porter	Port McNicoll	Killed in action
Kinnear, William	Case washer	Angus	Killed in action
Lander, Robert	Clerk	Winnipeg	Wounded
Lester, Joshua	Tuber	Wynyard	Died of wounds
Livock, John C.	Machinist	Angus	Killed in action
Longpre, Maxime O.	Waiter	B.C. Coast Service	Died of wounds
McDonald, Malcolm	Waiter	B.C. Lake Steamers	Presumed dead
Mann, James	Storekeeper	Estevan	Wounded
Marks, Albert	car repairer	West Toronto	Wounded
Mattheson, Thos.	Wiper	Lethbridge	Died of wounds
Meadows, Henry F.	Storeman	McAdam	Wounded
Moran, Richard	Helper	Angus	Died of wounds
Muske, Loftus G.	Fitter	Chapleau	Died of wounds
Poole, Thomas	Helper	Winnipeg Shops	Killed in action
Porteous, Hubert B.	Stenographer	Montreal	Wounded
Pancher, Gabriel S.	Baggage man	North Bay	Gassed
Radford, Arthur G.	Bookkeeper	Vancouver	Killed in action
Reid, James	Timekeeper	Winnipeg	Killed in action
Riddell, James D.	Steward	B.C. Coast Service	Wounded
Rolfe, Frederick C.	Car cleaner	Winnipeg	Wounded
Samson, John	Chief clerk	Montreal	Wounded
Sanger, George	Clerk	Angus	Wounded
Saunders, Walter F.	Clerk	Toronto	Wounded
Sawkins, Frederick F.	Locomotive fireman	Kenora	Wounded
Scott, Edward	Locomotive fireman	Calgary	Shell shock
Seddon, Thomas E.	Messenger	Brandon	Killed in action
Shuttleworth, Wm. J.	Stenographer	Souris	Wounded
Simpson, Harold I.	Waiter	Montreal	Presumed dead
Slater, Edward	Section foreman	Hamiota	Killed in action
Smith, Wm. A.	Fitter	Cartier	Wounded and prisoner
Stephens, Chas. G.	Clerk	Winnipeg	Killed in action
Stuart, Thomas C.	Call boy	Calgary	Killed in action
Sturbeck, Theodore A.	Rodman	Weyburn	Wounded
Sussams, George	Car repairer	Winnipeg	Killed in action
Thomas, Albert	Waiter	B.C. Lake Steamers	Killed in action
Thomas, William P.	Apprentice	Ogden Shops	Wounded
Vezina, Cyril	Locomotive fireman	Chapleau	Wounded
Weavers, Frederick	Section foreman	Provost	Presumed dead
Webb, William	Boilermaker's helper	Winnipeg	Wounded

Shown on Honor Lists to date:—Killed, 701; wounded, 1,538. Total, 2,239.

### United States Exports Control Committee.

The Secretary of War, the Secretary of the Navy, and the Director General of Railroads, have, on behalf of the U.S. Government, created the Exports Control Committee, consisting of Maj. Gen. G. W. Goethals, U.S. Army, representing the War Department; Rear Admiral C. J. Peoples, U.S. Navy, representing the Navy Department; G. D. Ogden, representing the Railroad Administration; P. A. S. Franklin, representing the Shipping Control Committee; D. W. Cooke, representing the traffic executives controlling allied traffic.

The committee, which has its headquarters at Washington, is to inform itself as to the probable amount of freight which must be exported for the prosecution of the war; how this war freight can best be routed through the various ports; how much of other essential export traffic has to be handled, and the amount of local traffic necessary for each port.

The committee will have authority to select the port to which specified freight shall be transported for trans-shipment overseas for the use of the War and Navy Departments, the allied governments, and others. The committee will also decide

the distribution of the combined amount of all exports, as between the various ports, so as to facilitate its handling at and avoid congestion in any one port.

### Railway Crossings Have Concrete Base.

Paved street crossings on the Atchison, Topeka & Santa Fe Ry. frequently have the tracks supported on a 12 in. concrete base, and have concrete filled between the ties to carry the paving. Brick is used mainly for the paving, as it more generally conforms to the street construction, but a concrete surface is used in some cases. The general design of the brick-paved crossings is shown in the accompanying drawing.

To reconstruct a crossing on this plan, excavation is first made along and under the ends of the ties to a depth of about 13 in. On each side two timber stringers are placed, just outside the rails, and are wedged up to give the ties a firm bearing. In the middle of the track, excavation is made between and under the ties to a depth of 12 in. This space is filled with concrete, which is packed under the ties and is then allowed to set for two weeks before the load is transferred to it.

The timber stringers are then removed, and concrete is filled under and between the ends of the ties. A small rib or stringer of concrete is laid along the inside of each track rail to carry the steel angle which forms the flangeway guard, this angle being anchored to the concrete. A 1 in. sand cushion is then spread on

the concrete base and the brick paving is laid and grouted.

Traffic is maintained without interruption, but all trains are required to slow down in passing over the work. It is stated by C. M. Buck, Division Engineer at Topeka, Kan., that as the adjacent roadbed has 12 in. or more of stone ballast, the concrete crossing does not make a noticeably hard-riding spot in the track even though trains often pass over outlying streets at a speed of 20 miles an hour.—Engineering News Record.

### Die for Forging Hand Brake Ratchets.

The accompanying plan shows a die used at the C.P.R. shops at Ogden, Alta., in an Ajax machine for forging hand brake ratchets. A cylinder cover grinder

is made up of a 9½ in. Westinghouse air pump steam cylinder and top head, with extension piston and attachments. It is operated by compressed air, and makes a very effective cylinder cover grinder. The setting and operating can be seen from the plan without explanation.

**St. John & Quebec Ry. Financing.**—The New Brunswick Government has issued writs against J. K. Flemming, former premier, to recover \$100,000; W. B. Tennant, to recover \$133,000, and T. Nagle, to recover \$20,000, money alleged to have been paid to them for political influence out of funds provided by the government for building the St. John & Quebec Ry. A commission of investigation found that these sums had been paid to the persons named by A. R. Gould, the then President of the company, and by contractors and sub-contractors, thus unduly enhancing the cost of building the railway.

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 243, July 25.—Further postponing until Oct. 1, effective date of general order 240, May 17, re inter-switching of freight traffic.

General order 244, July 26.—Specifying time, when, and manner in which railway companies shall report accidents to the board.

General order 235, Aug. 8.—Amending clause 4 of general order 186, Apr. 4, 1917, to provide that, until further order the minimum carload weight of flour shall be 50,000 lb. when loaded in cars of 60,000 or 70,000 lb. capacity.

General order 246, Aug. 12.—Permitting railways in Canada engaged in eastbound transcontinental traffic to increase commodity rates from Pacific coast terminals in B.C. This order is given in full on another page.

27448, July 18.—Authorizing C.P.R. to build spur for Imperial Oil, Ltd., Vulcan, Alta.

27449, July 17.—Extending to Sept. 30 time within which C.P.R. shall build standard 2 station at Hayter, Alta., according to order 26140, May 22, 1917.

27450, July 18.—Approving clearances of coal and tippie works for Edmonton Collieries, Ltd., on Great West Coal Co.'s spur, Clover Bar, Alta.

27451, July 19.—Approving Central Vermont Ry. resolution June 28, authorizing N. W. Hawkes, General Freight Agent, to issue tariffs of tolls.

27452, July 18.—Dismissing application of residents of Massett, B.C., for order directing Grand Trunk Pacific Coast Steamship Co. to reduce freight rates from Vancouver and Prince Rupert, B.C.

27453, July 17.—Relieving Canadian Northern Ry. from providing further protection at highway just east of Cardinal, Man.

27454, July 18.—Apportioning cost of maintenance of bridge over C.P.R. on Nelson St., Sudbury, Ont., as follows: actual blanking of surface renewed and maintained by Town of Sudbury from time to time; structural work and 80% of cost of structural maintenance by C.P.R., and 20% by Sudbury-Copper Cliff Suburban Electric Ry.

27455, July 19.—Amending order 27423, July 17, re highway over Grand Trunk Pacific Ry. between Secs. 5 and 6, Tp. 32, Range 27, west 2nd meridian, by substituting Tp. 34 for Tp. 32.

27456, July 27.—Authorizing Montreal & Southern Counties Ry. to increase existing freight rates except on coal and coke, by 15%, and on coal and coke by 15c a ton; also to increase standard maximum passenger rate so as not to exceed 2.875c a mile; effective when requirements of secs. 327 and 331 of Railway Act are met.

27457, July 22.—Dismissing application of Town of Kenora, Ont., for authority to make highway over C.P.R. near Keewatin.

27458, July 22.—Declaring that C.P.R. heater charge of \$15 a car on bananas from Minneapolis, Minn., to Winnipeg, for Vipond Fruit Co., was wrongfully made, and authorizing refund.

27459, July 22.—Ordering Grand Trunk Pacific Ry. to reduce rate on coal shown in its Special Joint & Competitive Freight Tariff, C.R.C. 285, from mines on Great West Coal Co. spur, to Edmonton, Alta., to 45c a ton.

27460, July 26.—Dismissing application of Twin City Coal Co., Swift Canadian Co., Northern Alberta Coal Operators' Association, and Alliance Power Co., Edmonton, Alta., for reduced rates on slack coal.

27461, July 22.—Declaring that C.P.R. heater charge of \$22.50 a car from Minneapolis, Minn., to Calgary, Alta., on 5 carloads of bananas for Plunkett & Savage was wrongfully made, and authorizing refund.

27462, July 22.—Dismissing application of Security Traffic Bureau, Minneapolis, Minn., alleging overcharge by C.P.R. on shipment from Winnipeg to Wilkie, Sask., Apr. 27, 1912.

27463, July 22.—Authorizing G.T.R. to build siding for I. Cohen, Kingston, Ont.

27464, July 23.—Authorizing G.T.R. to remove siding built under order 27134, to relay same and build additional tracks for Lindsay Factories, Ltd., Toronto.

27465, July 22.—Authorizing Canadian Northern Quebec Ry. to build siding for Canadian Ferro Alloys, Shawinigan Falls, Que.

27466, July 22.—Ordering Canadian Northern Ry. to erect fences along right of way in north half of Lots 7, 8 and 9, Con. 6, Glamorgan Tp., to be completed by Sept. 1.

27467, July 22.—Amending order 26941, Jan. 28, 1918, so as to extend express collection and delivery limits in Winnipeg.

27468, July 26.—Authorizing Canadian Northern Ontario Ry. to build temporary siding from C.P.R. to C.N.R. ice house at Leaside yard, Toronto, for stocking ice house and delivery of construction material in connection with C.N.R. yard.

27469, July 22.—Approving location of Esquimalt & Nanaimo Ry. station at Bainbridge, B.C.

27470, July 18.—Authorizing Lake Erie & Northern Ry. to operate over joint section without pilots being furnished by G.T.R., upon installation

of electric train staff system authorized by order 27180; provided that in event of electric train staff system failing to work at any time, L. E. & N. R. to stop trains before entering G.T.R. tracks and hold them until necessary repairs have been made; rules governing operation of joint system to be submitted for approval by board's chief operating officer.

27471, July 22.—Authorizing Hamilton Radial Electric Ry. to increase its standard maximum freight mileage tariff by 15%, and its carload rates on coal and coke by 15c a ton; to increase its passenger tariff from 2c to 2.5c a mile, subject to limitations created by bylaws of Saltfleet Tp., Burlington Village, Nelson Tp., and Oakville, Ont.

27472, July 19.—Authorizing C.P.R. to build siding for Montreal, Light, Heat & Power Co., Montreal.

27473, July 22.—Authorizing C.P.R. to build spur for Maple Leaf Harvest Tool Co., Tillsonburg, Ont.

27474, July 23.—Approving Esquimalt & Nanaimo Ry. plan M. 846, of shelter and platform at Bowser, B.C.

27475, July 23.—Authorizing Saskatchewan Highways Department, on behalf of Colonsay rural municipality 342, to make public highway over Grand Trunk Pacific Ry., Young to Prince Albert Branch.

27476, July 23.—Authorizing Grand Trunk Pacific Ry. to build spur from G.T.P.R. and C.N.R. joint section at mileage 1053.2 Winnipeg west, in Cariboo District, B.C., to connect with Lucerne gravel pit.

27477, July 19.—Amending order 27366, June 27, by declaring that Toronto, Hamilton & Buffalo Ry. is senior to Toronto, Niagara & Western Ry. in connection with T. H. & B. R. branch near Beach Road, Hamilton, Ont., no matter when laid.

27478, July 19.—Approving plans and specifications of Southold Tp., Ont., showing work to be done on McIntosh drain 2 under G.T.R. on east half of Lot 10, Con. 3, Southold Tp.

27479, July 22.—Approving location of Esquimalt & Nanaimo Ry. shelter at Fanny Bay, B.C.

27480, July 25.—Ordering Canadian Northern Ry. to install standard one-car pen at Prince, Sask., with partition to divide mixed shipments of pigs and cattle; to be completed by Oct. 1.

27481, July 25.—Dismissing application of Town of Greenfield Park, Que., for order directing two limited through cars of Montreal & Southern Counties Ry. to leave Greenfield Park daily except Sundays at 6.20 and 7 a.m.; and two through cars from Montreal to Greenfield Park for Greenfield Park People only to leave Montreal daily except Sundays at 5.40 and 6.20 p.m.; and that all local cars stop at each street in Greenfield Park, including Murray and Fairfield Aves., and all Chambley and Granby cars stop at Greenfield Park.

27482, July 25.—Approving location of Canadian Northern Ontario Ry. station at Yarker, Ont.; and authorizing C.N.O.R. to rearrange tracks and cross Vanluven and Bridge Sts., and street running from Bridge to Center St., with pipe line.

27483, July 25.—Approving location of Canadian Northern Ry. station at Rainy River, Ont.; and C.N.R. to build two additional tracks across Government Road and Little St.

27484, July 25.—Authorizing Toronto, Hamilton & Buffalo Ry. to build second main track at grade across certain highways in Con. 4, Barton Tp., Ont.

27485, July 25.—Authorizing C.P.R. to build spurs for James Richardson & Sons elevators, and Saskatchewan Co-operative Elevator Co., Port Arthur, Ont.

27486, July 25.—Authorizing City of Toronto to remove cattle market bridge across G.T.R. and C.P.R. east of Strachan Ave.

27487, July 26.—Authorizing Alberta Public Works Department to build highway over C.P.R. in n.e. ¼ Sec. 25, Tp. 40, Range 24, west 4th meridian; cost to be paid by Municipal District 398.

27488, July 27.—Dismissing application G. Boyer, M.P., the municipal councils of Cedars, Coteau du Lac, Coteau Station and St. Zotique Parishes and Coteau du Lac and Coteau Landing Villages for order directing G.T.R. to sell communication tickets between Montreal and stations in Soulanges county, Que.

27489, July 25.—Authorizing C.P.R. and Hull Electric Co. to operate trains and cars over crossing at St. Hyacinthe St., Beemer, Que.

27490, July 29.—Authorizing Toronto, Hamilton & Buffalo Ry. to remove regular agent at Mount Pleasant, Ont., and close station as agency point; caretaker to be appointed to see station is kept clean and heated for passengers and care for L.C. and express freight.

27491, July 27.—Authorizing G.T.R. to build spur for E. Long Mfg. Co., South Orillia Tp., Ont.

27492, July 25.—Amending order 26486, Aug. 31, 1917, re highway crossing over Canadian Northern Ry. in Sec. 18, Tp. 15, Range 12, west 2nd meridian.

27493, July 29.—Ordering Canadian Northern Ry. to move station, siding and loading platform near Looma, Alta., to be completed by Sept. 1.

27494, July 30.—Authorizing C.P.R. to build spur for M. J. O'Brien, Ltd., Horton Tp., Ont.

27495, July 29.—Authorizing Lake Erie & Northern Ry. to build interchange track with Michigan Central Rd., at Waterford, Ont., and rescind-

ing order 21986, June 15, 1914.

27496, July 30.—Authorizing Canadian Northern Ry. to build spur through Blocks 81, 80 and 122, and T. Eaton Co.'s warehouse site, in Dominion Park, and cross Seacht St., Hamilton, Fifth and Sixth Aves., Regina, Sask.

27497, July 24.—Ordering Canadian Northern Ry. to extend walls of culvert opposite Marsh Engineering Works' property, Belleville, Ont., and to clean and widen ditch without prejudice to any claim C.N.R. may have under contract for construction of track by C.P.R.; work to be completed by Sept. 15.

27498, July 30.—Authorizing G.T.R. to build extension of siding for John Johnson, Vespra Tp., Ont.

27499, July 29.—Authorizing G.T.R. to build spur connecting with Grand River Ry., and using portion of its track; thence along and across Industrial St., for Dominion Tire Co., Kitchener, Ont.; and to rearrange lead and connection with main siding.

27500, July 29.—Relieving C.P.R. from providing further protection at first crossing west of West Shefford station, Que.

27501, July 23.—Authorizing Canadian Northern Ry. to build bridge over Riviere a Pierre, on Quebec & Lake St. John Ry., 57 miles from Quebec, Que.

27502, July 30.—Authorizing Saskatchewan Highways Department, on behalf of Fertile Valley rural municipality no. 205, to make highway over Canadian Northern Ry. Delisle-Elrose Branch on north boundary, Sec. 1, Tp. 28, Range 9, west 3rd meridian.

27503, July 31.—Relieving Canadian Northern Ry. from providing further protection at highway 7 poles east of mileboard 291, Hanna Sub-division, near Mecheche, Alta.

27504, July 30.—Ordering Canadian Northern Ry. to move machinery loading platform at North Battleford, Sask., and to extend freight shed 40 ft. and arrange for general waiting room not less than 20 by 23 ft., ladies' waiting room 16 by 19 ft., and lavatories flushed by city water.

27505, July 30.—Ordering C.P.R. to build 2-pen stock yard at Cairns, Alta.; to be completed by Sept. 1.

27506, July 29.—Ordering Grand Trunk Pacific Ry. to build station at Lydden, Sask., by Oct. 31.

27507, July 29.—Dismissing application of Ribstone, Alta., Board of Trade, for order directing Grand Trunk Pacific Ry. to erect station building there, and ordering G.T.P.R. to appoint station agent at Ribstone by Sept. 1.

27508, Aug. 1.—Approving Montreal & Southern Counties Ry. Standard Maximum Freight Mileage Tariff C.R.C. 33, and Standard Maximum Passenger Tariff C.R.C. 21.

27509, July 31.—Approving proposed Supplement 11 to Canadian Freight Classification 16 as submitted for approval by G. C. Ransom, Chairman, Canadian Freight Association, June 4, containing certain increased, reduced, and additional ratings.

27510, July 29.—Ordering Edmonton, Dunvegan & British Columbia Ry. to appoint caretaker at Bushby station, Alta.

27511, July 31.—Authorizing Moose Jaw rural municipality 161 to build highway over Grand Trunk Pacific Ry. between Sec. 19, Tp. 17, Range 27, and Sec. 24, Tp. 17, Range 28, west 2nd meridian, Sask., and rescinding order 21588, May 22, 1914, in so far as it requires the opening up of this crossing.

27512, July 30.—Dismissing complaint of Canadian Corrugated & Fibreboard Container Association, Toronto, against proposed increase in ratings in supplement 11 to Canadian Freight Classification 16 on bonnets and hats, trimmed and untrimmed, when shipped in fibreboard, pulpboard, or corrugated strawboard containers.

27513, July 29.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to remove station agent at Cardiff, Alta., and open agency at Morinville, Alta., in lieu thereof; Cardiff to be continued as non-agency station and caretaker appointed to keep station clean and when necessary heated and lighted.

27514, July 31.—Relieving Canadian Northern Ry. from providing further protection at first crossing north of Edberg station, Alta.

27515, Aug. 6.—Approving agreement, July 18, between Bell Telephone Co. and Scottish Canadian Magnesite Co., Argenteuil County, Que.

27516, Aug. 6.—Authorizing Canadian Northern Ry. to build siding for N. T. Turgeon & Co. in Portneuf Parish, Que.

27517, Aug. 1.—Approving Hamilton Radial Electric Ry. standard maximum freight mileage tariff C.R.C. 5, and standard maximum passenger tariff C.R.C. 4, subject to compliance with Secs. 327 and 331 of Railway Act.

27518, July 31.—Amending Order No. 27228, May 14, re G.T.R. siding facilities for Dominion Steel Foundry Co., Hamilton, Ont.

27519, Aug. 2.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Bainbridge Lumber Co., Alberni District, B.C.

27520, Aug. 1.—Authorizing G.T.R. to build siding from Oxford St. southwesterly into Block B, Brantford, Ont.

27521, Aug. 1.—Authorizing G.T.R. to build siding for R. McDougall Co., Galt, Ont.

27522. Aug. 2.—Authorizing C.P.R. to rebuild bridge 27.3, Minnedos Subdivision, Man.

27523. Aug. 7.—Authorizing G.T.R. to build spur for William Harris & Co., Toronto.

27524. Aug. 7.—Authorizing C.P.R. to build spur from yard to elevator 0, Montreal St., Fort William, Ont.

27525. Aug. 7.—Authorizing C.P.R. to open for traffic additional track mileage 0 to 2, and to use 2 concrete viaducts at mileage 0.9 and 1.8, Toronto Terminals, North Toronto Branch.

27526. Aug. 7.—Authorizing Canadian Northern Ry. to rebuild bridge over Little Batisseau River, Lake St. John Division, 107 miles from Quebec.

27527. Aug. 6.—Authorizing C.P.R. to build spur for Imperial Munitions Board and extensions to sidings on Godson Contracting Co.'s premises, Toronto.

27528. Aug. 2.—Amending order 27472, July 19, re C.P.R. siding for Montreal Light, Heat & Power Co., Montreal.

27529. Aug. 8.—Ordering Canadian Northern Ry. not to exceed 10 miles an hour with trains over highway first north of Edberg station, Alta., and rescinding order 27514, July 31.

27530. Aug. 2.—Ordering C.P.R. and Canadian Northern Ry. to hold their trains 454 and 457 respectively at Montfort Just., Que., at least 10 minutes, if not at time more than 10 minutes late, to enable passengers on either of trains to make connection.

27531. Aug. 1.—Extending to Sept. 1 time within which Canadian Northern Ry. under order 27348, June 25, shall provide well and extra yard for pigs at Kuroki, Sask.

27532. Aug. 8.—Amending order 27412, July 8, re Grand Trunk Pacific Ry. and C.P.R. connections at 3 points in Saskatchewan.

27533. Aug. 8.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to build spur for Allen & King Logging Co., Pine Grove, B.C.

27534. Aug. 1.—Authorizing Kettle Valley Ry. to divert public road in Lot 1822 on Copper Mountain Branch, B.C., for eliminating crossings at mileage 11.87 and 12.06; maximum grade on division is fixed at 8%, conditional upon B.C. Government paying not more than \$145 to cover cost.

27535. Aug. 2.—Dismissing application of Canyon City Lumber Co., Creston, B.C., for order disallowing C.P.R. charge of \$3 a car for handling on applicant's spur carload freight other than that consigned to applicants.

27536. Aug. 2.—Ordering that shipments of fruit and vegetables by Similkameen Farmers' Institute, Keremeos, B.C., to points in Alberta and Saskatchewan be moved via Sweet Grass on Great Northern Ry., and Cutts on C.P.R.; C.P.R. and G.N.R. to file tariffs showing rates from Similkameen Valley to Alberta and Saskatchewan points as far east as Moose Jaw by suggested routing.

27537. Aug. 8.—Authorizing Grand Trunk Pacific Saskatchewan Ry. to operate over C.P.R. crossings at Weyburn, Sask., until Jan. 1, 1919, pending installation of interlocking plant as required by order 18064; crossings to be protected by flagmen appointed by C.P.R., at expense of G.T.P.S.R.

27538. Aug. 9.—Approving clearances at Grand Trunk Pacific Branch Lines Co.'s tracks at freight shed, Calgary, Alta.

27539. Aug. 1.—Amending order 8942, Nov. 30, 1909, re Michigan Central Rd. and Pere Marquette Ry. crossings at Highgate and Muirkirk stations, Ont.

27540. Aug. 2.—Amending order 26798, Dec. 4, 1917, re G.T.R. and Pere Marquette Ry. crossing of Devonshire Road, Walkerville, Ont.

27541. Aug. 9.—Ordering G.T.R. not to exceed 10 miles an hour with trains over crossing at Grant St., St. Johns, Que.

27542. Aug. 10.—Authorizing Edmonton, Dunvegan & British Columbia Ry. by special tariff to vary terms of its livestock contract form limiting its liability as follows: "No head of cattle, except calves exceeds \$40 in value; no head of sheep exceeds \$5, and that the said contents of no car exceeds \$600."

27543. Aug. 10.—Dismissing application of Brotherhood of Locomotive Engineers for order directing that switch and transfer locomotives be equipped with wedge tanks low enough for locomotive men to see over and with headlight on rear.

27544. Aug. 10.—Ordering Canadian Northern Ry. to erect 4th class station at Ashern, Man., by October 1.

27545. July 31.—Ordering that crossing of Niagara, St. Catharines & Toronto Ry., by G.T.R. at Port Colborne, Ont., be protected by derails on N. St. C. & T. R. and home signals on G.T.R. G.T.R. tracks to be bonded for 1,400 ft. to east and 2,600 ft. to west; signals on G.T.R. to be left normally clear and levers operated by N. St. C. & T. R. conductors; work to be done by N. St. C. & T. R. and completed by Dec. 31.

## Canadian Northern Railway Construction, Betterments, Etc.

**Quebec Union Station.**—A press report states that plans have been prepared for the erection of a new station to replace the old Quebec & Lake St. John Ry. St. Andrew St. station. The intention is said to be to build a union station for all lines owned or operated by the Dominion Government, entering Quebec.

**Regina Siding.**—The company is applying to the Board of Railway Commissioners for permission to construct a spur track through blocks 80, 81 and 82, and the T. Eaton warehouse site in Regina, Sask.

**New Westminster-Steveston Line.**—It was reported in New Westminster, B.C. Aug. 17, that it is not likely that any work will be done for some time towards the rebuilding of the half mile trestle on the branch line to Steveston, which was burned in June.

**Vancouver Island Lines.**—The company's line on Vancouver Island is graded from Victoria to Nitinat River, over 100 miles, and on this about 10 miles of track has been laid from the south end. About 40 miles beyond the present end of track is the Sooke River, where there is some bridge work to be done. The B.C. Government has been advocating the laying of track from the north end, so as to connect with the Esquimalt & Nanaimo Ry., to get out spruce for aeroplane manufacture, the rails to be supplied by the B.C. Government. Referring to the matter on Aug. 10, the B.C. Premier is reported to have said that however desirable it would be to have an additional 22 miles to con-

nect Sooke and Cowichan Lakes, he did not see that the government could reopen the question with the Dominion Government.

It would appear from statements reported to have been made by the B.C. Premier and others, that the arrangement is that rails for laying some 70 miles of track on C.N.R. lines on Vancouver Island are to be supplied by the B.C. Government from Pacific Great Eastern Ry. orders.

M. H. MacLeod, General Manager and Chief Engineer, Western Lines, C.N.R., was in Victoria recently in consultation with the government upon the matter.

The question of the purchase of additional land on the Songhees Reserve at Victoria for terminal purposes has been settled, 40 acres additional having been granted to the company, at a price agreed upon. (Aug., pg. 335.)

**Reid Newfoundland Co.'s Department of Resources.**—A department for the development of the natural resources of Newfoundland, is reported to have been started by the Reid Newfoundland Co., under the charge of J. W. Forbes. According to a press report, the department will make a thorough survey and exploration of all the lands in the colony owned by the company along its railway lines and ascertain its mineral, timber, agricultural and water resources, and take steps to have them developed. It is expected that as a result new industries will be brought into the colony, and a larger population attracted. The R.N. Co. is preparing to operate a coal mine on block 7 of its land area.

When the Quebec & Saguenay Ry. is opened for traffic between St. Joachim and Baie St. Paul, Que., early in September, the passenger traffic at Quebec will be handled in and out of the St. Andrew St. station, and the freight traffic will be handled in and out of the Limoilou station of the Quebec & Lake St. John Ry.

# Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

**Canadian Railway Troops' Work.**—The Roman Catholic Bishop of London, Ont. (M. F. Fallon), who has been visiting the British western front, is reported to have said in an interview in London, Eng.:—"In the matter of transportation Canada has secured a decided triumph. This is particularly the case with regard to her railways and her system of tramways. In rapid and effective construction, our railway troops are unequalled, and to them is due very much of the credit for the rapid and constant provision of all the supplies needed by the men in the trenches."

**Track Making at the Front.**—The Toronto Globe says:—"The Canadian railway men have done great work at the front, but it is the Germans who are making tracks just now."

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association had contributed \$89,436.86 to the Canadian Red Cross and Canadian Patriotic Fund, up to Apr. 30.

ver Pilotage Authority, is on leave in Vancouver, having been in the Royal Navy since the outbreak of war.

Brigadier-General A. C. Joly de Lotbiniere, C.I.E., has been gazetted Chief Engineer in the Imperial Army. He was born at Quebec, Que., and educated at Lennoxville, Que., and at the Royal Mil-

hydro electric power installation on the River Shelum in Kashmir, which supplied power for the operation of the Abbotabad Srinagar Ry., for dredging the River Shelum in Kashmir and for industrial purposes in Kashmir and the Punjab.

Capt. C. S. L. Hertzberg, A.M.E.I.C., who was invalided from the front some

## PERSONAL NOTES.

Lieut.-Col. T. V. Anderson, D.S.O., who has been gazetted commandant of the Engineers' Training Corps, Seaforth, Eng., with the title of Assistant Director of Signals, is a son of Col. W. P. Anderson, C.M.G., Chief Engineer, Dominion Marine Department.

Capt. F. W. Evans, R.N.R., a former commander of one of the Canadian Pacific Ocean Services' steamships on the Pacific Ocean, and also a member of the Vancou-

versity College, Kingston, Ont., graduating in 1883, and receiving a commission in the Royal Engineers in 1886. Prior to the present war, his service has been chiefly in India, where he proposed and carried out the first large hydro electric transmission power scheme in the East, viz., the Cauvery Falls transmission to the Kolar goldfields in Mysore, which was, for some time, the longest power transmission line in the world. He was also engaged on the construction of the large

months ago, and has since held positions at the Spadina Military Hospital and the District Depot, Toronto, and has been transferred to the Canadian Engineers' office at Toronto Military headquarters, is a son of A. L. Hertzberg, M.E.I.C., Engineer, Ontario District, C.P.R., Toronto.

Lieut. W. L. Lanigan, Royal Air Force, whose death in an airplane accident in England was announced in our last issue, was son of W. B. Lanigan, Assistant Freight Traffic Manager, C.P.R., Winnipeg. The funeral took place July 16, and was attended by A. V. Clark, Secretary to European Manager, C.P.R., London, Eng.

Lieut. Robt. Luxton, Canadian Railway Troops, has been awarded the Military Cross. While on a battery being subjected to heavy enemy fire, he observed an enemy shell hit one of the dugouts near the battery. He and two sappers thereupon volunteered their services and went out and dressed the wounds of one man, whom this officer got away to the dressing station on a lorry. After working tirelessly for half an hour, he succeeded in extricating two noncommissioned officers and two men belonging to the battery, who had been buried beneath the debris. Though this splendid and gallant work of rescue was carried out under a heavy and harassing fire, the rescuers acted throughout with an utter disregard of their personal safety, and their conduct was worthy of the highest praise.

Capt. Malcolm A. McKechnie, No. 6 Field Ambulance, reported killed in action, Aug. 8, was formerly a physician for the Canadian Northern Ry., and went overseas from Winnipeg with the Cameron Highlanders.

Lieut. T. C. Martin, R.A.F., who was reported missing on Aug. 10, is son of G. C. Martin, General Traffic Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.

**Capt. E. G. T. Penny**, reported killed in action, Aug. 8, was a son of E. Goff Penny, of Montreal, Manager of the Memphramagog Navigation Co., Georgeville, Que., and brother of A. G. Penny, formerly Advertising Agent, Canadian Northern Ry., Toronto, now editor of the Quebec Chronicle, and a member of a party of Canadian editors who recently visited the front.

**Temporary Colonel C. W. P. Ramsey**, C.M.G., Canadian Railway Services, has been seconded for duty with the War

Office. He went overseas early in 1915, in command of the Canadian Overseas Railway Construction Corps, with the rank of Lieutenant-Colonel, and was created a Companion of the Order of St. Michael and St. George, for service in the field, in June, 1916. Prior to entering military service, he was Engineer of Construction, Eastern Lines, C.P.R., and was granted extended leave of absence.

**Lieut. F. W. Rous**, who has been reported as in a hospital in London, Eng., with gunshot wound in the shoulder, was

formerly Secretary-Treasurer, Canada & Gulf Terminal Ry.

**Lieutenant A. T. Shaw**, Royal Warwick Regiment, who died of wounds received in action in Italy, in June, was, prior to enlistment, in the Traffic Department, Canadian Northern Ry., Birmingham, Eng. He enlisted as a private in 1915 and was wounded in that year. He went to Italy in Dec., 1917, having been granted a commission, and his commanding officer reported that his conduct under fire was magnificent.

## Organization of Board of Adjustment for Railway Employees' Wages.

The illustration on the first page of this issue shows the railway officials, and the railway employees organizations' officials, who attended a meeting in Montreal Aug. 7, when the following agreement was entered into:

Memorandum of agreement made between the Canadian Railway War Board, acting for the railways of Canada, members thereof, of the one part; and the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railway Telegraphers and the International Brotherhood of Maintenance of Way Employees, acting for the said classes of employees on the said railways, of the other part.

Whereas the parties hereto, in united desire to avoid disputes or misunderstandings which would tend to lessen the efficiency of transportation service in Canada during the war, have resolved upon the appointment of a board composed of members to be selected as hereinafter prescribed, which shall have full power and authority to determine all differences which may arise between any of the said railways and any of the classes of its employees above mentioned, and which shall not be promptly adjusted between the officers and employees of the railway concerned; including the interpretation or application of wage schedules or agreements, and the application to the railways of Canada of General Order 27 of the Director General of the United States Railroad Administration; with authority to make such amendments or additions in line with such amendments or additions as may be made thereto for the railways in the U.S. as may be necessary, having due regard to the rights of the several classes of employees and of the railways respectively. Now therefore it is agreed by and between the parties as follows:

1. There shall be at once created a board, to be known as Canadian Board of Adjustment No. 1, to consist of 12 members, 6 to be selected by the Canadian Railway War Board, and compensated by the railways, and 6 by the executive officers of the organizations of employees hereinbefore named, and compensated by such organizations.

2. The Canadian Board of Adjustment No. 1 shall meet in Montreal within 15 days after the selection of its members and select a chairman and a vice chairman, who shall be members of the board. The chairman or vice chairman will preside at meetings of the board, and both will be required to vote upon the adoption of all decisions by the board.

3. The board shall meet regularly, at stated times each month, and continue in session until all matters before it are considered.

4. Unless otherwise mutually agreed, all meetings of the board shall be held in Montreal; provided, that the board shall

have authority to empower two or more of its members to conduct hearings and pass upon controversies when properly submitted at any place designated by the board; provided further, that such division of the board will not be authorized to make final decision. All decisions shall be made, approved or ratified by the board as herein provided.

5. Should a vacancy occur in the board for any cause, such vacancy shall be immediately filled by the same appointive authority which made the original selection.

6. The Canadian Board of Adjustment No. 1 shall render decisions on all matters of controversy arising from interpretations of wage agreements and other matters in dispute, as provided in the preamble hereof, and when properly submitted to the board.

7. Wages and hours established by General Order 27 of the Director General of the U.S. Railroad Administration, and amendments thereto, shall be incorporated into existing agreements on the several railways, and should differences arise between the management and the employees on any of the railways as to such incorporation, such questions of difference shall be decided by Canadian Board of Adjustment No. 1, when properly presented thereto.

8. Personal grievances or controversies arising under interpretation of wage agreements, and all other disputes arising or now properly pending between officials of a railway and its employees covered by this understanding, will be handled in their usual manner by general committees of the employees up to and including the chief operating officer of the railway (or some one officially designated by him), when, if an agreement is not reached, the chairman of the general committee of employees may refer the matter to the executive officer of the organization concerned, and if the contention of the employees' committee is approved by such executive officer, then the chief operating officer of the railway and the executive officer of the organization concerned shall refer the matter, with all supporting papers, to Canadian Board of Adjustment No. 1, which board shall promptly hear and decide the case, giving due notice to the chief operating officer of the railway interested and to the executive officer of the organization concerned of the time set for hearing.

9. No matter will be considered by Canadian Board of Adjustment No. 1 unless officially referred to it in the manner herein prescribed, provided, however, that no case having origin in circumstances occurring prior to the date hereof shall be referred to the board, except those arising out of the application of the said General Order 27, or arising out of disputes properly pending at the date of this agreement, as mentioned in clause 8.

10. In hearings before Canadian Board

of Adjustment No. 1 in matter properly submitted for its consideration, the railway shall be represented by such person or persons as may be designated by the chief operating officer, and the employees shall be represented by such person or persons as may be designated by the executive officer of the organization concerned.

11. All clerical and office expenses will be borne equally by the Canadian Railway War Board and the organizations above mentioned. The railway directly concerned and the organization involved in a hearing will, respectively, assume any expense incurred in presenting a case.

12. In each case an effort should be made to present a joint concrete statement of facts as to any controversies, but the board is fully authorized to require information in addition to the concrete statement of facts, and may call upon the chief operating officer of the railway or the executive officer of the organization concerned for additional evidence, either oral or written.

13. All decisions of Canadian Board of Adjustment No. 1 shall be approved by a majority vote of all members of the board.

14. After a matter has been considered by the board, and in the event a majority vote cannot be obtained, then any 6 members of the board may elect to refer the matter upon which no decision has been reached to a referee to be unanimously agreed upon by the board, and in failure to agree, application shall be made to the Governor General in council for appointment of a referee, whose decision shall be final.

15. Canadian Board of Adjustment No. 1 shall keep a complete and accurate record of all matters submitted for its consideration and of all decisions made by the board.

16. A report of all cases decided, including the decisions, will be filed with the Canadian Railway War Board, and with the chief operating officer of the railway affected, and with the executive officer of the organization concerned.

17. The Canadian Railway War Board further agrees that Canadian Board of Adjustment No. 1 shall have like authority to determine differences between any of the railways represented herein and any other classes of employees of such railway who may request and consent to submitting differences to Canadian Board of Adjustment No. 1, and to agree that the decision of the said board of adjustment shall be final.

18. This agreement shall remain in full force and effect during the period of the present war, and thereafter unless the Canadian Railway War Board, on the one hand, as representing the railways, or a majority of the executive officers of the organizations, on the other hand, as representing the employees, shall desire to terminate the same, which can, in these circumstances, be done on 30 days notice.

This agreement was signed on Aug. 7 for the Canadian Railway War Board by U. E. Gillen, Chairman, and W. M. Neal, General Secretary, and for the railway employees' organizations as follows:—Brotherhood of Locomotive Engineers, by Ash Kennedy, A.G.C.E.; Brotherhood of Locomotive Firemen and Enginemen, by G. K. Wark, Vice President; Order of Railway Conductors, by S. N. Berry, Vice President; Brotherhood of Railroad Trainmen, by Jas. Murdock, Vice President; Order of Railway Telegraphers, by J. M. Mein, Deputy President; International Brotherhood of Maintenance of Way Employees, by W. V. Turnbull, Vice President.

**Personnel, Etc., of Board of Adjustment.**  
In conformity with the above agreement, the Canadian Railway War Board

appointed its 6 representatives as follows: F. P. Brady, General Manager, Western Lines, Canadian Government Railways; S. J. Hungerford, General Manager, Eastern Lines, and A. J. Hills, Executive Assistant, Canadian Northern Ry.; A. D. MacTier, General Manager, Eastern Lines, and G. Hodge, Assistant to General Manager, Eastern Lines, Canadian Pacific Ry.; U. E. Gillen, Vice President, Grand Trunk Ry.

The railway employees organizations' representatives were appointed as follows: Ash Kennedy, A.G.C.E., Brotherhood of Locomotive Engineers; G. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Enginemen; S. N. Berry, Vice President, Order of Railway Conductors; Jas. Murdock, Vice

President, Brotherhood of Railroad Trainmen; J. M. Mein, Deputy President, Order of Railway Telegraphers; Wm. Dorey, Vice President, International Brotherhood of Maintenance of Way Employees.

The Board of Adjustment held its first meeting at Montreal, Aug. 19, and elected U. E. Gillen, Vice President, G.T.R., as chairman; S. N. Berry, Vice President, Order of Railway Conductors, as vice chairman, and W. M. Neal, General Secretary, Canadian Railway War Board, as General Secretary.

It was decided to hold regular monthly meetings during the remaining portion of 1918, as follows: Sept. 10, Oct. 8, Nov. 12, Dec. 10. All decisions of the board will be issued over the chairman and vice chairman's signatures.

## Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—E. E. STEVENS, heretofore Claims Agent, Moncton, N.B., has been appointed Safety Engineer, Eastern Lines, vice J. E. Long, appointed Superintendent of Safety, Delaware & Hudson Ry. Office, Moncton, N.B.

T. THORNING, heretofore hostler, Cochrane, Ont., has been appointed acting Locomotive Foreman, Hearst, Ont., vice C. W. Wilson, Locomotive Foreman, on leave of absence for military service.

H. MITCHINSON has been appointed Safety Engineer, Western Lines, vice J. E. Long, appointed Superintendent of Safety, Delaware & Hudson Ry. Office, Winnipeg.

**Canadian Northern Ry.**—W. ADAMS has been appointed Signal Inspector, Port Arthur, Ont., vice H. E. McDonald, transferred to Duluth, Winnipeg & Pacific Ry. service, as reported in our last issue.

J. J. CROWE has been appointed acting Signal Inspector, Edmonton, Alta., as reported in our last issue.

**Canadian Pacific Ry.**—W. R. MACINNES, heretofore Freight Traffic Manager, has been appointed Vice President in charge of Traffic (Freight and Passenger), vice G. M. Bosworth, who has retired, but who retains his other position, viz., Chairman, Canadian Pacific Ocean Services, Ltd., to which he was appointed Jan. 1, 1916. The President, Lord Shaughnessy, issued the following circular in this connection, Aug. 14:—"Geo. M. Bosworth, Vice President of the company, will retire Sept. 1, proximo, to become Chairman of Canadian Pacific Ocean Services, Ltd., and the directors have appointed Wm. R. MacInnes, Vice President, to succeed him. Mr. MacInnes will have charge of all matters connected with the company's Traffic Department, and will perform such other duties as may be assigned to him."

W. B. LANIGAN, heretofore Assistant Freight Traffic Manager, Western Lines, Winnipeg, has been appointed Freight Traffic Manager, vice W. R. MacInnes, promoted. Office, Montreal.

W. B. BROWN, heretofore Car Service Agent, New Brunswick District, St. John, N.B., is temporarily engaged on special duty.

W. COULTER has resumed as Freight Agent, Ottawa, vice E. A. Campbell, transferred.

**Canadian Pacific Ocean Services, Ltd.**—E. Alexander, Secretary, issued the following circular, Aug. 14:—"Pursuant to

a resolution of the directors, GEO. M. BOSWORTH, Chairman, will, on and after Sept. 1, devote all his time to the affairs of the company as chief executive. Officers of the company will report to him and be governed by his instructions." Office, Montreal.

Wm. R. MacInnes  
Vice President, Canadian Pacific Railway.

**Central Vermont Ry.**—The following appointments have been made by J. W. Wardlaw, General Manager, under the U.S. Railroad Administration, all with offices at St. Albans, Vt.:—

E. DESCHENES, heretofore Auditor, has been appointed General Auditor.

J. W. REDMOND, heretofore Counsel, has been appointed General Solicitor.

P. D. FITZPATRICK, heretofore Valuation Engineer and General Roadmaster, has been appointed Chief Engineer.

W. H. CHAFFEE, heretofore Treasurer, has been appointed Local Treasurer.

H. L. BLACK has been appointed Superintendent of Signals. Office, Portland, Me.

**Delaware & Hudson Ry.**—J. E. LONG, heretofore Safety Engineer, Canadian Government Railways, Moncton, N.B.,

has been appointed Superintendent of Safety, D. & H.R. Office, Albany, N.Y.

**Duluth, South Shore & Atlantic Ry.**—E. R. LEWIS, heretofore Assistant to General Manager, has been appointed Chief Engineer. Office, Duluth, Minn.

**Grand Trunk Ry.**—E. L. DYSON has been appointed Division Signal Foreman, Montreal Division, vice H. L. Black, transferred. Office, Richmond, Que.

F. E. LITTLE has been appointed Water Service Foreman, Montreal Division, vice J. C. Gokey, transferred. Office, Richmond, Que.

G. MURGATROYD has been appointed Assistant Engineer, Montreal Division, vice C. B. Weiss, transferred. Office, Montreal.

B. J. FARR, Master Mechanic (Road), Battle Creek, Mich., has had his jurisdiction extended to include the locomotive shops there; J. C. GARDEN having been transferred to Stratford, Ont., as announced in our last issue.

C. J. PIERCE, heretofore Manager, National-Despatch Great Eastern Line, Boston, Mass., has been appointed General Agent, Freight Department, G.T.R. Lines in Canada, in charge of traffic to and from points in the New England States. He continues to act as Manager, National Despatch-Great Eastern Line, in respect to business which that line handled prior to June 1. Office, Boston, Mass.

ROY BULLEN, General Agent, Freight Department, Minneapolis, Minn., and T. C. BURGESS, Commercial Agent there, having been assigned to other duties, JAMES WAUGH, heretofore Commercial Agent, San Francisco, Cal., has been appointed Commercial Agent, G.T.R. Lines in Canada, Minneapolis, Minn. Office, 713 Metropolitan Life Bldg.

The following appointments have been made for G.T.R. Lines in New England, under the U.S. Railroad Administration:

G. L. NELSON, heretofore Division Freight Agent, Portland, Me., has been appointed Traffic Manager. Office, Portland, Me.

J. H. EDWARD, heretofore agent, Portland, Me., has been appointed Local Treasurer and Paymaster. Office, Portland, Me.

A. E. PLANT, heretofore chief clerk, Montreal, has been appointed General Auditor and Freight Claims Agent. Office, Portland, Me.

H. P. SWEETSER, heretofore Solicitor, has been appointed General Solicitor. Office, Portland, Me.

M. W. STEVENS, heretofore Storekeeper, Portland, Me., has been appointed Purchasing Agent and Storekeeper, Portland, Me.

J. W. FARRELL, heretofore Trainmaster, Island Pond, Vt., has been appointed Superintendent. Office, Portland, Me.

J. HAY, heretofore Foreman, Sarnia, Ont., has been appointed Master Mechanic. Office, Portland, Me.

E. W. WILLIAMS, heretofore Traveling Inspector, Western Lines, Chicago, Ill., has been appointed chief clerk and Superintendent Car and Time Service, Portland, Me.

C. B. WEISS, heretofore Assistant Engineer, Montreal Division and Montreal Terminals, has been appointed Chief Engineer. Office, Portland, Me.

J. M. GIBSON, heretofore General Foreman, District 1, has been appointed Supervisor of Bridges and Buildings. Office, Portland, Me.

J. J. FOLEY has been appointed Supervisor of Track, east of Shelburne, N.H.

M. CORCORAN, heretofore Supervisor of Track, Gorham, N.H., has been appointed Supervisor of Track, west of Shelburne, N.H.

W. M. COOPER, heretofore Road Foreman of Locomotives, has been appointed Trainmaster and Road Foreman of Locomotives. Office, Portland, Me.

Great Northern Ry.—J. M. GRUBER, heretofore Vice President and General Manager, has been appointed Federal General Manager. Office, St. Paul, Minn.

E. J. HEALY, District Traffic Agent, Tacoma, Wash., is reported to have been appointed District Traffic Agent, Vancouver, B.C., K. J. Burns, Assistant General Freight and Passenger Agent there, having resigned to enter other service.

Michigan Central Rd.—E. A. WIGREN, heretofore Assistant Auditor, has been appointed Auditor, M.C.R., Toronto, Hamilton & Buffalo Ry., Toronto, Hamilton & Buffalo Navigation Co., and Chicago, Kalamazoo & Saginaw Ry., vice F. O. Waldo, resigned. Office, Detroit, Mich.

Northern Pacific Ry.—E. E. DILDINE, heretofore Assistant Superintendent of Telegraph, Tacoma, Wash., has been appointed Superintendent of Telegraph, St. Paul, Minn.

Pacific Great Eastern Ry.—G. L. COURTNEY has been appointed General Manager, the former General Manager, A. H. Sperry, having resigned. Office, Vancouver, B.C.

Pere Marquette Ry.—F. H. ALFRED, Federal Manager, Detroit, Mich., has had his jurisdiction extended to cover the car ferry lines on Lake Michigan, formerly operated by the Ann Arbor, Pere Marquette and Grand Trunk Rys.

Temiscouata Ry.—A. NADEAU has been appointed General Freight and Passenger Agent, vice F. X. Belanger, who has resigned on his appointment in charge of traffic department, Fraser Companies, Ltd., Edmundston, N.B. Office, Riviere du Loup, Que.

T. N. WALSH has been appointed Freight Claim Agent, Riviere du Loup, Que.

Toronto, Hamilton & Buffalo Ry.—G. C. MARTIN, heretofore General Freight and Passenger Agent, has been appointed General Traffic Manager. Office, Hamilton, Ont.

R. F. HILL, heretofore Assistant General Freight and Passenger Agent, has been appointed General Freight and Passenger Agent, vice G. C. Martin, promoted. Office, Hamilton, Ont.

A. I. COOMBES, heretofore General Manager's chief clerk, has been appointed Assistant to General Manager. Office, Hamilton, Ont.

C. M. DENT, accountant, is reported to have been appointed General Manager's chief clerk, Hamilton, Ont., vice A. I. Coombes, promoted.

## White Pass and Yukon Railway Reorganization.

Meetings of the holders of the company's 5% consolidated first mortgage debenture stock, and of the 6% debentures, of income debenture stock, and of ordinary shares of the White Pass & Yukon Ry. Co., were called to be held in London, Eng., Aug. 2, by order of the court, to approve a scheme for the reorganization of the capital. The proposals are outlined as follows:—

Under the abnormal condition produced by the continuance of the war, it is essential that the White Pass enterprise should be provided with a further £95,000, to be applied, £52,000 for working capital, £15,000 in paying off the advance from Glyn, Mills, Currie and Co., about £23,000 in paying off the loan of £110,000 to the Pacific and Arctic Ry. and Navigation Co. from the Mortgage and Debenture Co., which became due Jan. 1, and £5,000 in paying commission and the expenses of carrying through this scheme. It is accordingly proposed to create £100,000 7% prior lien debenture stock, repayable Dec. 31, 1935, and constituting a first charge on the whole of the assets and undertaking, to be secured by a trust deed which will provide, among other things, that further prior lien debenture stock up to £200,000 ranking pari passu with the £100,000 prior lien stock may hereafter be issued from time to time as to £100,000 if the necessity is decided by the directors and approved by Close Bros., who have agreed to be a financing syndicate, and as to a further £100,000 if the holders of the prior lien stock approve. The company may redeem all or any part of the stock at any time on 6 months notice at a premium of 5%. It is proposed to issue the stock at 95 and to offer it in the first instance to the existing shareholders. It is further proposed to give to each subscriber for £25 prior lien debenture stock one A share.

It is also proposed to create £5 consolidated mortgage debenture stock for £315,163, constituting a second charge on the assets and undertaking, the stock to be issued and transferable in multiples of 1s, repayable Dec. 31, 1950. Interest during 5 years to be reckoned from June 30 next following after the end of the war will be payable in each year only out of the net profits for that year after payment of all outgoings and expenses, and after provision has been made for a sinking fund for the redemption of the prior lien debenture stock and for depreciation and reserve, and will not be cumulative during that period.

It is further proposed to reduce the existing amount of income debenture stock by two-thirds, and to create by way of substitution 6% income debenture stock up to £589,465 4s., issuable and transferable in multiples of 1s. The stock will constitute a third charge by way of floating security, will be repayable Dec. 31, 1950, and interest will be payable only if and so far as in any financial year there may be net profits available for that purpose, after paying all outgoings and expenses, including interest on the prior lien stock and the consolidated stock, and after the directors have made such provision as they may think proper for depreciation, reserve fund, and contingencies.

The £211,932 existing debentures, the £23,308 10s. income debenture stocks, and the £67,000 branch line bonds of the British Yukon Ry. Co. in the hands of the sinking fund trustees will be cancelled. The holders of existing debenture stock,

debentures, and income debenture stock respectively will surrender their present securities to the company and accept for each £100 of debenture stock £40 of consolidated stock and £60 of 6% income stock; for each £100 of debentures £30 of consolidated stock and £70 of 6% income stock; for each £100 of existing income stock 33 1/3% of new 6% income stock.

W. B. Close will put at the disposal of the company 1,000 fully paid £10 shares, which will be sub-divided into £1 A shares, these shares having the right to 80% of the profits available for dividend in each year; if the company be wound up to 80% of the assets available for distribution among the members; to 40 votes in respect of each A share; and to nominate two directors. Each subscriber for prior lien debenture stock will receive one A share in respect of each £25 of that stock allotted to him, and the remainder of the 6,000 A shares will be transferred to the financing syndicate as a commission for undertaking the financial arrangements. In addition to £2,000 payable in cash for their services in connection with this scheme, a commission of 5% in cash on all prior lien debenture stock subscribed and paid for in cash by security holders or shareholders of the company, and a commission of 10% payable in prior lien debenture stock taken at 95 on an amount representing the difference, if any, between £100,000 and the face value of the prior lien debenture stock actually subscribed and paid for by the security holders and shareholders of the company, this difference being the amount which the syndicate will have to find if the whole of the prior lien debenture stock is not subscribed for. Close Brothers and Co. will, if and so far as sufficient prior lien stock shall not be subscribed to enable the company to make the payments and provide the working capital necessary, arrange that the debt due to the Mortgage and Debenture Co. shall be discharged by their accepting the amount in prior lien debenture stock at par and relevant A shares and provide until Dec. 31, 1920, a working capital of £50,000. All advances made by them or on account of the company will be secured by prior lien debenture stock of a face value greater by 25% than the amount of the money advanced, and will carry interest at 1% above the current rate for the time being on the Pacific Coast of America. Any advance by them for working capital will be repaid in each year out of the available earnings of the local companies. The capital of the company is to be reduced from £1,700,000 in 170,000 £10 ordinary shares to £283,000 in 10,000 £1 A shares and 136,500 £2 ordinary shares, the reduction to be effected by reducing the amount of each ordinary share from £10 to £2 and by cancelling the unissued shares; each reduced ordinary share will have one vote.

Vessel Control in Canadian Territorial Waters.—An order in council has been passed, subsequent to a conference between representatives of the Canadian, British and U.S. Navies, when it was agreed that the U.S. should control all coast patrols, sea patrols, protection of traffic and offensive action against enemy submarines as far east as the 65th meridian (Lockport, N.S.), including the outer part of the Bay of Fundy, providing that U.S. naval officers be authorized to visit and search all vessels within Canadian waters west of the 65th meridian.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alaska Railways.**—Announcement was made in Washington, D.C., Aug. 2, that only 3,000 men would be employed by the government upon construction of the railway in Alaska during this year, against 6,000 in 1917. Several sections of the coast lines will be linked up by the end of the year, and it is expected to have about 40 miles of additional grading on the inland section completed this year. Of the 560 miles of main and branch lines projected, 296 miles have been completed, of which 215 miles are main line.

**Canadian Pacific Ry.**—We are officially advised that the work being done by the company at St. John, N.B., under the Board of Railway Commissioners order 27431 of July 12, is the construction of a second track, alongside the existing main line between Fairville and Bay Shore stations, 1.3 miles. It consists of linking up existing side tracks by the construction of half a mile of new track and the conversion of eight-tenths of a mile of siding into main line. The existing gradients and curves are not to be changed. Five streets are crossed at grade, and a second crossing of the St. John Ry. is to be made at Main St., Fairville, within the protection of the present half interlocking plant. The work is being done by the company's own forces, and is expected to be completed by Oct. 1.

A half mile timber trestle over the valley near Elbow, Sask., built in 1909 on the Moose Jaw-Kerrobert line, settled some 8 ft. during the filling in process on Aug. 9. The trestle was strengthened temporarily and traffic was resumed in a few days. It will be some little time, a press report says, before the permanent strengthening of the structure is completed. (Aug., pg. 344.)

**Central Canada Ry.**—Good progress is reported to have been made to date with the erection of the superstructure of the bridge across the Peace River, and it is expected to have it ready for running trains early in 1919. A description was given in Canadian Railway and Marine World for June, 1917, pg. 224. (July, pg. 285.)

**Dominion Atlantic Ry.**—The station at Round Hill, N.S., was destroyed by fire July 24, after being struck by lightning. (Jan., 1917, pg. 24.)

**Edmonton & Southwestern Ry.**—The Edmonton, Alta., City Council has declined to grant the Hydro-Electro Co.'s request for an extension of time to carry out its construction programme, which included the building of a railway from Edmonton to the Blue Falls on the Saskatchewan River. (Aug., pg. 337.)

**Essex Terminal Ry.**—The Board of Railway Commissioners has authorized the opening for traffic of the extension from Ojibway to Quarries, Ont., where the Brunner, Mond Co. is erecting a large Solway process plant. The contract for building the extension was let to the Chick Construction Co., Windsor, Ont.

We are officially advised that nothing has been done in the way of work or survey on the proposed extension to Pelton, Ont. (Jan., pg. 12.)

**Grand Trunk Ry.**—The freight sheds at the central station, Ottawa, were destroyed by fire started by an explosion of a tank of gasoline, Aug. 16. The loss is placed at: freight shed, \$15,000; twenty-eight freight cars, \$20,000; contents of freight shed and cars, \$50,000. The freight sheds were 800 x 40 ft.

The station at Mitchell, Ont., was de-

stroyed by fire, Aug. 14. The building, which was 100 ft. x 30 ft., was a frame structure erected about 45 years ago to replace the original station, which also was burned. It was shown that the fire originated through H. Daoust, a former employe, lighting a match over a little pool of alcohol which had leaked from a barrel. It was reported Aug. 21 that criminal proceedings were likely to be taken against him.

The new freight shed on Sandwich St., Windsor, Ont., is reported completed and in use. (Aug., pg. 337.)

**Grand Trunk Pacific Ry.**—H. G. Kelley, President, G.T.R. and G.T.P.R., returned to Montreal July 30, after completing an inspection of the system. The physical condition of the G.T.P.R., he is reported to have said, is excellent, and traffic is increasing satisfactorily. It is not proposed to extend any of the company's branch lines at present, but certain improvements, calculated to increase the efficiency of the lines, are in progress at various points. These included the filling in of some of the large trestle bridges, the construction of buildings, etc. (June, pg. 240.)

**Medicine Hat, Alta.**—Some years ago a short spur line was built connecting the Ansley coal mine with Medicine Hat, Alta. We are officially advised that J. B. Swan and his associate, J. Smith, who are developing the Swan mine, are building an additional 3.50 miles of line, to connect the Swan mine with the Ansley spur line, and so to give it connection with the C.P.R. at or near Medicine Hat. The country through which the spur is being constructed is of an unpromising character, being made up of side hills, coulees and saw tooth pinnacles. The distance from the mouth of the mine to the prairie is 1.50 miles, and there is a rise of 150 ft.; but the route has been so located that the steepest gradient is 2% and the sharpest curve 4 degrees. From the prairie to the old Ansley spur, the route is practically level. Construction was started by M. Higdon, June 25, and it is expected that grading will be completed about Sept. 15. We were advised Aug. 2, that grading had been half completed, 47,000 cubic yards of material having been shifted during July. A newspaper account of the work states that one cut is 53 ft. deep, and another 38 ft., the material from which is being utilized in two fills, one of which requires 23,142 cu. yd. of material, and the other 17,600 cu. yd. The yards have been laid out about 500 ft. from the mouth of the mine. Grading has been completed for 4 tracks and provision is made so that 2 more can be laid when required. The track is expected to be laid and the spur to be ready for operation by Oct. 1. C. Le B. Miles is engineer in charge of the work. Arrangements have been made, we are advised, for leasing a locomotive from the C.P.R., but nothing definite had been done, up to Aug. 12, with respect to cars.

The distance of the Swan mine from Medicine Hat is about 7 miles. The machinery, including the electric cutting plant, is being installed. The seam of lignite to be worked is 7 ft. thick, and is said to be of superior quality. It is expected to be able to begin shipping at the rate of 350 tons a day, and to increase the output in a short time to 500 tons a day.

**Kettle Valley Ry.**—A press report states that grading on the 14 mile branch to the Copper Mountain mining area, is about 50% completed, and that the lower

end of the line, on which is the lightest part of the work, will be completed early in November. The upper end of the line, upon which location surveys are being completed, will have some heavy cuts and rockwork. W. P. Tierney is the contractor, and he is reported to have over 300 men employed. (July, pg. 285.)

**Michigan Central Rd.**—The new reinforced concrete bridge over the M.C.R. at Wyandotte St., Windsor, Ont., was opened for traffic recently. The first application for the erection of the bridge was made in 1908, but it took several years to settle the plans as between the company and the city, and it was not until 1917 that the contract for the work was let. The bridge was erected by the John W. Gray Construction Co., Toronto. It is 66 ft. wide, 32 ft. long in the clear, with approaches of 200 ft. each side. The tracks have been lowered 6 ft. (Feb., pg. 57.)

**Pacific Great Eastern Ry.**—On July 15, the Lieut.-Governor of British Columbia issued a proclamation bringing into force sec. 2 of the P.G.E. Settlement Act, under which the B.C. Government takes over the P.G.E. Development Co.'s lands and property.

A. F. Proctor, Chief Engineer, B.C. Railways Department, completed a trip of inspection over the line recently, and is reported to have said in an interview, the line from Squamish to the end of steel beyond Clinton, 181 miles, has been ballasted and surfaced, and is in first class condition. At 61-mile house, a station, warehouse and cattle pens are under construction. The end of track is near 100-mile house, and it is hoped to get it carried to Soda Creek early in 1919. There is water navigation from Soda Creek to Prince George.

Tenders were received to Aug. 2, for the completion of 42 miles of uncompleted line beyond the present end of track on a unit price basis or in the alternative, on a cost plus percentage basis. We have been officially advised that there are about 6 miles of light grading to be done, and there are about 1,000,000 ft. of timber work and some other work to be done to get ready for tracklaying. Tenders are reported to have been received among others from: The Foundation Co. of B.C., Ltd., Grant Smith & Co., Northern Construction Co., the Cotton Co., McKinnon & Co., Palmer Bros., Robinson & Co., Sullivan & Co., H. A. Stewart, J. W. Lund. A press dispatch, Aug. 16, reported the B.C. Premier as stating that the contract would likely be let to the Cotton Co. (Ltd.), Vancouver.

A Victoria press dispatch of Aug. 25 says:—"The Northern Construction Co. has secured the contract for the 42-mile extension of the Pacific Great Eastern Ry. The tender was \$419,000 on the unit basis, 5% $\frac{1}{2}$  commission. There will be no commission on excess of estimate of cost. The contractors are to furnish steam shovels, rolling stock, and construction equipment free, and will get 25% on the saving of the unit prices."

Negotiations are reported to be practically completed in Seattle, Wash., for the purchase of a tug and a barge, to replace those now rented for the transfer of freight cars from Vancouver to Squamish. The tug formerly in use was destroyed by fire at the end of July. (Aug., pg. 337.)

**Quebec & Saguenay Ry.**—We are officially advised that the tenders received recently for station buildings on the line

were considered to be too high, and none were accepted. The question of erecting stations is in abeyance for the present. The line will be opened for traffic between St. Joachim and Baie St. Paul early in September. (Aug., pg. 337.)

**Quebec Bridge.**—A press dispatch of Aug. 13 stated that the contractors had completed all their work on the bridge, and that it was ready to be taken over by the government in its entirety. (June, pg. 241.)

The final official test of the bridge was made Aug. 21, in the presence of representatives of the Railways Department, the Quebec Bridge Commission, the Canadian Government Railways and the St. Lawrence Bridge Co., the builders. The bridge was tested by the operation over it of trains of the heaviest capacity operated, and by bringing them to a standstill on the central span. The test is reported to have been satisfactory in every particular. The results of the observation of the engineers were to be reported to the Railways Department, which would then formally take over the structure from the contractors.

**St. John & Quebec Ry.**—A press report states that as a result of the speeding up notice served by the New Brunswick Government on the Nova Scotia Construction Co., an additional number of men have been put on the construction of the extension of the line from Gagetown to the C.P.R. near Westfield, 37.8 miles. (Aug., pg. 337.)

### Railway Rolling Stock Orders and Deliveries.

The British Columbia Government is reported to have bought 30 freight cars in Chicago, Ill., for the Pacific Great Eastern Ry.

Canadian Government Railways have received 6 switching locomotives from Canadian Locomotive Co., for the western lines, and 106 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co., on account of orders placed in March.

The C.P.R., between July 16 and Aug. 14, received the following additions to rolling stock:—2 steel mail cars, 15 express refrigerator cars, 160 steel under-frame box cars, and 1 decapod locomotive, from its Angus shops, and 7 vans from its Winnipeg shops.

The U.S. Government has ordered an additional 509 consolidation locomotives from the Baldwin Locomotive Works; 15 additional light mikado locomotives from the Lima Locomotive Corporation, and 10,000 box, gondola and tank cars, distributed amongst 8 car building companies, for use of the U.S. Army in France.

The Dominion Government has bought 2 Marion ditchers for Eastern Lines, Canadian Government Railways, \$11,125 each, from F. H. Hopkins & Co.; 15 steel tank cars, 40 tons capacity, \$3,500 each, from American Railway Equipment Co.; 3 switching locomotives, \$43,095 each, from Toronto, Hamilton & Buffalo Ry., and 10 locomotives, \$10,000 each, from G.T.R., for Canadian Northern Ry.

The Canadian Government Railways are having a number of freight cars repaired and overhauled. Approximately 200 standard wooden box cars are to be repaired at Canadian Car & Foundry Co.'s Amherst, N.S., plant. These are of from 30 to 40 tons capacity, and some of them, where the roofs are defective, will be remodelled as roofless pulp cars. About

100 similar cars and some steel frame cars of 40 tons capacity, will also be repaired at the company's Montreal plant. A number of 40 ton box cars, and also some Hart-Otis cars, will be overhauled by the Eastern Car Co.

Following are chief details of the rotary snow plough, without tender, which the Dominion Government has ordered from the Montreal Locomotive Works, for the Canadian Northern Ry., as mentioned in a previous issue:—

Cylinders.....	17 x 24 in.
Plough truck wheels.....	33 in.
Boiler.....	60 in. diam.
Boiler pressure.....	190 lb.
Fire box.....	92 x 50 in.
Tubes, no., diam. and length.....	202 2 in. x 9 ft. 8 in.
Truck wheel base.....	4 ft. 6 in.
Wheel base, total.....	19 ft. 8 1/2 in.
Weight in working order, front truck.....	82,500 lb.
back truck.....	73,500 lb.
Total.....	156,000 lb.
Fuel.....	18 ft. coal
Heating surface, tubes.....	1,022 sq. ft.
Heating surface, firebox.....	150 sq. ft.
Heating surface, total.....	1,152 sq. ft.
Grate area.....	31.9 sq. ft.
Width of cut.....	15 ft.
Rotary wheel diam.....	9 ft. 8 1/2 in.
Weight per axle.....	40,000 lb.
Length over all.....	38 ft. 3 in.
Height above rail, smoke stack.....	15 ft.

### Freight and Passenger Traffic Notes.

The Edmonton, Dunvegan & British Columbia Ry. has put in operation specially low rates for cattle and sheep going into the north country, and for feed going out.

A Quebec press report states that the traffic through Quebec on the National Transcontinental Ry. at present is about double what it was at the same time last year.

Protests are being made at various western points regarding the use of private cars, and the suggestion is made that regulations restricting their use for strictly official purposes only be put in force.

The Grand Trunk Pacific Ry. announces that it has completed arrangements for the issue of through tickets from points on its lines to any point on the Edmonton, Dunvegan & British Columbia Ry., the Central Canada Ry., and the Alberta & Great Waterways Ry.

The Quebec & Saguenay Ry. was opened for traffic from St. Joachim to Baie St. Paul, Aug. 20, one train a day being run in either direction, Tuesdays, Thursdays and Saturdays. This service is being given by the contractors, O'Brien & Doheny, and connection to and from Quebec is made via the Quebec Ry., Light & Power Co.'s line.

The C.P.R. has discontinued the serving of night lunch free to Alaska passengers on local steamships between Vancouver, Victoria and Seattle. The service is, however, continued between Vancouver and Skagway. The night lunch on local vessels, for which a charge of 50c is made, includes meat or fish, while the free night lunch on other vessels is plain.

A new government regulation requires all aliens to produce their certificates of parole, with notice of permission to travel from one point to another when purchasing railway and steamship tickets in Canada. The order as to the registration of enemy aliens also requires all persons, 16 years old and upwards, to be registered. Heretofore only adults were required to be registered.

A Moncton, N.B., press dispatch, Aug. 19, states that it has been decided for

the present to keep the steamer Northumberland on the Summerside-Point du Chene route, and to put off until further notice the resumption of the car ferry service between Cape Tormentine, N.B., and Borden, P.E.I. It had previously been announced that this latter service was to be resumed Aug. 20.

The divisional point at Graham, Ont., on the National Transcontinental Ry., has been renamed Sioux Look Out. This is the name of the village and post office, which existed prior to the building of the railway, when the station was named Graham, after the then Minister of Railways. The station heretofore known as Knowlton, on the line between Superior Jet, and Fort William, has been renamed Graham.

A. H. Brittain, Montreal, in addressing the Canadian Fishermen's Association at Halifax, N.S., Aug. 10, dealt with the equipment necessary for the transportation of fish to inland points. He advocated the building of special express cars, similar to those used on western lines, to be run on passenger trains. The success of the business, he said, depends upon the provision of suitable cars, and their being run on passenger and not freight trains.

### Railway Finance, Meetings, Etc.

The Grand Trunk Ry. is reported to have paid off, on Aug. 1, out of earnings, \$2,000,000 two-year 5% collateral gold notes issued in 1916, and offered by Blair & Co. at 98 1/2 and interest.

Canadian Pacific Ry.—Dividends of 2% for the half year ended June 30, and of 2 1/2% on the common stock, for the quarter ended the same date, being at the rate of 7% per annum from revenue and 3% per annum from special income account, have been declared payable Oct. 1 to shareholders of record Aug. 31.

Timiskaming & Northern Ontario Ry.—Passenger earnings for June, \$54,449.64; freight earnings, \$150,056.74; total earnings, \$204,506.38, against \$56,820.46 passenger earnings; \$120,419.57 freight earnings; \$177,240.03 total earnings for June, 1917.

### Grain Inspection at Western Points.

The following figures, compiled by the Trade and Commerce Department's inspection branch, show the number of cars of grain inspected on railways at Winnipeg and other points in the Western Division, for July, and for 11 months ended July 31, compared with the number for the same period in 1917:—

	July, 1918	11 months to July 31, 1918	11 months to July 31, 1917
C.P.R. ....	1,248	91,328	128,307
C.N.R. ....	529	54,876	71,296
G.N.R., Duluth ..	4	711	3,511
G.T.P.R. ....	183	23,369	22,687
Totals .....	2,264	170,287	225,811

Two C.P.R. sleeping car conductors were committed for trial at Winnipeg, Aug. 1, charged with carrying passengers in sleeping cars who had not secured passenger tickets, and with not turning in the sleeping car fares collected. It is reported that similar charges have been preferred against sleeping car conductors at Montreal, Vancouver, and other places. The company's allegation is that passengers are handed over from one conductor to another from coast to coast, and that the cash received from such non ticketed passengers is divided between the conductors in the ring.

## Mainly About Railway People Throughout Canada.

G. A. Mountain, M.E.I.C., Chief Engineer, Board of Railway Commissioners, Ottawa, has resumed his duties after a long absence due to illness.

Hen. F. Cochrane, M.P., ex-Minister of Railways and Canals, returned to Ottawa early in August from St. Andrews, N.B., where his family are spending the summer.

P. J. Dooley, who has been appointed dispatcher, Canadian Northern Ry., Daphin, Man., was, for 8 years, operator, C.P.R., White River, Ont., and dispatcher, C.P.R., Schreiber, Ont.

S. L. Schoonmaker, Chairman of the Board, American Locomotive Co., and also of the Montreal Locomotive Works, shot himself while suffering from melancholia, at his home at Rosebank, N.Y., Aug. 17.

George Ham, of the C.P.R. headquarters staff, was entertained to dinner at Montreal, Aug. 23, by a number of C.P.R. officials, on the occasion of his 71st birthday, when he was presented with an oil painting of himself.

G. J. Harris, formerly Lake and Rail Agent, G.T.R., Chicago, Ill., and who, as announced in our last issue, was assigned to other duties on account of ill health, died at Chicago recently, of myocarditis, aged 62.

C. S. Mellen, formerly President, New York, New Haven & Hartford Rd., is suing for a divorce, on account of alleged desertion by his wife, who has already figured as defendant in another case, and who has entered a counter suit.

H. R. Safford, heretofore Chief Engineer, G.T.R., Montreal, has, according to a press report, been appointed Engineering Assistant to the Regional Director of the Central Western District, U.S. Railroad Administration.

Mrs. R. L. Smith, widow of Mr. Justice Smith, of the Manitoba bench, and mother of R. Home Smith, Toronto, President, Algoma Central & Hudson Bay Ry., died at Niagara on the Lake, Ont., Aug. 26, after a short illness.

Miss Doris Bury, younger daughter of Sir George Bury, Vice President, C.P.R., was married at St. George's Church, Montreal, to Capt. J. S. Allen of Vancouver, B.C., Aug. 26. After the ceremony they left for North Carolina, where they will reside.

D. J. Murphy, Roadmaster, Dominion Atlantic Ry., Kentville, N.S., was seriously injured at Bridgewater, N.S., at the end of July, when the trolley car on which he was riding on the track, was run into at a crossing by an automobile. He was conveyed to his home at Yarmouth.

Jos. H. Edwards, who has been appointed Local Treasurer and Paymaster, G.T.R. Lines in New England, Portland, Me., was born Dec. 1, 1872, and entered G.T.R. service Dec. 1, 1894, since when he has been, to June 1, 1897, clerk; June 1, 1897, to July 1, 1918, agent at various points.

R. E. Marks, whose appointment as passenger Trainmaster, Eastern Lines, G.T.R., Montreal, was announced in our last issue, was born at Brockville, Ont., Aug. 11, 1875, and entered G.T.R. service May 27, 1897, since when he has been, to May 15, 1906, brakeman; May 15, 1906 to July 9, 1918, conductor, all at Montreal.

J. G. Sullivan, M.E.I.C., M.Am.Soc., C.E., who resigned his position as Chief Engineer, Western Lines, C.P.R., recently, has opened a consulting engineer's office at 703 McIntyre Block, Winnipeg, making a

specialty of all kinds of railway work, mining, foundations, tunnelling, elevators, etc.

W. C. Riddell, whose appointment as Advertising Agent, Grand Trunk Pacific Ry., Winnipeg, was announced in our last issue, was presented with a leather travelling bag by his associates at Montreal, prior to leaving there at the end of July, after having been chief clerk, General Advertising Agent, G.T.R., for 16 years.

Harry P. Sweetser, who has been appointed General Solicitor, G.T.R. Lines in New England, Portland, Me., under the U.S. Railroad Administration, was born July 20, 1873, and entered G.T.R. legal department in Oct., 1898, and for about 8 years acted as Assistant Solicitor, and from Jan. 1, 1917, as Solicitor, G.T.R., Portland, Me.

Alfred Edward Plant, who has been appointed General Auditor and Freight Claims Agent, G.T.R. Lines in New England, Portland, Me., was born Apr. 8, 1878, and entered G.T.R. service Jan. 1, 1908, since when he has been, to July 1, 1912, clerk; July 1, 1912, to Aug. 1, 1914, book-keeper; Aug. 1, 1914, to July 1, 1918, chief clerk, all at Montreal.

Michael Corcoran, who has been appointed Supervisor of Track, west of Shelburne, N.H., G.T.R. Lines in New England, was born at Valcartier, Que., Sept. 4, 1863, and entered G.T.R. service May 10, 1888, since when he has been, to June, 1891, trackman, North Stratford, Ont.; June, 1891, to Feb. 8, 1911, track foreman, North Stratford, Ont.; Feb. 8, 1911, to July 1, 1918, Supervisor of Track, Gorham, N.H.

James M. Gibson, who has been appointed Supervisor of Track, east of Shelburne, N.H., G.T.R. Lines in New England, was born June 17, 1856, and entered G.T.R. service May 1, 1872, as apprentice in the engineering department. He was appointed first assistant foreman, in 1886, Foreman, Bridge and Building Department, Portland, Me., in 1896, General Foreman, District 1, in Jan., 1902, holding the last position at the time of his present appointment.

Gardner Ludwig Nelson, who has been appointed Traffic Manager, G.T.R. Lines in New England, Portland, Me., under the U.S. Railroad Administration, was born June 28, 1862, and entered G.T.R. service Nov. 23, 1879, since when he has been, to Mar. 15, 1893, clerk in Transportation Department, Portland, Me.; Mar. 15, 1893, to Jan. 1, 1903, agent, National Despatch-Great Eastern Line, Portland, Me.; Oct. 1, 1905, to July 1, 1918, Division Freight Agent, G.T.R., Portland, Me.

James W. Farrell, who has been appointed Superintendent, G.T.R. Lines in New England, Portland, Me., was born Aug. 1, 1863, and entered G.T.R. service Aug. 1, 1881, since when he has been, to May 1, 1883, telegraph operator; May 1, 1883, to May 24, 1898, dispatcher, Island Pond, Vt.; May 24 to Nov. 1, 1898, instructor of standard rules at various points; Nov. 1, 1898, to Oct. 1, 1907, Chief Dispatcher, Island Pond, Vt.; Oct. 1, 1907, to July 1, 1918, Trainmaster, Island Pond, Vt.

William Morley Cooper, who has been appointed Trainmaster and Road Foreman of Locomotives, G.T.R. Lines in New England, Portland, Me., under the U.S. Railroad Administration, was born July 25, 1875, and entered G.T.R. service July 8, 1894, since when he has been, to Aug.

10, 1895, road house foreman; Aug. 10, 1895, to Sept. 12, 1898, locomotive fireman; Sept. 12, 1898, to Nov. 1, 1904, locomotive man; Nov. 1, 1904, to July 1, 1918, Road Foreman of Locomotives at various points.

Joseph Hay, who has been appointed Master Mechanic, G.T.R. Lines in New England, Portland, Me., under the U.S. Railroad Administration, was born July 4, 1876, and entered G.T.R. service Feb. 24, 1893, since when he has been, to May 1, 1893, call boy, Belleville, Ont.; May 1, 1893, to Nov. 19, 1898, apprentice; Nov. 19, 1898, to Aug. 1, 1900, fitter; Aug. 1, 1900, to Apr. 1, 1907, foreman, Palmerston, Ont.; Apr. 1, 1907, to Feb. 1, 1911, foreman, London, Ont.; Feb. 1, 1911, to July 1, 1918, foreman, Sarnia, Ont.

Maynard W. Stevens, who has been appointed Purchasing Agent and Storekeeper, G.T.R. Lines in New England, Portland, Me., was born July 8, 1888, and entered G.T.R. service Sept. 1, 1906, since when he has been, to Feb. 1, 1910, bonding clerk, Island Pond, Vt.; Feb. 1, 1910, to Sept., 1914, chief clerk, Water Power Department, Island Pond, Vt.; Sept., 1914, to Feb., 1915, in charge of stores; Feb., 1915, to Aug. 1, 1917, in charge of general inventory work on the road; Aug. 1, 1917, to July 1, 1918, storekeeper, Portland, Me.

John Marlin Gilmour, whose appointment as Yardmaster, Edmonton and Strathcona Terminals, C.P.R., Edmonton, Alta., was announced in our last issue, was born at Ottawa, Ont., Aug. 21, 1885, and entered C.P.R. service in 1902, since when he has been, to 1906, stenographer, consecutively, at Ottawa, Ont.; Regina, Sask.; Fort William, Ont.; Winnipeg, Man.; and Calgary, Alta.; 1906 to June, 1910, rodman and clerk, Engineering Department, Calgary, Alta.; June, 1910, to Jan., 1912, assistant chief clerk, Superintendent's office at Calgary, Lethbridge and Edmonton, Alta., consecutively.

E. E. Dildine, who has been appointed Superintendent of Telegraph, Northern Pacific Ry., St. Paul, Minn., was born at Hawtrey, Ont., Sept. 1, 1866, and entered railway service Sept. 15, 1883, since when he has been, to 1884, with the Flint & Pere Marquette Rd., now the Pere Marquette Ry.; 1884 to 1886, with Canada Southern Ry., part of the Michigan Central Rd.; from 1886 to date, his service has been with the Northern Pacific Ry., except for a period in 1892, which he served with the C.P.R. Telegraphs at Toronto, and the Western Union Telegraph Co., Chicago, Ill.

L. R. Pyle, Fuel Supervisor, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., has been appointed Supervisor of the fuel conservation section of the Central Western Region, under the U.S. Railroad Administration, with office at Chicago, Ill., and gives special attention to the conservation of fuel used on locomotives, in shops, at terminals, at water stations and for all miscellaneous purposes, and to the preparation of fuel received, and to its quality, and will make investigations and recommendations in regard to its transportation and handling at fuel stations.

Chas. H. Tillet, whose appointment as Electrical Engineer, G.T.R., Montreal, was announced in our last issue, was born at Peru, Ind., Dec. 8, 1884, and entered railway service in Aug., 1907, since when he has been, to Nov., 1907, signal repair man, Pennsylvania Rd., Fort Wayne, Ind.; Apr., 1908, to Feb., 1910, signal re-

pair man, Great Northern Ry., Seattle, Wash.; Feb., 1910, to July, 1913, Signal Inspector, Chicago & Eastern Illinois Rd., Chicago, Ill.; July to Oct., 1913, Signal Inspector, G.T.R., Montreal; Oct., 1913, to July, 1918, Supervisor of Signals, G.T.R., Montreal.

**Edgar E. Stevens**, who has been appointed Safety Engineer, Eastern Lines, Canadian Government Railways, Moncton, N.B., was born there Oct. 19, 1887, and entered Canadian Government Railways service, Sept. 17, 1903, since when he has been, to Feb. 1, 1917, in various positions from messenger to chief loss and damage claim investigator in the Freight Claims Department; Feb. 1 to May 24, 1917, chief clerk to General Solicitor; May 24 to July 10, 1917, Travelling Freight Claim Adjustor, Freight Claims Department; July 10, 1917, to Aug. 1, 1918, Claims Agent, all at Moncton.

**James J. Ginty**, whose appointment as Supervisor of Signals, Eastern Lines, G.T.R., Montreal, was announced in our last issue, was born at Lockport, N.Y., Nov. 3, 1884, and entered transportation service in 1906, since when he has been, to 1907, construction hand, Western Lines, New York Central Rd.; 1907 to 1908, assistant construction foreman, General Railway Signal Co., Rochester, N.Y.; 1908 to 1913, general construction foreman, Union Switch & Signal Co., New York, N.Y.; 1913 to 1916, General Signal Foreman, G.T.R., Montreal; 1916 to July, 1918, Chief Signal Inspector, G.T.R., Montreal.

**W. Sutherland Taylor**, formerly Treasurer, C.P.R., died at his home at Montreal, Aug. 22, after a short illness. He was born at Dornoch, Scotland, Oct. 18, 1839, and entered railway service in Canada as Secretary, during construction, of the Toronto, Grey & Bruce Ry., now part of the C.P.R., and was from 1873 to Jan. 1, 1884, Secretary and Treasurer, Toronto, Grey & Bruce Ry.; and from Jan. 1, 1884, to June, 1908, Treasurer, C.P.R., Montreal, at which latter date, he retired from active service. The funeral at Montreal, Aug. 24, was attended by a large number of C.P.R. and other transportation officials.

**Rowland F. Hill**, who has been appointed Assistant General Freight and Passenger Agent, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., was born there, Dec. 14, 1889, and entered T.H. & B.R. service in July, 1906, since when he has been, to Sept., 1906, stenographer in Master Mechanic's office; Sept., 1906, to Sept., 1909, stenographer in General Freight and Passenger Agent's office; Sept., 1909, to Nov., 1911, Soliciting Freight Agent; Nov., 1911, to May, 1915, rate clerk; May to Sept., 1915, chief clerk, General Traffic Manager's office; Sept., 1915, to Aug. 9, 1918, Assistant General Freight and Passenger Agent, all at Hamilton, Ont.

**George L. Courtney**, who has been appointed General Manager, Pacific Great Eastern Ry., Vancouver, B.C., was born at Chatham, Ont., Oct. 7, 1868, and entered railway service in 1885, since when he has been, to Aug., 1890, clerk, G.T.R.; Aug., 1890, to Aug., 1898, with C.P.R. consecutively as clerk, travelling passenger agent, contracting freight agent and agent at Victoria, B.C.; Aug., 1898, to 1908, Traffic Manager, Esquimalt & Nanaimo Ry., and during the latter portion of that period, General Agent, C.P.R., Victoria, B.C. He resigned from the service in 1908, and was subsequently engaged in the tugboat business as a partner in the firm of Greer, Courtney & Skene, Ltd., Victoria, B.C.

**Chester Barrett Weiss**, who has been appointed Assistant Engineer, G.T.R.

Lines in New England, Portland, Me., under the U.S. Railroad Administration, was born Dec. 27, 1889, and entered railway service in 1909, since when he has been, to 1919, on reconnaissance surveys, Louisville & Nashville Rd.; 1910 to 1911, tunnel inspector, Lexington & Eastern Rd.; 1911 to 1912, Masonry Inspector, Tuscaloosa Mineral Rd.; 1912, in private business as masonry engineer, Detroit, Mich.; Sept. 15, 1912, to Feb. 1, 1916, Grade Separation Engineer, G.T.R., Detroit, Mich.; Feb. 1, 1916, to July 1, 1918, Assistant Engineer, Montreal Division and Montreal Terminals, G.T.R., Montreal.

**W. W. Walker**, Federal Manager, Duluth, South Shore & Atlantic Ry., Duluth, Minn., who died recently following an operation, was born at St. Catharines, Ont., June 3, 1868, and entered railway service in 1883, as office boy with the G.T.R. In 1884 he entered the Queen and Crescent Route service, as clerk in

**Morley Donaldson, M.E.I.C.**  
Formerly Vice President and General Manager,  
Grand Trunk Pacific Railway, who died at  
Ottawa Aug. 27, 1918.

the traffic department, and in 1887 transferred to Chicago & North Western Ry. service in the claims department, and from Oct., 1887, to Feb., 1890, was rate clerk and chief clerk in the Great Northern Ry. general freight department, and in 1890 was appointed Travelling Freight Agent, Duluth, South Shore & Atlantic Ry.; 1897, Assistant General Freight Agent; July, 1901, General Freight Agent; Dec. 1, 1911, to the passing of the railway under the U.S. Railroad Administration, Vice President and General Manager.

**W. B. Lanigan**, who has been appointed Freight Traffic Manager, C.P.R., Montreal, was born at Three Rivers, Que., Oct. 12, 1861, and entered railway service in 1879, on the North Shore Rd., between Montreal and Quebec. He took service with the G.T.R. in Jan., 1881, remaining there until he went to the C.P.R. in Aug., 1884, since when he has been, to Oct., 1886, operator and relieving agent, Sharbot Lake, Ont.; Oct., 1886, agent, Claremont, Ont.; Nov., 1886, to April, 1887, agent, Myrtle, Ont.; April, 1887, to July, 1888, agent, Dundalk, Ont.; July, 1888, to

July, 1891, agent, Galt, Ont.; July, 1891, to April, 1900, Travelling Freight Agent, Ontario Division; April, 1900, to July, 1901, Assistant General Freight Agent, Ontario Division; July, 1901, to Feb., 1908, General Freight Agent, Western Division, Winnipeg; Feb., 1908, to Aug., 1918, Assistant Freight Traffic Manager, Western Lines, Winnipeg.

**Morley Donaldson, M.E.I.C.**, who died at his home in Ottawa, Ont., Aug. 27, resigned the position of Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, in Aug., 1917, on account of ill health. He was born near Edinburgh, Scotland, May 1, 1851, and was educated in France and Canada. After spending some time in E. Gilbert & Co.'s engine works at Montreal, he entered W. & F. Shanly's service, and was with them during the construction of the Hoosac tunnel in Massachusetts. He entered railway service in 1881, as chief draftsman, Canada Atlantic Ry., and subsequently was Superintendent, Mechanical Department; Superintendent of Traffic and Mechanical Department, and to Apr. 11, 1898, Superintendent, same road, Ottawa, and on the absorption of the Canada Atlantic Ry. by the G.T.R., and its operation as the Ottawa Division, he was appointed Superintendent, retaining that position until June 17, 1912, when he was appointed Vice President and General Manager, Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Winnipeg.

**James B. Lambkin**, who died at the Royal Victoria Hospital, Montreal, Aug. 1, from diabetes and tuberculosis, was connected with transportation service for many years. He was born at Quebec, Que., Apr. 5, 1858, in barracks, his father being a sergeant-major, attached to the 17th Leicestershire Regiment, then stationed there. As a boy he entered the Ottawa River Navigation Co.'s service as a messenger, and later entered Pullman Co.'s employ. From 1881 to 1898, he was in C.P.R. service, and in 1898 was appointed District Passenger Agent, Intercolonial Ry., Montreal, and was subsequently appointed Assistant General Passenger Agent, I.R.C., Halifax, N.S., remaining there until 1912, when he left railway service. Though young, he served as a trumpeter with the Ottawa Field Battery during the Fenian raids in 1870, and was for several years connected with the Princess Louise Dragoons at Ottawa, and acted as state herald to H.R.H. Princess Louise, wife of the then Governor General. During the present war he served as conducting officer for the Invalidated Soldiers' Commission, with the rank of captain.

**G. M. Bosworth**, who has retired from the position of Vice President, Traffic Department, C.P.R., and will devote his whole time to his duties as Chairman, Canadian Pacific Ocean Services, Ltd., both of which positions he has held since the organization of the latter company, was born at Ogdensburg, N.Y., Jan. 27, 1858, and entered transportation service May 1, 1875, since when he has been, to Feb. 21, 1881, office boy, clerk in Local Freight Department, in Audit Department, and in General Freight Department, Ogdensburg & Lake Champlain Ry., Ogdensburg, N.Y.; Feb. 21 to Aug. 1, 1881, General Freight Agent, same road; Aug. 1, 1881, to May 1, 1882, Travelling Freight Agent, National Despatch Line, Chicago, Ill.; May 1, 1882, to Jan. 1, 1884, Assistant General Freight Agent, Ontario and Quebec Lines, C.P.R.; Apr. 15, 1885, to Jan. 1, 1896, Assistant Freight Traffic Manager, lines east of Fort William, C.P.R.; Jan. 1, 1896, to Dec. 1, 1901,

Freight Traffic Manager, C.P.R.; Dec. 1, 1901, to Aug. 15, 1918, Vice President, Traffic Department, and from Jan. 1, 1916, also Chairman, Canadian Pacific Ocean Services, Ltd., Montreal.

Earl Washington Williams, who has been appointed chief clerk and Superintendent Car and Time Service, G.T.R. Lines in New England, Portland, Me., was born Aug. 8, 1879, and entered railway service May 1, 1898, since when he has been, to Mar. 2, 1899, clerk, Baltimore & Ohio Rd., Cumberland, Md.; Mar. 2, 1899, to Nov. 11, 1900, clerk to Trainmaster, same road, Cumberland Md.; Nov. 11, 1900, to Nov. 29, 1903, clerk to Superintendent, same road, Grafton, West Virginia; Nov. 29, 1903, to Apr., 1909, chief clerk to General Yardmaster, same road, Grafton, W.V.; Apr. to Nov. 21, 1909, extra Yardmaster, same road, Grafton, W.V.; Nov. 21, 1909, to July 6, 1911, chief clerk to Trainmaster, Missouri Pacific Rd., Wichita, Kan.; July 8 to 14, 1911, assistant chief clerk to General Superintendent, same road, St. Louis, Mo.; July 20 to Nov. 7, 1911, chief clerk to Trainmaster, G.T.R., London, Ont.; Nov. 7, 1911, to Feb. 8, 1912, assistant chief clerk to General Superintendent, same road, Toronto; Feb. 8, 1912, to Feb. 7, 1918, chief clerk to Superintendent, same road, London, Ont.; Feb. 7 to July 1, 1918, Travelling Inspector, Western Lines, same road, Chicago, Ill.

G. C. Martin, who has been appointed General Traffic Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., was born at Creemore, Ont., Jan. 2, 1866, and commenced his railway career as assistant to agents, Northern and North Western Ry., at Creemore, New Lowell and Thornbury, Ont. He was engaged as an operator on construction, C.P.R., near Calgary, Alta., and at Hawk Lake, Ont., in 1883, and was appointed agent and operator, Northern and North Western Ry., Colwell Jct., Ont., in 1884, was moved to Caledon East, Ont., in 1886, to Cardwell Jct., Ont., in 1888, and to the city ticket office, London, Ont., in 1889. He entered C.P.R. service in 1891 as relieving agent, and after doing station work, station auditing, dispatching, etc., for several years, he left railway service for one year, returning to the service as clerk in the G.T.R. ticket office, union station, Toronto and in 1897 entered Toronto, Hamilton & Buffalo Ry. service, since when he has been, to Oct., 1909, chief clerk, General Freight and Passenger Agent's office; Oct., 1909, to July 22, 1912, Assistant General Freight and Passenger Agent; July 22, 1912, to Aug. 9, 1918, General Freight and Passenger Agent, all at Hamilton, Ont.

Wm. R. MacInnes, who has been appointed Vice President, Traffic Department, C.P.R., Montreal, was born at Hamilton, Ont., June 7, 1867, and educated at Marlboro College, England. He is a son of the late Senator MacInnes, a former director of the C.P.R., and a grandson of the late Sir John Beverley Robinson, Bart. He entered C.P.R. service July, 1884, since when he has been, to Nov., 1885, clerk in Purchasing Department; Nov., 1885, to Sept., 1886, clerk in Solicitor's office; Sept., 1886, to May, 1887, clerk in General Traffic Manager's office; May, 1887, to Mar., 1896, chief clerk, same office, all at Montreal; Mar., 1896, to June, 1899, General Agent, Freight Department, C.P.R., and Agent, Canadian Pacific Despatch, Chicago, Ill.; also representative of Duluth, South Shore & Atlantic Ry. and Minneapolis, St. Paul & Sault Ste. Marie Ry. there; July, 1899, to June, 1901, General Freight Agent, Lines west of Lake Superior; June, 1901, to

Jan., 1903, Assistant Freight Traffic Manager, Western Lines, Winnipeg; Jan., 1903, to Aug. 15, 1918, Freight Traffic Manager, Montreal. He is a member of the Bank of British North America's Canadian advisory board.

C. W. Van Buren, General Master Car Builder, C.P.R., Montreal, was killed in an automobile accident near Albany, N.Y., Aug. 24. The car in which he was travelling swerved over an embankment and fell about 15 ft., in front of an eastbound New York Central express train. He was born in Rensselaer county, N.Y., Oct. 15, 1867, and entered railway service in Mar., 1889, since when he was, to Nov., 1891, carpenter, New York Central Shops, West Albany, N.Y.; Nov., 1891, to Sept. 1, 1893, assistant foreman; Sept. 1, 1893, to Sept. 1, 1896, in charge of Car Department work, Adirondack Division, same road, Herkimer, N.Y.; Sept. 1, 1896, to July 16, 1905, Car Foreman, Adirondack Division, and Mohawk Division, New York Central and West Shore Rds.; July 16, 1905, to July 1, 1906, General Car Inspector, Eastern Lines, C.P.R., Montreal; July 1, 1906, to July 1, 1909, Divisional Car Foreman, Eastern Division, C.P.R., Montreal; July 1, 1909, to May 31, 1911, Master Car Builder, Eastern Lines, C.P.R., Montreal; July 1, 1911, to Jan. 1, 1915, Assistant to General Manager, Union Stock Yard and Transit Co., Chicago, Ill.; Jan. 1 to April 1915, General Foreman, Car Shops, Milwaukee Refrigerator Transit & Car Co., Milwaukee, Wis.; and from Apr., 1915, General Master Car Builder, C.P.R., Montreal.

### Canadian Railway War Board's Work.

**Aisle Strips in Passenger Cars.**—In the interest of sanitation and economy in materials, a majority of member lines having voted in favor of a proposal to discontinue the use of aisle strips, either carpet or linoleum, in day passenger cars on all railways operating in Canada, commencing not later than Oct. 1, all railways have been asked to place this arrangement in effect on their lines, if it does not already govern.

**Anthracite Coal Consumption.**—In view of the increasing difficulty in obtaining necessary supplies of anthracite coal, and the possibility of further reduction in the allotment to Canada during this year, railways have been called upon to effect a heavy reduction in their requirements. In order to permit of accomplishment of the necessary reduction, therefore, it has been arranged that the railways will discontinue the use of anthracite coal, except to the extent required for consumption in heaters in passenger equipment. In all other circumstances where hard coal has been used in previous seasons, it is necessary to arrange for the burning of coke or other suitable substitute.

The Fuel Administration has stated that for every ton of hard coal which was used in Canada last year, in excess of the amount allotted for the coming season, 1½ tons of bituminous coal will be allowed.

J. E. Quick, who retired recently from the position of General Baggage Agent, G.T.R., in writing to have his address changed from Toronto to R.F.D. 2, Port Huron, Mich., said: "I have been a constant subscriber since Canadian Railway and Marine World was started and have found it very interesting, and undoubtedly will continue to do so now that I have retired from active service."

### Canadian Government Railways, Construction, Betterments, Etc.

**Prince Edward Island Ry.**—C. A. Hayes, General Manager, Eastern Lines, Canadian Government Railways, made a trip of inspection over this railway Aug. 16. A press report states that he informed the Charlottetown Board of Trade that there was a possibility of a third rail being laid between Borden and Summerside and Charlottetown at an early date to enable standard gauge cars to be operated between these points. A large quantity of standard gauge ties have been delivered, and it is reported that special switches to suit both narrow and standard gauges are being manufactured. (June, pg. 241.)

**Sydney Yard Extension.**—A press report of Aug. 9, stated that in preparation for extending the yards at Sydney, N.S., an area of 1,000 x 490 ft. near Ferry St. was being filled in, and that four steam shovels were at work on a nearby hill getting out material.

**Halifax Ocean Terminals.**—According to a press report of Aug. 17, it is expected to have the temporary station at the new ocean terminals ready for occupation early in October. The new structure is of frame and faces Pleasant St., and is 180 ft. long by 80 ft. wide, and 30 ft. high. The waiting rooms are on the north side, the general waiting room being 100 x 40 ft. Adjoining this is an L section, 240 x 150 ft. wide, on the ground floor of which are the baggage room offices, 3 express rooms, milk store and commissariat store, while upstairs are the conductors' rooms, the commissariat and other offices. Along the east side of this building are doors for loading and unloading produce, etc. The platform is sheltered by an overhang of the roof. The train sheds are permanent structures of reinforced concrete and extend back to the waterfront. The contract for the train sheds was let to the Bate, McMahon Co., and that for the station building to Morrison & Downey.

**Yard Improvements at Moncton.**—A press report states that a number of improvements have been made at the yards at Moncton, N.B. (See Intercolonial Ry., Aug., pg. 337.)

**C.P.R. Irrigation Developments.**—Tenders are under consideration by the C.P.R. Natural Resources Department for the Magrath, Alta., diversion works, comprising the construction of a spillway, sluice gates and headgates in the N.W. ¼ of Sec. 23, Tp. 5, R. 22, West of 4th Meridian, approximately 1½ miles directly south of Magrath station, in the Lethbridge irrigation system. The structure will contain approximately 1,600 cubic yards of concrete and 97,000 lb. of reinforcing steel. A. S. Dawson, Calgary, Alta., is Chief Engineer.

**Railway Lands Patented.**—Letters patent were issued during July in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Alberta & Great Waterways Ry.....	6.00
Calgary & Edmonton Ry.....	9,564.00
Central Canada Ry.....	203.28
Canadian Northern Ry.....	640.18
Canadian Pacific Ry.....	16.82
Grand Trunk Pacific Ry.....	12.24
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.....	5,785.17
Total .....	16,227.69

By arrangements made by the Alberta Government, farm laborers were enabled to travel anywhere within that province during August at 1 a mile, going to and from farm work.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.

Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

## Signals for Railway Grade Crossings.

The Board of Railway Commissioners passed general order 247, Aug. 6, as follows:—By circular 156, dated Jan. 15th, 1918, railway companies were directed to consider the adoption of a metal disc to be used as a standard at railway grade crossings protected by watchmen, and to file their comments with the board within 30 days therefrom.

Upon reading the replies filed by the companies affected, and upon the recommendation of the board's Chief Operating Officer, it is ordered that railway companies be directed to adopt and put into use at all grade crossing protected by watchmen during the daytime, a metal disc, 16 in. in diameter, with a short handle having a white background, with the word "Stop" in large black letters and a black border. That rule 33 of General Train and Interlocking Rules, which provides that "watchmen stationed at public crossings must use a green signal to prevent persons and vehicles from crossing the track when trains are approaching," be amended to conform with the standard hereby directed to be adopted.

## Wedge Tanks for Switching and Transfer Locomotives Refused.

D'Arcy Scott, Assistant Chief Commissioner, Board of Railway Commissioners, gave the following judgment July 31 re the application of the Brotherhood of Locomotive Engineers, for an order directing that all switch and transfer locomotives be equipped with wedge tanks, low enough for locomotive men to see over, and with a headlight on the rear; the case having been heard at Ottawa, May 7:

A number of railway companies have switching locomotives equipped with a sloping tender so that the locomotive man when backing the locomotive can see a man whose duty it would be to couple the locomotive to a car. This would, doubtless, lead to the prevention of an accident where the tender is being coupled to a car, but in many cases of shunting, the car which is being attached or separated from the train, is not next the locomotive, but some distance away from it. In such a case, where there is a box car between the man on the ground and the locomotive man, the box car obstructs the view and the sloping tender is of no avail. Some railway officials object to sloping tenders, because the capacity of the tender for carrying coal and water must be curtailed.

The board's operating department reports that in so far as equipping the rear of tenders with headlights is concerned, that as a matter of fact nearly all the switchers now in use are so equipped. A headlight on the rear end of a tender would, of course, be obstructed by a box car attached to the tender, as the view of the locomotive man would be obstructed by a box car as I have already mentioned.

It is apparent that the changes asked for would have some advantages and some disadvantages, but it does not appear to me that the sloping tender, or the rear headlight, would be sufficiently important in the lessening of the occurrence of accidents to warrant the board in putting the railway companies to the expense of equipping their shunting and switching locomotives accordingly. The present time is quite inopportune, when

the resources of railway companies are being taxed to the utmost by war necessities, and material and labor are so difficult and expensive to obtain, to place any such burden upon railway companies.

As I have already pointed out, some of the railway companies have already many shunting locomotives equipped in the way the applicants desire. The companies are, of course, free to continue arranging for such equipment if they so desire. I do not think the board should order them to do so. The application should be dismissed.

Deputy Chief Commissioner Nantel and Commissioner Boyce concurred in the judgment. Commissioner McLean said:—"Independently of the question of expense, a case for the order asked for has not been made out."

## Canadian Northern Railway Construction, Betterments, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1916, from July 1, 1917:

	Gross		Net	
	Earnings	Expenses	Earnings	Decrease
July	\$3,841,900	\$2,940,000	\$ 904,900	\$ 262,566
Aug.	3,405,200	2,812,000	593,200	478,800
Sept.	3,341,700	2,915,800	1,921,000	306,700
Oct.	3,941,600	3,350,500	591,100	629,200
Nov.	4,050,200	3,295,500	754,700	495,300
Dec.	3,273,200	3,207,900	65,300	758,500
Jan.	2,715,300	3,290,300	x575,000	1,057,100
Feb.	2,691,000	3,171,400	x480,400	588,600
Mar.	3,436,300	3,225,900	210,400	467,700
Apr.	3,958,100	3,416,500	541,300	216,600
May	3,762,000	3,381,100	380,900	673,500
June	4,031,100	3,516,900	514,200	573,400

	\$12,450,600	\$38,524,100	\$3,926,500	\$6,477,900
Inc.	\$ 5,272,000			
Dec.	\$ 1,205,900		\$6,477,900	

Approximate earnings for July, \$3,739,400, and for three weeks ended Aug. 21, \$2,591,600, against \$3,844,900, and \$2,276,000 for same periods in 1917.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, compared with those of 1917, from Jan. 1, 1918:

	Gross		Net	
	Earnings	Expenses	Earnings	Increase
Jan.	\$10,789,818	\$9,621,824	\$1,167,993	\$1,263,485
Feb.	9,574,302	8,983,404	590,898	1,396,151
Mar.	12,427,915	9,435,131	2,992,781	944,536
Apr.	13,328,849	9,873,459	3,455,390	719,588
May	13,314,117	9,626,341	3,687,776	863,944

	\$72,012,289	\$57,395,302	\$14,706,985	\$6,290,464
Inc.	\$ 655,510	\$ 6,945,974		
Dec.			\$ 6,290,464	

Approximate earnings for July, \$11,920,000, and for three weeks ended Aug. 21, \$8,583,000, against \$12,925,000, and \$8,005,000 for same periods in 1917.

## Grand Trunk Railway Earnings.

Aggregate from Jan. 1 to July 31:—				
	1918	1917	Increase	Decrease
G.T.R.	\$31,951,668	\$29,042,498	\$2,908,510	
G.T.W.R.	5,934,536	5,545,031	389,505	
D.G.H. & M.R.	1,748,861	1,940,817		\$191,956
Totals	\$39,640,405	\$36,528,346	\$3,106,659	

## Grand Trunk Pacific Ry. Earnings.

Aggregate earnings from Jan. 1 to June 30, \$2,861,179, against \$2,509,457 for same period in 1917. Earnings for three weeks ended Aug. 21, \$304,969, against \$338,139 for same period 1917.

E. E. Stevens, Safety Engineer, Canadian Government Railways, Moncton, N. B., writes: "I have always found Canadian Railway and Marine World to be of great interest and value."

# Traffic Orders by Board of Railway Commissioners.

## Increase in Electric Railway Freight and Passenger Rates.

Orders passed by the board, authorizing increases in freight and passenger rates on certain electric railways, are given in the electric railway department of this issue on page 397.

### Wood Pulp Rates for Bromptonville.

The Assistant Chief Railways Commissioner, D'Arcy Scott, gave the following judgment, Aug. 2, on the Fort Frances Pulp & Paper Company's application for an order compelling the Grand Trunk and Canadian Northern Railways to re-establish joint commodity rates on wood pulp from Bromptonville, Que., to Fort Frances, Ont.:

The applicant has large pulp and paper mills at Fort Frances. It manufactures its own ground wood, one of the ingredients in newsprint, but owing to the increased demand for newsprint for newspapers published in Western Canada and to a lessening in its supply of pulpwood, on account of low water in Rainy River, the company was compelled to buy wood pulp from some eastern mills. Effective Dec. 19, 1917, a special joint commodity rate from Bromptonville to Fort Frances of 22c per 100 lb., was arranged between the railways interested. (See G.T.R. Tariff, Supplement 7 to C.R.C. no. E-3483.) This rate was taken out on May 8, and there being no special rate available, the wood pulp moved under the 10th class of 49c.

The distance from Bromptonville to Fort Frances is 1,393 miles. At the hearing the Canadian Northern Ry. undertook to endeavor to secure the establishment of a 28c rate, which would give the railways a gross revenue of four-tenths of a cent a ton a mile from Bromptonville to Fort Frances. After allowing this matter to remain in abeyance, with the expectation that some agreement would be arrived at, we have now been advised that the 28c rate is not agreeable to the G.T.R., but that that company would be agreeable to the establishment of a joint rate of 35c per 100 lb.; that is, the company wants an increase of 25% on the 28c rate suggested. In view of the general increase in freight rates granted by the Governor in council, by order dated July 27, which would, of course, automatically have increased the 28c rate had it been made effective, it seems to me to be not unreasonable to increase this rate in accordance with the order in council. Wet wood pulp is 10th class freight, and the present 10th class rate from Bromptonville to Fort Frances is 49c. Taking the east and west factors of this rate and applying the increase of the order in council in the same ratio to the 28c rate, the result would give a through commodity rate of 33½c, which rate should be established and made effective not later than Aug. 15.

### Minimum Carload Weight of Flour.

General order 245, Aug. 8. Re complaints of Dominion Millers' Association and Toronto Board of Trade against increased carload minimum weights on grain and grain products for domestic consumption, published by railway companies to take effect April 2, 1917; and re application of Canadian Railway War Board for permission to increase minimum carload weight of flour as fixed by general order 186, April 4, 1917: Upon the consent of the Dominion Millers' Association and the Toronto and Montreal Boards of Trade, on file with the board, it is ordered that clause 4 of general order

186 be amended so as to provide that, until further order, the minimum carload weight of flour shall be 50,000 lb. when loaded in cars of the capacity of 60,000 or 70,000 lb.

### Eastbound Transcontinental Freight Rates.

General order 246, Aug. 12. Re eastbound transcontinental freight rates, and the powers conferred upon the board under sec. 323 of the Railway Act; and re application of W. C. Campbell, Secretary, Canadian Freight Association, Winnipeg, on behalf of railway companies engaged in transcontinental transportation from Pacific coast terminals in British Columbia to eastern Canada, for permission to increase their so called commodity rates on not less than 5 days notice. Whereas the eastbound transcontinental freight rates on specific commodities from points in British Columbia, recognized as Pacific coast terminals, to destinations in eastern Canada, have been in the past and are now lower than the regular scale of rates under the Canadian Freight Classification, and are related to the rates on like commodities when shipped from the corresponding terminals in the contiguous State of Washington to eastern destinations; and whereas by order of the Director General of the U.S. Railroad Administration, U.S. carriers increased their freight rates, including their said transcontinental rates, from June 25, 1918, by 25%, subject to certain modifications with respect to specific commodities, and because of the competitive character of the traffic it is expedient to continue at least the said relationship—it is ordered that the railway companies in Canada engaged in eastbound transcontinental traffic be permitted to increase their present commodity rates from the said Pacific coast terminals in British Columbia to destinations in eastern Canada, subject, however, as a maximum, to the lowest rates now in effect from the corresponding terminals in the State of Washington on like commodities to corresponding eastern destinations, and that the rates so increased be permitted to become effective not earlier than Sept. 9, 1918, upon not less than 5 days notice to the board and to the shipping public, by filing and posting in the manner prescribed in the Railway Act.

### Commutation Tickets, Montreal to Points in Soulanges County, Que.

27488. Re application of G. Boyer, M.P., the municipal councils of Cedars, Coteau du Lac, Coteau Station, and St. Zotique parishes, and the villages of Coteau du Lac and Coteau Landing, for an order directing the G.T.R. to sell commutation tickets between Montreal and stations in Soulanges County, Que.: Upon hearing the application at Ottawa, July 9, Mr. Boyer appearing for himself and on behalf of the municipal councils named; no discrimination in violation of the provisions of the Railway Act being established, the board is without jurisdiction to make the order applied for. It is therefore ordered that the application be dismissed.

### Supplement to Canadian Freight Classification.

27509, July 31. Re application of Canadian Freight Association, on behalf of railway companies, under sec. 321 of the Railway Act, for approval of proposed Supplement 11 to Canadian Freight Classification 16, containing certain increased, reduced, and additional ratings. Notice having been

given in The Canada Gazette by the railway companies, as required by sec. 321 of the Railway Act, and the proposed changes having been fixed by consent of the parties or by orders of the board, or reserved for order of the board; upon the consideration of what has been filed, and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the proposed supplement, as finally revised and submitted for approval by the Chairman of the Canadian Freight Association, by letter dated June 4, be approved.

### Rates on Bonnets and Hats.

27512. Re complaint of Canadian Corrugated & Fibreboard Container Association, Toronto, against proposed increase in ratings published in Supplement 11 to Canadian Freight Classification 16, on bonnets and hats, trimmed and untrimmed, when shipped in fibreboard, pulpboard, or corrugated strawboard containers: Upon hearing the complaint at Toronto, June 24, the complainants, the Canadian Freight Association, the Toronto Board of Trade, and the Canadian Manufacturers Association being represented, and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the complaint be dismissed.

### Spur Carload Freight.

27535, Aug. 2. Re application of Canyon City Lumber Co., of Creston, B.C., for an order disallowing charge of \$3 a car made by C.P.R. for handling on the applicant company's spur, carload freight other than that consigned to or shipped by the applicant company: Upon hearing the application at Calgary, June 10, in the presence of counsel for the applicant company and the railway company, and what was alleged, and upon reading the further submissions filed, it is ordered that the application be dismissed.

### Fruit and Vegetable Routing from Similkameen District.

27536, Aug. 2. Re application of Similkameen Farmers' Institute, of Keremeos, for better connections and joint freight rates on fruit and vegetables over the Great Northern and Canadian Pacific Railways, in the Similkameen District, to points in Alberta and Saskatchewan: Upon hearing the application at Winnipeg, June 15, in the presence of counsel for the railway companies, no one appearing for the applicant, and what was alleged; and upon reading the further submissions filed, it is ordered that the applicant's shipments of fruit and vegetables to points in Alberta and Saskatchewan, to and including Moose Jaw, be moved via Sweet Grass, on the G.N.R., and Coutts, on the C.P.R.; the C.P.R. and G.N.R. forthwith to file tariffs showing rates from the Similkameen Valley to Alberta and Saskatchewan points as far east as Moose Jaw via the routing suggested.

### Beverley Coal Co. Running Rights.

27557, Aug. 14. Re application of Beverley Coal Co. for running rights over a portion of the spur line between the Grand Trunk Pacific Ry. main line and the Humberstone Coal Co.'s line to the point of the proposed spur into the Beverley mine, and for an order fixing the terms of the user. Upon hearing the application at Edmonton, June 11, the applicant company, the Grand Trunk Pacific Ry., and the Humberstone Coal Co. being represented, and what was alleged, and upon reading the further written submissions filed, it is ordered that the application be, and it is hereby, dismissed.

# Electric Railway Department

## Increases in Electric Railway Freight and Passenger Rates.

The Board of Railway Commissioners has passed the following orders, in addition to those given in Canadian Railway and Marine World for May to August, both inclusive:—

**Montreal & Southern Counties Ry.**—27456, July 27. Re application of Montreal & Southern Counties Ry. for an order permitting it to file tariffs providing for a general advance in tolls for carriage of passengers and freight over its line in the same manner and to the same extent as permitted by the board in the case of steam railways: Upon hearing the application at Montreal, June 10, in the presence of counsel for the company and the municipalities of Greenfield, Longueuil, Montreal South, and St. Lambert, and what was alleged, and upon reading the further submissions filed, it is ordered that the company be authorized to publish and file tariffs increasing its existing freight rates, except on coal and coke, by 15%, and its rates on coal and coke by 15c a ton; also to increase its standard maximum passenger rate so as not to exceed 2.875c a mile. The increased rates herein authorized shall not become effective until the company has complied with the requirements of sec. 327 and 331 of the Railway Act.

27508, Aug. 1. Re application of Montreal & Southern Counties Ry., under sec. 327 and 331 of the Railway Act, for approval of its Standard Maximum Freight Mileage Tariff C.R.C. 33, and its Standard Maximum Passenger Tariff C.R.C. 21: The said tariffs having been filed on the basis permitted by the board in order 27456, July 27, it is ordered that they be approved, subject to compliance with the requirements of secs. 327 and 331 of the Railway Act before being made effective.

### OTHER APPLICATIONS AND INCREASES.

**British Columbia Electric Ry.**—We were advised Aug. 14 that the fares then in force on this company's system of city lines were as follows:—

**Vancouver City:** Fare, 6c with transfer privilege, or 6 tickets for 35c. This fare replaced the 5c fare, or 6 tickets for 25c, both of which carried transfer privilege.

**South Vancouver and Point Grey municipalities:** The fare within the confines of these individual municipalities is 6c, with transfer privilege, from any one point to any other point within the municipality. Settlers' tickets are 10 rides for 70c, with transfer privilege from the municipality to Vancouver City cars. This replaced the previous settlers' rate of 10 rides for 50c, which carried transfer privilege to Vancouver city lines.

**New Westminster City:** The fare is 6c, with transfer privilege, or 6 tickets for 35c, also with transfer privilege. This rate of fare replaced a straight 5c fare which carried transfer privilege.

**North Vancouver City:** The fare is 6c, with transfer privilege, or 6 tickets for 35c, also with transfer privilege. This fare replaced a straight 5c fare, which carried transfer privilege. The company has also granted North Vancouver City and district a special ticket of 10 rides for 70c, with privilege of a transfer from North Vancouver cars to Vancouver City cars.

**North Vancouver district:** The fares

are the same as those within North Vancouver City.

**Victoria City:** The fare is a straight 5c one, without transfer privilege. This fare replaces a 5c fare, with transfer privilege, or 6 tickets for 25c with transfer privilege.

No changes have been made in the interurban fares, but the company has applied to the Board of Railway Commissioners for permission to increase commutation fares for the carrying of passengers on the Vancouver & Fraser Valley Ry., covered by tariff B.C.E.R. 11, C.R.C. 5, on the basis as outlined in tariff B.C.E.R. 19, C.R.C. 7.

The following information is gathered from unconfirmed press reports:—

The Mayor of Vancouver informed the city council Aug. 11, that he would not sign the bylaw and agreement authorizing the company temporarily to charge a 6c fare on its city lines. He demanded that the rates for domestic lighting be reduced immediately, which the company declined to do, whereupon he stated that unless the company reduced the rate for lighting, he would not sign the agreement as authorized by the council, to permit the company to increase its street railway fare to 6c. He wrote the Attorney General, asking him if he would use his good offices to the fullest extent to the end that a director or receiver be appointed under the B.C. Minister of Railways, in case the company took its cars back to the barns, so that the public might be assured of a car service until such time as a public utilities commission should be appointed by the government to control this and other similar situations. Following the mayor's announcement of his intention, citizens using the street cars began on the evening of Aug. 12 to refuse to pay more than 5c. The Attorney General is reported to have said, Aug. 15, that he would take all the necessary proceedings to enforce the rights of the citizens should the B.C.E.R. fail to operate its lines in Vancouver. The company has announced that it cannot grant any reduction in the rates for light under present conditions; that it insists on the 6c fare, and that it has no intention to cease operating its cars.

**North Vancouver City Council and North Vancouver District Council,** have approved of bylaws authorizing the B.C.E.R. to increase its fares to 6c within their respective limits. The bylaws are to be submitted to a vote of the electors on an early date.

**Burnaby Tp. Council** has under consideration a bylaw authorizing an increase of fares on the electric line in Burnaby to 6c, and on the Burnaby-Vancouver line to 7c.

**Cape Breton Electric Co.**—The enquiry by the Nova Scotia Public Utilities Commission into the proposed increase of fares on this company's lines, particulars of which were given in Canadian Railway and Marine World for August, was resumed Aug. 13, and was concluded Aug. 16, judgment being reversed.

**Hamilton Radial Electric Ry.**—Following the Board of Railway Commissioners order published in Canadian Railway and Marine World for August, pg. 346a, authorizing the company to increase its passenger rates from 2c to 27sc a mile,

subject to the limitations created by its franchise bylaws of Saltfleet and Nelson townships, Burlington village and Oakville town, General Manager Coleman sent the following communication on Aug. 17 to all the municipalities interested:—

"The attention of your council is called to the following statement of facts and notification:—The Hamilton Radial Electric Ry. has throughout its history been a losing concern. Scarcely a year since its inauguration has it anything to show as the result of operations but loss. The rates of fare insisted on by municipalities in their bylaws are quite too low for a well equipped and well managed system to avoid constantly recurring returns of actual loss. The present cost of materials and wages and other necessary outlays has greatly aggravated this loss, which has become intolerable. Electric railways all over the continent have been allowed to increase their fares, and the Board of Railway Commissioners has expressed the opinion that the present rates of fare are unreasonably low. The company is therefore compelled, with a view to reducing its loss as far as possible, to reduce its scale of operations to the simple requirements of the franchise bylaws. The municipal councils, in a sense representing the public, have the responsibility cast on them of avoiding or removing any inconvenience that may be suffered, but from any reasonable view of the situation, it cannot be expected that the company must voluntarily continue to lose more and more as the traffic increases. The company has been and is willing to leave the fixing of the rates of fare to the adjudication of the Board of Railway Commissioners, the municipal bylaws to be amended accordingly; but notice is hereby given that under the present rates of fare, the service must, and will, on and after Sept. 15, 1918, be reduced to the number of cars each way required by the bylaws."

The company's action means that the service will be reduced to 6 trains a day, in each direction, instead of 19, as during the last winter season.

**The Moncton Tramways, Electricity & Gas Co., Moncton, N.B.,** will, according to a press report, put in force shortly a straight 5c fare on its street railway.

**Montreal Tramways Co.**—The hearing of the appeal of the Montreal Tramways Co., and of the municipalities within which it operates, against the schedule of fares ordered by the Montreal Tramways Commission, and published in Canadian Railway and Marine World for August, was begun before the Quebec Public Utilities Commission July 31. After sitting for three days, the commission adjourned to Aug. 8, and concluded its hearing of the case Aug. 10, after three additional days sittings, when judgment was reserved.

Soon after the commission started hearing the appeal, it was informed that judgment had been given in a Quebec court by Justice Mercier dismissing the petition of Dr. L. Dubois and H. Robert for an interlocutory order restraining the commission from hearing the appeals. An effort had been made to postpone the hearing of the appeals by the commission until this matter had been disposed of, but the commission decided that it had plenary powers in its own field, and was

not a court of inferior jurisdiction to the superior court.

The matter of the writs before the superior courts did not end with the dismissal of the petition for an interlocutory writ by Justice Mercier on July 31. On the original writ applied for by Dr. Dubois and H. Robert, Justice Monet issued an order in the practice court, which the commission held did not bind it. Further proceedings were taken in the superior courts, where application was made for an interlocutory writ, the object being to ascertain whether the issue of the first order did not actually restrain the commission from hearing the appeals until judgment had been given on the merits of the application. This application Justice Mercier dismissed with costs. On Aug. 5, J. L. Perron, K.C., filed an inscription in law in the practice court, in connection with the original petition, with the object of having such petition quashed. On the hearing of the matter Aug. 6, Justice Ducloux maintained the inscription and dismissed the writ of prohibition. Proceedings were initiated by Dr. Dubois and H. A. Robert, Aug. 14, to carry the matter to the Court of Appeal, with a view of obtaining a reversal of Justice Ducloux' decision.

The case for the Montreal Tramways Co. was presented before the Public Utilities Commission by J. L. Perron, K.C., Chief Counsel, and evidence was given by E. A. Robert, President; J. E. Hutcheson, General Manager; H. E. Smith, Comptroller; W. F. Graves, Chief Engineer; D. E. Blair, Superintendent of Rolling Stock, and A. S. Byrd, Superintendent Power Plants, and other company officials, who were cross examined by A. W. Atwater, K.C., representing Montreal; Senator Beaubien, representing Outremont; J. W. Wilson, representing Westmount, and J. F. Hackett, representing Montreal West. These counsel, and also counsel for Montreal North, Pointe aux Trembles, and Lachine, presented brief arguments in support of the appeals made by the municipalities. Mr. Perron replied on the whole case, and the commission adjourned to consider the evidence.

The company, through Mr. Perron, asked that for a 7c cash fare, with 4 tickets for 25c; and free transfers within the uniform fare territory. No appeal was made against the proposed schedule of fares for the territory outside the uniform fare territory. On the basis of the present traffic in the uniform fare territory, the 7c fare asked for would, it is estimated, give the company, including miscellaneous earnings, an income of \$10,681,120.

**Quebec Railway, Light & Power Co.**—In reference to the use of workmen's tickets by females, which was mentioned in Canadian Railway and Marine World for August, pg. 346c, we are advised that in the revised tariff agreed on between the company and the city council recently, the company agreed to sell workmen's tickets for use by bona fide workmen between 6 and 8 a.m., and 5 and 7 p.m. Considerable opposition was, however, made on account of there being a large number of females engaged in shoe factories and other munition factories in the city and district who heretofore travelled on workmen's tickets, and at the request of a number of organizations acting on behalf of the working women, and at the request of the city council, the company agreed to extend the sale of workmen's tickets to working women. Literally speaking, it is workmen only who are entitled to use these tickets, and while the company has not as yet put into force an identification card or badge system, it may de-

cide on this action should it find that the privilege is being abused. From information received from the conductors, it is stated that, so far as they can judge, only bona fide working men and women are using the tickets. Article 2013a of the Civil Code, as amended by 7 George V, chap. 52, with reference to privileges of workmen, builders and other persons, says: "the work 'workmen' includes the artisan the laborer and generally everyone who make his living by manual labor." The privilege given to the working women may be cancelled at any time, it being an act of courtesy only on the company's part to honor these tickets from working women.

**Regina Municipal Ry.**—At a meeting of the Regina, Sask., City Council's street railway committee, Aug. 4, the question of increasing fares on the municipal railway was discussed at length and it was decided to make no alteration in the present rates.

**Toronto & York Radial Ry.**—The Ontario Railway and Municipal Board issued the following order July 9:—Re application of Toronto & York Radial Ry. for permission to increase its freight rates by 15%, in line with advances granted to other electric railways operating in Ontario: Upon reading what has been submitted by the railway in support of its application, and upon the report and recommendation of the board's Traffic Expert, it is ordered that the T. & Y.R. Ry. be authorized to increase its standard freight rates by 15%; provided that in the disposition of fractions of 1c the following rule shall be observed:—0.24 and under to be dropped; 0.25 to 0.74 to be counted as 1/2c; 0.75 and over to be counted as 1c.

The Ontario Railway and Municipal Board, on Aug. 7, approved the T. & Y.R. Ry.'s standard freight tariff of maximum mileage tolls filed with the board, the said tariff with reference to the order to be published in two consecutive issues of the Ontario Gazette.

**Winnipeg Electric Ry.**—A Winnipeg press dispatch stated recently that the company was considering the question of applying to the city for authority to increase its fares from 5c to 6c each with 1c for transfers. Up to the time of writing (Aug. 24), no action had been taken.

### Electric Railway Fares, Etc. in Great Britain.

The recent report of the select committee on tramways appointed by the House of Commons, recommends that the Board of Trade should be empowered by legislation to permit, until two years after the war, the modification of statutory requirements with regard to the charges for the conveyance of traffic on tramways and railways constructed wholly or mainly on public roads, in the case of undertakings the financial circumstances of which are proved to have been injuriously affected by the war. Evidence was given that wages had risen from 60 to 100%, and the cost of materials from 100 to over 200% since the war. In addition, there is the increased cost of fuel, and consequently of power, coupled with restrictions on supply. Statistics were supplied showing that out of 80 municipal undertakings, only 28 were charging maximum fares to ordinary passengers, and 44 maximum workmen's fares. The committee was satisfied that some relief should be afforded to those undertakings that cannot increase their revenues, to compensate them for the abnormal working expenses occasioned by war conditions.

### The Toronto Railway Overcrowding and the Order for Additional Cars.

In response to questions by the Mayor of Toronto, as to the cause of the delay in the Toronto Ry. not complying with the Ontario Railway and Municipal Board's order to have 100 additional cars in service by Jan. 1, 1918, and another 100 by Jan. 1, 1919, who authorized the delay, and why the company's car shops are not in full operation, the following information was supplied recently:—

"The delay in obtaining results from the board's order arises from the times fixed for the sittings of the court, which cannot be expedited by any known process. The dates of the sittings of the court are fixed by the judges of the Supreme Court each year for the following year and provide dates and appointments for each of the judges throughout the whole year. It will readily be understood that these cannot be re-arranged to suit the convenience of litigants. The company's General Manager, while under oath before the board, stated that it was impossible to obtain men to conduct a factory in Toronto, the material for the cars or power to run the cars. The Legislature, at its last session, with the consent of the civic authorities, waived the provision in the agreement requiring the company to manufacture all its cars at a factory within the city. This was done for the purpose of widening the field upon which the cars might be obtained."

The Toronto Ry.'s appeal against a fine of \$24,000 inflicted by the Ontario Railway and Municipal Board for failure to comply with the order to provide additional cars, is due to come before the courts shortly, on a question of jurisdiction, and in the meantime nothing is being done regarding the cars, the company claiming that, on account of the general conditions, it is not possible to obtain the necessary materials and labor.

The mayor, however, with his customary misdirected energy, insists on obtaining more indictments for overcrowding of cars, and states that the board and the courts are trifling with the matter, and that if there is not more progress, he will seek advice outside the city's legal department.

### Alberta Motor Vehicles Act Amended.

The Alberta Government has, by order in council, repealed section 49 of the Motor Vehicles Act, and replaced it by a new section which deals with automobiles passing street cars.

The old section provided that: "In approaching or passing a car of a street railway which has stopped or is about to stop to allow passengers to get on or off, the operator of every motor vehicle shall bring said motor vehicle to a stop and not proceed until the car has started and all passengers who have alighted shall have gotten safely clear of the motor vehicle."

The new section reads as follows: "In approaching or passing a car of a street railway which has stopped to receive or discharge passengers, the person operating a motor vehicle shall bring such motor vehicle to a full stop in the rear of the said car and shall not proceed until all passengers getting on or off the said car shall have gotten safely clear of the motor vehicle."

## Zone Fares for Increased Revenues.

The following has been received from a correspondent in connection with the more or less general applications for increased fares on electric railways. While in no way committing itself as to the best methods to obtain increased revenue from street railway patrons, Canadian Railway and Marine World would be pleased to receive the views of those chiefly concerned, with the object of publishing them for general enlightenment.

"While increases in passenger and freight rates are the order of the day for steam railways, and to a limited extent for electric railways, the regular street railway systems seem to be expected to preserve the status quo ante bellum. Apart from those operated by municipalities, most street railways appear to be bound by agreement with the municipalities in which they operate, to provide transportation under any and every condition at a fixed maximum rate, with special privilege tickets at reduced prices. It is remarkable that greater elasticity in revenue is experienced on those systems which are not municipally operated, but even there there is a limit, and this seems to have been reached. On the present basis of rate fixing, there appears to be only one means of meeting the situation, viz., by increasing the 5c limit. This has been done in several cases in the United States, but in others, the proposal to raise the limit is not favored, counter proposals being made, for the adoption of a zone system of fares. This seems to me to be, not only a proper method to adopt in the present emergency, but the correct thing to do all the time. The main principle to be followed, is that each passenger should pay for the service rendered, and the short haul passenger should not be penalized for the benefit of the long haul passenger. The arrangement of zones could not possibly be made on a fixed basis to apply to all systems, but could, without doubt, be so mapped out in each locality as to meet the demands of the particular district concerned, having regard to the general trend and density of traffic, but such arrangement should not be made arbitrarily with a pair of compasses from a central point on a map. I am of the opinion that the general adoption of zone systems of fares based on a fare in accordance with the service rendered, would relieve the present situation by producing increased revenue, and would tend toward a better, and perhaps more economical operation of the system.

"In connection with the Rhode Island Co.'s street railway system at Providence, R.I., the Rhode Island House of Representatives has adopted the zone system in preference to raising the fare limit to 6c, but action by the Senate is yet to be taken. The legislative committee of the house rather favored the higher unit fare, and in the course of the hearing of the application, it transpired that the estimated increased revenue from a 6c fare was from \$440,000 to \$500,000, and from the zone system of fares it was from \$400,000 to \$550,000. Reasons given in favor of the higher unit fare as against the zone system, were: that it was the mode of relief already granted elsewhere; that the zone system as proposed had not been applied to another community of the size of Providence; that it was simpler of operation and easier as a measure of temporary relief; that it would not result in any disturbance of community life or of property and rental values; and that the increased fare is a burden which

should be shared by all patrons of the system.

"In my opinion, the fact that the zone system has not been applied to any system of considerable size, is no reason why it should not be, and I think it may fairly be said that the other points are debatable. The success of the modified zone systems used on practically all the street railway systems in Great Britain, is evidence that such a system can be operated efficiently as well as successfully, and I think that the statistics of the larger systems there will compare favorably with those of like systems on this side of the Atlantic."

## Lever and Street Car Pull Sheet Piles.

Improvised methods of pulling sheet piles were used at the Macomb St. bridge in Mt. Clemens, Mich. The circular cofferdam for the pivot pier had two rows of 9 in. T-girder rails. Those of the outer row were placed in radial position and alternated with heavy planks driven between the webs. Those of the inner row had their webs in a circumferential line, the heads and flanges being connected by lugs and clamps.

To pull the outer rails, a heavy timber was rigged as a lever, with its short end hooked to a hole in the rail web while four to six men on the long end kept the lever "teetering" until the pile came loose. At the same time a man with a sledge hammer struck the rail to help to jar it free. When it was loosened, it was pulled out by means of a chain hoist hitched to the bridge.

For pulling the inner ring a work car of the electric interurban railway was used. A rope hitched to the car on the bridge was led through a snatchblock hooked to the handrail, then down through an open panel in the cement sidewalk to a snatchblock at the water's edge and then back to the cofferdam. This rope was attached to a ring fitted to a hole in the web of the rail. By moving the car forward the rail was pulled sideways and torn away from its next neighbor. When thus loosened it was pulled up by means of the chain hoist and lowered upon a raft. Men with rail tongs carried it on a working platform to the shore.—Engineering News Record.

## The International Railways and Canadian Money.

A Niagara Falls, Ont., press dispatch stated recently that the International Ry. of Buffalo, N.Y., was absolutely refusing to take Canadian bank notes. Enquiry of the company by Canadian Railway and Marine World has elicited the following reply:—

"This company, being international, operates part of its railway in the U.S. and part in Canada. Naturally revenue derived on the Canadian side is deposited in Canadian banks. Canadian visitors to Niagara Falls, N.Y., spend money shopping and sight seeing, using Canadian currency, which in the early stages of the war was accented at par by U.S. merchants, as well as banks. Lately, however, the banks refused to take deposits of Canadian money without charging us a discount, which has ranged nearly as high as 3%. To overcome this difficulty, we then deposited the Canadian money we received with our banks in Canada. To further complicate the situation, the banks are now charging exchange or discount on funds we withdraw from Canadian

banks, so no matter how we handle Canadian currency we are compelled to stand a discount. We are not as fortunate as merchants, who can always charge more for their wares to offset discount rate, while we are compelled to do business at a fixed rate. We instructed our agents lately to accept Canadian currency, provided those tendering it are willing to pay the discount. So long as the banks compel us to pay exchange and will not accept deposits from us except at a discount, it seems to us that our position in the matter is fair and just, otherwise we would lose from 2 to 3% on all Canadian currency handled. The whole trouble rests with the banks, in charging us exchange, thus compelling us to charge a discount to protect ourselves from loss. You can readily understand that we do not wish to do anything to cause our patrons inconvenience, and it is only due to circumstances beyond our control that makes it necessary for use to charge a discount on Canadian currency tendered to us in the U.S. From the above it is obvious that we do accept Canadian money."

## Montreal Tramways Mutual Benefit Association Report.

The 15th annual report for the year ended April 30, 1918, gives the following summary of relief work done during the past year:—

Members disabled through sickness or injury .....	1,529
Visits made by physicians to disabled members .....	607
Consultations given by physicians to disabled members .....	8,653
Prescriptions issued .....	6,594
Paid for sickness and injury .....	\$13,825.80
Paid for medicine .....	2,291.73
Paid for pensions .....	1,714.00
Paid for withdrawals .....	932.22
Paid for death and burial insurance .....	6,530.50

The following benefits have been paid since the formation of the Association to April 30, 1918:—

Death and burials .....	\$113,992.88
Sickness and injury .....	144,677.60
Pensions .....	7,563.50
Withdrawals .....	4,312.85

There has also been paid \$62,264.81 for medical attendance and medicine. The expenses of management amounted to \$81,156.80. The amount received from members for fees and dues for the same period was \$208,539.50.

The committee gratefully acknowledges receipt from the Montreal Tramways Co. of \$14,659.67, which amount, added to the fees and dues received from members, viz: \$16,483.50, and the interest received on investments and bank deposits, amounting to \$10,404.89, makes the total revenue for the year \$41,548.06, and expenses being \$35,590.47, leaves a surplus of \$5,957.59, which has been transferred to the reserve fund.

The officers for the current year are:—President, J. E. Hutcheson; Secretary-Treasurer, Patrick Dubee; Assistant Secretary-Treasurer, S. A. Caron; committee of management, E. A. Robert, A. Gaboury, Hon. J. L. Perron, K.C., D. E. Blair, A. S. Byrd, R. M. Hannaford, J. C. Brossard, E. Renaud, R. Lavigne, M. Paiement, D. Mathieu, O. Marleau, A. Bessette.

**Calgary Municipal Ry.**—The Calgary, Alta., City Comptroller's department has issued its report on the civic finances for the half year ended June 30. The three public utilities operated by the city show increased revenues of approximately \$20,000 as compared with the corresponding period of 1917; the increase in revenue of the municipal railway being approximately \$6,000.

# Electric Railway Municipal Franchises and Limitations of Passenger Fares.

Canadian Railway and Marine World for August contained two orders passed by the Board of Railway Commissioners, one authorizing the Hamilton Radial Electric Ry. to increase its passenger fares from 2c to 2½c a mile, subject, however, to the limitations created by certain of its franchise bylaws; the other the Montreal & Southern Counties Ry. to increase its freight and passenger rates to the same extent as permitted by the board in the case of steam railways, notwithstanding the provisions of its franchise from the town of St. Lambert. These judgments are of such great importance that the following extracts from them are given:—

## Hamilton Radial Electric Ry.

The Chief Commissioner, Sir Henry Drayton, after dealing with the company's capital, earnings, etc., said:—It has a line of 25 miles, and has also 8.69 miles of second track. The company is not one which can well be compared with the trunk line railways, as claimed by the city of Hamilton. It can be much more reasonably compared with the London & Port Stanley Ry., which has a mileage of some 29 miles. The board has only recently considered the L. & P.S. Ry.'s application for an increase of rates and found that increase to be justified. Comparisons may be much more fairly instituted between these two radials than between any radial and a steam railway. Here again comparisons cannot be exactly made. The London & Port Stanley's business is much more remunerative than the Hamilton Radial's, and no reasonable rate increase of the Hamilton Radial tariffs could put the net earnings of the systems on a parity. While the Hamilton Radial earns on its freight traffic but \$12,368.72, the London & Port Stanley earns \$147,826.72.

The passenger traffic returns, however, may be compared. The London & Port Stanley's standard passenger rate before its rates were increased was 2½c a mile, subject, of course, to the usual minimum of 5c. Its standard rate as increased is 2.875c a mile. The Hamilton Radial's standard passenger tariff is 2c a mile. The London & Port Stanley's standard passenger rate is therefore 43.75% higher than the Hamilton Radial's.

Much traffic, of course, does not move on the standard rate, but moves under special tariffs. The statistics for 1917 show that the Hamilton Radial carried 1,322,615 passengers, with a resulting gross earning of \$148,175.56, which gives an average rate per passenger carried of 11.20c. In the same year the London & Port Stanley carried 726,799 passengers, with a resultant income of \$147,470.44, an average rate per passenger of 20.29c. The Hamilton Radial, therefore, had a passenger traffic amounting in load to 82% more than the London & Port Stanley, but its remuneration per passenger was 48% less than that received by the London & Port Stanley.

The excess of passenger density on the Hamilton Radial is not as great as the excess figures would show, as reducing the number of passengers to the passenger car mileage basis, the statistics show that the passenger car miles of the Hamilton Radial amounted to 489,658, with passengers, as already noted, of 1,322,615, resulting in an average of 2.72 passengers per car mile. The London & Port Stanley has a passenger car mileage of 440,315, carrying 726,799 passengers, making an average of 1.65 passengers per car mile. The car mile traffic density on the London & Port Stanley is, therefore, but 39.4%

less than that of the Hamilton Radial, indicating that the London & Port Stanley has the benefit of a longer haul, approximating 50%, and which of necessity, apart from rate differences, would increase the passenger returns.

The Hamilton Radial's returns from operating, after deducting taxes, amount to \$24,015.89. Those of the London & Port Stanley for the same year were \$106,162.88. The Hamilton Radial earns \$060.63 a mile of line; the London & Port Stanley \$3.669. The London & Port Stanley is prosperous; the Hamilton Radial is maintained only on advances made by the Dominion Power & Transmission Co.

There can be no question that it is entirely in the public interest to have railways self sustaining and capable of making the expenditures which the constant demands of transportation from time to time entail. The Hamilton Radial pays interest at only 7% on a capitalized value of \$13,723 a mile of line. The property unquestionably is worth much more. In so far as the merits go, there is no question that the company is entitled to a larger revenue and to increase its rates to those enjoyed by the London & Port Stanley. As I see it, however, the case cannot be dealt with on its merits. Certain portions of the company's tracks are laid under municipal bylaws and subject to municipal franchise. The Saltfleet Tp. bylaw, sec. 18 (a), reads as follows:

"The said company may charge and collect from any person on entering any of their cars for riding on any part of their railway the following fares: For any distance less than 3 miles, 5c, and for any greater distance, 2c a mile, and for a return trip from Hamilton to Burlington, or Burlington to Hamilton, the sum of 25c."

The Village of Burlington bylaw reads as follows:

Section 32 (b): "The company shall carry passengers for a rate not exceeding 5c each from any point within the limits of the Village of Burlington to the Burlington Canal, and shall carry passengers from Burlington Canal to any point within the limits of the Village of Burlington for a fare not exceeding 5c each, and children in arms shall be carried free, and the company shall sell tickets to school children residing in the Village of Burlington desiring to use the company's cars for the purpose of going to or coming from a public or private school, in the City of Hamilton, at a price not exceeding 46 tickets for \$1.85, but shall not be required to sell less than 16 tickets to any one or more of such school children, and each of such tickets shall be good for one fare from any point in the Village of Burlington to any point in the City of Hamilton, and from any point in the City of Hamilton to any point in the Village of Burlington, for school purposes only."

Sec. 37: "The company may carry passengers and charge and collect from every person on entering any of their cars or carriages for riding any distance on their railway within the Village of Burlington in the same continuous route, a sum not exceeding 5c, except children under five years of age accompanied by their parents or other persons having them in charge, such children will ride free, provided they do not occupy seats, and the company shall carry children between the ages of 5 and 12 years any distance on their railway within the Village of Burlington in the same continuous route for a cash fare of not more than 3c each; provided also that the payment of the said fares of 5c and 3c respectively hereinbefore mentioned shall entitle the person so paying the same to ride in the cars or carriages of the company from any point within the limits of the Village of Burlington to the Burlington Canal, and all such persons may return in the cars or carriages of the said company from said Burlington Canal to any place within the limits of the Village of Burlington upon payment of the said rates as aforesaid in this clause mentioned; and it is hereby declared and provided that the rate of fare payable by any adult now or hereafter residing in the said Village of Burlington for riding in the company's cars or carriages from any place within the limits of the Village of Burlington to any place within the limits of the City of Hamilton, and returning to any point within the said village on the line of said company shall not exceed the sum of 25c."

Sec. 38: "The said company shall keep tickets for sale upon their cars and shall sell tickets to persons desiring the same at a rate not exceeding 25c for 6 tickets, and each of such tickets shall be good for one fare to any point on their line within the limits of the Village of Burlington to the Burlington Canal and from the Burlington Canal to

any point within the limits of the said Village of Burlington."

The Township of Nelson bylaw, sec. 19 (a), reads as follows:

"The said company may charge and collect from any person on entering any of their cars for riding on any part of their railway, the following fares: For any distance less than 3 miles, 5c, and for any greater distances 2c a mile, and for return trip from Hamilton to Burlington, or Burlington to Hamilton, the sum of 25c, and for return trip from any point on the company's line in the Township of Nelson east of the Village of Burlington to the City of Hamilton and return, the sum of 50c."

The City of Hamilton bylaw also has rate stipulations which, however, are not of moment, as it was shown at the hearing that the company is not permitted to carry passengers in Hamilton, and the stipulations referred merely to Hamilton traffic.

It was urged at the hearing, as well as in written submissions, that the agreements with the municipalities absolutely concluded the matter, and that the rates could not be increased. The Railway Act leaves the whole subject of rate regulation in the board's hands. The matter is not left so that certain shippers or municipalities can obtain unduly low or discriminatory rates, whether by agreements or otherwise. Shippers and passengers cannot be discriminated the one against the other, nor can one locality or municipality obtain any more favorable treatment than the other. In other words, discrimination cannot be practiced either as between localities or individuals. Township regulations, which can cover only a part of the line, of necessity give way to power regulation over the whole and under which high rates on the one hand can be cut down, or unduly low rates on the other hand raised. The board's general jurisdiction under the Railway Act is not, therefore, ousted by any municipal agreement.

The Hamilton Radial, in the first instance, was incorporated and constructed under Ontario legislation. Under its act of incorporation, and under the Ontario law, it was open to municipalities to enter into franchise agreements and pass franchise bylaws, and the company then became bound by these. After the hearing, on looking into the company's statutory position, I find that it was declared to be a work for the general advantage of Canada by the statutes of Canada, 1918, chap. 117. Sec. 10 of that act reads as follows:

"Nothing in this Act contained, or done under or by virtue of the powers hereby granted, shall alter or affect the provisions contained in any bylaw of any municipality heretofore passed relating to the company, or to any portion of the company's railway heretofore or hereafter constructed, or contained in any agreement between any municipality and the company; but all such agreements and bylaws shall continue and remain in full force as between the municipality and the company as continued and incorporated by this act; and in case of any inconsistency between the provisions contained in any such bylaw or agreement and the provisions of The Railway Act, the provisions contained in the bylaw or agreement shall prevail, and all such bylaws and agreements and all rights, franchises, privileges, and exemptions of the company thereunder are hereby confirmed."

In view of this section, and following the opinion adopted by the board, having regard to the provisions of the Crow's Nest Pass Act and agreement, in my opinion the board is bound by the provisions of the municipal bylaws referred to, and ought not to authorize any tariff which would create charges higher than those stipulated in the different bylaws for the services set out in the bylaws. I do not repeat the grounds on which this opinion is based; it will be found in the Increased Rates Case 22, Can. Ry. Cases, 49, at pgs. 57-60. In my view, therefore, the only order that can be made is to

allow the Hamilton Radial rates to be increased to those enjoyed by the London & Port Stanley, subject, however, to the limitations created by the municipal franchise bylaws. It is probably the case that this restriction will largely prevent any relief whatever being granted the applicant company. The point which to my mind determines the issue was not raised at the hearing. In my opinion, it is so plain and clear that nothing would be gained by setting the case down for another hearing so that the matter could be discussed. As the company has not been heard on this question, however, it is entitled to a rehearing on this point if it so desires.

**Montreal & Southern Counties Railway.**  
The Chief Commissioner, Sir Henry Drayton, after dealing at length with the company's capitalization, earnings, etc., said:—

Rates must not only be just and reasonable as between the public and the carrier, but they must also be free from discrimination not only as between individual shippers, but also as between localities. The present rates are clearly unremunerative.

I now deal with the question of municipal agreements. Mr. David, K.C., appeared for the St. Lambert and Montreal South municipalities. Mr. Chisholm, K.C., who appeared for the railway company, stated that the application to increase rates did not conflict with his company's agreement with the Montreal & Southern Counties Ry. Company; but there is no doubt whatever that the issue is direct in so far as the agreement with the Town of St. Lambert is concerned. Agreements are also relied on by the Greenfield Park and Longueuil Municipalities. The agreement made with the Town of St. Lambert, as contained in bylaw 44, was adopted by the electors. Sec. 6 provides for the rate of fares, as follows:

"The rate of fare to be charged and collected by the said company for commutation tickets, or for single and round trip tickets; between any point on their line in St. Lambert and their terminus in the City of Montreal, and vice versa, shall not exceed the rate or fare charged by steam railways for similar tickets between the said places at the date of the passing of the present bylaw by the city council."

If increased tariffs as applied for are allowed, these tariffs will not be higher than the existing rates on the steam roads, but will be higher than the steam railway rates in force at the time the bylaw was passed. Mr. David's submission, which is joined in by the other interested municipalities, is that the board has no jurisdiction to change the rates fixed by the agreement. His final submission on the point is:

"I submit that although the board may have a general jurisdiction over all railways, electric or steam, throughout Canada, whenever there is a private agreement between a municipality, in which one of the conditions is that the rate shall never exceed a certain amount, that contract should be accepted."

Mr. David, upon being asked how many other municipalities the line served, stated that it ran all along the south shore of Granby, passing through St. Lambert, Greenfield Park, Montreal South, Longueuil, Chambly, Richelieu,—a very large number altogether, and that the company's mileage in St. Lambert is only 1.4 miles. The Montreal & Southern Counties Ry. Co. was incorporated by an act of the Dominion Parliament declaring its undertaking to be a work for the general advantage of Canada. The company's mileage in all the municipalities having agreements limiting rates constitutes but a comparatively small part of the whole.

Beyond all question the company requires more revenues. There is no room for debate, in so far as municipalities are concerned which are without agreement.

Under the circumstances the company is entitled to increase tolls beyond all question in so far as such municipalities are concerned, but to increase the company's tolls in such municipalities without at the same time increasing the rates in St. Lambert and the other municipalities which have agreements with the railway, would be to produce a different scale of tolls between such municipalities and the municipalities with agreements.

The Railway Act further, does not contemplate rates being fixed by agreement. The board's jurisdiction over rates is not shared by one conferred upon municipalities. On the other hand, agreements between individual shippers and railways and separate municipalities or localities must inevitably tend to defeat the object of the act, which is to secure as far as possible a just and reasonable basis of charge free from discrimination. In the present case the agreements go further than to provide for merely a local rate within the bounds of the municipality and call for rates either into or out of the interested municipalities. The railway company can only recover such tolls as its tariffs filed with the board justify. Under the act, it is for the board, and not for the municipality, to determine whether or not the tariffs filed are unjust or unreasonable. The question as to whether tolls are, or are not, unjust or unreasonable cannot conclusively be determined by municipal agreement, even though fixed by a municipality as a condition of the franchise and so accepted by the carried. Agreements between the municipalities and the railway company do not oust the jurisdiction of the Dominion Parliament and the board in their administration of the Railway Act. The agreements in question have not been validated by legislation and have not been submitted to or approved by the board.

After citing a number of cases previously decided, the Chief Commissioner said:—Similar action has been taken by rate regulating commissions in the United States. Indeed, such action is the only logical result of either provincial or Dominion rate regulating laws. Rates cannot well be regulated by two conflicting jurisdictions. I find that the cost of the transportation service afforded by the company has greatly increased and that the increased rates the company desires to make effective are just and reasonable. In my opinion, an order ought to issue as prayed, notwithstanding any municipal agreement to the contrary.

### London and Port Stanley Railway Report.

The London & Port Stanley Ry.'s report for the year ended June 30, was laid before the London, Ont., City Council, Aug. 21. Following is a table showing the earnings and expenses, the cents in each case being omitted. This table is compiled from press reports and is subject to correction:—

Passenger earnings	\$177,795
Freight earnings	143,698
Miscellaneous earnings	47,796
	\$369,294
Maintenance of way and structures	\$18,829
Equipment	23,030
Traffic expenses	32,109
Miscellaneous expenses	66,500
	250,469
Gross income	\$118,825
Fares	82,251
Interest	53,732
Rental	20,000
Sinking fund	14,763
	90,755
Net earnings	\$28,070

### Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry. and allied companies.**—

	June, 1918	June, 1917	12 mths. to June 30, 1918	12 mths. to June 30, 1917
Gross	\$488,874	\$373,029	\$5,986,437	\$7,326,382
Expenses	388,019	351,784	4,600,691	4,268,007
Net	100,854	21,245	1,385,746	1,068,375

**Calgary Municipal Ry.**—A press report states that for the six months ended June 30, the C.M.R. showed net earnings of \$6,743, against a deficit of \$21,270 in the same period of 1917.

**Cape Breton Electric Co.**—

	June, 1918	June, 1917	12 mths. to June 30, 1918	12 mths. to June 30, 1917
Gross	\$40,057.83	\$37,078.16	\$486,048.17	\$425,543.92
Exp.	29,940.65	26,424.11	339,416.09	258,057.33
Net	10,157.18	10,654.02	146,632.17	172,486.59

**Edmonton Radial Ry.**—

	1918	1917
Revenue for June	\$40,868.20	\$39,508.63
Operating expenses	32,082.20	32,118.42
Net earnings	\$ 8,786.00	\$ 7,390.26

	June 30	June 30
Revenue, six months ended	\$264,243.72	\$254,865.24
Operating expenses	193,543.15	210,830.40

	1918	1917
Net earnings	\$ 70,543.15	\$ 44,034.54
Fixed charges	127,577.86	127,965.18
Deficit	\$ 54,234.71	\$ 83,930.34

	1918	1917
Passengers carried	5,383,584	5,235,778

**Montreal Tramways Co.**—The directors have deferred payment of dividend on common stock, ordinarily payable Aug. 1, until the appeal is decided regarding increases in fares.

**The Nova Scotia Tramways & Power Co.'s** comptroller advised the Halifax City Council, July 30, that on the following day there would be payable to the city \$11,436.51 on percentages account in respect of electric light and power and gas earnings, and that the city owed the company \$12,026.66 for public lighting. The city council proposed to tender a cheque for the amount due, less certain disputed items, on receipt of a cheque from the company for percentages.

**Regina Municipal Ry.**—A statement of the municipal finances for the six months ended June 30, issued by the city auditors, showed that there was a net deficit on the three public utilities operated by the city of \$37,616.02, of which \$30,223.57 was due to the operation of the R.M. Ry. At the beginning of the financial year provision was made for an estimated deficit of \$46,824.82 for the 12 months.

**Toronto Civic Ry.**—Traffic receipts for July, \$28,285.97, against \$23,262.03 for July, 1917. Passengers carried in July, 1918, and 1917, 1,691,403 and 1,380,801, respectively.

**Toronto Ry.**—Under the terms of a mortgage deed of Sept. 1, 1902, 304 1/2% currency bonds have been drawn for redemption on Aug. 31, and cease to bear interest after that date.

**Toronto Ry., Toronto & York Radial Ry. and allied companies.**—

	June, 1918	June, 1917	12 mths. to June 30, 1918	12 mths. to June 30, 1917
Gross	\$1,035,992	\$984,529	\$6,356,169	\$5,871,584
Expenses	582,154	569,121	3,455,413	3,634,414
Net	453,778	415,408	2,900,756	2,237,170

**Winnipeg Electric Ry. and subsidiaries.**

	June, 1918	June, 1917	12 mths. to June 30, 1918	12 mths. to June 30, 1917
Gross	\$293,110	\$254,226	\$1,811,138	\$1,673,350
Expenses	218,282	204,562	1,385,293	1,277,473
Net	74,828	49,664	425,845	395,877

Gross earnings for June, \$293,139.92; net after operation, \$74,858.30; surplus after fixed charges, \$19,316.20.

# The Toronto Railway Prepayment Cars.

The illustrations on this page show a remodelled double truck car on a p.a.y.e. plan, which the Toronto Ry. has com-

pleted recently, and which has been approved by the Ontario Railway and Municipal Board. The company is remodel-

ling 50 cars on this plan, and if it is successful, further cars will be changed as soon as possible, so that the whole system may be operated on this plan.

The door opening is 5 ft. wide, and the

Toronto Railway Prepayment Car, with doors open and step down.

pleted recently, and which has been approved by the Ontario Railway and Municipal Board. The company is remodel-

ling 50 cars on this plan, and if it is successful, further cars will be changed as soon as possible, so that the whole system may be operated on this plan. The changes made, are confined to the rear end, where the bulkhead is being removed, and the main floor of the car projected into the vestibule, in order to accommodate a seat for the conductor, and a stationary fare box. By this arrangement the seating capacity of the car is not interfered with, and there is ample room on either side of the conductor for entrance and exit of passengers. The rear vestibule is fitted with folding doors and folding step, and these are operated by a small pneumatic engine located above the door, and connected with a light signal to the motorman, to indicate immediately the doors are closed. The mechanism is supplied by the National Pneumatic Co., New York.

The space occupied by the conductor projects about 3 ft. into the vestibule, and is 2 ft. wide, the vestibule measuring 6½ ft. from the original car floor line. On entering the car, passengers will pass in front and to the right of the conductor,

Toronto Railway Prepayment Car, rear vestibule, showing doors and step up.

folding step, when down to allow passengers to enter the car, is 15 in. from the street level, the next step is 12½ in. to the vestibule floor, which is 9½ in. below the main car floor.

Chatham, Wallaceburg & Lake Erie Ry.—A Chatham, Ont., press dispatch of Aug. 14 says the Ontario Railway and Municipal Board has authorized the C.W. & L.E.R. to use natural gas for fuel until Sept. 1.

Montreal Tramways Co.'s Franchise.—An action has been started in a Quebec court in the name of J. P. Lanctot, mayor of Ville , prior to its annexation to Montreal, who was formerly a member of the Montreal City Council, to annul the franchise granted the Montreal Tramways Co. on June 28. The City of Montreal, the Montreal Tramways Commission and the Attorney General of the province are made parties to the action. The plaintiff alleges fraud and false representations, and contends that the franchise, granting that it is a statute, is unconstitutional, because the legislature delegated wits powers without the right to do so. It is further alleged that the M.T. Co. sought to force the city council to grant a new franchise in 1914, and in

Toronto Railway Prepayment Car, floor plan.

place fare in the box and pass into the car. Exit will be made either from the front, or back of the car, in the latter

case, passing on the conductor's left. When the car is full, the conductor will move the handle in front of him, to start

connection with this allegation the whole of the proceedings in the injunction cases are recited.

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—An agreement was signed Aug. 9, between the company and the North Vancouver City Council, under which the car tracks at the foot of Lonsdale Ave. will be moved to the west side of the street, and several other improvements made at the street car terminal there, which will facilitate both street car and ferry traffic. (Aug., pg. 348.)

**Calgary Municipal Ry.**—The City Engineer reported as to the proposed change of route of the car line from Calgary to Ogden at a recent meeting of the commissioners. He estimates that it would cost \$25,000 to grade the new route, move the rails from the present track, relay them and do the ballasting. The cost of right of way and of any compensation in connection with the carrying out of the work would also have to be provided for. The proposed new route would reduce the length of the line from 9,420 ft. to 7,600 ft., and of the total trackage from 12,020 ft. to 9,950 ft. This does not provide for any change in the route east of the high bridge. The matter was taken under consideration. (Aug., pg. 348.)

**Levis County Ry.**—We are officially advised that the reconstruction of 11.50 miles of the company's lines, by being ballasted with crushed stone, is being gone on with, and that up to Aug. 10, work had been completed upon 1.75 miles. (Aug., pg. 348.)

**London & Port Stanley Ry.**—The London Railway Commission has decided to co-operate with the London City Council in an application to the Board of Railway Commissioners for permission to erect a foot bridge across the Thames River to Beatty Bros. plant in Chelsea Green. In order to reach the proposed bridge, a footway would have to be provided along the railway right of way; and if the work is carried out, the commission proposes to raise its own bridge at that point 2½ ft. in order to improve the location for the provision of siding tracks. The cost of the work to the railway is estimated at \$13,500. May, pg. 211.)

**The Quebec Ry., Light & Power Co.'s** roundhouse and paint shop were destroyed by fire, July 30, together with 1 passenger excursion car, 1 flat car, 1 box car and 1 gondola car. These buildings were on the north side of the track at St. Anne de Beaupre, and the loss, which is covered by insurance, is placed at \$8,419. It has not been decided to rebuild on the same location, but should it be so decided, the building will be approximately 80 ft. square. The operation of the machine shop at Montmorency Falls, as a locomotive house, machine and paint shop, is under consideration. (Aug., pg. 348.)

**Moncton Tramways, Electricity & Gas Co.**—Owing to the taking over of the Moncton & Buctouche Ry. by the Dominion Government, a new arrangement is being made with the M.T.E. & G. Co. respecting the section of the M. & B. Ry. it operates over.

Negotiations are still in progress for the extension of the company's line to Sunny Brae, but up to Aug. 19, nothing had been settled between the company and the Sunny Brae Council. (July, 1917, pg. 286.)

**Ottawa Electric Ry.**—The Ottawa City Council is proposing to rebuild the bridge over the Rideau River on St. Patrick St., at an estimated cost of \$190,000. The O.E.R. was asked to contribute towards the cost, but it was reported Aug. 20, that

the company was not disposed to make any contribution at all, considering that its franchise has so short a term to run.

**Winnipeg Electric Ry.**—On the amended plan for the Sargeant Ave. extension submitted to the Winnipeg City Council, the line is to be carried to Dominion St., approximately 2,800 ft. The original plan

was to build only 2,200 ft.

Application was made to the city board of control, Aug. 1, for an extension on Academy Road to the Midland Ry. of Manitoba tracks, but A. W. McLimont, General Manager stated that it was out of the question to think of extending the line this year. (Aug., pg. 348.)

## Electric Railway Notes.

The Regina, Sask., Municipal Ry. carried 171,241 passengers during the recent fair week, against 168,413 for the fair week of 1917.

North Vancouver, B.C., City Council is operating a municipal jitney service on the Lynn Valley Road between Center Road and the city limits.

The Moncton Tramways, Electricity & Gas Co. has decided to abandon for the present its car service from Moncton, N.B., to Lewisville and Humphreys Mills.

The Cape Breton Electric Co. has placed in operation, two one-man "safety" cars, received recently from the American Car Co., and which were ordered early in 1917.

The New Westminster, B.C., City Council has decided to wait and see the outcome of the litigation in Vancouver, before it takes steps to further restrict or prohibit the operation of jitneys.

The St. Thomas, Ont., City Council instructed its solicitor, Aug. 1, to take proceedings against the London & Lake Erie Ry. and Transportation Co., to recover \$8,000 for unpaid taxes and rentals.

The Windsor, Ont., City Council, on Aug. 19, refused to accede to the Sandwich, Windsor & Amherstburg Ry.'s request to release it from paying taxes levied on its property for patriotic purposes.

Men employed in Winnipeg railway yards and shops are asking for an increased night service on the Winnipeg Electric Ry., including a half hourly service between 2 and 6 a.m., when, under present arrangements, no cars are run.

Montreal Tramways Co.'s conductors were instructed Aug. 15 that the only persons entitled to free rides on the street cars are policemen and firemen in uniform, out of all the number of city employees who used to travel without payment.

North Vancouver, B.C., city authorities have taken proceedings against motor owners who used their vehicles as jitneys, and charged 25c and 50c fares, during the recent periods when the British Columbia Electric Ry. was not being operated, owing to strikes.

Jos. McGee, conductor, was found guilty in the Brantford, Ont., police court, Aug. 7, of stealing fares from the Brantford Municipal Ry. and was directed to make restitution to the extent of \$50, and to pay the costs, in which case sentence would be suspended.

The Board of Railway Commissioners has refused the town of Greenfield Park's application for changes in the Montreal & Southern Counties Ry. car schedule. The changes asked for included, among other things, the putting on of a special through car.

The Calgary, Alta., street railway department has been advised by the City Solicitor that it may collect a fee of admission to Bowness Park, if it is desired by the authorities, from every person seeking entrance, except persons residing within the Bowness limits.

The British Columbia Electric Ry. is giving a special rate, 5 tickets for 20c, to returned wounded soldiers in uniform, for

local traffic in Vancouver, New Westminster and North Vancouver. These tickets can only be obtained at the Carroll St. and Grenville St. ticket offices.

The Langley, B.C., municipal council has passed a bylaw regulating jitney traffic. The license fee is \$10 for six months; a bond for \$500 has to be carried; the total liability for any one accident is \$2,500, and the penalty for infractions of the bylaw is \$100 or 30 days in jail.

British Columbia Electric Ry. employees went out on a sympathetic strike, Aug. 2, at the call of organized labor. The mayor intervened and the street railway employees went back to work on Aug. 6. The stoppage of the car service nearly brought about a riot, returned soldiers protesting strongly.

The Winnipeg Electric Ry. dropped its belt line service, Aug. 1, and made a number of other changes which it is claimed will greatly expedite the cross city traffic. Protests were made about the change, and the city board of control, on Aug. 7, instructed the city solicitor to investigate the matter.

The Victoria City Council has under consideration a plan for the purchase of the British Columbia Electric Co.'s properties on Vancouver Island. The matter was expected to be discussed between the Council, G. Kidd, General Manager, and A. T. Goward, Local Manager, at Victoria, Aug. 21.

The Toronto Ry. has been granted leave to appeal to the Judicial Committee of the Privy Council, as to the proportion which it is to be called upon to pay the City of Toronto for the construction of the high level bridge carrying Queen St., and the Toronto Ry. tracks over the C.P.R., C.N.R. and the Don River.

As a result of a conference between officials of the New Brunswick Power Co. and the Superintendent of the St. John ferry service, a new schedule has been arranged by which there will be a close connection between the street cars and the ferry. Twice during the greater part of the day across the bridge at the Reversing Falls.

The increased street railway fares in Edmonton, Alta., have necessitated the use of a large number of cents, and as the cent has never had much circulation in the west, the city treasurer has had to import \$1,000 worth, and on Aug. 13 it was reported that the supply was again so short that a further importation would have to be made.

The Hamilton, Ont., St. Ry. started the operation of p.a.y.e. cars on its belt line Aug. 4. This service necessitates the use of 22 cars, each with capacity for 45 passengers. We are officially advised that it is not at all likely that one man cars will be adopted in the city, the management's opinion being that they are not adapted to conditions prevailing in Hamilton.

The action of McKay vs. the City of Vancouver, to suspend the jitney elimination bylaw, a summary of which was given in our August issue, was argued before Justice Gregory, Aug. 5, who decided, Aug. 16, that he could not issue an

injunction to prevent the city prosecuting jitney-men under the prohibitory bylaw, pending the trial of the main suit as to its legality.

A number of residents of Calgary, Alta., contend that the city council should not have withdrawn the \$ for 25c tickets in the evenings on the Calgary Municipal Ry. without having first taken a vote of the people. If every matter affecting the operation of a municipal public utility had to be submitted to a vote of the people, which would be the final outcome if the claim of the residents referred to were admitted, municipal ownership would not have the slightest chance of success anywhere.

The Toronto & York Radial Ry. has bought 2 cars from the Edmonton Radial Ry., Edmonton, Alta., for its Scarboro Division, to replace those lost by fire Feb. 24. These cars were built originally by the Preston Car & Coach Co., and are standard double truck cars with 33 in. rolled steel wheels, and are equipped with electric heaters, 4 G.E. motors with K6 controllers, Westinghouse automatic air compressor, and cross seats. They are 46 ft. 3 $\frac{3}{4}$  in. long over all, and 33 ft. 3 $\frac{3}{4}$  in. long over the body.

The Regina, Sask., City Council's chairman of its street railway committee is reported to have said on Aug. 17 that one-man cars and a 7c fare will likely be the ultimate solution of the problem of financing the municipal railway. He is not in favor of one-man cars until all the possibilities of the present system of operation have been tried out. Various suggestions are before the committee, although both the 7c fare and the one-man-car proposals have been defeated for the present.

The two cars which the Brantford Municipal Ry. has ordered from the Preston Car & Coach Co. for operation on the Brantford-Paris line, as mentioned in our last issue, will be 47 ft. long over vestibule, 35 ft. over corner posts, and 48 ft. over bumpers, with a width of 8 ft. 8 ins. over sheathing. The length of the vestibule will be 6 ft. framing of steel, with straight sides, turtle back roof, vestibule sash in one piece to drop, and other sash arranged with the upper sash stationary with art glass, and the lower to drop. The interior will be arranged with a smoking compartment, all seats of the walkover type upholstered in rattan, for 50 persons. The cars will be equipped with ANM Westinghouse airbrakes and Westinghouse 101B motors with K28 controllers.

### Mainly About Electric Railway People.

D. Roche, heretofore chief clerk to General Storekeeper, Winnipeg Electric Ry., has been appointed Storekeeper.

Fred J. Pratt, for 16 years Storekeeper, Winnipeg Electric Ry., has been appointed Purchasing Agent, vice J. S. Mackenzie, appointed Assistant Treasurer.

Lawrence Palk, heretofore Assistant to General Manager, Winnipeg Electric Ry., who has been in the company's service for 14 years, has been appointed Assistant Secretary, and also Secretary of the company's subsidiary, the Winnipeg, Selkirk & Lake Winnipeg Ry. Co.

J. S. Mackenzie, heretofore Purchasing Agent, Winnipeg Electric Ry., has been appointed Assistant Treasurer, vice G. A. Henson, resigned. Mr. Mackenzie was at one time in Toronto Ry. service, going to the Winnipeg General Power Co. in 1902. When that company was amal-

gamated with the Winnipeg Electric Ry. Co. in 1906, he was appointed Purchasing Agent of the latter. Mr. Henson entered street railway service in Winnipeg in the old horse car days, and in 1890 was practically the whole office force of the horse car company there. When the horse cars were superseded by the electric ones, he went into insurance business. In 1900 he was appointed Accountant, Winnipeg Electric Ry., and Assistant Treasurer in 1915.

### Women as Street Railway Conductors.

The question as to whether women should, or should not, be employed as conductors on street cars, is causing some agitation in various communities where such a course has been suggested, but not, as yet, adopted. Arguments have been used from both ethical and eugenic viewpoints, but as a matter of fact, all such arguments fall to the ground in view of the nature of work which women have been engaged in for many years past, and at any rate without any very strong protests on either ethical or eugenic grounds from the sources from which arguments of this nature now emanate. A summary of the points against employing women as conductors, as taken from a resolution passed recently by the Toronto St. Ry. Employees Union, is covered by the statement "that it would be an injustice to women to have them train for two weeks without remuneration, for conductors on street cars, only to realize, after a short period, that, owing to the system of operation, hours of labor and the conditions under which the work is performed, they were unable to stand the strain, and that it would not be conducive to either the health or moral standing of women to have them collect fares in crowded cars, such as are found on the system."

Where this work has been undertaken by women, and it is being carried on to a large extent, in Great Britain and the U.S., as well as other countries, chiefly, it must be admitted, as a war necessity, it is being done successfully, and without any apparent ill effects. Any detrimental moral effect which there may be, is infinitely less than in many occupations in which women are now working as a war necessity, and so far as any evil physical effects are concerned, women have been engaged for generations, in work, supposed to be natural to the sex, with far greater physical dangers than acting as conductors on up to date street cars.

The Toronto Ry., as announced previously, is remodelling a number of its cars for the adoption of a prepayment system, and when these are placed in operation, it is intended to employ women as conductors on them. The work will consist merely in receiving the fares, opening and closing the door, and giving the signals for stopping and starting. While this work is being carried on, the conductor can be seated, and in fact can remain seated the whole time she is on duty, if she wishes. There will be no passing through the car to collect fares, nor can the conductor be crowded in any way, as she will be, at no time, in physical contact with the passengers.

The argument is also used, that it is not required that women be engaged in this capacity as a war necessity, as should there be a real shortage of men for the work, which does not appear to be admitted, and when the company remodels its cars to the proposed prepayment plan, "returned soldiers should be engaged to

fill vacancies as they occur, since men in broken health, or those who have lost a leg, could fill the position." The weakness of this argument is apparent, when it is contended that returned soldiers, broken in health, or minus a leg, would be able to stand the strain involved better than a woman of ordinary physical capacity.

Reports as to the actual effect of the work on women, differ to a great degree in different countries, and even in the same country, and the only way to deal with the effects is by taking individual cases. The matter cannot be dealt with, and either approved or condemned, in general. A recent report after an investigation of one of the U.S. electric railways, was entirely in favor of women engaging in such work, while a report of another system states that they are not fit for the work, that while they can perform the duties as well as men, the strain, both physical and mental, the irregular hours, and the necessity for standing for long periods, are particularly detrimental to women's health.

With the equipment now provided on the latest type of prepayment car, any physical strain on the conductor is entirely eliminated, owing to the easy manipulation of the automatic machinery operating the doors and step; and the mental strain, if it ever existed, also disappears. The irregular hours can easily be dealt with, and as shown, there is no necessity for long periods of standing.

**A Railway Without Rates.**—The Spokane & Inland Empire Rd., operating out of Spokane, Wash., is in the peculiar position of having no authorized rates. The U.S. Government assumed possession of the road Jan., 1918, and established rates entirely different from those previously in force, and after these had been in force for a certain period, the U.S. Railroad Administration turned the railway back to the company. The question has arisen, as to what rates should be charged. If the original rates, approved by the State Commission, were suspended, information is desired as to which provision of the state statutes covers the case. Again it cannot be claimed that the U.S. Railroad Administration's rates are in force, and the new rates which are being applied at present are being protested because they impose a minimum charge of 10c for less than a mile. A report by the State Public Service Commission, on the matter, concludes with the statement that the company is "in a hell of a fix." Two of the commissioners, in concurring with the report, resent the form of words used to describe the position, but the chairman says that no other words fit the occasion.

**A Common Blunder.**—The Canadian Railway War Board's Secretary made the statement recently that gasoline had increased 100% in cost since the commencement of the war. Invoices in his possession show the purchase of gasoline before the war, at 16 $\frac{1}{2}$ c a gallon, and purchases of recent date at 33c a gallon. S. R. Parsons, of the Canadian Manufacturers Association, while not quoting figures, asserted that the price of gasoline had only increased 50%. Many people who ought to know better, consider that an increase such as that shown, is only 50%, because it is half of the increased price.

The Montreal Tramways Commission submitted to the Montreal City Commissioners, on July 11, a plan providing for the rerouting of cars affecting eight lines. At the date of our latest advice the plan had not been accepted either by the city or the company.

# Marine Department

## Cargo Steamship Building for Dominion Government.

### The 3,750 Ton Type of Steel Cargo Steamship.

Canadian Railway and Marine World for August contained a full technical description of the 4,300 ton type of steel cargo steamships for the Dominion Government, which are to be built under the shipbuilding policy of the Minister of Marine, Hon. C. C. Ballantyne, as first detailed in Canadian Railway and Marine World for February. Following is a description of the 3,750 ton type.

The second keel under the new shipbuilding programme was laid by the Collingwood Shipbuilding Co. at Collingwood, Ont., during the first week in June. The vessel will be of the following leading particulars:—

Length . . . . . 251 ft.  
Breadth . . . . . 43½ ft.  
Depth . . . . . 26 ft.  
Draft, loaded . . . . . 22 ft. 2 in.  
Canal draft . . . . . 14 ft.  
Speed, maximum . . . . . 9 knots  
Deadweight on load draft . . . . . 3,750 tons  
Complement officers and men, including gunners. 30

The vessel will be of the single deck type, with poop, bridge and fore-castle, straight stem, elliptical stern and subdivided into 12 water tight compartments. A double bottom 39 in. deep, with solid floors on alternate frames and on every frame forward and under the machinery will be fitted from the collision bulkhead to the after peak bulkhead, connected up in the usual way with the steam suction. The vessel will be built on the ordinary transverse system, the frames being of bulb angle spaced 24 in. apart, ample compensation being provided to the shell plating in lieu of side stringers. Bilge keels will be provided for a suitable length amidships.

The main deck, poop, bridge, and fore-castle decks will be of steel, sheathed with British Columbia fir in way of the accommodation. The cargo hatches will be arranged for the speedy handling of bulk cargoes and will be of the following dimensions:—No. 1 hatch, 20 x 18 ft.; no. 2, 24 x 18 ft.; no. 3, 24 ft. 18 ft.; no. 4, 20 x 18 ft. The usual stanchion arrangement in the holds will be dispensed with, in order to facilitate loading and unloading.

In accordance with what is now recognized practice in modern cargo vessels, the seamen and firemen will be housed under the poop deck aft, in large compartments. Separate mess rooms will be provided for the seamen and firemen, and all other requirements, such as lighting, ventilation, and sanitation, will be in conformity with the Board of Trade regulations governing the survey of masters and crew spaces. The ship's officers, etc., will be berthed in deck houses situated at the fore end of the bridge deck and alongside the engine casing, which will contain one cabin for each officer; wireless office, dining saloon, pantry, baths, water closets and the usual stores. The captain's cabin will be over the forward deck house, which will be surmounted by the navigating bridge. The galley will be placed between the engine and boiler casings. The cold chamber will be fitted on the port side, under the bridge deck aft. All the accommodation throughout will be steam heated.

The vessel will be provided with 4 derrick posts and 1 pole mast, carrying wire-

less aerials. Each derrick post will have 2 derricks fitted, capable of lifting 5 tons each. There will be 7 cargo winches, 7 x 12 in., of the Clarke-Chapman type, manufactured by the Corbet Machine Co., Owen Sound. The windlass, which will be placed on the fore-castle head, will also be of the Clarke-Chapman type, manufactured by the same firm. The steering gear will be placed at the after end of the engine room casing, inside the bridge erection. The engine will be of the ordinary horizontal type, with cylinders 8 in. diameter by 8 in. stroke. It is being manufactured by John Hastie & Co. of Greenock, Scotland. The 10 k.w. electric generating set will be placed in the engine room. The dynamo, by Vickers, Limited, Sheffield, Eng., will be coupled to a single cylinder enclosed forced lubricating engine, manufactured by Goldie & McCulloch Co., Galt, Ont. The vessel will be fitted with a 2 k.w. wireless set supplied by Marconi Wireless Telegraph Co. of Canada.

The life saving appliances will be in accordance with the Canadian Board of Steamship Inspection's requirements, and will comprise 2 lifeboats, 24 ft. x 7½ ft. x 3 ft. 2 in., and 1 dinghy, 18 ft. x 5½ ft. x 2¼ ft. The vessel will be furnished with the usual armament as required by law and provision will be made for defence from floating mines.

The main propelling engine, which will be placed about amidships, will be of the triple expansion, surface condensing type, with cylinders 18 x 30 x 50 x 36 in. stroke, having a working pressure of 180 lb. a square inch, is being built by the Collingwood Shipbuilding Co. under British Corporation survey. The h.p. and i.p. cylinders will be fitted with piston valves and the l.n. with a double ported slide valve. The air pump and bilge pumps will be worked off the main engine. An independent pair of feed pumps by G. J. Weir & Co., of Glasgow, will be provided for boiler feed purposes. The main circulating pump will be of the centrifugal type, driven by an enclosed forced lubrication engine, manufactured by the Storey Pump Co., Toronto. The main condenser will have a cooling surface of 1,350 sq. ft., and an auxiliary condenser having 500 sq. ft. of surface will be provided, for taking the exhaust from the deck winches, etc. The general service pump will be of the vertical duplex type, 10 x 6 x 12 in., and the ballast pump of similar type, 10 x 10 x 12 in. The reversing engine will be of the direct acting type, manufactured by the builders, and a separate engine will be provided for turning the main engine in port. Steam will be generated in 2 single ended boilers, 14 ft. diameter by 10¾ ft. long, designed to work under Howden's system of forced draft, and having a working pressure of 180 lb. a sq. in.

The vessel is being built to British Corporation classification and under government survey. Satisfactory progress is being made with the construction in both the hull and machinery departments, and it is anticipated that the vessel will be placed in service before the close of navigation. The Collingwood Shipbuilding Co. has been given an order for a duplicate vessel of this type, as stated in Canadian Railway and Marine World for August, the same to be completed by the

opening of navigation in 1919.

**Orders for Steamships.**—We are officially advised that the Marine Department has given the following orders for steel cargo steamships, in addition to those mentioned in our August issue:—

British-American Shipbuilding Co., Welland, Ont.—2 of 4,300 tons d.w. capacity each.

Collingwood Shipbuilding Co., Collingwood, Ont.—2 of 3,750 tons d.w. capacity each.

Davie Shipbuilding & Repairing Co., Lauzon, Que.—2 of 5,100 tons d.w. capacity each.

Tidewater Shipbuilders, Ltd., Three Rivers, Que.—2 of 3,750 tons d.w. capacity each.

This makes order for 22 vessels given to date, as follows, the tonnage stated being deadweight in each case:—

	No.	Tons each.	Total tonnage
British-American Shipbuilding Co., . . . . .	2	4,300	8,600
Canadian Vickers, Ltd., . . . . .	1	4,300	4,300
Canadian Vickers, Ltd., . . . . .	1	5,100	5,100
Collingwood Shipbuilding Co., . . . . .	4	3,750	15,000
Davie Shipbuilding & Repairing Co., . . . . .	2	5,100	10,200
Port Arthur Shipbuilding Co., . . . . .	2	3,400	6,800
Tidewater Shipbuilders, Ltd., . . . . .	4	3,750	15,000
Wallace Shipyards, Ltd., . . . . .	2	4,300	8,600
Wallace Shipyards, Ltd., . . . . .	4	5,100	20,400
	22		97,000

In addition to the above, the department has agreed to give Halifax Shipbuilders, Ltd., an order for 3 steel cargo steamships of approximately 10,000 tons d.w. capacity each when its yard at Halifax, N.S., is ready to begin building. Other orders will be placed, as berths may be becoming vacant, with the shipbuilders mentioned in Canadian Railway and Marine World for March and April, and if the St. John Drydock & Shipbuilding Co. goes on with its proposed shipbuilding plant at St. John, N.B., it will also probably be given some orders.

**Wallace Shipyards, Ltd., North Vancouver, B.C.**—A quantity of steel for the vessels to be built for the Dominion Government, arrived at the yard towards the end of July, and work is reported to be approaching completion on the preparation of the additional berths, so that three vessels may be proceeded with at the one time. Railway track has been laid to connect the stores with the berths, and two large oil furnaces have been installed, one for treating angles and the other for plates. An 1,800 ft. twin angle compound compressor for the pneumatic machinery has also been installed, and other machinery includes: 4 1¼ in. punches, an overhead monorail system and a 4,800 ton steel carrier.

**Steam Navigation Co. of Canada, Ltd.,** has been incorporated under the Dominion Companies Act, with \$2,500,000 capital and office at Montreal, to carry on a general transportation business, with power to own and operate steam and other vessels, and other transportation facilities. The incorporators are connected with a legal firm in Montreal, but it is said that the Canadian registry is chiefly for holding purposes, local and U.S. interests being concerned.

# Cargo Steamship Building in Canada for British Government.

**Additional Orders.**—Reference was made in our last issue to persistent rumors that the Imperial Munitions Board was about to place additional orders for steel steamships for the British Government. Wooden steamships should have been mentioned, instead of steel ones, as it was definitely arranged early this year that no further orders would be given in Canada for steel steamships for the British Government, and that as those under order were completed, the berths would be occupied in building steel steamships for the Dominion Government. If any further orders are placed for the British Government, they will be for wooden

Steel cargo steamship Alaska, for British Government, leaving J. Coughlan & Sons yards at Vancouver for trial trip.

steamships, but so far there is no indication that any such orders will be given.

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to July 31, giving in each case the date of the launching, the name of the steamship, the name of the builder and the deadweight tonnage:—

## Steel Steamships.

May 18, 1917—	War Dog, Wallace Shipyards	4,500
July 9, 1917—	War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N. S.	1,800
Aug. 19, 1917—	War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300
Nov. 3, 1917—	War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Mar. 16, 1918—	War Camp, J. Coughlan & Sons, Vancouver, B.C.	8,800
Mar. 23, 1918—	War Power, Wallace Shipyards, North Vancouver, B.C.	4,600
Apr. 3, 1918—	War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
May 8, 1918—	War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
May 21, 1918—	War Bee, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	2,400
May 27, 1918—	War Osiris, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
June 8, 1918—	War Earl, Canadian Vickers Ltd., Montreal	7,000
June 29, 1918—	War Duchess, Canadian Vickers Ltd., Montreal	7,000
July 20, 1918—	War Hathor, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
July 29, 1918—	War Charger, J. Coughlan & Sons, Vancouver, B.C.	8,800
Total, 14 steel steamships.....		65,700

## Wooden Steamships.

Dec. 28, 1917—	War Songhee, Foundation Co., Victoria, B.C.	3,080
Jan. 4, 1918—	War Nootka, Western Canada Shipyards, Vancouver, B.C.	3,080
Jan. 24, 1918—	War Yukon, Cameron-Genoa Mills, Victoria, B.C.	3,080
Feb. 16, 1918—	War Puget, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
Mar. 6, 1918—	War Selkirk, Western Canada Shipyards, Vancouver, B.C.	3,080
Apr. 10, 1918—	War Caribou, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080

Apr. 11, 1918—	War Comox, New Westminster Construction & Engineering Co., New Westminster, B.C.	3,080
Apr. 11, 1918—	War Masset, Foundation Co., Victoria, B.C.	3,080
Apr. 13, 1918—	War Tyee, Pacific Construction Co., Coquitlam, B.C.	3,080
Apr. 25, 1918—	War Haida, Cameron-Genoa Mills, Victoria, B.C.	3,080
Apr. 27, 1918—	War Cayuse, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
May 11, 1918—	War Mohawk, Quinlan & Robertson, Ltd., Quebec, Que.	3,080
May 11, 1918—	War Sioux, Port Arthur Dredging Co., Port Arthur, Ont.	3,080
May 21, 1918—	War Atlin, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
May 23, 1918—	War Tatla, Western Canada Shipyards, Ltd., Vancouver, B.C.	3,080

July 27, 1918—	War Ottawa, Fraser, Brace & Co., Montreal	3,080
Aug. 5, 1918—	War Chilkat, Cameron-Genoa Mills Shipbuilders, Victoria, B.C.	3,080

Total, 30 wooden steamships.....92,400  
Total deadweight tonnage of 14 steel and 30 wooden steamships launched, 158,300.

**Vessel Registry.**—A report from Victoria, B.C., July 31, says that all wooden steamships built on the Pacific coast to the Imperial Munitions Board's orders for the British Government will be registered at the port of construction, in the name of the British Minister of Shipping, instead of in London, Eng. We are advised that any registration in Canada, if it takes place, is of a temporary character, the vessels proceeding overseas under special license, and then being registered in England.

**British-American Shipbuilding Co.,** Welland, Ont.—The first of the three steel steamships to be built by this company for the British Government, under order from the Imperial Munitions Board, was launched Aug. 21, and christened War Weasel by Mrs. R. W. Leonard of St. Catharines, Ont. She is of steel throughout, 3,500 tons deadweight capacity, and has the following dimensions: length 261 ft., breadth 43½ ft., depth 23 ft.

**Cameron-Genoa Mills Shipbuilders, Ltd.,** Victoria, B.C.—With the launching of the s.s. War Stikine by this company, July 27, its contract for 4 wooden steamship hulls with the Imperial Munitions Board was completed. To signalize this, the launching was turned over to the employees, and a committee was formed to handle it. The company was formed in 1916, and its first vessel, an auxiliary powered schooner, was launched Aug. 15 of that year, and named Margaret Haney, for Canada West Coast Navigation Co.,

Steel cargo steamship War Charger, for British Government, just after launching by J. Coughlan & Sons, Vancouver.

June 15, 1918—	War Babine, Foundation Co., Victoria, B.C.	3,080
June 24, 1918—	War Nicola, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
June 28, 1918—	War Quebec, Quebec Shipbuilding & Repairing Co., Quebec, Que.	3,080
June 29, 1918—	War Ontario, Toronto Shipbuilding Co., Toronto	3,080
July 5, 1918—	War Huron, Fraser, Brace & Co., Montreal	3,080
July 5, 1918—	War Erie, Fraser, Brace & Co., Montreal	3,080
July 6, 1918—	War Casco, Western Canada Shipyards, Ltd., Vancouver, B.C.	3,080
July 12, 1918—	War Sumas, Pacific Construction Co., Port Coquitlam, B.C.	3,080
July 24, 1918—	War Squash, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
July 27, 1918—	War Gaspé, Quinlan & Robertson, Quebec, Que.	3,080

and subsequently 5 other similar vessels were built for the same interests. The first of the wooden steamships for the Imperial Munitions Board was launched Jan. 24, 1918, and named War Yukon, the total cargo tonnage of all vessels being 26,350 tons. The christening of the s.s. War Stikine was performed by Miss H. E. McLaughlin, one of the stenographers, who was presented with a souvenir. In a speech subsequent to the launching, J. H. Price, President of the company, stated that he was not in a position to state particulars of the company's future, but it could be taken for granted that within a month, the yard would be in full swing again.

**Canadian Vickers, Ltd.,** Montreal,

launched the s.s. Samnanger, Aug. 3, Capt. H. Jonassen, Bergen, Norway, officiating. This is the Canadian Vickers third launching since the opening of the St. Lawrence navigation season. The Samnanger is a sister vessel of the s.s. Porsanger, which was launched from the same yard, Nov. 29, 1917, and handed over to Furness, Withy & Co., early this year, for operation on behalf of the British Government. She has been built to classify 100 A1 at Lloyd's, and also for Det Norske Veritas. Her dimensions are: length over all 394½ ft., breadth extreme 49¼ ft., depth moulded 30 ft.; deadweight tonnage 7,000; gross tonnage 4,670; load draft 24 ft. The hull is fitted with double

are 5 large cargo hatches, 11 steam winches, powerful steam windlass, steam and hand steering gear, 2 steel masts, the top masts being made telescopic to suit bridges across the Manchester (Eng.) ship canal.

**J. Coughlan & Sons, Vancouver, B.C.**—The second steel steamship to be built by this firm, for the British Government, under orders from the Imperial Munitions Board, and the third launched in this yard, was sent down the ways, July 27, and named War Charger, being christened by Miss Grace Coughlan. This launching would have taken place considerably earlier, had it not been for the disastrous fire at the yard a few weeks ago. She is

**Fraser, Brace & Co., Ltd., Montreal.**—The s.s. War Ottawa, the third of the four vessels on order for the Imperial Munitions Board, was launched July 27, the christening being performed by Mrs. C. Fraser. The fourth vessel, which was expected to be launched toward the end of August, is to be named War Niagara.

**New Westminster Construction & Engineering Co., New Westminster, B.C.**—A press report states that the launching of the wooden hulls War Kitimat and War Ewen, for the Imperial Munitions Board, have been postponed, owing to lack of accommodation at the assembling plants. These two vessels will complete the board's order with this company.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—The s.s. War Hathor, which was launched July 20, as mentioned in our last issue, was expected to sail from Port Arthur, about the end of August, for delivery at Montreal by Sept. 1. Two other similar vessels are nearing completion for the Imperial Munitions Board, the War Horus, which will be launched about Sept. 20, and the War Karma, to be launched about Oct. 10. These will complete the Imperial Munitions Board's order for 6 steel steamships for the British Government.

**Quinlan & Robertson, Ltd., Limoilou, Que.**—The third of the wooden steamships building at this yard for the Imperial Munitions Board, was launched July 27, and christened War Gaspe. The christening was performed by Mrs. Bilodeau, wife of the yard superintendent. After launching, the vessel was towed to the Louise Basin, where her machinery is to be installed.

**Western Canada Shipyards, Ltd., Vancouver, B.C.**—The s.s. War Chilkat, the fifth of the 6 vessels ordered for the British Government by the Imperial Munitions Board, was launched Aug. 5, and was christened by Mrs. W. C. Ditmars of Vancouver. The last of these vessels, which is to be named War Tatoosh, was expected to be launched before the end of August.

One of our contemporaries announced in its August issue, that the company will establish a plant shortly. It is to be presumed that the vessels already launched just grew.

**Sarnia Coal & Dock Co., Ltd.,** has been incorporated under the Dominion Companies Act, with \$20,000 capital and office at Sarnia, Ont., to carry on a coal and ice dealing business, and in connection therewith to own and operate steam and other vessels, and other means of transportation by land and water. Peter Paton, who resigned recently as Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, to enter private business in Sarnia, is chiefly interested.

**The Nova Scotia Transportation Co., Ltd.,** has been incorporated under the Dominion Companies Act, with capital of 1,000 shares of no nominal or par value, provided that business be carried on with a capital of \$5,000. The head office is at Toronto, and power is taken to own and operate steam and other vessels and to carry on a general navigation, manufacturing and forwarding business.

**Lavonia Ship Co., Ltd.,** has been incorporated under the New Brunswick Companies Act, with \$24,000 capital stock and office at Memramcook, N.B., to carry on a shipowning and management business. The incorporators are:—R. McManus, Moncton, N.B., contractor; J. W. McManus, Memramcook, civil engineer; and E. E. McManus, Memramcook, merchant.

Steel cargo steamship Alaska, for British Government, built by J. Coughlan & Sons, Vancouver, on trial trip.

bottom fore and aft, subdivided into 14 separate water tight compartments, with total water ballast capacity of 1,630 tons. The officers' accommodation is in deck houses on the bridge, and the crew are berthed in the poop deck in separate two-berthed rooms. All accommodation is large and roomy and well ventilated and lighted. The vessel is provided throughout with Chadburn's ship telegraphs, manufactured by Taylor & Arnold, Ltd., Montreal. The propelling machinery consists of triple expansion engines, 2 main boilers and large donkey boiler. There

of 8,000 tons d.w. and is the second of 9 similar vessels to be built for the British Government under the Imperial Munitions Board orders.

The s.s. War Camp, which was launched Mar. 16, was scheduled for her trials during August.

**Foundation Co., Victoria, B.C.**—The fourth wooden steamship hull, built for the British Government under the Imperial Munitions Board orders, was launched at this year, Aug. 8, and named War Camchin. The company has one more hull to complete before finishing the board's order.

## Atlantic and Pacific Ocean Marine.

The Imperial Oil Co.'s oil tank s.s. *Lux Blanca* was torpedoed off the Atlantic coast, Aug. 5.

The Japanese s.s. *Canada Maru*, which ran aground on the rocky ledges near

mitted suicide, because he feared the possible disgrace which might attach to the casualty.

Bowring & Co.'s s.s. *El Lobo* was dry-docked at Esquimalt recently, for examination, after having struck a submerged reef off the Peruvian coast in July. It is reported that repairs, which will cost ap-

Sicilian collided in Quebec harbor, Aug. 6, with the Canadian Northern Ry. car ferry *Canora*, which was scheduled to leave Quebec some time during August, for the Pacific coast, and did considerable damage above the water line. An action has been entered in the Admiralty Division of the Exchequer Court, on behalf of the owners, the Canadian Northern Ry., and the builders, the Davie Shipbuilding & Repairing Co., Lauzon, Que., for \$80,000, and a warrant was issued for the vessel's arrest.

Launching of Wooden Cargo Steamship, *War Ottawa*, for British Government, by Fraser, Brace & Co.

Cape Flattery, was released Aug. 6, and proceeded to Victoria.

The s.s. *Key West*, under time charter to Canadian Pacific Ocean Services, Ltd., for the Oriental trade, has been repaired at Victoria by Yarrows, Ltd., after having damaged her main air pump gear, when two days out of Vancouver recently.

The s.s. *Celtic Prince*, which ran ashore recently at St. Barnabe Island, St. Lawrence River, was taken to the dry dock at Lauzon, Que., early in August, where she will be repaired by the Davie Shipbuilding & Repair Co.

The British Court of Appeal has dismissed the appeal of the owners of the s.s. *Kingsway*, from the judgment confirming the report of the Liverpool District Registrar, in assessing the amount payable by them to the Allan Line as owners of the s.s. *Grampian*, for damages sustained in a collision in the River Mersey, May 14, 1915.

The Japanese steamship *Canada Maru*,

Wooden cargo steamship *War Babine*, for British Government, just prior to launching by Foundation Co. of British Columbia, at Victoria.

Steel cargo steamship *War Isis*, built for British Government by Port Arthur Shipbuilding Co. The photograph, taken at Montreal, shows the steamship loaded with grain and ready for sea.

which ran ashore near Cape Flattery, late in July, was released by the salvage tug *Salvor*, Aug. 5, and proceeded to Victoria, B.C., under her own steam, for examination. It was announced Aug. 7, that Capt. Y. Yamomuto, master of the vessel, com-

proximately \$70,000, cover the renewal of about 37 plates, the straightening of 70 frames, and the repair of 4 bulkheads. It is expected that the contract will be given to Yarrows, Ltd.

Canadian Pacific Ocean Services' s.s.

laid proposals before the Louisburg, N.S., town council, for the construction of a dry dock there. The site mentioned is to the west of the Dominion Coal Co.'s property on the water front. The proposal will be submitted to the ratepayers.

The French Government has issued a writ against the Belgian s.s. *Imo* for \$2,000,000, in respect of the explosion of the s.s. *Mont Blanc* in Halifax harbor, Dec. 6, 1917, and a counter claim has been entered by the owners of the s.s. *Imo*. The case will be heard by Admiralty Court at Halifax, N.S.

The Strait of Canso Ferry Co. has purchased the s.s. *Chignecto* to replace the s.s. *Arcadia*, which it sold recently to Hendrys, Ltd., Halifax, N.S. The *Chignecto* was built at Port Greville, N.S., in 1908, and is screw driven by engine of 16 n.h.p. Her dimensions are: length 78.6 ft., breadth 17.8 ft., depth 7.2 ft.; tonnage, 86 gross, 36 register.

The Newfoundland schooner *Gladys M. Hollett*, 159 tons, which was attacked by a German submarine, Aug. 9, when bound from Twillingate, Nfld., for New York, was subsequently towed into port. The bomb placed on board, though having

exploded, failed to sink her. She will easily be righted and repaired.

A German submarine which has been operating off the Atlantic coast, seized the North Atlantic Fishing Co.'s trawler *Triumph*, about Aug. 20, and after equipping her with guns proceeded to harass the fishing fleet off the North Atlantic banks. Several fishing schooners have been torpedoed, as well as the large schooner *Dornfontein*, recently built in New Brunswick, and which had sailed on her maiden voyage to South Africa. It is reported that six submarines are working along the coast, with the avowed in-

ment of hands owing to the scarcity of labor, and the abnormal demands for wages.

There was a considerable decrease in the traffic passing through the Lachine canal during July, as compared with July, 1917. The chief decrease was in grain, of which 1,130,932 bush. passed through in July, 1918, compared with 2,998,051 bush. in July, 1917. The coal carried was 344,559 and 335,039 tons for the same periods respectively.

It was announced recently that the shipping of trans-Atlantic freight was too concentrated at Montreal during the cur-

## Ontario and the Great Lakes.

The U.S. s.s. *Wiley M. Egan*, which sank in the Welland Canal, near the M.C. R. swing bridge south of Welland, July 15, was raised Aug. 6, and towed to Port Colborne.

The Webster Steamship Co.'s s.s. *Muriel W.*, which grounded at Gabriels Point, near Port Colborne, July 30, while bound from Erie to Montreal with coal, was released Aug. 4, after lightering about 2,000 tons of coal.

The U.S. *John Webster*, which was built in 1917, for ferry service between Morristown, N.Y., and Brockville, Ont., is stated to have been requisitioned by the U.S. Government for service on the Erie Canal between Buffalo and Troy, N.Y.

The C.P.R. Great Lakes passenger service will close for the season, by the sailings of the steamships *Assiniboia* and *Kewatin* from both ends of the Port McNicoll route, Sept. 28, and of the s.s. *Manitoba* from Owen Sound, Sept. 30, and *Fort William* and *Port Arthur*, Oct. 3.

The Dominion Marine Department received tenders to Aug. 30, for breaking ice in the harbors of Port Arthur and Fort William, Thunder Bay, Lake Superior. The tenders cover periods of 5 and 10 years, the price for the work to be quoted for each year in either case.

The Marine Department has arranged with the Marconi Wireless Telegraph Co. to have the Great Lakes radiotelegraph stations broadcast weather forecasts from the stations at Toronto, Midland, Kingston, Sarnia, Sault Ste. Marie and Port Arthur, as they are received from the Meteorological Observatory at Toronto.

The Muskoka Lakes Navigation and Hotel Co.'s steamboat *Kenosha* was destroyed by fire while at her dock at Lake Joseph, Aug. 13. She was built at Gravenhurst, Ont., in 1883, and was screw driven by engine of 16 n.h.p. Her dimensions were: length 100.8 ft., breadth 18.2 ft., depth 6.2 ft.; tonnage, 225 gross, 124 register.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for July, as follows:—Lake Superior, 602.26 ft.; Michigan and Huron, 581.92; St. Clair, 575.98; Erie, 572.58; Ontario, 246.85. Compared with the average July levels for the past 10 years, Lake Superior was 9.20 ft. below; Michigan and Huron, 1.05 ft. above; Erie, 0.27 ft. below, and Ontario 0.09 ft. below.

## Manitoba, Saskatchewan and Alberta.

The s.s. *Kenora* is being operated for excursion parties on the Red River between Winnipeg and Lake Winnipeg. She was owned formerly by the Rainy River Navigation Co., Fort William, Ont., and was sold about two years ago to Alex. Mackenzie, Winnipeg, and is now registered in the name of John F. Wallar, Winnipeg. We have been informed recently that negotiations are in progress which may lead to her being sold again for Pacific coast service, which would necessitate her dismantling and being shipped to the coast overland. She was built at Kenora, Ont., in 1897, and is screw driven by engine of 38 n.h.p. Her dimensions are: length 119.9 ft., breadth 28 ft., depth 8.3 ft.; tonnage, 486 gross, 269 register.

Wooden cargo steamship, *War Sumas*, for British Government, just prior to launching by Pacific Construction Co., at Port Coquitlam, B.C.

tention of destroying the fishing fleets. The protection of the coast line is under U.S. Navy jurisdiction, and the proper steps are being taken to deal with the menace.

## Province of Quebec Marine.

The St. Lawrence Shipping & Trading Co.'s s.s. *Guide* sailed from Quebec, Aug. 2, for Lower St. Lawrence ports with a general cargo. It is said that she was compelled to go without a full comple-

ment season. This was regarded as detrimental to the interests of the port of Quebec, and the matter was taken up with the Imperial authorities, with whom the control at present rests. It is now stated that from enquiries which have been instituted at Quebec regarding the labor situation, two vessels a week can be handled, and should additional vessels require to be handled there, other local labor now engaged elsewhere would be recalled. It has since been announced that two steamships a week will be loaded at Quebec until the close of St. Lawrence navigation.

## British Columbia and Pacific Coast.

Canada West Coast Navigation Co.'s auxiliary schooner Malahat has loaded lumber at Victoria, and sailed for Iquique, Chile.

The controlling interest in the British Columbia Marine Railway Co., Vancouver, held by G. G. Bushby, has been sold to I. Hopkins, J. K. McKenzie and associates.

The B.C. Government is reported to have purchased a sea-going steam tug in Seattle, Wash., for the Pacific Great Eastern Ry. service between Vancouver and Squamish.

The Dominion Public Works Department, received tenders, to Aug. 24, for repairs to the wharf at Victoria, and for the construction of a float at Hardy Bay, and also to Aug. 31, for repairs to the wharf at Tofino, Comox-Alberni District.

The C.P.R. discontinued the trips of the s.s. Princess Alice in the B.C. Coast Service, Aug. 10, and this necessitated changes in the sailing dates of the s.s. Princess Sophia, these being fixed for Aug. 17, 27, Sept. 7, 17, 28, Oct. 8, 19, 29, from Vancouver.

The channel in the First Narrows at Vancouver, has been dredged to a little over 900 ft. wide, with an average depth of 32 ft. at low tide. The cut on the north side of the Narrows and Parthia Shoal has been dredged to a depth of 35 ft. at low water. The sweeping of the shoal has been completed and there is a least depth of 22 ft. there at low water, with the exception of a point on the south side, where it is 29 ft.

The C.P.R. s.s. Tees is reported to have been bought by the British Columbia Salvage Co., to replace the s.s. Salvor, sold recently for the trans-Pacific trade. It is stated that she will be overhauled for salvage service, and renamed Salvor. She was built at Thornaby, Eng., in 1893, and is screw driven by engine of 95 n.h.p. Her dimensions are: length 165 ft., breadth 26 ft., depth 10.8 ft.; tonnage, 679 gross, 441 register.

The British Columbia Salvage Co.'s s.s. Salvor is reported to have been sold to Powell Davies, Montreal, for service between Vancouver and Australasian ports. It is said that she is to be overhauled and made suitable for freight service, when her name will be changed. She was built at Govan, Scotland, in 1869, and was formerly known as Danube. She is screw driven by engine of 65 n.h.p., and her dimensions are: length 215.6 ft., breadth 27.7 ft., depth 20.7 ft.; tonnage, 988 gross, 621 register.

The Union Steamship Co. of British Columbia is reported to have sold its s.s. Comox to the Gulf of Georgia Towing Co. She has been operated for several years on the logging camp and cannery routes out of Vancouver, it is now stated that she will be converted for towing purposes. She was built at Vancouver in 1891, the steel plates and frames having been shipped from England. She is screw driven by engine of 24 n.h.p., and her dimensions are: length 101 ft., breadth 18.1 ft., depth 5.2 ft.; tonnage, 101 gross, 60 register.

**Increase in Charges for Elevating Grain.**—The Board of Grain Commissioners has increased the charges for elevating grain from \$4 to \$4.35 per 1,000 bush., following an increase of from \$3 to \$4. The Dominion Marine Association has entered a protest against the latest increase.

## Shipbuilding in Canada During 1918.

"Canada's War Efforts, 1914-1918," issued recently by the Director of Public Information, contains the following, under the head of "Shipbuilding":—

tracts in Canada, on behalf of various governments, for a number of submarines for the Imperial Government, as well as several submarines for the Italian and

Ships Which Have Been Launched Since Jan. 1, 1918, or Will Be Launched Before Dec. 31, 1918.

	Steel vessels.				Deadweight carrying capacity (approx.).	Wooden vessels.				Deadweight carrying capacity (approx.).
	Atlantic Coast shipyards.	Great Lakes shipyards.	Pacific Coast shipyards.	Total.		Atlantic Coast shipyards.	Great Lakes shipyards.	Pacific Coast shipyards.	Total.

Grand total: Ships.....										112
Tonnage (approximate deadweight carrying capacity).....										446,600

The above figures do not include a large number of small craft of less than 1,000 tons building at present, such as trawlers, drifters, small schooners, etc.

In connection with the government shipbuilding programme, 20 ships, with a gross tonnage of 55,000, are under construction under contracts entered into by the Marine Department. Seven will be delivered during 1918, the remainder in 1919.

The Naval Service Department, since the outbreak of the war, has placed con-

Russian Governments; about 550 motor submarine chasers for the Imperial Government; about 36 motor submarine chasers for the French Government; a number of steel lighters, shipped in "knock-down" form, for the Imperial Government's use in Mesopotamia, and a large number of trawlers and drifters for the Imperial Government.

### Mainly About Marine People.

**K. J. Burns**, Assistant General Freight and Passenger Agent, Great Northern Ry., Vancouver, B.C., is reported to have resigned to enter Canadian Robert Dollar Co.'s service there.

**Capt. J. R. Grauer**, master of the Gulf of Georgia Towing Co.'s tug Ellison, died at Vancouver, B.C., July 28, aged 54. He came to Canada from Norway in 1892, and had since been engaged on vessels plying out of Vancouver.

**Capt. G. P. Mackay**, Treasurer of the Lake Carriers' Association, Cleveland, Ohio, died there, Aug. 5, aged 80, after a long illness. He was connected with the Lake Superior trade for many years, and was well known throughout the Great Lakes.

**Capt. L. F. Davison**, Assistant Shore Superintendent, Canadian Pacific Ocean Services, Ltd., Vancouver, B.C., is reported to have been appointed master of the company's s.s. Montague, vice Capt. A. J. Hailey, who has been given extended leave of absence on account of ill health.

**Hon. C. C. Ballantyne**, Minister of Marine, was a guest at the Canadian Pay Corps dinner in London, Aug. 13. One press dispatch credits him with plainly hinting at the coming creation of a Canadian navy, and another report says he expressed the belief that Canada would have a maritime unit of its own shortly, working in harmony with the Admiralty.

**E. S. Thompson**, who retired as Passenger Manager, Allan Line, Liverpool, Eng., recently, after 40 years service, was presented with a silver tray and a cheque by a number of transportation friends. On account of Mr. Thompson's unavoidable absence, W. Baird of Canadian Pacific Ocean Services, Ltd., which now owns the

Allan Line, acted as the recipient.

**G. M. Bosworth**, Vice President (Traffic), C.P.R., and Chairman Canadian Pacific Ocean Services, Ltd., has retired from the former position, to devote his whole time to the duties of the latter position. Fuller particulars and biographical data will be found under Transportation Appointments and Mainly About Railway People in another part of this issue.

**Sir George Gibbons**, ex-Chairman of the Canadian section of the International Waterways Commission, died at the Royal Victoria Hospital, Montreal, Aug. 8, following an operation. He was born at St. Catharines, Ont., July 2, 1848, and educated there and at Toronto. He was admitted to the bar in 1869, and engaged in practice in London, Ont. He was engaged in the negotiations between Great Britain, Canada and the U.S., dealing with boundary waters, which led to appointment of the International Waterways Commission, and he was Chairman of the Canadian Section from 1905 to Nov. 10, 1911.

**Coals, Limited**, the incorporation of which was mentioned in our last issue, was formed to take over the coal handling plants owned formerly by Wilson-Pater-son Co., on the Lachine Canal basin and at Casgrain St., Montreal, on the C.P.R., and the new company is closely allied with the Ogdensburg Coal & Towing Co., and the Century Coal & Coke Co. The head office is at 134 McCord St., Montreal, and W. L. McDougald is President, F. F. McCourt, Vice President, and G. S. McSweeney, Secretary-Treasurer. It is reported that on the completion of organization, interests associated with Canada Steamship Lines, Ltd., will be represented on the board.

## General Shipbuilding Notes Throughout Canada.

**British-American Shipbuilding & Engineering Co., Vancouver, B.C.**—It is reported from Vancouver, that contracts have been signed in London, Eng., for the construction by this company, of 20 wooden cargo steamships for Norwegian interests. The site of the plant is on the old Kitsilano Reserve, and it is said that 8 ways are to be laid down at once. The original plans showed 8 building slips, machine shops, blacksmith shop, mould lofts, etc., and a composite type of vessel is to be built. As announced in our May issue, the company has been granted an export permit to build 20 vessels for Norway.

**Canadian Car & Foundry Co., Fort William, Ont.**—The first of the 12 mine sweepers which are under construction by this company at Fort William, Ont., for the French Government was launched

ways are to be laid down and the construction of 3 sailing vessels of 1,500 tons each commenced as soon as possible, for Norwegian interests. Two of these vessels are said to be for H. C. Hansen, and the third for the Porsgrund Steamship & Sailing Co., all of Porsgrund, Norway. Orders for another two vessels for the same interests are expected. Mention was made in our last issue of the negotiations then proceeding for the acquisition of a site for shipbuilding purposes by Chris. Cholberg, who is now mentioned as Manager of the new company.

**Comeauville Shipbuilding Co., Comeauville, N.S.**—A three masted schooner, 449 tons gross and 385 tons register, was launched at this yard, Aug. 8. This is the fourth vessel turned out by this company, but the first from this yard, the other three having been launched at

of shipbuilding berths throughout the Dominion as they became vacant. In presenting these details, we said: "The Davie Shipbuilding Co., Lauzon, Que., will have two berths available in August, and two additional before the close of navigation. It is expected to place contracts with this company as berths become vacant, for steamships of 3,000 tons deadweight capacity each. Delivery of the first of these is expected before the close of navigation this year, and of the balance during the summer of 1919."

We were officially advised, Aug. 15, that an order had been given the Davie Co. by the Marine Department for 2 steel steamships of 5,100 tons d.w. each. There appears to be no confirmation of the statement that the company is negotiating a contract for steel steamship building for U.S. interests, and under the existing circumstances, it scarcely seems likely.

**Ernst Shipbuilding Co., Mahone Bay, N.S.**—The schooner William Duff, built in this yard, was completed and ready for

The schooner Celina K. Goldman, built by St. Martins Shipbuilding Co., St. Martins, N.B., for British Colonies Transportation Co., before and after launching.

July 29, and the second on July 31. These vessels are 143 ft. over all, 135 ft. between perpendiculars, moulded breadth 22½ ft., moulded depth to main deck 13¼ ft., to quarter deck 14¾ ft. They have a displacement of 630 tons, and have a freeboard (Lloyd's) of 15 in.

**Cape Breton Shipbuilding Co., Johnstown, N.S.**, has under construction a three masted schooner of 400 tons, which has been sold. The head office is at North Sydney, the shipbuilding yard being at Johnstown, and is in charge of A. Finlayson, as Managing Director. The officers are:—President, F. L. Kelly; Vice President, D. H. McDougall, President, Nova Scotia Steel & Coal Co.; Managing Director, A. Finlayson, formerly railway contractor in the west; Treasurer, W. Hackett; Secretary, N. A. McMillan. Other directors: G. W. Kyte, C. Mackenzie, R. T. Sainthill and R. Musgrave.

**Cholberg Ship Co., Victoria, B.C.**—It was reported that work would be commenced during August on laying out of a shipbuilding yard in the Victoria inner harbor, in the Mud Bay section of the Songhees reserve. It is stated that three

Meteghan. It is said that she has been sold to Newfoundland parties. Another schooner is well under way, and when launched will be named Edward L.

**J. Coughlan & Sons, shipbuilders, Vancouver, B.C.**, entertained about 60 foremen and heads of departments at dinner recently, when they were complimented on the expeditious manner in which the work of rehabilitation after the recent fire, was carried out.

**Davie Shipbuilding & Repair Co., Lauzon, Que.**—It was reported recently that G. D. Davie, Managing Director, had visited the U.S. in connection with a contract for building of several steel steamships, and that the company had been invited to tender for the work. We are again constrained to call attention to the particulars relating to the Dominion Government's shipbuilding programme, and that there is practically no likelihood of the government permitting the construction of steel steamships for outside parties for some time to come. Canadian Railway and Marine World for April contained full details of the government's programme, and the proposed utilization

sea early in August, and left for Lunenburg. Her dimensions are: length of keel, 127 ft., breadth 33 ft., depth 12 ft. 7 in., and she has a net tonnage of 365. She is equipped with gasoline engine for hoisting sails, anchor, etc., and also with

**Fauquier & Porter, Hantsport, N.S.**, launched the schooner Margaret F. Dick, August 24, for the British Colonies Transportation Co., Ltd., St. John, N.B. She is of about 1,000 tons capacity, and is the second vessel to be built for this owning company, which was incorporated recently. The first vessel, the Celina K. Goldman, built by the St. Martins Shipbuilding Co. at St. Martins, N.B., is mentioned elsewhere on this page.

**G. Gulliford, Britannia, Nfld.**, has completed the three masted schooner Barbara Barr for G. M. Barr and J. T. Currie. She is 363 tons gross, and has the following dimensions: length 142 ft., breadth 29½ ft., depth 12 ft. She is equipped with an 8 h.p. engine for raising the anchor and sails, handling cargo, pumping, etc.

**R. H. Howes Construction Co., Mete-**

ghan, N.S.—The three masted schooner Richard B. Silver was launched at this yard at the end of July. She is built for Lloyd's class A1 with a star, for 12 year rating. Her dimensions are: length 150 ft., breadth 34½ ft., depth 14¾ ft.; tonnage, 485 gross, 400 register. She has been bought by H. W. Adams et al., Lunenburg, N.S., and is at Liverpool, N.

miles, a speed of a little more than 9 miles an hour is said to have been made, on a consumption of 8 tons of coal, which included banking the fires three times and raising steam once. She has a cargo capacity of about 300 tons, and when fully loaded will have a draft of about 10 ft. On the completion of the trip she was placed in the Marine Department

the St. Lawrence Dock, Levis, Que., a marine railway and slip, where work is proceeding on the conversion of the dredge Galveston, which was purchased from the Dominion Government, into a cargo freighter. When completed, this vessel will be taken over by French interests, for operation in the coal service between England and France. She will have a capacity of 2,500 tons. The Quebec Harbor Commission's dredge No. 1 was also purchased and has been remodelled and named Silene. She has now a dead-weight capacity of 2,350 tons, and was expected to sail for France for similar service, about the end of August. It is the company's intention to limit its new shipbuilding to small craft, such as steam trawlers, harbor tugs, etc.

**Nova Scotia Shipbuilding & Transportation Co., Liverpool, N.S.**—The schooner James G. Joy was launched Aug. 3, for Job Bros., St. John's, Nfld. This is the fourth vessel launched by the company since Nov., 1917. She is of the following dimensions: length over all 150 ft., length over keel 128 ft., breadth 33 ft., depth of hold 12 ft.; tonnage, 460 gross. She is a tern schooner for the fish trade and has been built with a poop deck carried forward of the main mast. Two other schooners of smaller capacity are under construction.

**The Port Arthur Shipbuilding Co., Port Arthur, Ont.**, will, altogether, build 8 trawlers this year for the Naval Service Department, similar to the Castle class. Two of these sailed east early in August, and two were launched Aug. 3, and were expected to be ready to sail about the end of the month. Two more will be launched about the middle of September, and another two early in October.

**Prince Rupert, B.C.**—The G.T.P.R. dry dock and ship repair plant here has been leased to the Mullen Contracting Co., Pittsburg, Pa., for a term of years. It is stated that J. L. Mullen of Pittsburg, Pa., has undertaken the work of turning the dry dock into a shipyard, and that contracts for 10 steel steamships of about 8,800 tons each, have been secured.

**Quebec Shipbuilding & Repair Co., Quebec, Que.**, has laid the keel for a 600 ton

Launching of steel steam trawler for Naval Service Department.

T.R. 12, built by Collingwood Shipbuilding Co., Collingwood, Ont., was christened by the Governor General's daughter, Lady Rachael Cavendish. The steel cargo steamship War Wizard, being built for the British Government, is shown to the right of the illustration.

S., loading for Buenos Ayres. She is equipped with stockless anchors, and Canadian Fairbanks-Morse type Z engine.

**McLean & McKay, Economy, N.S.** have a 3 masted schooner of 400 tons capacity, nearing completion. The dimensions are: length over keel 136 ft., breadth 23 ft., depth of hold 12 ft.

**Milton Shipbuilding Co., Yarmouth,**

yards at Prescott, Ont., and it is expected that she will eventually be used on the Great Lakes. The construction of the vessel was commenced in Aug., 1907, and she was launched in November, work proceeding slowly on her during the winter.

**National Shipbuilding Co., Goderich, Ont.**—In our last issue, some comment was made on incorrect information given

Canada Steamship Lines steamship T. P. Phelan, just prior to launching at Three Rivers, Que.

N.S., has a schooner of about 350 tons under construction at Milton. Amongst those interested in the company are E. B. Ehrogott, H. C. Churchill, B. A. Wetmore, E. L. Crosby and T. A. Crosby.

**Montreal Shipbuilders, Ltd., Montreal.**—The trial trip of the reinforced concrete steamboat Concretia, on July 23 to 25, to which reference has been made previously, was on the St. Lawrence River between Montreal and Prescott, with overnight stops at Stanley Island and Morrisburg. During the trip of 108

in the daily press as to the establishment of a large shipbuilding plant on the south shore of the St. Lawrence River, to be operated by a large combination of Ontario and Quebec interests. At the same time we gave the correct details, so far as they were then available. We have since been advised by W. H. Hutchinson, President, National Shipbuilding Co., that the scheme for a shipbuilding yard at New Liverpool, Que., as mentioned in our July issue, is not to be proceeded with, but that his company is establishing at

schooner, to be built on the lines of the schooner M. P. Connolly, built by the same company, and which was wrecked at Sable Island, N.S., recently.

**St. Martins Shipbuilding Co., St. Martins, N.B.**—The schooner Celina K. Goldman, for the British Colonies Transportation Co., Ltd., St. John, N.B., was launched Aug. 7, the christening being performed by Mrs. C. E. A. Goldman, Toronto, wife of one of the directors of the company. The Celina K. Goldman is the first of three schooners which the

British Colonies Transportation Co. is having built for the South African trade. She has a carrying capacity of 1,000 tons, and is of the following dimensions: length over all 171 ft., length between perpendiculars 161 ft., length over keel 141 ft., breadth 35 ft., depth of hold 12 ft. 8 in.; tonnage, 525 gross, 477 register. She is loading lumber at Parrsboro, N.S., for South Africa. The St. Martins Shipbuilding Co. intends filling the moulds again, and expects to use considerable foreign wood, with the idea of obtaining a better class.

W. D. Sweeney, Yarmouth, N.S., launched the schooner Grace and Ruby, Aug. 8. She is 112 ft. long over all, and 85 tons register. She is to be equipped

result, permission has been granted to a company at Vancouver, B.C., to build 20 wooden vessels for Norwegian interests. It is stated that numerous applications for permission to build steel vessels for foreign register have been refused, as it is believed that the Dominion government's own shipbuilding programme would be interfered with. For some time past it has been stated orders have been offered at various plants in British Columbia for the construction of wooden vessels for outside interests, and it was mentioned, and as we pointed out, wrongfully mentioned, that they were for the British Government. Norwegian interests were reported recently to be negotiating for a site for a shipyard at the Songhees Re-

a little additional publicity. The following paragraph appeared in the August issue of a monthly devoted to marine "information":—

"Dominion Iron & Steel Co., Montreal, Que., Canada, last March, undertook to erect a steel plant at Sidney, B.C., capable of an annual output of 150,000 tons of ship steel. The plans, now completed, provide for a shipbuilding plant to be built at Halifax for the construction and repair of steel vessels. This part of the programme will be begun at once."

The Dominion & Steel Co., it is needless to point out, has not undertaken to erect a steel plant at Sidney, B.C., the company's plant being at Sydney, N.S. The plans which the company has in connection with the extension of its Sydney plant, for the manufacture of steel plates for shipbuilding, by arrangement with the Dominion Government, do not provide for a shipbuilding plant at Halifax. The shipbuilding plant at Halifax, which will utilize ship plates made by the Dominion Iron & Steel Co., at Sydney, N.S., is being built by Halifax Shipyards, Ltd., which company is erecting the plant, and which has no connection whatever with the Dominion Iron & Steel Co.

The reinforced steamship Concretia, built by Montreal Shipbuilders, Ltd.

with auxiliary power and will be used in the fishing business.

Three Rivers Shipyards, Ltd., Three Rivers, Que.—The National Shipbuilding Corporation of Boston, Mass., with a shipbuilding plant at New Orleans, La., is reported to have secured the capital stock of the Three Rivers Shipyards, Ltd., and it is stated that the building of wooden steamships for foreign account will be undertaken there, the National Shipbuilding Corporation having orders on hand amounting to between \$8,000,000 and \$10,000,000, which will keep the yards, with 15 ways, busy until the end of 1919. It is also stated that the National Shipbuilding Corporation intends converting the shipyards into a car building plant, should the shipbuilding show signs of declining. Three Rivers Shipyards, Ltd., which was incorporated early in the year, has a 5 acre site on the western side of Three Rivers harbor, and is building 2 wooden steamships for the British Government, under order from the Imperial Munitions Board, placed with T. M. Kirkwood, Toronto, who is President of the company.

C. T. White & Son, Alma, N.B.—The schooner Vincent A. White, 453 tons, was launched at this yard, Aug. 7, and this was followed on Aug. 9 with the launching of the schooner Meredith A. White. The first named vessel will load general merchandise at Apple River, N.S., for South Africa.

Wooden Vessels for Foreign Registry.—A press dispatch from London, Eng., states that Sir William Beardmore, of Wm. Beardmore & Co., shipbuilders, Glasgow, Scotland, and other shipbuilders, interviewed Hon. C. C. Ballantyne, Dominion Minister of Marine, in London, early in August, relative to the building in Canada of wooden vessels for Norwegian registry. It is stated that as a

serve, Victoria, and the Victoria Shipbuilding Co., in which J. H. Price, President, Cameron-Gence Shipbuilders, Ltd., is chiefly interested, was said to have

The Montreal Dry Dock, Connaught.—A report is current in Montreal, that Canadian Vickers' floating dry dock is to be taken to Halifax for operation by Halifax Shipyards, Ltd. We have been unable to obtain any confirmation of this, but, if such an arrangement could be made, it would seem that there would be considerable advantage in having the dock there for the winter. There is no question but that additional dry dock facilities are urgently required at Halifax, and until the plans now being considered, can be carried out, some temporary accommodation should be provided to meet the needs of the situation. The matter is one which might profitably engage the attention of those concerned.

Steel steam trawler for Naval Service Department, built by Port Arthur Shipbuilding Co.

practically completed arrangements with the British Government for the construction of 20 wooden vessels.

### "Information" That is Not Information.

In our last issue we gave an instance of the type of incorrect information, which is being published in many papers, news, trade and technical. We do not wish to assume the task of correcting all the errors which find their way into print, nor even to pose as infallible, but some of the items are so absurd as to call for

The auxiliary schooner M. P. Connolly, which was launched at Quebec, Que., in October, 1917, was reported, Aug. 19, to have become a total loss, with her cargo, near Sable Island, Aug. 19. She was built by the Quebec Shipbuilding & Repair Co. at its St. Laurent yards, Isle of Orleans, and was the first wooden vessel built in Quebec since 1893. Her dimensions were: length over all 223 ft., breadth 42 ft., depth of hold 20 ft.; deadweight capacity about 2,100 tons; net register tonnage 1,350 tons. Full details of the casualty were not obtainable at the time of writing, the crew still being at Sable Island.

## Toronto Harbor Commissioners' Office Building.

For several years back the need of an office building to accommodate the various interests doing business on the Toronto waterfront has been from time to time impressed upon the Toronto Harbor Commissioners. Along with a desire to do everything in their power to facilitate business around the harbor, it was felt by the commissioners that the time had arrived with an opportunity to show their unlimited confidence in the coming importance of the harbor front from the viewpoint of the development work which they are now undertaking. Consequently, with the nearing of the expiration of the lease of the commission's Bay St. offices and the necessity of obtaining larger quarters for the increased staff, all of the

continuous automatic record of the fluctuations in the water levels of the lake. On the main floor are the Comptroller's department, Harbor Master's office and the construction department. On the 2nd floor are the offices of the Chief Engineer and Manager, Assistant Chief Engineer, surveys and lands department, Secretary, industrial department and the board room, the latter being 35 by 16 ft., thus giving ample space for receiving deputations, etc. The third floor is partly occupied by the commission's designing and drafting department. Separate luncheon rooms for men and women are being fitted out on the 6th floor. The privilege of using this accommodation will be extended to all the occupants of the building, so that

Toronto Harbor Commissioners' Office Building.

above served to confirm their decision to erect a building of their own. The result was the construction of what may be termed the latest addition to the Toronto waterfront sky line.

The building is a 6 story structure, facing on what will ultimately be the 86 ft. Queen's Quay or marginal way serving the waterfront, having a frontage of 100 ft. along the water by 65 ft. deep, and is of reinforced concrete construction resting on spread footings. These footings are in turn carried by round bearing piles driven to rock. The walls are of Indiana limestone, furred with 4 in. hollow tile, and the building is fronted with 8 stone columns extending from the 2nd to the 6th floors.

The centre of the building is taken up by the stairs, 2 elevators, vaults and piping shaft, and around these run the corridors, serving the different offices and giving ideal lighting conditions for all of the offices. On each floor there is available for occupancy over 4,200 sq. ft. of space. In the basement, the floor of which is just 3 ft. below the grade of the street, and which is well provided with sunlight, are the janitor's quarters, photograph and blue printing departments, stationery storeroom and heating plant; also the hydrograph, operated by a float, giving a

on stormy days, or, in fact, every day, anyone desiring to obtain a light luncheon may do so without leaving the building.

Already considerable space in the remaining upper floors of the building has been taken up by various firms. Up to the time of writing, offices have been leased to J. E. Russell, contractor; David Ross, engineer and contractor; The Construction & Supply Co.; Roger Miller & Sons, contractors; Alfred Chapman, architect, and the Sherwood Construction Co. By the terms of the leases, the commissioners furnish the floor covering of battleship linoleum, and also supply the lighting current. The offices are being rented for \$1.50, \$1.25 and \$1 per sq. ft. per year. It is the commissioners' ultimate intention to enlarge their garage, located a short distance from the building, to afford accommodation to all the tenants and thus do away with any possible infractions of the city parking by-law, as well as affording protection for cars during stormy weather.

Along the face of the dock or landing stage, which has been constructed along the front of the building, are being provided facilities for public use for picking up and landing special parties. Seats are also being placed along the dockage, for the accommodation of any of the citizens

desiring to while away spare moments by the waterfront.

## Control of Shipping in Newfoundland.

On the Minister of Shipping's recommendation, and under the authority of the War Measures Act, 1914, and amending acts, the Governor in council has approved the following regulations regarding the control and regulation of shipping:

The managing owner or agent of any vessel owned or registered in Newfoundland or of any vessel chartered in whole or in part by or to any person residing or trading there, before allowing it to proceed to any port or between any ports outside Newfoundland, shall send a written notice of the proposed voyage to the Minister of Shipping, and submit a copy of the proposed charter party (if any) and the rates of freight for the voyage. The minister reserves the right to approve or disapprove of voyage, charter party, and rates of freight, and to vary same in whole or part. No vessel shall proceed upon a voyage to any foreign port or between foreign ports unless and until the owner or agent has received official notification of the approval of the minister. The minister may instruct the Customs Department to refuse a clearance or entry to any vessel to or from any port in Newfoundland to or from any port or ports outside Newfoundland; and may also instruct any collector to withdraw or cancel any such clearance or entry already given which in the minister's opinion ought to be withdrawn or cancelled. Any master of any vessel sailing without a clearance or whose clearance has been withdrawn, shall be guilty of a breach of these regulations. Any person guilty of a breach of any of these regulations shall be liable to a penalty not exceeding \$5,000, or in default of imprisonment not exceeding 6 months, to be recovered and enforced in a summary manner before any magistrate or justice of the peace; and such penalty shall be in addition to and not in substitution for any penalty to which any person may be subject under sec. 8 of the War Measures Act, 1914.

**Toronto Ferry Co.'s Fares.**—The Toronto City Council is making another effort to prepare a bylaw for the Ontario Government's approval, granting the Toronto Ferry Co. power to increase its fares for adults' ordinary tickets for the round trip from the mainland to Toronto Island, from 10c to 15c, and from 5c to 8c for the single trip. The second attempt limits the increase for the duration of the war, and maintains the fares for children and picnic parties and for baseball combination tickets, as at present. There is continued opposition to the proposed increase, and the point has been raised as to what constitutes a picnic party. The dictionary definition is capable of considerable exploitation.

**Vessel Losses by Submarines.**—Vessels sunk during July by submarines aggregated 313,011 gross tons, of which 176,479 gross tons were British, and 136,532 tons belonged to allied and neutral countries. This is an increase of 10,965 gross tons British, and 20,552 gross tons allied and neutral, over June, and a decrease of 55,301 gross tons British, and 3,829 gross tons allied and neutral, as compared with the figures for May. The sailings to and from Great Britain during July showed a great increase, the total gross tonnage being 7,718,898 gross tons, an increase over June of 288,512 gross tons.

## Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held into the following casualties recently, and judgments delivered:—

### Stranding of s.s. City of Vienna.

Held at Halifax, N.S., July 8, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander G. E. Bridge, R.N.R., and Lieut. J. L. Poppleton, R.N., as nautical assessors, into the stranding of British s.s. City of Vienna, owned by the Hall Line, Liverpool, Eng., on Black Rock, Sambro Ledges, at the entrance to Halifax Harbor, July 2, during a dense fog. The court found that the master, J. W. Partington, a stranger in those waters, and holding the highest grade certificate, navigated his vessel with every care and precaution which prudence demanded, from Cape Gaspe, where he encountered fog, taking his vessel, without sight of land or observation of any kind, from the Gulf of St. Lawrence into Cabot Strait, and out into the Atlantic afterwards to reach Halifax by a zigzag course. On July 1, he obtained a sight and found his position, which was verified by a cast of the lead. On that day he received a message warning him of the presence of an enemy submarine in the vicinity of Halifax, and he elected to alter his course more in shore, with the consent of the officer in charge of troops then on board. Weather conditions then permitted of him seeing from 4 to 5 miles, without perceiving land. The weather then became thicker and the speed was reduced to half and finally dead slow and stopped, and the vessel struck while barely moving. His attention to soundings was all that could be desired, and his vigilance on the bridge cannot be questioned, his actions throughout showing that he possessed very good judgment in resolving his calculations based on dead reckoning, and being a stranger, he was not aware of the fact that after a steady easterly wind, a set to westward is keenly felt, the allowance for which can only be arrived at by local knowledge. The court found him in error in not stopping his vessel upon hearing the Sambro fog signal ahead, or slightly on the port bow, and then circling until he heard the Chebucto Head fog signal, being then only 6 or 7 miles distant. This error is by no means culpable under the circumstances, but, unfortunately, it jeopardized valuable property. It was therefore held that the master was not in default, but that he committed an excusable error of judgment.

Regarding the discipline amongst the troops on board, all of whom were landed safely, the court remarked that this remarkable feat was without doubt due to the discipline which the officer in command had instilled in the men, with the help of his subordinate officers, the men, one and all going to their stations calmly singing verses of song, and upholding in every way, the best traditions of British soldiers.

The court remarked on the evidence that there were only four lifeboats on board, but that 77 rafts had been added at Montreal. The officer in command stated that he had expostulated before leaving Montreal, at the insufficient number of lifeboats, but was told that there was a sufficient number of life rafts to compensate. It is within the province of the court to enquire into the equipment of vessels, and the court expressed the opinion that life rafts do not meet the requirements. They are not placed on vessels as substitutes for lifeboats, but as adjuncts, and it therefore condemned the

continuance of equipping vessels in this manner.

The court also expressed its surprise at the wholesale depredations and wanton destruction committed by residents in the vicinity of the wreck after it had been for the time abandoned. It suggested that means should be taken to prevent a recurrence of such disgraceful pillage, and for the punishment of the guilty parties.

### Stranding of s.s. Eugenia John Diacaki.

Held at Halifax, N.S., July 11, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander G. E. Bridge, R.N.R., and Lieut. J. L. Poppleton, R.N., as nautical assessors, into the stranding of the Grecian steamship Eugenia John Diacaki, on Transport Ledges, Egg Island, N.S., during a fog, July 2. The court, after considering the evidence, which was obtained under the greatest difficulty, owing to necessary interpretation, and to the necessity of writing questions to the first mate, who is totally deaf, found the master and mate in default, and would have looked on the stranding with some leniency had the master and mate taken casts of the lead, and made some theoretical and practical efforts, which was part of their duty, and is obligatory to keep a dead reckoning of the distance run, and to maintain the position of the vessel at each change of course. It would also have allowed much for the panicky situation caused by the receipt of a message bearing on the presence of enemy submarines, if it had been shown that the slightest effort had been made to keep each position in view by other means than supposition and assumption. Having no jurisdiction over the certificates of these men, the Greek consul was advised of the finding, for the information of his Government.

### Stranding of s.s. Ockenfels.

Held at Halifax, N.S., July 19, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander G. E. Bridge, R.N.R., and Lieut. J. L. Poppleton, R.N., as nautical assessors, into the stranding of the U.S. steamship Ockenfels, at Mars Head, N.S., June 30. The court found that the master, John Deery, from the time he left Philadelphia, navigated his vessel with prudence, and adopted every means at his disposal to obtain his position, almost from hour to hour. He, however, erred, involuntarily, in reckoning on an easterly current, while a westerly current was flowing, and also inadvertently ignored a possible leeway occasioned to the vessel by swell and the wind. This error is not considered culpable, and he was exonerated from blame, and the hope was expressed that on these matters being pointed out to him, he will exercise additional prudence in future. The evidence showed that the various messages he received as to the presence of submarines in the vicinity, did not in the least affect him in exercising proper judgment. The finding was forwarded through the usual channels to the U.S. Government.

The Lincoln Steamship Co., Selkirk Steamship Co., and Westham Steamship Co., all of Vancouver, B.C., are being wound up voluntarily, with L. Rogers as liquidator.

The North Vancouver ferry committee is considering the question of building a double end ferry steamboat, somewhat larger than the two now in operation.

## Halifax Shipyards Limited,

Progress is being made on the work in preparation for the erection of the shipbuilding plant at Halifax, N.S., some details of which have been given in previous issues. It was originally intended that the plant would include 3 shipbuilding berths, but changes have been made in the plans, so that there will be 4 berths. The contracts for the excavating, which is in progress, and for the retaining walls, etc., have been placed, as already mentioned, with the Bedford Construction Co. which also has the contract for the erection of one of the buildings, which is partly completed. Contracts for the remaining buildings are yet to be awarded. The dry dock which was taken over by the Dominion Government recently, has been leased by the company, and the plans for the whole plant are so arranged as to provide for its enlargement.

It was announced recently that Jas. Carruthers, of Montreal, who is said to have subscribed for \$500,000 of the company's stock, had resigned the chairmanship of the board. In confirming this, Mr. Carruthers stated that he had resigned because two other directors, who are interested in the Maritime Wrecking & Salvage Co., which was incorporated Dec. 29, 1917, had refused to transfer their interests in it to Halifax Shipyards, Ltd., and he did not believe in any officer of a company being interested in other companies which might interfere with its earnings. Under its charter, Halifax Shipyards, Ltd., could carry on wrecking business itself.

Roy M. Wolvin, Vice President and Managing Director, Halifax Shipyards, Ltd., stated in this connection that Mr. Carruthers had some time ago expressed a desire to withdraw from the company, and in pursuance of his request his resignation had been accepted and his subscription already replaced.

Everybody connected with the company regretted Mr. Carruthers' decision, and the loss of his personality. The prospective operations of Halifax Shipyards, Ltd., were, however, of a national character, and he and all his associates realizing this, were striving to their utmost to successfully carry out the undertaking and were making very satisfactory progress in getting the new plant into operation. Mr. Wolvin further stated that no one interested in Halifax Shipyards, Ltd., was in any way, either directly or indirectly, interested in any subsidiary company which is in competition with the new company, and that there must be some misunderstanding in this connection.

It is stated that Sir Herbert Holt, one of the C.P.R. directors, and President of the Royal Bank, has bought a large block of stock of Halifax Shipyards, Ltd., and that while he may not become a member of the board, his interests will probably be represented by J. S. Norris, General Manager, Montreal Light, Heat & Power Co.

**U.S. Lake Wages Scale.**—Cleveland, Ohio, press dispatch, Aug. 14:—The committee appointed at the last meeting of the directors of the Lake Carriers' Association to fix a scale of wages made a report last night, and the schedule recommended by the committee was approved by the mobilization committee. The schedule, which calls for a general advance of from \$7 to \$20 per month, will be paid from Aug. 1. The mobilization committee also announced that an adjustment will be made of the wages of all licensed officers at the end of the season.

## Investigation into Shipbuilders Employes Wages, etc. in Quebec.

The following report was approved by the Governor General July 29:—The committee of the Privy Council have had before them a report, dated July 25, from the acting Minister of Labor, submitting that there exists serious friction as between various firms in the Province of Quebec, engaged in the shipbuilding industry, and the employes of such firms in different classes of labor, the employing firms being occupied wholly or chiefly on work which is essential to the conduct of the war, and there is grave reason to apprehend that the unrest in question may result in a cessation of work and in serious injury to the public interests. The minister further submits that, with a view to the establishment of more harmonious and satisfactory relations between the employers concerned and their workmen, it is advisable that an enquiry be made into and concerning such unrest, with special regard to wages, piece-work, working hours, overtime and other conditions of labor and the nature and cause of the grievances alleged; and that the enquiry shall include particularly disputes which have come to the knowledge of the Minister of Labor, in the case of Fraser, Brace & Co. of Montreal; Quinlan & Robertson, Ltd., Quebec; the Davie Shipbuilding & Repairing Co., Lauzon, Que., and the Quebec Shipbuilding Co., Quebec, and their employes, and shall extend to such other disputes of like character as may be reported to the minister during the progress of the enquiry in question.

The minister, therefore, recommends: That it be referred to a commission under the provisions of part 1 of chap. 104, Revised Statutes of 1906 (the Enquiries Act), composed of Mr. Justice F. S. MacLennan, of the Superior Court of the Province of Quebec; Thos. E. Robb, Secretary of the Shipping Federation of Canada, Montreal, and J. M. Walsh, Secretary of the Quebec and Levis Federated Trades and Labor Council, to hold and conduct such enquiry, with all the power conferred by the aforesaid statute upon the commissioners. That the commissioners have the right to determine the manner of conducting the proceedings in respect to such enquiry and to make all necessary enquiries and investigation concerning the relations between said employers and employes, with a view to taking such steps as may seem calculated to promote and secure an amicable working arrangement between the employers in question and the employes concerned, and, failing the achievement of such amicable working agreement before the commission, the commissioners shall make such recommendations as will, in their opinion, be best calculated to remove or lessen the unrest now existing. That Mr. Justice MacLennan be appointed chairman of the commission, and that the report of the commissioners on the matters investigated and their findings and recommendations be presented to the Minister of Labor. That all fees and expenses payable to the commissioners, or to the witnesses or other persons who may under their authority be concerned in the proceedings of the commission, shall be governed by the provisions as to such matters of the Industrial Disputes Investigation Act, 1907, as if the commission were a board of conciliation and investigation established under that statute. That all expenses incurred by the commission be paid from the War Appropriation. The committee concur in the foregoing recommendations and submit the same for approval.

## United States Great Lakes Training Station.

The U.S. Shipping Board has authorized the commissioning of a training ship on the Great Lakes for training of apprentices as seamen, firemen, and cooks on lake cargo carriers. The ship will be based at the station to be established at Cleveland, under the board's recruiting service for the lakes. This service, of which Henry Howard, of Boston, is director, is training 3,000 men a month for the new merchant marine on a fleet of training vessels maintained in Atlantic and Pacific waters. It is now seeking a suitable vessel for the lakes, which will be the thirteenth in the board's training fleet.

Recruiting of apprentices for the Great Lakes training ship will be carried on in the same recruiting stations of the board that are now providing large numbers of young men for coastwise and overseas ships. The board has nearly 2,000 of these stations in the seven states touching the lakes.

## Shipbuilding in the United States.

All shipbuilding records went to smash in the U.S. in July. Statistics assembled by the U.S. Shipping Board Emergency Fleet Corporation, from reports sent in by the various shipyards, show that more ships were launched during July than had hitherto been launched in any 12 months from U.S. shipyards.

The figures reach the impressive total of 123 vessels with a dead-weight tonnage of 631,944. The launchings divide as follows:

Type of vessel.	Number.	Dead-weight tonnage.
Composite .....	3	11,000
Steel .....	67	433,241
Wood .....	53	187,700
Total .....	123	631,941

The following table shows launchings by months for 1918 in d.w. tons:

January .....	88,507
February .....	123,625
March .....	172,611
April .....	160,286
May .....	259,241
June .....	283,222
July .....	631,941
Total .....	1,719,536

There were completed in July, 41 vessels totaling 235,025 dead-weight tons. Of these 36 were steel vessels of 217,025 d.w. tons, and 5 were wood vessels of 18,000 d.w. tons. This does not include 2 steel vessels of 15,855 d.w. tons which were delivered from Japanese shipyards. If these were counted in the grand total of ships completed for the Shipping Board in July it would be 43 ships of 250,880 d.w. tons.

From Aug., 1917, when the present Shipping Board began operations, up to Aug. 1, 1918, there have been completed and delivered 37 steel contract vessels having a deadweight tonnage of 245,700, and 210 requisitioned vessels totaling 1,326,156 d.w. tons, a grand total of 247 ships, aggregating 1,571,856 tons, completed and placed in service. Almost half of this total tonnage was delivered during the last three months, the actual amount being 775,545 tons.

There are now 118 fully-equipped shipyards in the U.S., and 44 others partly complete, of which 23 are more than 75% finished, and only 6 less than 25%, ready to begin building tonnage. Many have been built from the ground up, while the others have been extended and enlarged to such a degree that many of them amount almost to new yards.

Thirty-seven steel yards which the

U.S. had when the war began have grown to 72. The old yards have been increased from 162 ways to 195, and more are being added. Eighty yards for building wooden ships are in operation or nearing completion. The remainder of the total number of yards are for building concrete ships, a new industry developed by the war need.

The 118 yards which are complete are distributed sectionally as follows: Pacific coast, 48; Atlantic coast, 38; Great Lakes, 16, and Gulf coast, 16.

With the success of its huge shipbuilding programme assured, the U.S. Shipping Board will now concentrate its power on the manning of the merchant marine with "all-American" crews.

**St. John Dry Dock & Shipbuilding Co., St. John, N.B.**—The company's shipbuilding and repair plant will be located immediately adjoining the dry dock, where work was commenced Aug. 5, on clearing the ground. In the course of a few weeks, a definite proposal regarding the plant is to be placed before the New Brunswick Government and the City of St. John. The Bedford Construction Co. has been awarded a contract for the removal of rock work from the dry dock site, and it is expected that by the end of the year, 250,000 cub. yds. of rock will have been removed from the prism of the dry dock and placed in the breakwater. A. R. Dufresne, formerly Assistant Chief Engineer, Dominion Public Works Department, Ottawa, has been appointed Manager in charge of the work at St. John.

**Masters and Mates on Pacific Coast Vessels.**—The Royal Commission, consisting of W. E. Burns, Chairman, E. A. James and J. H. McVety, appointed recently to investigate disputes between vessel owners on the British Columbia coast, and masters and mates engaged on their vessels, has concluded its enquiries, but had not reported at the time of writing. The application for an investigation, made by the men, stated the matters in dispute related to wages and working conditions, but in the course of the enquiry, it developed that the chief trouble was the question of the recognition of the Canadian Merchant Service Guild, by the employers. A press report from Victoria, late in August, stated that after having given 48 hours notice, the men had left their vessels, which were then tied up at various points.

**Grain Shipments from Pacific Ports.**—Several shipments of grain have been made through the Government elevator at Vancouver recently, for European ports, via the Panama Canal. The steamships Empress of Asia, Alaska, War Power and War Viceroy, have each taken cargoes, and so far as reports have been received, the grain has arrived at its destination in excellent condition. It was at one time thought that the varying climatic conditions would cause considerable deterioration of such cargoes, but so far this trouble has not been met.

The Champlain dry dock at Lauzon was opened for business Aug. 22, and two large Atlantic steamships were docked there for overhaul. A full description, with illustrations, was given in our June issue.

Canadian Pacific Ocean Services' s.s. Lake Manitoba was practically destroyed by fire, Aug. 26, while taking on oil at the Imperial Oil, Ltd., wharf at Longue Pointe, Montreal. She had about 8,000 tons capacity, and had been operated in the combined passenger and freight trade between Canadian and European ports for several years.

## Welland Canal Lock Gate Accidents.

The s.s. Canobie, owned by Wilson-Patterson Co., Montreal, while upbound light, struck and carried out the two head gates of lock 8, Welland Canal, Aug. 10. Spare gates were placed in position and navigation resumed Aug. 11, after an interruption to navigation of 16½ hours. Owing to the comparatively short reach above lock 8, and a long one below, very little damage was done to the canal banks. The cause given for the accident was that the reversing machinery jammed and failed to work. The estimated damage is \$5,000.

A second accident occurred Aug. 16, when the Montreal Transportation Co.'s s.s. Pawnee, while upbound light, struck the tow path head gate of lock 12, carrying out both upper gates and the heel path lower gate. The banks on both sides of the canal at the head of lock 11 were badly washed by the water released. Spare gates were stepped and navigation resumed Aug. 17, after an interruption of 15 hours. The vessel was undamaged, and the cause alleged for the accident, was that the engine having centered, failed to reverse. The canal damage is estimated at \$7,500. Richard Carroll, a lock tender at lock 12, hung on to the hand railing of the lower gate, and was carried into the canal and drowned.

## Canadian Pacific Ocean Services and New Steamships.

The Liverpool Journal of Commerce of July 25 publishes the following from a correspondent:—"I hear that the directors of the Canadian Pacific Ocean Services have ordered several big steamships, with which, it is hoped, the government will allow the company to proceed, so that the work may be completed in time for the conclusion of the war. As a matter of fact, one of them, a vessel of 9,400 tons carrying capacity, is, or was, in course of construction on the Tyne, while arrangements have been made for the building of others on a cost and percentage basis. 2 of them to have a length of 605 feet and a speed of at least 20 knots each. Lord Shaughnessy is, I believe, very hopeful about future prospects on the Pacific, and is not by any means pessimistic as to the result of Japanese competition, and the temporary breakdown in Russia. He is of opinion that, although it is difficult to be specific about plans, there will be some big developments on that ocean before very long. As a highway of commerce and travel it is gaining in importance every day, and it is only a question of time before the Atlantic will have to look closely to its laurels, or it will carry traffic second in volume to that of the Pacific. The awakening of the Orient and the development of the west coast of North America will force the shipping companies to increase their transport facilities very considerably."

This little bit of news concerning the purchasing and ordering of new tonnage, was contained in the C.P.R. report for the six months ended Dec. 31, 1916, issued in April, 1917, and published in Canadian Railway and Marine World for May, 1917. For obvious reasons it is impossible to give the position of affairs as regards these vessels at present. One steamship of 9,400 tons was purchased while under construction, and orders were placed, on a cost and percentage basis, for 2 steamships 605 ft. long, 20 knots speed, and 2 of 16 knots speed, with length of 546 ft.

## British Shipbuilders Looking to Canada.

A Canadian Press dispatch from London, Eng., Aug. 12, referring to the Canadian newspaper men's party's visit to English manufacturing districts, said:—"The great captains of industry directing this war effort are alive to the possibilities of the future, and discuss freely their confidence in Canada. Unanimously they predict her prosperity. Among those who believe that Canada is on the eve of tremendous development are the shipbuilders on the Clyde, of whom Hugh Latta is one. One of these captains said to me: 'We already are preparing plans for works in Canada for ourselves. We believe opportunities for shipbuilding in your country are unexcelled anywhere. You have the raw material, and coal within easy access and what is of great importance, a manufacturer or builder may begin afresh with you on new plans and under new conditions.'"

## Proceedings re Ship Protests.

Under an order in council of July 2, 1918, collectors of customs at ports of entry on the Pacific and Atlantic, including ports on the Gulf and River St. Lawrence up to and including Montreal, are authorized, during the war, to do any notarial act for the purpose of noting and extending ship protests, and are authorized to receive any statutory declarations required in connection therewith. Masters of all British ships have been instructed that no note of protest of loss or of any occurrence whatsoever arising in respect of their ships is to be made by them in the Dominion except before a collector of customs, who are instructed, when the master of a British ship reports inward and when issuing a clearance to a British ship, to direct the master's attention to the above requirements.

Protests by masters of British ships trading on the inland waters of Canada, or protests in respect of loss or other occurrence arising while a British ship is on any of the inland waters of Canada, do not require to be made before a collector of customs. In such cases the master may follow the usual and existing practice.

For the information and guidance of collectors before whom a master may present himself in connection with ship protests, it should be stated that a protest may be made in the first instance, or the master may desire to make a note or entry of protest only, which may later be extended to a regular protest before the same or another collector of customs. The note or entry of protest is merely a notice of the master's intention to protest, should an extended protest afterwards become necessary or advisable. A note or entry of protest, also a protest—if made in the first instance—should be made as soon as possible after the arrival of the ship in port. If made later than 24 hours after arrival, it should contain a brief statement of the cause of the delay. Note or entry of protest forms, protest forms, and extended protest forms, may be obtained from collectors of customs. The note or entry of protest should be made in duplicate, signed by the master and formally certified to by the collector, and one copy retained by the collector and placed on file. When a protest is made or extended, the original is to be retained and filed by the collector and certified copies are to be given or mailed to the master and to the owner of the ship.

## The Australian Government Shipbuilding Programme.

Ottawa press dispatch, Aug. 12.—The Dominion Government has received an interesting statement in regard to the present position of shipbuilding by the Australian Commonwealth. Actual contracts entered into by the Australian Government include 26 steamships and 24 wooden ships, with a gross tonnage of 200,600. Twenty-seven distinct slips are being used for construction. When these contracts are completed, the Australian Government will own a fleet of 77 vessels, of a gross tonnage of 302,506. Of this number 14 have been purchased in England and 14 are being built in the United States.

At least one Nova Scotian vessel will, in all probability, be purchased by the Australian Government within an early date. The report states that as it is impossible to obtain adequate supplies of wire rope and the favored hemp sail canvas from the U.S., the attention of Canadian manufacturers of these articles is directed to the development of Australian shipbuilding as an outlet for their products.

## British Mercantile Marine Pay.

The London, Eng., Times says that shipowners have not been able to see their way clear to accept the scales of pay for navigating and engineer officers serving under monthly articles on passenger liners approved by the Shipping Controller and accepted by the men. The controller, in view of the protracted negotiations which have taken place, has decided that his decision is to stand, and the scales of pay accordingly are promulgated.

The pay of a first mate with a certificate of superior rate on a vessel from 1,000 to 5,000 tons is to begin at £26 a month, on vessels from 5,000 to 9,000 tons £27, on vessels from 9,000 to 13,000 tons £28, and on vessels up to 18,000 tons £29, and after three years service is to be advanced to £29 a month in the first instance, and pro rata to £32 a month in the case of vessels of from 13,000 to 18,000 tons. The pay of other navigating officers of lower grades is proportionately improved.

Chief engineers' monthly pay on 1,000 to 5,000 tons vessels is to begin at £31, on 5,000 to 9,000 tons vessels at £33, on 9,000 to 13,000 tons vessels at £35, and on 13,000 to 18,000 tons vessels at £37, rising after five years to £41 in the first instance, to £47 in the case of the 13,000 to 18,000 tons vessels. The schedule covers other engineering ranks with and without certificates.

The Maple Leaf Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital stock of 1,000 shares, without nominal or par value, provided that it shall carry on its business with a capital of \$5,000, and the head office is at Toronto. Power is taken to own and operate steam and other vessels, and to carry on a general navigation, manufacturing and forwarding business.

Making Hay While the Sun Shines.—There is a touch of humor about the announcement that, owing to the necessity of having the haying completed, employees of the St. Martins Shipbuilding Co., St. Martins, N.B., had been given a short leave, and as soon as the urgency of the crop situation had been met, shipbuilding operations would be recommenced.

## The Future of Wooden Shipbuilding in Canada.

From the time when the conditions brought about by the adoption of unrestricted submarine warfare by the enemy, made it necessary to concentrate a considerable portion of the national energy on the speedy construction of ships, the merits and demerits of wooden ships, as compared with those built of metal, have been freely discussed. It cannot be said that the adoption of the wooden ship was anything but a temporary expedient, and certainly it was not intended that the building of wooden steamships by the British Government was to become a permanent part of its policy.

On account of the abnormal demands for steel of all kinds, it was considered advisable to have a number of vessels built of wood, and to cope with orders placed by the British and French Governments, several yards were established in Canada, and equipped for the building of wooden vessels only. Some time ago it was announced that the Imperial Munitions Board, acting for the British Government, would not place any further orders for wooden steamships, as the conclusion had been arrived at that for operation in war zones, they were not able to evade submarines, etc., so well as the speedier steel vessels.

In dealing with the Dominion Government's policy regarding the building of steamships, recently, the Minister of Marine announced that the Dominion Government did not intend to have any wooden steamships built, as a part of its shipbuilding programme. He stated that the wooden shipbuilding yards in different parts of Canada had many opportunities for building wooden ships for private interests for Canadian registry, and several were then working on such orders for allied and neutral countries. As some of the yards engaged on the construction of wooden ships are now approaching the completion of their Imperial Munitions Board contracts, it is feared that they will close, thus dissipating staffs, which, in some cases, have been got together with difficulty, and also losing the experience gained, in a work, which is not without considerable usefulness, both for the present, and the near future, when vessels in large numbers will be required, and when they could operate without fear of submarine attack.

The energy which has been shown on all sides in the establishing of new yards, and in pushing the construction of the vessels ordered, can well be renewed for the continuance of the yards and the construction of further vessels without the material aid furnished by the Imperial Munitions Board for vessels built under its orders. On this point, it is well to remember that practically the whole of the material required for the ships was supplied to the builders by the board, so that in the event of builders continuing the yards and canvassing the open market for orders, they would not be in quite so advantageous a position as in dealing with the board's orders, having to buy and sell both, in open competition.

The situation is clear, ships are wanted, and to a large extent, wooden ships meet the requirements. There seems little doubt that all vessels which the wooden shipyards in the Dominion can build for the next few years, would find ready purchasers, so that it remains for those yards to turn out the vessels. There is no likelihood of the Dominion Government subsidizing the building of wooden steamships in any way, but there are great in-

ducements in the way of customs drawback on imported materials. Nothing therefore remains for the successful continuation of the wooden shipbuilding industry, but energy, public spirit, and the judicious outlay of the necessary capital, combined with the judicious handling of labor, without which last, the other matters are mere waste. A combination of all forces should enable an important, and almost essential industry, to be firmly established in the Dominion, which is peculiarly fitted for such work, and which for the several years of shipbuilding rehabilitation ahead of us, is bound to play an important part.

## Power Schemes Affecting St. Lawrence River Navigation.

The International Joint Commission met at Atlantic City, N.J., recently to consider two applications for approval of plans for the development of power affecting boundary waters; one made by the New York & Ontario Power Co. to improve its plant at Waddington, N.Y., in the south branch of the St. Lawrence, known as the Little River, between Ogden's Island and the U.S. main shore opposite the Morrisburg Canal, and the other made by the St. Lawrence Power Co., a subsidiary of the Aluminum Co. of the U.S., with reference to its plant at Massena, N.Y., to which water is drawn from the St. Lawrence, south of Long Sault Island, through an artificial canal and returned lower down through the Grasse River. The first proposal contemplates a new dam in, and an increased withdrawal of water through, the Little River, with certain remedial or compensating works to protect navigation in the Radipe Plat of the main channel and in the Morrisburg Canal, and the second contemplates the complete damming of the south branch of the river south of Long Sault Island, and the dredging of the approach to the power canal to Massena, with the advantage of establishing navigation to Massena, and also greatly increasing the power available for the output of aluminum.

The Dominion Marine Association is opposed at present to both proposals, in view partly of the prejudicial effect upon the navigability of the river, and also

because of its opposition to the parceling out of the St. Lawrence waters to private corporations, in a manner which is fast putting the river beyond the government's control, and would certainly materially prejudice any future general scheme designed to improve navigation and develop power as a national or international undertaking. Pending further investigation, the Dominion Government has withheld its approval, and in the Waddington case has filed pleadings in opposition to the proposal.

Counsel appeared for both the Dominion and U.S. Governments at the hearing at Atlantic City, and Francis King, counsel, Dominion Marine Association, appeared for that association, and also represented navigation interests, which by treaty are paramount. Mr. Kuntz, of Washington, for the U.S. War Department, supported the Massena proposal in the interest of an increased aluminum supply. A great array of engineering talent was also in attendance.

The Waddington proposal stands over for further evidence and argument at Ottawa on Oct. 1st, and the Massena project will come up for final hearing at Montreal on Aug. 29.

**Canada Steamship Lines, Limited, Earnings.**—At a meeting of directors at Montreal, Aug. 13, Jas. Carruthers, President, is reported to have stated that the business for the half year ended June 30, showed a satisfactory condition of earnings, these being considerably ahead of those for the same period of 1917. It is said that the returns indicate net earnings of over \$2,000,000 for 6 months. Taking into account that this covers the period when lake and river business is practically nil, the second half of the year ought to show considerably larger results. Last year net earnings were \$4,023,000 and in 1916 \$4,059,000, so that present indications point to even a higher result for the full year.

**Vessel Repairs in Great Britain.**—It is reported that between Aug. 3, 1917, and Apr. 25, 1918, 5,307 vessels were repaired and restored to service, representing an aggregate gross tonnage of 16,150,000 tons. The work has been thoroughly systematized, and whatever repairs can be carried out without docking the vessel, are so done.

## Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie canals during July, 1918.

ARTICLES.	Eastbound.		
	Can. Canal.	U. S. Canal.	Total.
Lumber . . . . .m. ft. b. m.	1,951	49,786	51,737

## Grain Rates for Canadian Lake Shipments.

At a meeting of the Canadian lake carriers at Toronto, July 30, for the discussion of the vessel situation on the Great Lakes in preparation for the handling of the new wheat crop, resolutions were passed as follows:—

That Canadian carriers have given careful consideration to the proposal for mobilization of all their tonnage, either jointly with that of the U.S. lake carriers, or separately, but after full discussion and after having heard the opinions of those interested in the trade from all points of view, have come to the conclusion that they can best serve the prime object of all such proposals, namely: the contribution of the most effective assistance in the present unfortunate situation due to the war, by supporting a continuance of the arrangement which prevailed during the fall of 1917; an arrangement which gave general satisfaction and effectively met all requirements. They are influenced to some extent by the fact that in Canada there is no centralization of vessel management in any one locality, and, in consequence, an almost insuperable difficulty would be at once encountered in an attempt to manage the trade through a committee, yet, nevertheless, as already stated, this objection was subsidiary to the main question which was determined with reference to the general satisfaction expressed with the 1917 arrangement.

Canadian lake carriers, recognizing the obligation imposed on them of furnishing efficient aid to the transportation of the grain crops of Canada and the U.S., agree as follows:

1. That Lake Superior shall be served in preference to Lake Michigan and only surplus grain tonnage sent to Lake Michigan.

2. That Lake Superior wheat will be served in priority to any other grains.

3. That all tonnage to Duluth-Superior shall be allotted through the U.S. Grain Corporation office there; all tonnage for Lake Michigan ports through the U.S. Grain Corporation office at Chicago, and tonnage to Fort William and Port Arthur through the Winnipeg Chartering Committee, under the same conditions as prevailed in the autumn of 1917, but under such instructions as to allotments as may be acceptable to the Wheat Export Co. and the Dominion Government, and subject to insurance by the shipper against any grain shortage on outturn, in accordance with the present arrangement in the Buffalo trade.

4. That all unloading at Buffalo shall be directed by the U.S. Grain Corporation office at Buffalo.

5. That the Canadian lake carriers will provide tonnage for the grain movement at rates not exceeding basic rates of wheat, Lake Superior to Lake Erie, 4c a bushel until Sept. 1, and 4½c thereafter until Nov. 30, and wheat Lake Michigan to Lake Erie, 3½c a bushel until Nov. 30, with alternative and relative rates as follows: to Georgian Bay and Goderich, ½c under Lake Erie rates; to Port Huron, ¼c under Lake Erie rates; to Collingwood, ½c under Lake Erie rate, but terms of discharge at Collingwood to be the same as hereafter provided for discharge at Lake Erie side ports; to side ports other than Buffalo and Port Colborne, including Detroit, same rates as Buffalo, but with special agreement as to discharge, allowing two working days free, but thereafter vessel to receive ¼c a bushel additional on entire cargo for each running eight hours or fraction thereof,

until fully discharged; to ports of light draft, vessel to be allowed freight calculated on its Buffalo capacity.

Other grains than wheat to net the vessel the equivalent of wheat cargo. Freight to Canadian vessels for carriage to U.S. ports shall be paid in funds current in U.S., and freight to Canadian vessels to Canadian ports shall be paid in funds current in Canada, and Canadian vessels, as much as possible, shall be employed in their customary autumn trade routes.

### Among the Express Companies.

William Walsh has been appointed General Superintendent of Stables and Street Equipment, Dominion Ex. Co. Office, Toronto.

Thomas E. McDonnell, General Superintendent, Western Ex. Co., Chicago, Ill.,

T. E. McDonnell  
Vice President and General Manager, Dominion Express Company.

has been appointed Vice President and General Manager, Dominion Ex. Co. Office, Toronto.

A number of Canadian Ex. Co.'s porters at Toronto Union Station, struck work during the early part of August, and returned to work, Aug. 9, on the promise that a conciliation board would deal with their grievances.

G. E. Whitney, formerly route agent, Dominion Ex. Co., Montreal, died at Orford Lake, Que. recently, aged 65, after a long illness. He retired from active service in January on account of ill health, and later spent some time in Florida.

The Board of Railway Commissioners has extended the express delivery and collection limits in Winnipeg to include the territory bounded on the north by Kylemore Ave., on the west by Cockburn St., on the south by the south line of Lot 17, St. Boniface Parish, and on the east by Daly St.

The American Railway Express Co., operating under the U.S. Railroad Administration has applied to the Interstate

Commerce Commission for increased rates on newspapers and other publications registered as second class matter by the postal service. It is proposed to establish pound rates to correspond in a general way to the increased zone second class postal rates, and for the return of publications to the shippers it is proposed to charge first class pound rates, with a minimum of 25c.

Thomas E. McDonnell, heretofore General Superintendent, Western Ex. Co., Chicago, Ill., who has been appointed Vice President and General Manager, Dominion Ex. Co., Toronto, was born in Chicago, Ill., his father having been born in Ontario, where his mother came at an early age. He entered express service in 1887 as a wagon boy for the United States Ex. Co., and subsequently filled all positions up to General Superintendent of the Western Department, resigning in 1910 to organize and take into Chicago, the business of the Western Ex. Co., which was closely allied with the Dominion Ex. Co., and which, so far as business in the west is concerned, has passed to the American Railway Ex. Co., under the U.S. Railroad Administration.

### Telegraph, Telephone and Cable Matters.

John Ollerhead, one of the old time telegraphers, died at Heart's Content, Nfld., recently, aged 57.

The Great North Western Telegraph Co. has opened offices at St. Yvon, Que., Mimico, Ont., and Langruth, Man., and has changed the name of its office at Smiths Mills, Que., to Tomifobia.

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Metal & Thermit Corporation has removed its Toronto office to 15 Emily St.

The Independent Pneumatic Tool Co. has leased the entire 6th floor in the Otis Building, 600 W. Jackson Boulevard, Chicago, Ill., containing 12,000 sq. ft., and will occupy it for its general offices. J. D. Hurley, President, states that the great demand for pneumatic tools for government work and shipbuilding had forced his company to seek larger quarters.

Armstrong Whitworth of Canada, Ltd.—This company's tire and wheel plant at Longueuil, near Montreal, was formally opened July 31, in the presence of a number of railway officials and other guests interested in steel manufacture, who were shown the process of manufacturing tool steel and forging steel tires. After inspecting the works, the guests were given refreshments at the company's cafeteria, after which speeches were made by Senator G. G. Foster, K.C., Vice President, and M. J. Butler, C.M.G., Managing Director, Armstrong Whitworth Co.; D. H. MacDougall, President, Nova Scotia Steel & Coal Co.; Brigadier-General Sir Alex. Bertram, and W. D. Robb, Vice President, G.T.R.

The land occupied by the company comprises 216.6 arpents, the area of the buildings is 175,000 sq. ft., and between 600 and 700 men are employed. Three out of

the four methods of steel making are in process at the works, viz.: crucible process, electric furnaces, open hearth furnaces.

The steel making equipments consist of 72 pot crucible furnaces for manufacturing high speed steel; 1 three-ton Herroult electric furnace, 600 k.v.a.; 3 six-ton Herroult electric furnaces, 1,500 k.v.a. These electric furnaces are all 3 phase current, received at 22,000 volts, transformed to 100 volts at furnace. The carbon electrodes are 8 and 17 in. in diameter. There are two 18-ton open hearth basic furnaces fired with oil or powdered coal.

The boiler plant comprises 4 boilers of 500 h.p. water tube, fired with powdered coal; 2 boilers of 250 h.p. water tube, waste heat; and 1 boiler of 120 h.p. return tubular.

For the power plant, electric current is received of 22,000 volts, which drives motor generator set into d.c. current, 500 and 250 volts, for use on cranes, shop work, etc. Steam is used for driving hammers, steam intensifier, hydraulic forging presses. The 9 in. rolling mill engine is 18 x 30; the 20 in. rolling mill engine is 32 x 48, heavy duty. The tire and wheel rolling mill is equipped with a pair of simple 25 x 36 engines, fitted with a valve gear. The plant is heated by vacuum return system, using exhaust steam.

The forging shop equipment consists of one 500-ton steam intensifier hydraulic forging press, one 3-ton, one 1-ton, one 1,500 lb., one 800 lb., and one 500 lb. steam hammer.

The tire and wheel department equipment consists of one 2,000-ton steam intensifier hydraulic forging press, forging ingots into blooms for tire and wheel

work; one 600-ton steam intensifier hydraulic forging press, for decking tires; one 200-ton hydraulic press for marking tires, also a centering press; one 1,000-ton steam intensifier hydraulic press for dishing steel wheels, and making heavy forgings. This department is also equipped with continuous furnaces, two reheating furnaces, two electric servers, which handle the ingots from the furnace to the different machines. The powdered coal plant has a capacity of five tons an hour.

The small tool department is equipped with a repair shop for doing repairs throughout the mill, and a tool room for manufacturing small tools, such as drills, reamers, milling cutters, gauges and special tools of all description.

The rolling mills department contains one 3 high, 5 stand, 3 in. mill; one 2 high, 5 stand, 12 in. mill, and one 3 high, 20 in. mill, 2 in. stand, 20 in. mill.

### Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

### CANADIAN PACIFIC RAILWAY COMPANY.

#### Dividend Notice.

At a meeting of the Board of Directors held to-day, the following dividends were declared:

On the Preference Stock, two per cent. for the half-year ended 30th June last;

On the Common Stock, two and one-half per cent. for the quarter ended 30th June last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account.

Both dividends are payable 1st October next, to Shareholders of record at 1 p.m. on 31st August instant.

By order of the Board,

ERNEST ALEXANDER,  
Secretary.

Montreal, 12th August, 1918.

# National Pneumatic Door and Step Control

## Enables You to Put Salesmen on the Car Platform

So long as the operation of your cars requires severe manual labor, just so long will you be obliged to seek men for their physique rather than for their intelligence.

The application of **National Pneumatic Door and Step Control** actually will do even more for you than widening the age limits and lowering the physical standards of applicants for platform service; it will also permit you to draw upon the salesman type of men who—

Will gladly exchange their place behind the counter for a position where the selling of transportation service and not the tugging of levers is the predominant part of the job.

Let us assist you to attract individuals from this great reservoir of men.

## Terminal Handling of Locomotives.

By H. C. Pickard, Master Mechanic, Delaware, Lackawanna & Western Rd., Buffalo, N.Y.

Efficiency and conservation are more expedient at this time than ever before. We are forcefully reminded at this time of the efficiency of the naval and military service, the conservation of man power, food, fuel and electric power. We are face to face with the transportation problem, the second of the country's great industries. The country needs locomotives as it does ammunition and big guns. We are engaged in a business of transporting necessities from where they are produced to where they are needed and the connection between these two places is a railway, its motive power, vehicles for conveyance, tracks, etc.

The locomotive must be kept as near 100% efficiency as possible and be detained at the terminal as little as necessary. With this view in end we offer a few suggestions: First, when the locomotive arrives at the terminal, the first operation is the cleaning of the fire, or removing it entirely from the locomotive. To conserve man power, one of the best is the water type of pit, open on one side containing sufficient water space, to extinguish the hot cinders and to be served by a gantry crane, and with this kind of pit one man can readily serve 125 locomotives per 24 hours, that is, the handling of the cinders. The labor for cleaning the fires can be handled to the best advantage on a piecework basis.

**Cleaning Locomotives**—After the fire has been cleaned, the next operation is to thoroughly clean the machinery and running gear of the tender, so that it can be carefully inspected. The time of wiping locomotives, especially beneath the running board and the tender, is past history.

est to the lowest. Above the running board and the cistern can be successfully washed, but we recommend periodical wipings. We submit a ground plan A, showing a suitable design for a locomotive washing pit.

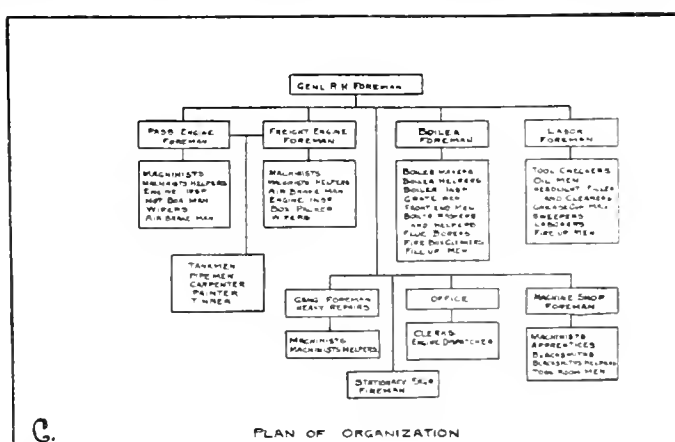

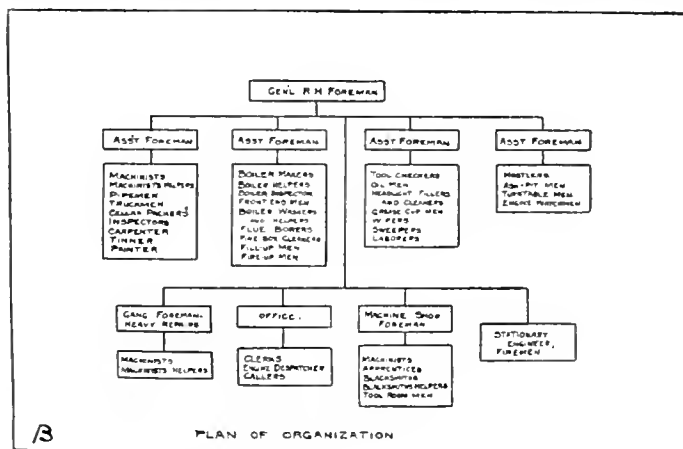

should be long enough to take in the entire locomotive and tender, and equipped with sufficient lighting facilities to enable the inspector to accomplish his work readily. It is more desirable to have an outside entrance, reached by a suitable

**Organization**—Now that we have the locomotive in the house, essential to good operation, there must be a well defined organization. Each individual terminal has its own characteristics, but basing an organization upon a terminal caring for

stairway.

**Turntables**—Necessary to the handling of locomotives at a large locomotive house, is a first class turntable of ample length and sufficiently strong in design, so that it will not spring under the heavy

By improved methods which are now on the open market, the largest types of locomotives can be thoroughly cleaned in from 7 to 10 minutes, by washing with a combination of fuel oil and water at about 90 degrees, aided by air pressure, which should be 100 lb. to derive the best result, and at the same time realize the greatest saving in labor, material and time. The success of it depends upon the enthusiasm of all the attaches of the motive power department, from the high-

approximately 100 locomotives per 24 hours, we submit for your consideration plan B, for use where it is not desired to specialize between the different classes of power. This is covered by plan C.

An inspection pit is desirable, immediately after the locomotive has left the washing pit, so that when it arrives on the pit in the locomotive house, the various gang foremen can promptly distribute to their workmen the reports of work required upon the locomotive. This pit

est load, and supported upon a suitable foundation. One very essential matter that is overlooked by designing engineers is the alignment of tracks across the table. Every mechanical man appreciates the layout of tracks to match up across the table so that handling locomotives in and out of the house or moving back and forth for valve setting, or switching out for back shop, or vice versa, when the tracks line up, it is a great assistance to the prompt handling of the power. When

you are putting in a table, make it large enough. In climates where considerable snow is experienced a double drive is desirable, that is, a motor on each end of the table coupled in multiple.

**Toolroom and Tools**—A locomotive house is not complete, unless it is equipped with a toolroom that contains suitable and enough tools to properly and promptly handle the work, located at the locomotive house, so that unnecessary time is not wasted by men in travelling back and forth for tools. Each locomotive house of any considerable size, should be equipped with all of the portable tools, such as

The handling of work reports, etc., is a very important question and suitable facilities must be at hand to properly receive, file and record the work. There should be a suitable place where the locomotive man can, on arrival, make out his report, being careful to fill out the details requested on the form. Plan J is a ground plan of the office building with suitable quarters for the foremen, clerks, register room for locomotive men and locker room. The locomotive man can dictate his report to a slip clerk and this clerk in turn can classify from the locomotive men and locomotive inspectors reports and place

far smaller space than one of a greater surface. The dispatcher's office must be equipped with a telephone system, and an air signal system for the various foremen extended throughout the locomotive house, which will enable him to secure information promptly or call the foremen when they are wanted at the telephone or for other information.

**Specializing Locomotive House Work**—There is a very great advantage to be obtained in specializing the mechanics. They can have suitable tools for doing their individual work and when better equipped can do it more promptly and

boring bars for cylinder and valve chambers, a valve facing machine, and a crank pin truing machine, and should be provided with portable tool boxes, and portable benches equipped with a vise. Small trucks and wagons should be plentiful and available, as considerable time is lost when these pieces of equipment are not available. Plan D shows a portable bench and vise, plan E a portable bench that is desirable for men working on cylinders, valve motion, air pumps, air reversing gears, etc., and plan F a portable tool box for the individual mechanic that contains all of his tools and can be handled to the

slips ready for distribution to the various classes of mechanics to perform the work. Upon these being signed by the foreman they are returned to the work slip clerk, who in turn checks them off the inspector's and locomotive man's report and then they are filed. The matter of inspection is very important, and the work report books and slips must always be kept in first-class condition. It is highly desirable on a division with any large number of locomotives to have a special man assigned as general inspector to cover the entire locomotive and to see that all requirements of the laws are

with better results. In locomotive houses of considerable size, men can be specialized on passenger locomotives, fast freight or slow freight locomotives as well as switch locomotives. In any large locomotive house, I would suggest that a man be specialized on cab work and one on piston and valve stem packing. The air jobs should be specialized and suitable quarters provided for foremen and organization. The boiler work can be divided and specialized in the same way.

**Water cranes** should be located on tracks leading to and from a locomotive house suitably. With these properly lo-

task that is assigned to him and avoid any lost motion in securing tools for the work to be performed. Plan G shows a portable wagon for a boring bar.

**Information Board**—A board suitably located in the locomotive house, that will give the information as to the status of the work by the various classifications is desirable. Of course, these boards have to be arranged for each individual terminal and should cover all of the operations that are specialized, machine, boiler, air, tender and all other operations. Plans H and I show two of these boards.

complied with.

**Handling of Locomotive Crews**—Essential to good locomotive house operation, facilities for the handling of engine crews is very important. Plan K is a sketch of a circular locomotive and crew board, which serves the purpose, takes up very little room in the office and is visible to the crews from the register room by the means of a glass. On the other side, it is open to the locomotive dispatcher and handy for him to mark up his crews and locomotives. By this means, a large board covers a great number of locomotives and crews and takes up

located, no time is lost in moving locomotives back and forth to give them water, when required. One is desirable for the switch locomotive movement and another for the road and passenger locomotives.

**Blower System**—Every locomotive house should have sufficient steam pressure to properly provide a blower system for getting locomotives hot. Permanent fittings should be made so that each pit in the locomotive house can be coupled by the means of flexible joints, hose or otherwise so that no time will be lost in making these connections.

**Hot Water Washout Plant**—No locomotive

tive house is complete unless with a hot water washout plant of sufficient capacity to take care of all the washouts. It does away with the breakages that are due from expansion and contraction, caused by the quick change of the temperature of a locomotive boiler when it is undergoing the washing process. It also tends to the conservation of fuel, as it takes about double the amount to get a locomotive up to the required steam pressure when cold water is used. It also enters into the time element.

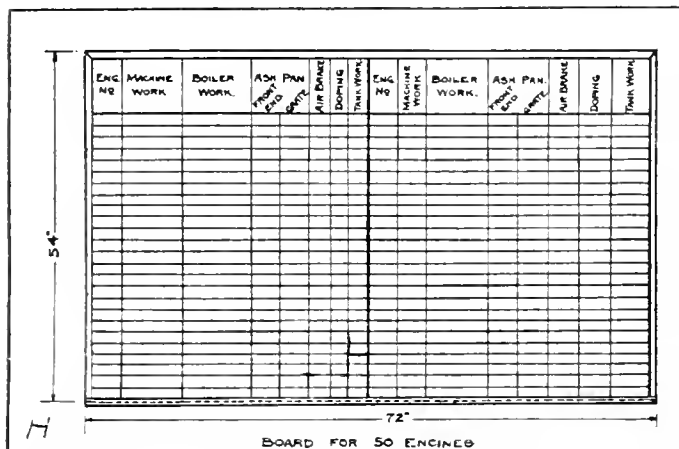

**Electric and Autogenous Welding**—No other appliance is of more assistance to

desirable on account of delays in coaling when the locomotives are being dispatched.

**Locomotive Performance**—The standard of comparison as to what constitutes a non-performance varies so greatly throughout the country, except within the boundaries of a state where the performance is based on rules laid down by a public service commission, that a conclusion cannot be drawn. As a rule, the performance of a locomotive depends upon the general conditions, so to speak, viz., shopping facilities for general repairs and properly equipped locomotive houses.

much as shrapnel. Ordinarily, 15% of all the locomotives on our railways are in the repair shop. By reducing that percentage to 10, we can add 3,325 locomotives to the number available for use. If we can keep more locomotives in good running order, we will help our country in the war with Germany."

Check up your locomotive houses at night, check up your locomotive houses in the morning and finish the day's work with as few locomotives held as possible. Go the limit on putting them into service. It may be that a tender from one locomotive can be switched to another and thus

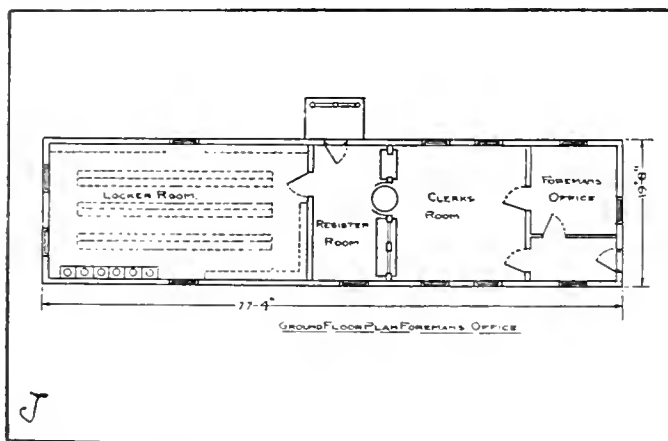

the prompt dispatching of power than electric and autogenous welding. It is a time saver and an increased boiler efficiency can be obtained by the welding of the firebox end of the flues as well as the time to be obtained in stripping or the removal of staybolts with the autogenous welding.

**Drop Pits**—Each locomotive house should have suitable pits for the removal of locomotive truck wheels, tender wheels and drivers. This pit should be equipped with a suitable jack of sufficient capacity to readily handle the heaviest pair of wheels. It does not seem that a suitable

Local conditions have a great deal to do with the performance from a boiler standpoint. Good performance is based upon proper inspection and the ability to make repairs and good operations.

**Terminal Delays**—A report should be made to the mechanical officer in charge, so that he can tell at a glance just what time a locomotive arrives and when it is again made ready to depart. This report should contain a column that will show the arrival of the locomotive at the cinder pit, when it is reported to the operating department as ready for a call and when it is ordered. It also should show the

a locomotive gained or, if you have two locomotives of the same class that are held over, maybe the switching of certain material from the one to the other will place a locomotive in service and hold out but one. Check up your shop locomotives and do not hold more of one class than is absolutely necessary to comply with the above request. In working your shops on a 10% basis the writer believes that at large railway centers great assistance can be rendered by all of the local mechanical men in keeping locomotives in service, hence the transferring of material and in that way helps to produce more loco-

jack has been designed for this purpose, or at least the writer never came in contact with one. This pit should have good drainage and proper lighting facilities.

**Coaling Facilities**—No part of the layout is more important than the handling of locomotive fuel at a terminal. There are many varieties of docks of the gravity and mechanical type. While there are a number of the latter that are highly successful, it seems to the writer that the least delays are incurred by the former. This coal dock should be located so that it will cover the locomotives as they approach the locomotive house, this being

mechanical department and the transportation department delays, separately.

**Present Facilities**—Of course, we all talk about ideal conditions, and there is no doubt that improvements are needed at almost every terminal, but they are harder to obtain now than at any other time, so we must take the present facilities and do the best we possibly can and speed up and take up the lost motion and follow the little things that go to bring about prompt dispatching and furnish the locomotives that the country needs.

The U.S. Railroad War Board said recently: "Our nation needs locomotives as

motive miles.

**Questionnaire**—The following questions should be carefully considered:—

Do you clean fires by day or piecework? Have you washed locomotives? Are you washing at present?

Do you approve of an inspection pit and where would you locate it?

Do you have drop pits and how heavy repairs do you recommend being carried on in the locomotive house?

Do you approve of air or hydraulic jacks for drop pit work?

What do you think of two motors on the turntable?

Do you find more supervision necessary under the present labor conditions, if so, to what extent?

Have you employed women in the locomotive house, if so, what work, and how do they compare with men?

What tool system do you prefer on

locomotives? Do you approve of each locomotive man having an individual tool box or do you prefer a set of tools for each locomotive?

How do you coal your locomotives, going in or out of locomotive house? Which plan do you prefer?

What plan of organization have you?

What do you think of a toolroom connected to the locomotive house, and what are the advantages to be gained?

The foregoing paper was read before the Central Railway Club in Buffalo, N.Y., recently.

## A Railway Air Compressor Laundry.

A committee report presented at the Air Brake Association's last convention gave the following information as to the means employed on the Minneapolis, St. Paul & Sault Ste. Marie Ry. (a C.P.R. subsidiary) to clean air compressors without taking them down or otherwise dismantling them.

Dirt entering the cylinders of an air compressor destroys lubrication and increases the wear of packing rings and cylinder walls. The dirt and worn-off metal, coupled with heat of compressor, form the hard gum so frequently met with; hence, excluding dirt will improve

To operate the outfit, first see that the air cylinder piston rod packing is tight, then remove the air strainers and disconnect the discharge pipe at the compressor. Connect the supply and return pipes from the "laundry" to the compressor air cylinders, also a steam line to the steam coil. After the solution is at or near the boiling point, open the compressor throttle and permit the compressor to operate at slow speed with the solution circulating through the air cylinders and discharging back into the tank.

The length of time the compressor should thus operate depends on its condi-

tion. It is usually from 2½ to 3 hours give the best results. After the compressor has been thoroughly cleansed the tank connections should be removed. Clean water (hot water is preferable) should then be worked through the air cylinders for several minutes, discharging into the pit, to insure all of the solution being removed, after which the compressor should run idle until all the water is worked out of the cylinders. The air cylinders should then be well lubricated, the strainers re-applied and the discharge pipe connected. If soft packing is used the air ends may need to be repacked.

C.P.R. Transcona Terminal Closed.—D. C. Coleman, Assistant General Manager, Western Lines, C.P.R., issued the following statement, Sept. 12:—"On account of the government having found it necessary

lubrication and reduce wear and gumming. Clogged and gummed passages and ring grooves of the compressor are responsible for a portion of the trouble, such as reduced efficiency, pounding, running lame, slow speed, etc.

A very effective and economical way to remove this deposit is by means of the compressor "laundry," which should be on the service and protection afforded the compressor against dirt. The accompanying illustration shows two types of air compressor "laundry" outfits, as developed by the M.St.P. & S.S.M. Ry. They consist in general of an enclosed tank mounted on wheels, for a lye solution, a steam pipe coil inside the tank and suitable pipe connections to join the tank to the suction and discharge openings of the compressor. The solution should consist of about one pound of concentrated lye to one gallon of water, and should be kept hot by steam circulating through the coil while the compressor is being cleaned.

tion, but usually from 2½ to 3 hours give the best results. After the compressor has been thoroughly cleansed the tank connections should be removed. Clean water (hot water is preferable) should then be worked through the air cylinders for several minutes, discharging into the pit, to insure all of the solution being removed, after which the compressor should run idle until all the water is worked out of the cylinders. The air cylinders should then be well lubricated, the strainers re-applied and the discharge pipe connected. If soft packing is used the air ends may need to be repacked.

The method here outlined for removing the gummy deposits from air cylinders of a compressor is far superior and more economical than to cut it out with chisel and scraper. When the old method is used it involves much labor in the removal and replacement of lower cylinder heads and air pistons, and then the ports only can be cleaned. After the "laundry"

to cancel the exemptions from military service which were issued to trainmen, enginemen and yardmen, it will be impossible for the C.P.R. to operate the Transcona terminal this year, and it is the intention to close up that terminal until next summer or autumn. It is figured that with the embargo placed on grain shipments originating at points west of Moose Jaw and Saskatoon, the railway will be able to handle the full volume of business through Winnipeg terminals without inconvenience to the public."

The C.P.R. has reopened its St. John's ambulance classes at Winnipeg for the winter. In connection with the work, the company has equipped a hospital at its Winnipeg shops, for first aid treatment of accidents.

Grand Trunk Pacific Ry. Hotel at Regina.—A Regina, Sask., press report states that there is every prospect that construction on the G.T.P.R. hotel there will be resumed next spring.

## Commodity Rates on Refined Sugar in Carloads.

Sir Henry Drayton, Chief Railway Commissioner, made the following report to the Dominion Government, Aug. 20:— Since reporting on the complaint of the Toronto Board of Trade, other complaints have been received by the cabinet, having particular regard to the spread in the new sugar rates, and a further report is required. The present complainants are the Atlantic Sugar Refineries, of St. John, N.B., and the Acadia Sugar Refining Co., of Halifax, N.S. The complaints of both companies have since been endorsed by the boards of trade of each city. In addition to these complaints, an issue largely similar is raised in western territory by the complaint of the British Columbia Sugar Refineries. The present case does not turn at all on the interests of the consumer, either as to price or as to output. The issue is largely one which has to do with claims of rival refineries on the one hand (not so much against the railways as against each other), and the necessity of increased railway revenues on the other. Much misapprehension appears from written submissions that have been made, not so much by companies as by boards of trade and sympathizers, or shareholders in the different companies. It is necessary that the actual issues be defined and understood.

On the question of the cost of sugar to the consuming public, I find that sugar sells in the different markets without the slightest regard to the freight rate. For example, in western territory, while the British Columbia Refinery at Vancouver pays freight rates to Winnipeg, which have varied from 78 to 89½c, effective Mar. 15, 1918, that company sells its sugar in Winnipeg at the same price as in Vancouver, where it pays no freight rate at all. As a matter of fact, in certain instances, and for practically short periods, sugar was actually sold in Winnipeg at a less price than in Vancouver. In the east the situation is very similar. The fact is admitted by everybody. The notes of evidence covering the question read:

"The Chief Commissioner: 'We had better have that cleared up while we are at it. As I understand from the evidence given before, both at Ottawa and Winnipeg, the question was a trade question, having regard to the rights of these different refineries, and their right to live (if I might loosely express it), and that it had nothing whatever to do with the public as such; in other words, that sugar prices in this country bore no relation whatever to freight rates. If that is incorrect, I would like to have it cleared up.'

"Mr. O'Grady (of the St. John Refinery): 'I think that is quite correct.'

"The Chief Commissioner: 'I think we had illustrations given that sugar in some instances was dearer at the point where it was refined than it was at distant points where there was competition with other factories. Is that right?'

"Mr. O'Grady: 'I think that is right.'

"Mr. Chrysler (counsel for the eastern refineries): 'I did not make any point about that. I do not know that our price has been limited in any way, or that it has been fixed in relation to the freight rate.'

"The Chief Commissioner: 'Well, Mr. O'Grady has covered the point.'

"Mr. Chrysler: 'Other agencies have been at work fixing prices beside the refineries, but I do not know enough about it to discuss that. I mean the grocers fix prices, but how I do not know.'

"The Chief Commissioner: 'The only thing I wanted to know was whether the public was interested in this, from a cost of living standpoint.'

"Mr. Chrysler: 'I think not. It was a question of our right to exist in competition with Montreal refineries.'

The interests of the public, having regard to a proper supply of sugar, is also not at stake. The sugar output does not at present depend on refinery capacity. The sugar shortage is not in the slightest related to any question of capacity. It is related entirely to scarcity of the raw

article. Allotments of the raw article have been made by the Canada Food Board. Under these allotments the Canada Sugar Co. at Montreal receives 70,400 long tons; St. Lawrence Sugar Refineries, Montreal, 67,200; Dominion Sugar Co., Wallaceburg, 38,400; Acadia Sugar Refining Co., Halifax, 41,600; Atlantic Sugar Refinery, St. John, N.B., 51,200. This allotment falls far short of the full melting capacity. The Atlantic Sugar Refinery, as an instance, has a capacity of 6,000,000 lb. a week, and under its allotment is producing only 2,000,000 lb. a week. As a further result, no one refinery, or one set of refineries, is able to increase its output at present at the expense of its competitor.

The Canada Sugar Refining Co., of Montreal, sells sugar at some 45c a hundred less than its competitors. For example, its sugar sold in Toronto at first of the month at \$8.76 a hundred, while the St. Lawrence Sugar Refinery, of Montreal, and both the eastern refineries, sold at \$9.21. Their Port Hope price was \$8.90, while the Port Hope price of the three other refineries was \$9.35. The Canada Sugar Refining Co. is not selling one pound more sugar than it would sell if it sold at the same price as its competitors. The whole situation is artificial and will in all probability so remain until the war is over, unless a great change takes place in the supply of raw material before that event.

Under the McAdoo order, sugar rates are dealt with in such a way as not only to increase the revenues of carriers, but also to place the movement of sugar on a relatively fair basis, having regard to the value of the service rendered and the charges exacted on other competitors.

The main report, dated July 25, 1918, in which the order in council now appealed against was made, reads:

"Sugar classifies 5th class, and only moves on 5th class, in so far as the all-rail movement from eastern to western Canada is concerned. The district covered by sugar commodity tariffs stops at North Bay, on the G.T.R., and at Sudbury, on the C.P.R. The effect of the McAdoo order is to increase the rates on sugar between points in the U.S. covered formerly by commodity tariffs to a greater extent than 25%. For example, the former commodity rate on sugar from New York to Detroit was 24½c. Under the McAdoo order it now becomes 35c, an increase of 42%. From New York to Chicago the commodity rate was 31½c; new rate, 45c; an increase of 43%. The New York to St. Paul and Duluth rate was 38½c; new rate, 65c; an increase of 69%.

"As the commodity rates in Eastern Canada were not based on any fixed proportion of the 5th class, the percentage of the resulting increase would change in almost every instance. As similar increases were made in both countries before the McAdoo order, the parity of treatment in increases will be obtained by providing for an increase of 25%, except that in Canada, where the Canadian Freight Classification applies, the 5th class rate as increased would be substituted.

"The effect of the McAdoo order on the sugar movement from Montreal to Toronto would be as follows: The present rate is 18½c per 100 lb., while the present 5th class rate is 26½c, and as increased under the McAdoo order would be 33c. As a result, the rate would be increased 14½c per 100 lb., or 78.3%. The increase would make the freight costs 0.33c a pound, as against 0.185c a pound, and on a 10 lb. purchase by the consumer, 3.3c, as against 1.85c."

It is unnecessary to refer in detail to the more recent report made on the Toronto Board of Trade's complaint, but merely to repeat that an anomaly existed, in that sugar moved on a low commodity basis from Montreal and eastern refineries in the more confined area, bounded by North Bay on the G.T.R., and Sudbury on the C.P.R., while, in violation to all proper practice, the longer haul took a higher basic charge, namely, the appropriate 5th class classification. The order simply removes rate preferences and puts

the sugar movement where it legitimately belongs.

The foregoing considerations apply to the sugar situation generally. The complaint of the eastern refineries and the movement of sugar from the Maritime Provinces to Montreal and points west is now considered. The tariff situation is as follows:

St. John to Montreal—Rate effective prior to Mar. 15	15c
St. John to Montreal—Effective Mar. 15	20½c
St. John to Montreal—Present rate	42c
Halifax to Montreal—Prior to Mar. 15	19c
Halifax to Montreal—Effective Mar. 15	22c
Halifax to Montreal—Present rate	43c

The initial rates were frankly admitted to be rates that were put in simply for the purpose of helping the eastern refineries. They were not justified and could not be justified on any system of ratemaking, bearing in mind either a proper remuneration to the carrier or a fair proportion of the cost of transportation as against rates exacted from other shippers. These low rates were first put in from Halifax. The Intercolonial Ry. management has put in an arbitrary rate basis between Halifax and St. John, under which St. John takes a rate below Halifax of 1c per 100 lb. on all commodities moving in carlots. The history of the 5th class rate under which sugar would normally move from Halifax to Montreal is as follows:

Fifth-class rate, Halifax-Montreal, when first sugar rate made	25c
Fifth-class rate, Halifax-Montreal, 1911	28c
Fifth-class rate, Halifax-Montreal, 1916	30c
Fifth-class rate, Halifax-Montreal, Mar. 15	34½c
Fifth-class rate, Halifax-Montreal, present rate	43c

Both the low sugar commodity rates and the 5th class rates are Intercolonial rates. The C.P.R. meets the Intercolonial-St. John commodity rate. The shorter mileage from St. John to Montreal is that of the C.P.R. of 487 miles. The actual mileage on the Intercolonial is 735. While, for purposes of rate-making, railway companies are entitled to construct their rates on the shorter mileage basis, and the shorter mileage basis governs, the mere fact that there is a shorter mileage basis is not the slightest justification for putting in an unremunerative rate. The principle in the present case would go no further than to permit the Intercolonial, with its longer mileage, to meet the rates published by the C.P.R., and applicable to its shorter line. The C.P.R. supports and strongly urges the continuance of the rates reserved under the order in council.

The old commodity rates, as already stated, cannot be justified on any business railway principle. The old St. John rate of 18c yielded the Intercolonial 0.4898c a ton per mile. The 20½c commodity rate, which was effective prior to the effective date of the order in council, yielded a return of 0.5578 a ton per mile. It was sought to justify the rates for the purpose of building up industries in the Maritime Provinces. These provinces, however, are equally interested in the production of coal and lumber. The rate on bituminous coal from Stellarton, N.S., to Montreal, effective prior to Aug. 12 last, was 17c; the mileage involved is 811 miles; and the resultant rate per ton per mile is 0.419c; while sugar moving on a 19c rate from Halifax to Montreal, involving a mileage of 831 miles, gives a return of 0.457c, and on the increased commodity rate of 22c a hundred, yields a rate per ton per mile of 0.529c.

The value of coal moving from Stellarton may today be put at \$10 a ton. The

value of a ton of sugar can conservatively be placed at \$180. Coal rates do not stand by themselves. The price of lumber per ton is also very much less than sugar; on the movement from Elmsdale to Montreal, lumber has a commodity rate of 18c, the mileage 801, and the resultant rate per ton per mile 0.449c. To get nearer to the St. John movement, the lumber rate from St. John to Montreal is 16c, the actual mileage 731, and the resultant rate per ton per mile 0.437c. Iron and steel constitute a very important movement and a great industry of the Maritime Provinces. The general iron and steel rate from New Glasgow to Montreal was 43½c per hundred, a rate more than double the sugar rate, and yielding, on the mileage involved of some 804 miles, 1.08c a ton per mile. These illustrations are not given for the purpose of attacking either the coal, lumber, or iron and steel rates as abnormally high. As a matter of fact, they are not. The illustrations merely emphasize the fact that there was no justification for the low sugar commodity rate that could be made from any legitimate railway standpoint. I need only point out that with practically the same rate on sugar and coal, while the sugar takes generally a 5th class rating, coal belongs to the lowest classification of all, namely, 10th.

In view of the suggestion that notwithstanding the abnormal railway costs of today, that the Intercolonial should put in a particularly low rate, I now reconsider the question as to whether the Intercolonial can afford to make sacrifices in its revenue or not. Comparisons based upon different rates per ton per mile are merely illustrative; they are not absolute. A company whose business consists of an abnormally large proportion of carload movement, as against a company the majority of whose business consists in l.c.l. movement, can carry on business successfully at a very much lower rate per ton per mile. Again, a much higher per ton per mile return must be earned on a system whose average haul is short, than need be earned by a company whose haul is long. For example, the C.P.R.'s operations are much more profitable than the Grand Trunk's, yet the C.P.R. rate per ton per mile, as given in the railway statistics, is 0.676, while the G.T.R.'s is 0.738. The C.P.R., however, enjoys an average haul of 477 miles, while the G.T.R.'s is but 195 miles. Subject to these qualifications, and applying the rate as given, I find from the railway statistics of 1917, that the ton miles on the Intercolonial amount to 1,900,097,294. The rate per ton mile of the Intercolonial is shown as 0.576, with a resultant total earning of \$10,946,071. The following table applies to the Intercolonial's total of ton miles and the ton mile earnings not only of the Intercolonial, but of the different systems:

	Rate.	Results.
Intercolonial .....		\$10,946,071
Intercolonial freight carried at C.N.R. rate of .....	0.688	13,072,669
At C.P.R. rate .....	0.676	12,844,657
At G.T.R. rate .....	0.738	14,022,718
At average Canadian rate .....	0.690	13,110,671

It is perfectly apparent that the Intercolonial returns are abnormally low. The increases which the adoption of the other rates per ton per mile would yield are as follows:

Per ton per mile basis.	Increased revenue	Increase in per cent.
Canadian Northern .....	\$2,126,598	19
Canadian Pacific .....	1,898,586	17
Grand Trunk .....	3,076,647	28
Average .....	2,164,600	19

The average haul on the different systems, as shown by the statistics, work out as nearly as may be as follows:

Intercolonial .....	266 miles
Canadian Northern .....	319 miles

Canadian Pacific .....	477 miles
Grand Trunk .....	195 miles
Average, all lines .....	255 miles

As a ton mile rate must increase with a decreasing mileage, it would not be at any rate unreasonable to compare the Intercolonial ton mile rate with the average rate in Canada, the average haul in Canada being 255 miles, against 266 miles on the Intercolonial, and on this basis the earnings of the Intercolonial are entirely too low. The status of the Intercolonial can also be approached from the basis of its operating ratios in comparison with those of other lines. I again use the statistics of 1917. The ratios are as follows:

Intercolonial .....	90.9
Canadian Northern .....	71.7
Canadian Pacific .....	65.7
Grand Trunk .....	71.9
Average, all lines .....	71.7

These operating ratios are capable of an exact definition when the system's whole business is considered. In the absence of a system of accounting which distinguishes freight costs from passenger costs, in the same way that passenger earnings are distinguished from freight earnings, the ratios can be applied only illustratively to either movement. Taking, however, the different ratios and applying them to the Intercolonial line freight movement, the net freight operating revenue would vary as follows:

At ratio of	Revenue.
Intercolonial .....	\$ 996,092
Canadian Northern .....	3,207,198
Canadian Pacific .....	3,754,502
Grand Trunk .....	3,155,306
Average, all lines .....	3,207,198

These seems to be some issue as to what the exact Intercolonial operating mileage is. It is given in one figure in the statistics and in another figure in the Railways Department report. For the purposes of the following table, I have taken the mileage operated as 1563, and the results of earnings per mile of line as applied to the Intercolonial and based on the foregoing table, are as follows, viz., net freight operating receipts per mile of line:

On Intercolonial ratio .....	\$ 637
On Canadian Northern ratio .....	2,051
On Canadian Pacific ratio .....	2,402
On Grand Trunk ratio .....	2,037
Average all lines .....	2,051

I do not consider at all the question as to whether the Canadian taxpayer is or is not entitled to any return from his investment in the Intercolonial, but unless that investment must constantly grow, without at the same time a proportionate increase in value, substantial surpluses have each year to be earned, reserves must be set aside, or else the capital account must constantly be unduly inflated. Railways from time to time must be practically renewed, in order to keep the systems on a proper basis. I think it is practically conceded that with interest on only a 4% basis, 2% on the actual investment ought to be yearly set aside. Eliminating all question of interest charges and payments of past deficits, the necessity of such a reserve is easily shown by taking the cost per mile of the Intercolonial to the country. In 1899 it was \$37,957, in 1911 it was \$57,419, and the cost per mile today on the mileage actually owned is over \$79,000; the cost of the road to Mar. 31, 1917, being returned as \$120,275,032. A percentage of this increase can undoubtedly be justified, but it is equally certain that a very large percentage of it cannot be justified on any basis of normal values and business accounting. Under the circumstances there is no question that any rate reductions on the Intercolonial are really not made at the expense of that system, but at the expense of Canadian taxpayers generally.

Mr. Chrysler urged that different treatment had been accorded under the McAdoo order to refiners in the different districts. He is absolutely correct. The adoption of the 5th class was made in official classification territory. This official classification territory covers territory contiguous to Eastern Canada. He pointed out that the refiners at New Orleans were specially provided for by the McAdoo schedule, and argued that their commodity rates and differentials were preserved. The New Orleans refineries did not lie in official classification territory, consequently the matter had to be dealt with on a different basis. All the eastern refineries in Canada, however, are in the same classification territory. The results, however, in New Orleans show that increases were made on very much the same parity, although on a different basis. The evidence shows that the old rate, New Orleans to Chicago, was 24.3c, new rate 45c, an increase of 85.2%; to St. Louis, old rate, 18.3c, new rate 44.5c, an increase of 143%; to Cincinnati, old rate 19.8c, new rate 46c, an increase of 132%; to East Burlington, old rate 28.8c, new rate 50c, an increase of 73.6%.

Mr. O'Grady, of the St. John Refinery, urged that the Montreal rate should be reduced to 27c. He leaves the matter in this way:

"The proposal of the railway company is 42c. St. John to Montreal, which you think should be reduced to 27c. You get at that reduction by taking, as I understand you, the new New York-Montreal rate on raw sugar at 21½c and add to it the 5½c which you think you should absorb, thus making a 27c rate?"

"Mr. O'Grady: 'Yes, sir. That is the basis we have been competing on ever since we started.'"

While the eastern refiners are willing to accept a 27c rate to St. John, they insist that the differential of 11½c should be continued on movements west. How this would work out can be illustrated by the Toronto movement. The record covering the question reads as follows:

"Chief Commissioner: 'Your Toronto rate today is what?'"

"Mr. O'Grady: '30 cents.'"

"Chief Commissioner: 'The Montreal rate is, what, the last rate to Toronto?'"

"Mr. Tilston: '18½c.'"

"Chief Commissioner: 'My recollection is that the Montreal to Toronto rate is 18½c.'"

"Mr. Tilston: 'That is correct.'"

"Chief Commissioner: 'Your rate to Toronto is 30c, Mr. O'Grady?'"

"Mr. O'Grady: 'Yes.'"

"Chief Commissioner: 'That gives you a differential, as you put it, of 11½c?'"

"Mr. O'Grady: 'Yes.'"

"Chief Commissioner: 'And the new Montreal to Toronto rate is what?'"

"Mr. Tilston: 'Standard 33.'"

"Chief Commissioner: 'It goes 33c as against 18½c.'"

"Mr. Tilston: 'Yes.'"

"Chief Commissioner: 'As I understand your submission, Mr. O'Grady, you want your St. John rate to have the same differential of 11½c. That would make your St. John-Toronto rate 44½c.'"

"Mr. O'Grady: 'Yes.'"

It will be observed that the new St. John rate of 44½c would be made up by the continuance of the old arbitrary or differential of 11½c from St. John to Montreal and the addition of the new 33c rate to Toronto. The result is that while the rate from Montreal to Toronto would be increased by approximately 80%, there would be no increase whatever in that portion of the through rate which is represented by the St. John-Montreal haul, although there is, of course, a substantial increase, treating the matter in percentages, in the through rate, the increase being some 41%. But the rate, St. John to Montreal, is even more out of line than the Montreal to Toronto rate. Both were unduly low, but the Intercolonial rate was much more out of line. The weaknesses and injustices of the tariff situation would be merely accentuated by the adoption of this suggestion. Traffic is infinitely heavier between Montreal and

Toronto and points west than it is between St. John and Montreal. Usually rates relate to traffic, to its volume, and to its earnings. To carry out Mr. O'Grady's suggestion would be to do violence to all cardinal principles. Further, if a proportionate rate basis was put in on any such theory, the Dominion Sugar Refineries, situate at Wallaceburg, Chatham and Kitchener, with far shorter hauls to Toronto, would naturally demand similar treatment to that which St. John would receive. The Montreal refiners, as well as the Dominion Sugar Co., do not object to the advance in rates, but they are insistent that if concessions are given to one refiner they should be given to all, and that the inequalities of the past cease. Mr. Hauson, who appeared for the Dominion Sugar Co., is reported as follows:

"Our raw sugar rate from New York to Wallaceburg or Chatham is 27c, which I believe is as high or higher than the rate paid by any of the other Canadian refiners. I wish to endorse the statements made by Mr. Tilston. Our company is fully in accord with those sentiments. We consider that it would be a mistake to re-open the order of July 27. I would like further to add that should the Atlantic seaboard refineries be given any consideration by the board, we would respectfully request the board to give us similar consideration from Wallaceburg and Chatham to Montreal and points east."

The statements made by the Montreal refiners are to the effect that the order for the first time gives them fair rates, having regard to hauls from other refineries, and that for the first time they properly enjoy their geographical and commercial position, not only as against Atlantic refineries, but also as against western refiners. The claim is, however, advanced that because investments were made in refineries in Halifax and St. John, when a certain scale of freight rates were in force, the freight rate situation cannot be disturbed; that the relationship of rates, not in percentages, but as to the actual spread, must remain constant. This argument cannot be regarded as sound, either under the provisions of the Railway Act or from any accepted economic commercial standpoint. There is only one thing certain about freight rates and that is, that the carrier, under the act, will not be permitted to make an undue profit. Just as soon as rates are unreasonably high they must be reduced, and, conversely, just as soon as rates are unreasonably low, they ought to be raised to a fair, equitable, and just basis, without regard to one section of the country or the other, but having regard to the inhibitions of the Railway Act, which prohibit one locality being discriminated against in ease of another. To accept the proposition, as a logical result, the principle would not only apply to railways, but would also mean that the industry's tax rate could not be increased and its cost of doing business locally ought not to be advanced. As a further corollary, any protective customs tariff in force when the investment was made must always be regarded as fixed, unless changed in the interests of the industry as against its foreign rival.

Mr. Chrysler argues that the Intercolonial is removed from the inhibitions of the Railway Act. In this he is absolutely right. The effect of the argument is that any illegal and improper preference under the Railway Act may safely be practised by the Intercolonial. The position used to be just the same, as far as private railway companies were concerned, before the act was passed. Discriminations and preferences could be and were from time to time practised. I do not for one moment, however, suppose, that as Parliament by the Railway Act has adopted the principles of equality in railway rates not only as between shippers, but as be-

tween localities, that these principles ought not to be considered because the Intercolonial, as well as a private corporation, is involved. Dealing with the matter entirely as a railway question, there is no just ground from which the Halifax and St. John refineries can escape paying the appropriate 5th class rates and contributing, in equal proportions with the other refineries, to the cost of the services which they enjoy, differing as that cost must differ, having regard to the length of the haul. If there should be a different rate system adopted in the different localities for the transportation of sugar, from a railway standpoint the lower rate basis would have to be given to those territories in which traffic and railway profits are the greater. Railway earnings are much larger in the prairie provinces and in Ontario than they are in New Brunswick and Nova Scotia, but in my view there is no question that a common basis should apply in the territories in question. I have so far dealt with the matter on a railway basis pure and simple. As I see it, this basis is not the only basis which of necessity should control the situation. The order in council is the result of war troubles and war expenditures. Both the St. John and the Halifax refineries have had an unduly large share of the war burden thrown upon them. Halifax and St. John have, geographically, under ordinary business conditions, certain advantages which Montreal has not. On the other hand, Montreal has advantages which they have not. St. John, for example, is still getting a packet service for 25% of its raw sugar without any additional charge over and above the 50c New York ocean rate from the West Indies. In normal times its rate on the balance of its raw material is 6c over New York, with the result that in so far as 25% of its sugar is concerned, it is on the New York basis, and as to 75% of it, 6c over. In so far as its whole supply is concerned, it would, therefore, average 4½c over New York. As a general thing, Montreal buys its raw sugars in the New York market, although in the past it has got raw sugar direct. The present New York rail rate to Montreal is 21½c, but the extra 6c rate which is charged on the vessels from New York to St. John, as the result of the war and vessel shortage, has been increased to 20c; so that as a consequence, at St. John today, instead of paying an average of 4½c over New York, it pays 15c, a difference of 11½c a hundred.

While no sugar now moves from St. John to Montreal, under the policy enforced as a result of which St. John gets the benefit of as low an import rate as the lowest port in U.S. territory, and thus obtains just as much traffic as is possible to secure for it, the St. John-Montreal rate on raw sugar is but 19c. It may be noted that there is a shrinkage from 106 lb. to 100 lb. in refining the sugar. I at one time thought that the rates on refined sugar might be graded in relation to the raw sugar, properly weighing the increased value of the commodity and the shrinkage in the material. I find, however, that the prices vary so much from time to time that it would be impracticable to so base the rate. The present price of raw sugar in Montreal may be taken at 5c, while the refined sugar may be taken as 9c, although the average is somewhat higher. It should further be borne in mind that on no other commodities are rates so graded. With St. John obtaining its raw sugar on a much lower basis than Montreal and enjoying the benefits of the export business, these advantages may well offset, and probably do

offset, the fact that Montreal is much nearer the larger consuming centres of the country. The movement to the large consuming western territory can best be illustrated by the rates to Winnipeg, effective under the order in council. The rate, Montreal to Winnipeg, is 87c, and from St. John to Winnipeg is \$1.03½. Under normal conditions, transportation costs over New York work out, as between the rival refineries, as follows:

	St. John refinery.	Montreal via St. John.
Freight on raw.....	4.50	23.50
Freight, refined.....	103.50	87.00
Total .....	\$1.0800	\$1.1050

For the Toronto market the position is:

	St. John refinery.	Montreal
Freight, raw .....	4.50	23.50
Freight, refined .....	50.50	33.00
Total .....	.5500	.5650

The Montreal cost on the raw material over New York is made up of the 4.50c St. John over New York, plus the St. John import rate of 19c. As Montreal, as a matter of fact, buys its raw sugar in the New York market and the rail rate to Montreal is 21½c, the real relative position in these two large typical consuming centres is as follows at Winnipeg: St. John freight, \$1.08; Montreal freight, \$1.08.50; at Toronto, St. John freight 55c, and Montreal freight 54c. These results could not have been made fairer if the order in council had been considered from the refiners' standpoint, apart from all question of railway necessity. The position today, therefore, is that while the new rate preserves to Montreal its natural geographical advantage on the manufactured article to which it is entitled, the natural geographical advantage on the raw material which Halifax and St. John normally enjoy is taken away from them as a result of war conditions. It is quite true that the rates on raw sugar have gone up at the other refineries, but on the other hand the Dominion Sugar Refinery uses beet root in a large proportion. This proportion varies, but I am fairly safe in saying that at present a fair ratio would range from at least 33 to 40%.

As the order in council is the result not only of a pressing railway condition, but also has to do with war conditions, and as these war conditions work peculiar hardship as against the Atlantic refineries and not to anything like the same degree as against the Dominion and the Montreal refineries, I would recommend that, as a temporary measure of fairness, while traffic conditions remain as they are, the St. John-Montreal rate be reduced 10c, making that rate 32c, and the Halifax rate be reduced 11c, making that rate 33c; and that for all points west through rates from St. John and Halifax for the time being move on the arbitraries suggested by Mr. Silver of the Acadia Sugar Refinery, over the Montreal rate, and arrived at by increasing the old Halifax arbitrary of 12.50c and St. John of 11.50c. by 25%. In making these recommendations, I have carefully considered the claims of the Dominion and Montreal refineries that any exceptional treatment extended to the more eastern refineries should also apply to them. There is no question of the importance of the beet root industry, both from the standpoint of the Ontario farmer and the fact that the more raw material produced in the country the less will be imported, to the financial gain of the country as a whole. Ordinarily, I am free to admit that any reduction in a fair tariff, free from discrimination, accorded to St. John and Halifax, ought, and indeed under the Rail-

way Act must, be accorded Wallaceburg and Chatham. The conditions of today are extraordinary, and the measure of relief suggested for the eastern refiners cannot, under present conditions, work any hardship either against those of Ontario or Montreal.

I now deal with the complaint of the British Columbia Sugar Refineries at Vancouver. The C.P.R. had largely to do with the inception of this refinery, and for the purpose of developing the industry, put into effect low commodity rates. For local movements the commodity moved on the appropriate 5th class scale, but a commodity blanket rate was made effective from Banff east in prairie territory. As a result of the establishment of the refinery, raw sugars of the Orient are refined in Canada. The raw sugar is subject to a duty of \$1.37½ per 100 lb., the duty on the refined product being \$2.07½. As a result, the movement of sugar from the Pacific has been practically that of the refinery in question, which has been very successful. The change brought about in rates under the order is indicated by the following table:

Vancouver-Calgary rate of 86½ becomes \$1.05.  
 Vancouver-Medicine Hat rate of 86½ becomes \$1.21½.  
 Vancouver-Moose Jaw rate of 86½ becomes \$1.42½.  
 Vancouver-Regina rate of 86½ becomes \$1.44.  
 Vancouver-Brandon rate of 86½ becomes \$1.50.  
 Vancouver-Portage la Prairie rate of 86½ becomes \$1.59.  
 Vancouver-Winnipeg rate of 89½ becomes \$1.59.

Many complaints have been made from time to time by the Montreal refineries against the low commodity rates enjoyed by the British Columbia Sugar Refineries. At one time the rates broke as far east as Winnipeg. Under a judgment of the board, rates were equalized at Portage la Prairie. The rates referred to as equalizing at that point were all-rail rates, but as a matter of fact the rail and water breaking point, which constitutes the real movement, was at Wapella, Sask., just past the Manitoba boundary. The complaints, however, have continued and the matter was pending for judgment at the time the order in council was made. Under the rate basis applicable in the different territories under consideration, the prairie territory enjoying a lower rate basis than British Columbia (owing to the great cost of railway construction and of railway operation in B.C.), the all-rail rate today from Fort William west would meet the rate from Vancouver east between Medicine Hat and Calgary, while the rate from Montreal, if the commodity moved on the lower water basis in eastern territory, and thus be a rail-lake and rail movement, would now break at about Swift Current, Sask. The eastern refineries have always argued that they were entitled to the rates being so adjusted. On the other hand, the British Columbia Refineries has always taken the position that its particular movement ought not to be considered on a mileage basis, and that the rate, having voluntarily been put in by the C.P.R., should stand. In the past the C.P.R. was the only railway company interested. It certainly required no increased revenues. The Canadian Northern today is operating out of Vancouver. Its deficit for the current year will not be short of ten million dollars, and to this deficit would have to be added the annual cost of the payment the government makes under the arbitration proceedings, which cannot well be stated as being less than \$550,000. But the Canadian Northern rates cannot be raised unless the rates of the Canadian Pacific today are not those it was enjoying when the former complaint was heard. It is, however, in the interests of the rail-

ways themselves, as well as in the interests of the public, that a substantial movement of sugar should be made from the west east. To break rates at Bassano, which is practically Calgary, would unduly and unfairly shut the B.C. Refineries out of a market which is contiguous to it and hand that market over to competitors situate many hundreds of miles farther away. The position is not that of the Nova Scotia and New Brunswick refineries, which seek to have an added mileage of 487 miles in part absorbed by the railways. The position is reversed.

Under all the circumstances, recognizing on the one hand the absolute necessity of an increase in rates, and on the other hand that the markets of the British Columbia Refineries should not by a change of railway rates be largely wiped out, I beg to recommend that Regina, which is 388 miles east of Bassano, be made the breaking point, and that the requisite amending order be made. In order to cover the situation, the order should read as follows:

The commodity rates to be charged upon sugar, in carloads, from Vancouver to destinations in Alberta, Saskatchewan, and Manitoba shall be as follows:

(a) To Regina, Lanigan, Humbolt, and Melfort—the rail-lake-and-rail 5th class rates contemporaneously in effect from Montreal to the same points.

(b) To Winnipeg—the percentage of the 5th class rate from Vancouver to Winnipeg, equivalent to the ratio of the commodity rate from Vancouver to Regina, to the 5th class rate from Vancouver to Regina.

(c) Subject to the said rates as maxima, the commodity rates to destinations intermediate to the aforesaid on the direct lines of transit shall be reasonably graduated until they merge into the 5th class rates from Vancouver.

(d) To destinations off the aforesaid direct lines of transit, the commodity rates shall not exceed those for equivalent direct line distances applied to the shortest practicable routes, with reasonable additions where the direct line mileage is insufficient for the purpose.

(e) During the existence of the class freight tariffs from Vancouver and Montreal in effect at the date of this order, the commodity rates from Vancouver, graduated as aforesaid, shall not exceed 94c to Banff, \$1 to Calgary and Edmonton, \$1.05 to Lethbridge, \$1.21 to Saskatoon, and \$1.26 to Prince Albert, per 100 lb. respectively.

#### Order in Council Changing the Dates.

On Aug. 24, the Dominion Government passed an order in council under authority of the War Measures Act, 1914, ordering that the commodity rates on refined sugar in carloads be as follows:—

To Montreal for local deliveries, 32c per 100 lb. from St. John, N.B., and 33c per 100 lb. from Halifax.

To destinations in Canada, west of Montreal, the 5th class rates current from Montreal, with the addition of 14½c per 100 lb. from St. John and 15½c per 100 lb. from Halifax.

From Vancouver, B.C., the rates provided for in the order in council are those recommended by the Chief Railway Commissioner, at the end of his report as given above, in paragraphs a, b, c, d and e.

The new rates are to come into force from St. John and Halifax on Sept. 12, and from Vancouver on Sept. 23, by publishing and filing on one day's notice with the Board of Railway Commissioners, and shall remain in force for the duration of the war or until further ordered.

## The United States Railroad Administration's Work.

**Coastwise Steamships.**—The Railroad Administration has placed H. B. Walker, President of the Old Dominion Steamship Co., in charge of all coastwise steamships operated by the administration. He succeeds the administration's coastwise steamship advisory committee, of which L. J. Spence was chairman.

**Meals on Dining Cars.**—A la carte luncheon and dinners on dining cars on U.S. railways will be abandoned after Oct. 1, and table d'hôte meals of not more than four courses substituted, with the charge limited to \$1, except on a few through trains, where \$1.25 will be charged. Breakfast will be served a la carte with a restricted menu. The purpose is to economize and put meals within the reach of more people, increase the capacity of dining cars, save labor and conserve food.

**Pullman Lines.**—The operating department of the Pullman Co., now under U.S. Government control, is known as the Pullman Car Lines. L. S. Taylor, heretofore Controller, Pullman Co., has been appointed Federal Manager of the Pullman Car Lines, with office in the Pullman Building, Chicago. He has jurisdiction over all departments, reporting to the Director, Division of Operation, U.S. Railroad Administration.

**Garnisheing of Wages, Etc.**—The Director General has issued the following order:—"Whereas proceedings in garnishment, attachment, or like process by which it is sought to subject or attach money or property under federal control or derived from the operation of carriers under federal control under the act of Congress of Mar. 21, 1918, are inconsistent with said act, and with the economical and efficient administration of federal control thereunder; and whereas such proceedings are frequently commenced, particularly for the garnishment or attachment of amounts payable, or claimed to be payable, as wages or salaries of employees, which practice is prejudicial to the interests of the Railroad Administration in the operation of the lines and systems of transportation under federal control, and is not necessary for the protection of the rights or the just interests of employees or others; and whereas if any rules or regulations become necessary to require employees to provide for their just debts, the same will be issued hereafter; it is therefore ordered, that no moneys or other property under federal control or derived from the operation of carriers while under federal control shall be subject to garnishment, attachment, or like process in the hands of such carriers, or any of them, or in the hands of any employee or officer of the United States Railroad Administration.

E. B. Tilt, formerly Engineer of Tests, Angus Shops, C.P.R., who returned recently to Montreal from Spain, where he was for some time as President and General Manager, Sociedad Hispano-Americano (Gaston Williams) writes: "I have been making an effort to catch up with the reading of the copies of Canadian Railway and Marine World which came here after I requested you to change my address, so that I may get up to date on current transportation matters. Canadian Railway and Marine World was among my most welcome visitors in Madrid and kept me most completely in touch with the railway and marine situation in Canada."

## Cross Ties Bought in Canada in 1916 and 1917.

The following bulletin, prepared by the Interior Department's Forestry Branch, is based on reports received from 41 steam railways and 25 electric railways which bought ties in 1917. The average prices in the tables are based on the cost at the point of purchase, and may or may not include long-haul transportation charges. Only in the cases of those woods which are used in large quantities can value given be taken to represent the relative value of the wood.

A total of 7,661,715 ties was bought in 1917, a decrease of 177,800, or 2.3%, compared with 1916.

Of the total ties bought, 649,227 were treated with preservative to withstand decay. This is 8.5% of the total, compared with 2.5% in 1916 and 5% in 1915.

Jack pine heads the list in number of ties cut with 40.2% of the total. Jack pine has held this position since 1911, when it displaced eastern cedar. Eastern cedar still holds well on to second place and shows a slight increase as compared with 1916.

The average value was 51c a tie in 1917, compared with 42c in 1916. Electric railways bought 4.9% of the total in 1917 compared with 3.4% in 1916 and 2.5% in 1915. The electric railways paid an average of 56c a tie, while the steam railways paid an average of 51c.

The number of ties imported in 1917 was 1,213,025, valued at \$971,254, compared with 622,819 imported in 1916, valued at \$424,599. The majority of these ties were of species of wood either not native to or not abundant in Canada, such as oak, hard pine, chestnut, and gum.

**The Metric System in Great Britain.**—A report presented to the Imperial Parliament recently, by the committee appointed to make suggestions as to the commercial and industrial policy to be followed after the war, contains certain conclusions relative to the adoption of the metric system in Great Britain. The committee states that having given the subject very full consideration, it is unable to recommend the compulsory adoption of the system, expresses itself as not being convinced that it is better than the present British system, and as satisfied that the practical objections are such as to outweigh any advantages claimed for it.

**The Pacific Terminal Land Co.** has been incorporated under the British Columbia Companies Act with authorized capital of \$8,000 and office at Victoria, to acquire and develop land and properties in the province, and to build wharves, tramways and logging railways, for operation by steam or electricity.

The Edmonton, Dunvegan & British Columbia Ry. special freight rates for cattle, sheep, hay and straw and haying outfits, have been arranged with the Dominion Department of Agriculture's Live Stock Branch. The shipper must have a certificate from the provincial agricultural department before he can make shipment, all charges being paid by the government.

The Peace River Development Co. is reported to have contracted to transport by water to Peace River Crossing, 200,000 bush. of grain from the Peace River Valley before the close of navigation. The grain will then be shipped by the Central Canada Ry. and the Edmonton, Dunvegan & British Columbia Ry. to Edmonton, and thence east by one of the transcontinental lines.
